AS exploiters of forest the American backwoodsmen have no superiors; and even in the matter of timber transport, whether by land or water, they are the peers of the most highly trained foresters of France and Germany. But as regards the creation of forest, the restoration of denuded forest areas, or the fostering of natural reproduction, very few of them are aware that these operations constitute a proper part of the forester's profession. There is nevertheless a growing recognition of the fact that the State ought to take some practical measures for the restoration of denuded forest areas, to provide for the maintenance of a perennial timber supply; and in view of the probable future demand for timber at figures very much above current prices, private owners of denuded forest tracts or of tracts from which the pine or other immediately marketable timber has been cut out, are concerned to know whether they could not profitably restock the area, instead of allowing it to be forfeited for arrears of taxes. But just here they are confronted with the practical difficulty, that they neither know how to go about the task of restoration nor where to turn for instruction.

Of course the nurseryman is at hand, he knows how to raise pine seedlings fit for transplanting in the forest, and he may possibly know that if a bared area is to be planted with nursery stock of pine, or other coniferous timber, it will require about three thousand plants to the acre, to provide for timber free from knots at the heart; his experience in planting has been mainly confined to fruit trees, his best men will hardly set out a hundred trees a day, and if asked the terms on which he would be prepared to restock a tract of five thousand acres, would name a figure somewhere between sixty and a hundred dollars an acre. Now, it goes without saying that at the present market price of timber there is no encouragement to engage in raising forests at an outlay of from sixty to a hundred dollars an acre for planting only.

The object of the present series of articles is to point out that a great deal may be done in the direction of forest restoration at a very moderate outlay by following nature's methods, and subordinating them to intelligent direction.

In the case of woods which have been denuded of their choice timber only, and the ground simply laid bare in spots, we have all the conditions favorable to the germination of any seed lying hidden in the soil, or that may be dropped on it. The mass of decaying vegetation on the surface, the rich soil of vegetable and insect remains below, the advantage of sufficient shade to protect the soil from evaporation and of sufficient sunlight to give vigor to everything that germinates, combine to constitute the conditions most favorable to all kinds of vegetable growth. On these very grounds the forest character of the floor is frequently lost, by being taken possession of by grass, which, when it once has hold of the soil, keeps possession and gives tree seed no chance of coming up. If the forest clearance was not very heavily timbered before the felling, the soil will probably be found stocked with young tree seedlings of some sort, as thick as they can grow. Perhaps not one in a thousand of the seedlings is pine, or such other timber as the owner would like to have the young forests stocked with, but since not more perhaps than one in a thousand of the seedling can reach maturity, the presence of one pine or other valued seedling in a thousand may, if evenly distributed, suffice for restocking the bared area with the required species. Nine hundred and ninety-nine per acre of the seedling must come out to enable the one in a thousand to reach maturity. Left to themselves there would be a struggle, in which the strongest would survive, but if man takes part in the struggle intelligently, he can provide for the survival of the trees of his election by cutting out the surrounding trees whenever they show any signs of dominating them.

And if it is so simple a matter to favor certain species of existing seedlings at the expense of others growing along with them, it is no less simple to grow artificial or planted species, and favor them at the expense of the natural sown seedlings in possession. For example, a forest consisting mainly of hardwood trees, with one or more openings to the acre, from each of which a large pine tree has recently been cut out, and these openings stocked wholly, or almost wholly, with hardwood seedlings, a condition of things which will frequently exist, it would cost but a mere trifle to plant out nursery-raised, two or three year old, pine seedlings about ten feet apart through all the openings; that is from thirty to forty plants to the acre. Under skilled management this work, including cost of raising plants, need not materially exceed a dollar an acre for the area operated on. Some additional outlay may be necessary for cutting back any hardwood seedlings that may crowd the pines too much and threaten to overtop them; but if the pines keep their heads above the crowd it may not be necessary to interfere for twelve or fifteen years, when the hardwood being cut out will leave a clean pine forest to grow up and retain secure possession of the soil.

In many such forests the hardwoods will gradually come into demand with increase of population, at first for fuel. This demand should be met by reserving the best stems most likely to come into demand for timber, cutting out all the inferior stuff area by area, and as soon as it is removed dibbling in pine seed at 5 or 6ft. apart over the whole cleared surface. The hardwood seedlings will probably go ahead of this pine, and in this case it will be necessary to cut them back the following year.

In carrying out this operation on a large scale it should be remembered that the pine seedlings require protection from summer's heat and drought, and winter's extreme cold, and that the required protection is best afforded by large trees shading the ground, conserving its moisture, modifying its temperature, and breaking the force of the winds, and that consequently no large areas of the forest should be laid bare at one time, unless there are strong nursery-raised plants, that have been two or three times transplanted, that are available for restocking. Such plants, having a dense mass of fibrous roots, take hold of new soil and find sustenance readily.

Under the systematic method of natural reproduction by self-sown seed in a compact forest, the first step is to thin out about one tree in every four to let in sufficient light and air to foster the germination of the seed as it is shed; from two to five years later another thinning out of the timber is resorted to, to afford light and air enough to foster the growth of the young crop, and after another interval of from two to five years, the young crop having got secure possession of the soil, the old timber is cleared off, and the young plants left to keep each other clear of side branches, and to struggle for supremacy for perhaps twenty years, when the forester goes in with his axe and thins the thicket down to six or seven to ten feet apart, leaving of course the strongest trees.

If the forest were now left to itself for a couple of centuries, the seven or eight hundred trees to the acre would perhaps be reduced to ten or fifteen giants to the acre, covering the whole ground; but by systematic thinning out, the value of the timber removed would be equal to the value of the final crop.

Going back to the subject of restocking forest which has only had its pine timber cut out, it will be readily seen that the bared areas, having a forest floor and forest shelter, may be restocked with any required species of timber by sowing or planting at a very trifling cost, and that if the remaining hardwood come into demand for fuel at a price that will pay the cost of cutting it out, the whole area may gradually be stocked up with young pine at perhaps one-tenth of the cost which would have to be incurred for restocking a bare area, a fact which should be weighed carefully by owners meditating allowing their woodlands to be forfeited for taxes.

DOG SHOW SUPPLEMENT.

LAST week we gave a four-page supplement devoted to duck shooting. To-day's issue contains a supplement with the report of the New York dog show. The comments and criticisms on several breeds are very full, and they are also intelligent and worth studying. We pride ourselves upon the high character of these show reports given in the FOREST AND STREAM.

THE menhaden fishing question is again to the front The subject is one that cannot be ignored so long as the public is unwilling to see valuable food fishes ground up into oil and fertilizers.

THE New York courts have just decided that to call a man a "swindler" and a "bluffer," meaning that he claims a bigger rifle score than he actually makes, is not actionable.

The Sportsman Tourist.

AWAY FROM THE THRONG.

IT may not be—yet it seems to me
Away from the throng is best;
By some lonely shore where the waters roar,
Or far in the crimson west.
For friends are few that are sure and true—
Aye, the crowd is a mob to me;
More tame and mild is the distant wild,
More calm is the stormiest sea.

Ah, it must be so, for the wisest know
That man is a foe to man!
The love is small that extends to all,
Tho' we trust it as we can.
To have one friend at a long life's end,
Is a blessing rare, I sigh,
One faithful clasp as we dying gasp—
One glance in an honest eye!

Yet there's love in all, in great and small,
In the fiend whom all avoid;
You may see its gleam in a demon's dream,
And it cannot be destroyed.
In the great and least, in man and beast,
'Tis the soul, till life shall fail;
I'm sure 'tis part of my lady's heart,
And it wags my spaniel's tail.

But I sigh again as I say with pain,
Away from the throng is best;
My fondest dreams are of woods and streams
Afar in the hostile west.
There's a gleam I prize in my horse's eyes,
And I like—three dogs at most—
Aye, one dear face in my heart has place,
But it cannot hold a host.

C. L. P.

A MONTH IN THE ROCKY MOUNTAINS.

[*Continued from page 83.*]

MINER'S DELIGHT, in the palmy days of gold mining ten years ago, was a smart town of 1,000 inhabitants. When the gold gave out, there being nothing else to hold them, the people left, and the present population numbers, or did at the time of my arrival, just three people, an old gentleman and his wife, and an old bachelor who lived by himself. During my stay a man with his wife and child moved in, which doubled the population. I remained here two days waiting for my guide to make his preparations, for I was still sixty or seventy miles from the hunting grounds. The time was pleasantly spent. I explored the neighborhood for game, without, however, any marked success. On one occasion the man who was out with me claimed to have started a deer, and pointed to the fresh track as positive proof of his statement. I observed the same day the track of a mountain lion, precisely like the footprints of a common cat, but several times larger.

Miner's Delight is the highest point, probably, in all this region east of the Rocky Mountains. The view from here exceeds in magnitude everything I have yet seen. It is simply unlimited, there being nothing to obstruct the vision. The Rocky Mountains bound the horizon on the west, and the sight of them from this point is grand beyond description. On the south the view is most extensive. It is a broken desertlike prospect, cut up with barren rocky ridges and abrupt cañons, and streaked with strips of stunted pines and cottonwoods. Toward the north the timber is more abundant, and the sides of the mountains are covered with a thick growth of pines, extending two-thirds up their sides to the timber line. A few lonely miners may be camped here and there in the gulches, or the white tent of a herder may be seen on the gray plains, where he is spending a few days of his gipsy life, but other than these there is not a human habitation in view. The atmosphere is wonderfully clear, rendering the reach of the naked eye much more extensive than in the East. There is no smoke or mist, and no dust, and there is none of the hazy appearance, prevalent in the East at this season. The atmosphere actually magnifies, making distant objects appear as though viewed through a spyglass. The rarity and clearness of the air and freedom from moisture may account for the heat of the sun in this northern latitude. Added to its purity are the delightful coolness and freshness of the atmosphere. It stimulates every nerve. I begin to feel like an athlete. My appetite is something alarming. I eat and eat and eat until I am ashamed of myself. Part of the credit of this appetite is due to Mrs. Kime; there never was a better landlady. Her table is supplied with everything the Territory affords, and prepared in a way that would do credit to Vanderbilt's *chef*. Dishes that I never especially craved at home, here seemed glorious luxuries.

At last everything was ready for the start to the hunting grounds—the headwaters of Little Sandy River. My guide was an experienced hunter. We had a good spring wagon and three horses, one to be used as a reserve in case of accident to the others. We had a tent, blankets, cooking utensils, and provisions to last a week, for the rest we relied on our guns. At 10 o'clock on the morning of Sept. 16 we pulled out for Miner's Delight. The weather was perfect. Our road was the old immigrant trail used by the first settlers to Oregon and northern California, in the early days before railroads, and has been the scene of many a bloody encounter with the Indians. We see plenty of sage hens along the road, and amuse ourselves firing at them with our revolvers, aiming at their heads as they trot off over the plains, but without much damage to the birds. We go down into a deep gulch to South Pass City, an old mining town now deserted, and then out into the broad plain beyond. Some traders who passed along this road the week before informed us that they saw "hundreds" of antelope in this vicinity, but not an antelope came in sight of us. Evidently they had loped off anterior to our arrival. We examine closely every suspicious looking stone and bush with the glass, but not a living thing came in sight. We see now and then the white skulls of buffalo distinguished from those of common cattle by the thick short horns and greater breadth between. In some places the ground is cut up with little round hollows, which my companion says are buffalo wallows. This locality was doubtless but a few years ago the resort of this noble animal, but we do not hope to see any now, as the race is practically extinct.

We soon leave the old immigrant trail and take to the right, following a dim path and the recent tracks of a wagon drawn by a horse and mule, as we see by the tracks in the sandy road. An Indian tepee trail comes into our road and goes in our direction. We see the trailing marks in the sand where the ends of the lodgepoles drag along on the ground, the other end being fastened to the pony. Further on we found where some Indians had camped the night before. A number of slim poles like fishpoles were stuck into the ground in a circle, and the ends tied together at the top. We are sorry to find that Indians are in the neighborhood, as they frighten the game, and for that reason the white hunter tries to avoid the neighborhood where Indians are supposed to be. Toward night we began to look out for good camping ground, but it is very nearly dark before we come to a good place, for we must find water and feed for the horses. This we find near a clear stream of water called Lander Creek. Dan unhitches the horses while I gather up some wood for a fire. Thanks to the kindness of Mrs. Kime, we do not have to cook much. We put over the frying-pan with two young sage hens, a piece of bacon and some slices of potatoes. We have some good biscuits, pickles, molasses and dried fruit, and some "way up" tea that I obtained at Denver. We sit cross-legged on the ground and eat with an appetite unknown outside of camp life.

As we were sitting by the fire after supper I heard a little rustling near by, and looking in the direction, saw two peering eyes glancing and turning in the darkness. I nudged my companion and pointed excitedly in the direction, declaring that there was a coyote, or wolf, or perhaps a mountain lion, at the same time fumbling around for my gun, intending to give the animal a load of buckshot between the eyes. Before I could get ready for the "tragedy," in walked a little half-starved tame cat, mewing and purring and rubbing herself against our legs. I could hardly restrain my feelings of disgust. Here I was one hundred miles from civilization and just about to add a gray wolf skin to my stock of trophies (yet to be obtained), and it turns out to be a miserable tame cat that has probably strayed from some moving ranchman or immigrant.

There is no use going to the trouble of putting up the tent, so we select a suitable spot and spread our blankets on the ground in the open plain. In this country where it seldom rains and the ground is perfectly dry, one can sleep on the ground without the least danger of taking cold. You double up your tent canvas in the right shape, and lay it on the ground first. Then your heavy double blankets are folded so as to be twice your length. You lie down upon one end and draw the other end up over you, clear up to your head. Your coat can be used for a pillow, and your rifle laid along the edge of your blanket underneath will prevent you from rolling out of bed You should have something like a traveling cap to protect your head. The stars shine out brightly through the cold air, and you go to sleep to know no waking until the morning sun shines in your face.

Our road from here is a gradual ascent following the course of the stream. Little Sandy River, our destination, flows into the waters of the Pacific slope, although we do not have to cross the main "crest of the continent" to get to it. It rises in a cañon southeast of the National Park and flows down between the principal range and a large spur of the Rockies on the east, thence out through an opening or break in the chain, and on into the Green River. We must, therefore, follow up the streams on this side and cross over the divide in order to reach it. About noon we reach the highest point of land, and turn down the other side to the river. Here we conclude to stop a while, rest the horses and try the fish. It is a curious fact that there are no trout in the Sweetwater River, a clear stream on the east slope, although they abound in all the streams flowing into the Pacific. Numerous attempts have been made to introduce the mountain trout into the Sweetwater, but all have been unsuccessful. We soon had all the trout we wanted for dinner. These fish differ somewhat from the Eastern brook trout. They are not near as gamy a fish as their brothers in the Allegheny Mountain streams, but I found them equally as shy in taking the bait. If I showed myself the least they would not take the most tempting bait; but half an hour afterward, creeping up carefully behind the willows, I caught four in a few minutes from the same place. They have the same red and black spots, but are a shade darker, and grow to a much larger size, often to 4 or 5lbs. in weight.

When Dan came in from fishing he reported having seen a large owl fly up from the thicket near the river and alight in the top of a tall pine not far off. Taking my three-barrel, I went out in that direction, and after peering up into the treetops for a while, finally discovered his owlship gazing down upon me solemnly from his perch, eighty or ninety feet above. It seemed a pity to do so, but I let fly a charge of No. 5 shot from the choke-bored chamber of my triple shooting machine, and down came the owl like a stone. He didn't even take time to unfold his wings, and I picked him up under the tree as limp as a wet rag, every bone in his body seemingly broken into half-inch pieces. He was a beautiful bird with mottled white and gray plumage, his outstretched wings extending as far as my hands could reach. As I came in carrying my owl, Dan was rather inclined to be out of humor on account of the noise I had made in firing at worthless game when we were so near the hunting ground. I expressed to him in a mild way that I didn't think there was any danger on that account; that it was yet several miles to the foot of the mountain, and there was no possibility of any large game nearer unless it might be a stray antelope, and that was not very probable, and besides I had plenty of ammunition along, and had come out here as much for owls as anything, although I knew they were not very good to eat, but were rather tough when boiled; in fact, I was something of a hunter myself. All which demonstrates, I suppose, that success in hunting makes one boastful, even though that success be no more than the killing of an owl at short range with a shotgun.

What annoys me most, however, is the occasional empty tin cans and bottles I see scattered about. Of course in this country, where no fruit or vegetables grow, every traveler brings canned fruits and throws away the cans. Along the stage road this was expected and was not objectionable, but now, after being eight days from railroads, and fifty miles from the remotest apology for a town, these things ought to disappear. I feel like telling them, "Avaunt and quit my sight." If I cannot achieve my great ambition, and find some place where civilized man has not yet taken up his permanent abode, I do hope at least to get out of the way of old tin cans and empty beer bottles.

Our intention was to drive up the stream as far as possible, and there make a permanent camp. We cross the river (it would be called a creek in the East) and turn to the right, leaving the trail, and follow the valley of the river toward a gap or narrow opening through which it is possible to take the wagon nearly up to the foot of the mountain. The mountains are about fifteen miles distant, although they appear to be but seven. We find after going some distance that the wagon track, which also left the trail at the river crossing, takes the same general direction that we have marked out for ourselves, a matter of disappointment to us as we don't know whether the party are Indians or whites, or what influence they may have on the game. If Indians, they are, of course, hunters; but if whites, they may be a party of mining prospectors, and will not interfere with us. We continue, however, following the wagon track up some steep pitches and over some almost impassable rocks.

While Dan is resting the horses I take my Marlin and push on ahead, ascending a benchlike plateau. Suddenly I see five antelope skipping away in the distance. They scamper off behind some quaking asp timber and get out of sight. I wait and get into the wagon in the hope of coming nearer to them in that way than I could on foot. As we go around a point of woods, sure enough about 400yds. away, we see them making toward the woods. I jumped out of the wagon with a view of taking a rest across a roll of blankets in the back end, but before I got around the game had disappeared, and by this foolish move on my part I lose the only opportunity I had of getting anything like a fair shot at antelope. We push on way up into the timber, going about as far as it seems possible to go with the wagon, but the fresh wagon tracks still going on, we urge the horses over rocks and logs through a recently made opening, and finally, descending a little hill, come to where the owners of the wagon are encamped. As we suspected, they are a party of white hunters. There is their tent and wagon and close by the horse and mule, whose track we had seen. What attracts our attention particularly and raises my spirits several degrees is about half the carcass of a calf elk hanging to a tree by the side of the tent. Here at least is evidence that we are in the neighborhood of noble game.

While Dan is looking after the camp affairs, I take my rifle and stroll out. Near by is a high and bald-top mountain, and I determine to climb up there and get a good view of the surroundings, and observe the lay of the land, for in such an immense extent of new country the stranger must first endeavor to fix upon some landmarks to guide him when out hunting alone, for if he once loses his reckoning in this wilderness he might wander about for weeks without coming upon a sign of a human being, so that my anxiety was not only to find game, but to keep from losing myself. I found the bald knob to be the point or termination of a long flat ridge or table land, extending back to the base of the main mountain, which seems further away now than it did from the river crossing. On each side, east and west, was an extensive valley. On the east the valley stretched out a good many miles, for the most part thickly covered with pine. Some patches of quaking asp, with here and there a spot of sage-grown prairie, gave variety to the scene. This wooded country extended from down into the plain or level country a mile or so below our camp to back up the sides of the mountains, a distance probably of fifteen or twenty miles.

Along the nearer edge of the valley I could trace the course of Little Sandy River by the denser growth of pines and an occasional rocky cañon. About half way up the main mountain is distinctly marked the timber line. Above all this is a bare rocky surface. The mountain sides are ribbed into huge sharp-pointed ridges, high, irregular and scraggy, sharply outlined against the sky, like immense saw teeth. Where the river breaks through, the sides come down in dizzy, almost perpendicular, steepness. The highest of one of these peaks is pointed out as Fremont's Peak, and on its eastern slope still remain drifts of last winter's snow. On the other side of the table land the valley is less regular, being broken by great spurs dropping down from the main ridge. Over and beyond there is an enormous thickly-wooded territory extending up the Big Sandy. The prospect seems interminable in extent. It is beautiful, grand, imposing.

Around the camp-fire that night we learned from our neighbors, the two hunters, who had in the meantime come in, that they had arrived three days before, and until the afternoon of the day previous had only killed the elk calf, but yesterday, just as they were returning to camp, having seen nothing all day, they suddenly came upon a band of four elk, an old bull and cow and two calves; they had fired into them at close range and killed three, and the fourth, one of the calves, got away with probably a fatal wound. They had skinned and quartered the elk, and last night a whole quarter of the cow elk had been carried off by a bear. This was exciting news. We were certainly in the country of large game. I rolled up in my blanket that night with anticipations at fever heat.

Chattanooga, Tennessee.

[TO BE CONTINUED.]

A Woodcock Portrait.—H. L. Brackett, the Boston artist, has recently finished a painting of a woodcock for E. H. Lathrop, which is now shown in one of the windows of Mayott's sporting goods store. The picture was painted from life, something that probably was never done before in the case of this species of game. Mr. Brackett, however, obtained a bird, and the excellent result he has portrayed on canvas is the fruit of his study. The bird is about life size, represented as standing on a miniature sand beach commonly seen on the lowlands frequented by woodcock. In the background is a slight fringe of coarse swamp grass or ferns. A common idea is that the bird stretches its neck out and down near the ground, and with its highly sensitive ears is able to hear the worms moving in the moist sand, and then bores after them with its long bill. This idea is followed out in the picture, and the position represents much intensity, and is so faithful that when one moves before the canvas he expects the bird to fly away.—*Springfield Republican.*

Natural History.

THOSE MYSTERIOUS CREATURES.

Editor Forest and Stream:

In your issue of Jan. 31, on page 22, about the middle of the article entitled "A First Hunt in Mexico," the writer gives some account of certain mysterious large creatures that exist, and of which he had a view, in a small lake in the vicinity where he was stopping. The reading of this item brings to my mind an account of a "something" given in a book published in London, by Longman, Brown, Green & Longmans, in 1843. The book is entitled "Narratives of the Travels and Adventures of Monsieur Violet in California, Sonora and Western Texas," written by Capt. Marryat, C. B. The work is in two volumes, and commencing on page 279 of the second volume may be found the following account of the mysterious "something":

"As soon as the rider feels his horse sinking, the first movement, if an inexperienced traveler, is to throw himself from the saddle and endeavor to wade or swim to the canebrakes, the roots of which give to the ground a certain degree of stability. In that case his fate is sealed, as he is in immediate danger of 'cawana.' This is a terrible and hideous monster, with which, strange to say, the naturalists of Europe are not yet acquainted, though it is well known to all the inhabitants of the streams and lagoon's tributary to the Red River. It is an enormous turtle or tortoise, with head and tail of the alligator, not retractile, as is usual among the different species of this reptile; the shell is one inch and a half thick, and is as impenetrable as steel. It lies in holes in the bottom of muddy rivers or the swampy canebrakes, and measures often ten feet in length and six in breath over the shell, independent of the head and tail, which must give often to this dreadful monster the length of twenty feet. Such an unwieldy mass is not, of course, capable of any rapid motion; but in the swamps I mention they are very numerous, and the unfortunate man or beast going astray, and leaving for a moment the small patches of solid ground, formed by the thicker clusters of the canes, must of a necessity come within the reach of one of these powerful creature's jaws, always extended and ready for prey.

"Cawanas of a large size have never been taken alive, though often in draining the lagoons shells have been found measuring twelve feet in length. The planters of upper western Louisiana have often fished to procure them for scientific acquaintances; but, although they take hundreds of the smaller ones, they could never succeed to drag on shore any of the larger ones after they had been hooked, as these monsters bury their claws, head and tail so deep in the mud that no power short of steam can make them relinquish their hold."

Having always thought that the description of these animals was a canard on the part of Monsieur Violet or Capt. Marryat, as I have never seen any scientific description of them, it is to be hoped that "Aztec" may be permitted a closer inspection of the creatures that he saw, and so be able to corroborate or deny the existence of the "cawanas." W. B. HARRISON.

FOSTORIA, Ohio.

BIRD NOTES.

COCOANUT GROVE, Dade County, Fla., Feb. 16.—*Editor Forest and Stream:* The migratory birds have started northward. On Friday, the 15th, just at sunset, thousands of bluebirds and ground sparrows reached this point coming from the southward. They were very weary as though from a long flight, and spent the night among the trees and bushes close to the coast. At daylight they left and when last seen were headed in the direction of the FOREST AND STREAM office. Robins, red-winged blackbirds and peewees (Phœbes) are with us in large numbers, but the swallows have not yet put in an appearance. There are a number of loons in Biscayne Bay, and their wild cry can be heard at all hours of the day and night, but ducks are very scarce and very shy. Quail are fairly plentiful.—O. K. CHOBEE.

MT. PLEASANT, Pa., Feb. 22.—Yesterday, Feb. 21, I saw a pair of bluebirds here, which are doubtless the first of the season; I have never seen them here so early as this before. We have had song sparrows all winter. *Feb. 23.*—Coldest morning of the season thus far. Saw a pair of robins this morning. They were singing and seemed lively. More bluebirds.—E. E. CRITCHFIELD.

FRAMINGHAM, Mass., Feb. 17.—The absence of bird visitants from the north has been very marked this season in this section. This is not to be wondered at, as we have had no winter, as usually understood. Have run my sleigh but six days so far, and the local ice cutters could not get to work till last week, and then had to be satisfied with 10in. Reports have been received of a single flock of snowflakes, redpolls and goldcrowns each a few times; tree sparrows occasionally, shrikes about as usual; no grosbeaks, crossbills, snowy or hawk owls. Robins, flickers and meadowlarks have been with us all winter. —F. C. B.

BIOLOGICAL SOCIETY OF WASHINGTON.—At the 137th regular meeting, held Feb. 23, the following papers were read: Mr. E. M. Hasbrouck, a new Maryland yellow-throat (*Geothlypis trichas roscoi*), found in the Mississippi Valley from Wisconsin and Minnesota in summer, to Louisiana and Florida in winter. This rediscovered race is larger than the typical eastern form, has a louder song, and differs in coloration. Mr. M. B. Waite read notes on a parasitic fungus (*Melampsora hydrangeæ*) and on the seed vessels of the lop seed (*Phryma leptostachya*). In the lop seed the ovary bends downward when ripe and is three-hooked at the tip for attaching itself to the hairs of mammals and thus securing a wide distribution. In its favorite localities, where found by Mr. Waite, rabbits were very abundant and supplied the needed agency for spreading the seed. Mr. Charles D. Walcott sketched the distribution and age of the genus *Olenoides* of Meek and exhibited a new species (*O. curticei*) from Alabama This is a trilobite, a remote relative of the horseshoe crab (*Limulus polyphemus*) of the present time. Dr. L. Stejneger described Pallas's cormorant, a species which disappeared about the same time as the great auk, and which is much rarer in museums, than this bird, there being only four skins in collections. Steller found this cormorant very common on Behring Island, and it is possible that it occurred in the Aleutian Islands of Alaska. The last one was killed on Behring Island about 37 years ago. The natives ate the flesh of this bird, as they do now with other cormorants when fresh meat is scarce in winter. Pallas's cormorant weighed 12 to 14lbs., or as much as a goose; it had small wings and was very clumsy—a good swimmer but a poor flyer. About 30ft. above the present sea level on Behring Island Dr. Stejneger found numerous bones of this species along with mammalian remains. Mr. F. V. Colville read a paper on the fruit of *Stipa spartea*, a grass which has the peculiarity of planting its own seed in the ground by the effect of alternating moisture and dryness, which give a twisting motion to the awn, persistently driving the seed vessel downward. Sometimes this seed vessel becomes attached to the wool of the sheep and penetrates through the skin, causing a troublesome wound. Dr. C. H. Merriam exhibited a new marmot, or woodchuck, from the Black Hills of Dakota, a much larger species than the common eastern ground hog and distinguished by a very long mantle of golden yellow hair over the shoulders. The feet are not black. A black stripe, sharply defined, marks the under part of the tail.

HABITS OF THE FLICKER.—Boston, Feb. 19.—*Editor Forest and Stream:* I notice recently several notes in regard to *Colaptes auratus* wintering in Massachusetts. They can be seen at all times during the winter along the south shore, and are a source of annoyance to people owning summer cottages left vacant during the winter. They do great damage to window blinds by cutting through them, and no doubt to obtain shelter. I have shot them by carefully approaching the house, and pounding upon the side, whereupon *Colaptes* darts out, and affords an excellent shot. In several instances I have known them to bore completely through the clapboards and thin wall boarding, and take up a temporary residence inside, completely sheltered from cold and storms. Do not woodpeckers "peck" at times merely as a signal to their companions? Last spring I observed a downy woodpecker mount the top of a telegraph pole and tap several times with great vigor and then listen attentively. This was repeated several times, and finally an answer came from quite a distance. The woodpecker then beat quite a lively tattoo and was soon joined by a female, apparently, and the pair immediately made off. Upon examination with a good glass the wood appeared perfectly sound, and I was led to infer that the bird was not engaged in seeking for food at the time, but was simply rapping a signal for a companion. Should be glad to have the opinion of others on these points.—C. W. CHAMBERLAIN.

ALBINO RED SQUIRRELS.—Chateaugay, N. Y.—*Editor Forest and Stream:* In FOREST AND STREAM of Feb. 14 I saw "Subscriber's" account of a black robin. I wish to ask if albino red squirrels are often met with. I have a friend who has a mounted specimen; it is pure white and of usual size and shape of our common red squirrel. The person who captured it, near the same place a few weeks previous killed another, probably of the same litter, which was partly white, having a white strip on its back, with tail entirely white.—ANOTHER SUBSCRIBER. [Albino red squirrels are sometimes seen, but not very often.]

"HABITS OF THE OTTER."—I wish to say a word in appreciation of the article on otters, in your last issue, by your correspondent in Bethel, Me. You have seldom published a more interesting communication on natural history matters. These notes of practical men are what we want; and I hope that you will see to it that we are favored with further observations and experiences of "J. G. R."—F. C. BROWNE.

THE CALIFORNIA ORNITHOLOGICAL CLUB was formed at a meeting of ornithologists, held in San Francisco on Feb. 9, for the study and advancement of the ornithology of the Pacific Coast. The following officers were elected for the year 1889: President, Walter E. Bryant; Vice-President, H. R. Taylor; Secretary and Treasurer, W. Otto Emerson.

Game Bag and Gun.

GROUSE SNARES AND DOGS.

Editor Forest and Stream:

In your issue of the 14th inst., in an article signed "U. F. & G. P. A.," exceptions are taken to my statement "that snaring cannot exterminate the ruffed grouse."

The writer also avows that my story of the Cape Ann fisherman, who caught but two birds in forty snares, "well tended for three months," is not in the interest of protection.

Let me say, in justice to myself, that I do not yield the palm to any member of the Utica Associatian in my desire to protect any and all game birds or game animals of our country, more particularly of Massachusetts, my adopted State.

I have watched with much anxiety the almost total extermination of quail and grouse on Cape Ann. Wishing to call the attention of our Legislature to the fact that bird dogs were destroying the young broods and exterminating the grouse, I sent my former letter to FOREST AND STREAM, well knowing that through the columns of that paper the members of any State Legislature could be quickly and effectively approached.

I had hoped—and do hope now—that others would agitate the subject after I had placed it before the public, and leave me free to return to my hermit life and bird studies.

I would say to the writer, "U. F. & G. P. A.," that if he had devoted years of untiring observation and patient study, as I have, to bird life, he would have learned ere this that kindness, persecution, etc., can greatly change the type of birds. Kindness has changed the nature of some wild birds around my cabin home, until they will eat from my hand; notably the chickadees in winter and the catbirds and towhee buntings in summer,

On the other hand, years of persecution have made the grouse as wild and wary as hawks. As cunning as foxes; too wary, too cunning to be exterminated by snaring.

If my critic were here I could take him to a locality where there are six grouse, five of them young birds; and then I could show him more than forty snares, some of them artfully and temptingly baited with coral-red barberries or rosy-cheeked baldwins.

Then I could tell him (which he might not believe) that these birds have had these snares constantly before them since about the middle of October, and yet decline to be snared.

I could then introduce him to a score or more of remarkably well preserved and intelligent old gentlemen, who would tell him, as they told me, that they set snares in their youth, fifty years ago, and that their fathers and grandfathers before them set snares; that snaring has been persistently followed for an unknown number of years on the Cape.

When I located here, four years ago last August, grouse were by no means scarce. At that time there were but few dogs in the woods without masters, but of late years they have increased in numbers to an alarming extent.

I say it without fear of contradiction, that bird dogs killed nearly all of the young grouse and quail on Cape Ann last season. What will the Legislature do about it?

HERMIT.

EXPRESS BULLETS.

Editor Forest and Stream:

During the last six months I have used something over four hundred express bullets, but fail to get the smashing effects with which such bullets are credited. The bullets used were the Winchester .45, 300grs., one part tin to sixteen parts lead, with hollow point containing a blank copper or brass tube; the rifle a Winchester .45, model of '86, with slow twist. Loading my own cartridges I use 100grs. (by weight) American rifle cartridge reloading powder No. 3. In shooting into a bag of fine sand the bullet expands to about the size of a half-dollar, and looks somewhat like the cup of an acorn. In soft pine the point is flattened and expanded about the same as a solid bullet of same size and weight.

Last summer I shot quite a number of woodchucks with these hollow-pointed bullets, and in every case they seemed to expand, making a hole where they came out from three to four inches in diameter, scattering the entrails in all directions.

Last October I shot three deer with the express bullets, shooting one square through the shoulders, the deer running about forty yards and falling dead. Another, shot just back of shoulder, bullet going just over the heart, dropped in its tracks and never kicked. Another, standing slightly quartering, was struck a couple of inches back of shoulder, bullet coming out near the hip; this one went out of sight as though it was not touched, ran at least fifty yards and fell dead. In cutting up these deer I was careful to follow the course of the bullets, and there were no signs whatever of any shattering. The holes where the bullets came out were no larger than where they went in. My guide (a man who has hunted most of the time for fifteen years) said he never saw the express bullets used before, but that he had seen a great deal more smashing done on a deer's body with an ordinary .45 solid bullet with much less powder.

Yesterday I shot some cattle which had run wild (a steer and a heifer). They had been in the woods all winter and had been hunted and shot a great many times during the past month. A couple of men had been hunting them to some heavy timber near here. They called here late in the afternoon as they had got lost (it was snowing hard) and were out of cartridges. I went out with them and after following the tracks of the cattle about two miles and a half, came in sight of them on some open ground about 100yds. away. It was so dark I could not see the sights of my rifle at all and had to sight along the barrel; I dropped the steer at once and shot four times at the heifer, which was making for the woods; the fourth shot struck her in the middle of the body and knocked her over. When the cattle were dressed we found the steer was struck square in the middle of the shoulder, the bullet going out between the ribs on the other side. The heifer had a bullet through the middle of body, it lying flattened under the skin on the opposite side. As on the deer there were no signs of smashing, simply a hole straight through, no larger than would have been made by a .45 round bullet.

If this is the way the hollow pointed express bullet works on large animals I prefer the solid bullet of 300 grains, finding the latter more accurate at distances over 200yds., the express tipping over occasionally, owing as I suppose to being too light forward on account of the hole in the point.

It may be that I do not use powder enough, but I understand 100 grains of powder to 300 of lead is called an express charge. C. M. STARK.

DUNBARTON, N. H.

BUTCHERY IN WASHINGTON.—A friend writes us from Washington Territory (now State): "Let me tell you something that happened this past summer in Pacific county, W. T. Three gentlemen (?), one of them a bank cashier, went from Portland, Ore., to Shoalwater Bay for a hunt. They were unsuccessful for two or three days, but finally got on to the tracks of a small band of elk, which for some time they could not find. At last one of them came on the band and commenced to shoot, killing five—three bulls and two cows. There were but seven in the band to start with. To add insult to injury, these men left the carcasses to rot, taking but 30 or 40lbs. of meat from the loin of a fat bull. A skin-hunter is a prince to these men. Again, a friend of mine was up from the same part of the county last week. I said to him, 'Jim, how is the game making it this spring?' 'Catching blazes,' he said. 'How is that?' I asked. 'Well,' he replied, 'you see, there are two fellows in there with dogs, and in the last seven weeks they have killed between fifteen and twenty elk, and what they didn't kill they drove out of the county. And the worst of it is, they do not save any part of the most they kill, but let them lay and rot. It is a wonder to me there is such a thing as an elk left in Washington Territory.'"

MASSACHUSETTS GAME LAW.—Boston, Mass., Feb. 22.—It is probable that the seasons will be made Sept. 15 to Dec. 15 for woodcock, and Oct. 1 to Dec. 15 for quail.—HUB.

THE CUMBERLAND CLUB HOUSE.

THE SHOOTING CLUBS OF CHICAGO.

VIII.—THE CUMBERLAND CLUB.

ONCE upon a time, so goes the story, there was an English lord, and this English lord had two sons, and these two sons had a friend, and this friend had a proclivity, and the proclivity has a story.

The name of the English lord was Lord Parker—if there ever was any such a lord—and in due time the eldest son would be called Lord Parker. The simple-minded country folk of Indiana, however, called young Lord Parker and his younger brother both Lord Parkers, and if there had been any more of the family they would have called them lords too. Captain Blake, the guide, philosopher and friend of the resident Parker lords, was only a plain military man, and as such to be pitied.

The young Lord Parkers—for, as the novelist says, so must we call them from this time forth—were sent to America to see life, to grow up with the country, to go into the fine stock business, and, incidentally to all this, to invest about $110,000 of good English gold. Just how they happened to drift down into Indiana and buy land along the edge of the Kankakee marshes is something that no fellow can find out. Nevertheless, they did do this. They hauled lumber from the nearest railway station, Crown Point, distant eighteen miles, and built at a very considerable expense the large, commodious and comfortable building which soon became known far and wide throughout the country as the "Lord Parker place." They bought 160 acres of land, back from the marsh a little, embracing a part of the bottom grove of native timber, and running back toward the timbered ridge. They stocked this farm with the best of blooded stock, put up extensive barns and granaries, and laid the foundation far a grand stock farm. The house itself stood, as it stands to-day, upon a little swelling crown of land some ten acres in extent, which overlooks the vast sweep of the Kankakee marsh. The knoll is covered with magnificent forest trees, and affords a building site whose picturesque qualities it would be hard to duplicate anywhere in that immediate section. Provided with numbers of spacious rooms, well furnished, well lighted, fitted with a perfect view to comfort, this big building is somewhat of a curiosity to-day, when one reflects that it was constructed by two young bachelors, the one little over thirty and the other barely twenty years old.

If the young Lord Parkers were careful about any one portion of their house, it was about the cellars. That cellar was the wonder of northern Indiana, stocked as it soon was with the best and most expensive wines the Old World could produce. It does not seem to be known whether Capt. Blake helped fill this cellar or not, but he did much toward emptying it, and in this he was ably seconded by the young Lord Parkers and their friends, and by everybody else whom they could invite in from the country round about.

Nothing less than a grand tally-ho coach would do for these gentlemen when they drove over after their mail, or when they sallied forth to the chase. Elaborate kennels were provided, and it is probable that no known race of sporting dog lacked a representative therein. There is conflict in the statements as to the numbers of these dogs, but it is never put less than fifty or sixty, and Mrs. Driscoll, wife of the present tenant of the place, declares that there were over two hundred dogs of all sorts in the Parker kennels. Each dog slept on a spring bed. The kennel was of brick, circular, with a cement floor sloping toward the center. A man and his wife were employed to attend to it. They cooked all the meals for the dogs and had none but kennel duties to perform. A cyclone destroyed the kennel and the barns and took off one corner of the club house.

But these dogs did not serve to satisfy the ambition of these young gentlemen. They had also a great quantity of wild animals, among others a captive bear. Once in a while they would announce a grand bear hunt and would hunt this unfortunate bear all over the country with foxhounds. The bear in desperation would run out into the marsh, and the hilarious lords would follow it out with the tally-ho as far as they could go, and finally bring bruin home in the stage coach.

There was no form of sport which these madcaps did not practice. They must have had grand shooting at wildfowl in those days, and there was also upland and timber shooting. It seems, however, that they sometimes wearied of such tame sport as this, and were contented with nothing but to lie in bed and shoot flies on the ceiling with the pistol. The walls of the rooms were peppered full of holes from one end of the house to the other.

All this sort of thing took money. Remittance after remittance came from the old country, but didn't seem to do anything but create a demand for more remittances. At length the old Lord Parker, or whoever constituted the remittance-sending power, over in England, grew a little suspicious, and despatched an agent to investigate this singularly bottomless stock farm. The true state of affairs was disclosed. The remittances stopped.

When the remittances stopped everything else stopped. Then the young Lord Parkers, to pay what were probably gambling debts or other extravagancies brought about by Captain Blake's proclivity for spending money, resorted to the good old English expedient of borrowing money. They mortgaged "Cumberland Lodge" to Mrs. Clark, mother of Dave Clark, whom many Chicago men will have seen about the Circuit Clerk's office. When their mortgages fell due they had them renewed, again and again. At length, so goes the story, the elder Lord Parker went back to England and went insane, probably from drink. What became of the younger boy I do not know. Capt. Blake was last heard from in charge of somebody's kennels in Philadelphia. The mortgages were now foreclosed, and a rapid decadence in the whilom glory of Cumberland Lodge ensued.

But, Phœnix-like, this structure whose foundations were laid in a genuine, if wild and reckless, love of outdoor sports, was destined to rise again for life in a similar atmosphere, and to flourish in an existence more enduring if less glorious. The property not yielding returns the heirs of Mrs. Clark sold it to a club of Chicago sportsmen, organized for that purpose, and incorporated under the name of the Cumberland Club. That was in 1881, and since then the big house has echoed again to good cheer a trifle less unbridled than that of the old days, and the present owners of the property have paid their regular respects to the wildfowl of the big marsh, until these last two years of dearth, when there hasn't been anything much to pay respects to; failing of which they have devoted themselves to trap-shooting, to fishing and to those large and enthusiastic picnics, half club meet and half Fourth of July, wherein the Cumberland men, in common with their jovial brethren of the other clubs, delight occasionally to revel.

The present railway station for Cumberland Lodge is Lowell, Indiana, on the Monon route. It is distant about six miles from the lodge, over a very pretty and restful country road. If the shooter takes the night train down, he will be obliged to take this drive at an hour near midnight, and if this be in duck season, the temperature may be a trifle low. Against this he has the alternative of spending the night at the sleepy old town of Lowell, at a hotel which has a firm grip on the early half of this century. This, however, and his further contact with a quaint and simple life among the inhabitants of that easy and untroubled land, will be a new and pleasant experience to him, and the more prized as he is proportionally not more duck hunter than hunter of odd corners of life. If he chooses to forsake the marsh entirely, and wander back along the sweeping ridges of nut-bearing woods, he may, I pledge him, find himself in surroundings which will take him back to the days of Daniel Boone. True to the instinct of the early pioneer, the settlers who live in these little log houses preferred to hew out their homes and farms from the solid forest, rather than take up the wide reaches of rich prairie lands and open glades, and here, in much the same simplicity, and quite the same apparent poverty of the earliest days, they live to-day, heedless of the bustle of the busy world near by. You may find here hoarse-voiced and gray-haired squirrel dogs, whose stiffened limbs will lead you after a sport of days gone by. Here you shall find still the old muzzle-loading rifle, and some long-legged fellow who will wield it with much of the old-time skill. Yonder are the still brown woods, sombre, mysterious, quieting, pathetic, mournful; and as you pass on to these, following the ghost of dog and rifle, there at the clearing's edge stands an old white-haired man, even yet deft wielder of the axe, and turning toward you a face lit by the light of other days. You are, even now, even here, in the land of the axe and rifle.

Hard by and in close contrast is the land of the boot and breechloader. And in Cumberland Lodge, big, well furnished, cheerful, modern in all its appointments, you shake off the feeling of sadness, which is so closely attendant upon a near look at the past, and settle down to a big dinner, which Mrs. Driscoll, wife of Martin Driscoll, the club superintendent, will have prepared for you. After that, even if you do not care to go out on the marsh, you will have plenty to amuse you in a stroll through the big house, in a trip to the well-stocked boat house, and a visit to Mr. Driscoll's pen of tamed Canadian geese, who will softly honk to you if they think you have some corn. A portion of these geese in the wire pen are a cross between the Canadian and the Chinese goose, and are a small, singular looking bird, of a general bluish color, and with a hairy crest extending down along the neck. Their note is hoarse and strident, and does not very closely resemble the resonant and not unmelodious honk of *Canadensis*.

The Cumberland Club owns in fee simple only the little wooded knoll upon which the club house stands, a plot of about ten acres. It holds 3,600 acres of the marsh by lease, and its territory covers some exceptionally good duck country. The records show the shooting to have been at times very heavy, and quite as good as the average of the other clubs up to within the past few years, when, as everyone frankly confesses, the shooting has been capricious, and, indeed, almost worthless. There is little doubt, however, that a year of high water and good feed will bring the mallards and teal and bluebills back in as good numbers as before, and the member who has Cumberland stock should hold it with jealous care, for there is not any prettier stretch of marsh out of doors than that which sweeps up almost to the door of the lodge.

The strip of marsh which lies right at the edge of the grove, just below where the trap grounds are arranged, is said to be the best jacksnipe ground in the country. It must be full of the feed most sought by that bird, for it can scarcely be driven away from it. A bag of twenty to forty each, made by two guns in the morning, has been reported in the afternoon on the same ground, and very often the bulk of the birds will drop in again not far behind the shooter.

There has been a great deal of trouble with fire on the Cumberland marsh, and it has been repeatedly burned over in large section within the last few years. The marsh was on fire to the southeast on the evening of my visit, and it seemed probable that the flames would make considerable headway into the body of the marsh. These fires are probably set out by malcontent natives who imagine they are doing themselves good by injuring the sport of the club members. There cannot be any doubt that these repeated fires have injured the feed. The spongy and peat-like soil, made up largely of matted roots, continues to burn for days after the passage of the surface fires, the gases thus generated exploding in miniature eruptions all over the marsh. In such a state of affairs the roots of all vegetation cannot fail to be destroyed over the whole section not actually lying under water. There can be no benefit in this. A mallard duck does not naturally resort to a barren and blackened waste in its search for a resting place and food.

The Cumberland Marsh is crossed by one or two big ditches intended as drains; but the State of Indiana does not seem to have gained much by its efforts at the reclamation of those lands. Through the effacing fingers of time and marsh alluvium, the ditches have well nigh fallen into an innocuous desuetude. The old "18-foot ditch" is altogether filled up. They are handy as boat-ways, and as such are duly appreciated, and they also serve as a fishing ground for an idle day; for, although only a foot or two deep at low water, they fairly swarm with little pickerel, which the Cumbeland men delight to slay. The pickerel are mostly such miserable, scrawny, no-account things that I should think they would be happier dead. They are not bad eating, however, and once in a while a big one is taken.

The marsh water of the ditches, though discolored to a deep reddish brown by its passage over and through the continuous vegetation, seems to be pure and not unhealthful. There is no ague in the water or in the air, and a more healthful country than this now is would be hard to find. Indeed, the whole region of the Kankakee swamps seems now to be relieved of all odium of ague or malaria, and some physicians of Chicago have sent patients down to the club houses of the Kankakee for a six-months' visit, during which they have gained rapidly in health and vigor. As a place for a "day off," and a resting spot in the heated term, there is no more delightful locality than the shaded yet breeze-swept point occupied bp Cumberland Lodge: and that the members fully recognize this fact is shown by the club register, which on some midsummer dates holds long lists of gentlemen and ladies who have thrown off the heat and burden and come down here to have a good big romp. This *dolce far niente* feature of the Chicago shooting clubs is a marked one and a commendable one. The whole atmosphere here is one of absolute freedom from work or care, and of complete surrender to the mercies of the day and hour.

The reception room of the Cumberlands is a large double room, and serves also as gun room and locker room, as is the case in most of the club houses. Every thing is simple, plain and business-like in this apartment. The parlors are nicely and the sleeping apartments neatly furnished. The superintendent and his family live in one part of the same building. The plan of the superintendent's retention is that in force at the other river clubs. He is paid a stated sum, paid for meals actually had by a member or his family and guests, and is allowed further the privilege of carrying on a farm. The fresh country products of the farm are esteemed as privileges by the city people who come down to the lodge.

There are plenty of pushers accessible at the Cumberland Club, all of whom are skillful, thoroughly posted on the marsh and quite reliable as aid to the shooter. Among the men who sometimes take a hand at this are the Allbright brothers, three old bachelors who live together in a little house just at the turn the sandy road makes up to the club house. These men are rather lightly alluded to as the "Swamp Angels." I do not like the allusion. It is probable that the lives, the inherited traits, the misfortune, perhaps, of these men have left unkind traces on their mental vigor. They may be odd, eccentric, even yet more worthy of the significant touch upon the forehead, but they are yet simple, kindly, honest and hospitable with what they have. No more jeers should go their way, but only a graver kindness. They have been the butt of other writers and the subject of many an untimely jest by thoughtless hunters and more than thoughtless neighbors. It is time for that to stop. It would be a great deal better fun to see if their lives could not be better understood and made more happy.

The boats used by the Cumberlands are chiefly of the Green Bay model, and they are well suited to marsh work. They pole easily, draw light and sit strong on the water. The main fault is that they have not rake enough to ride down driftage well. The decoys and all other appliances are admirable. The natural cover of the marsh is such that artificial blinds are not in much requisition. I have in a previous article spoken of Mr. Geo. T. Farmer's two dugouts. He doesn't use any other kind of a boat, and skims around alone all over the marsh in his tipsy-looking craft, not getting any wetter than anybody else. Mr. Farmer is one of the most regular and most successful shooters of the club. There has long been great rivalry between him, Mr. C. D. Gammon and Mr. W. W. McFarland as to which should hold the palm as most persistent and successful duck shooters, and when a good season comes again it is very probable that they will resume the contest, in which they will be joined by Mr. Shepard and a number of other successful if less frequent visitors to the marsh.

They are able and enthusiastic sportsmen who make up this club, and in the following list of members a reader will recognize a number of names familiar to every gathering of shooters in and around this city:

LIST OF CUMBERLAND CLUB.

C. K. Herrick, President; Henry Stephens, Vice-President; W. L. Shepard, Secretary; John Heiland, Treasurer; Geo. T. Farmer, John O. Blake and H. P. Thompson, Board of Managers. Members—A. G. Spalding, W. C. Scupham, F. P. Blair, G. M. Davis, M. J. Eich, Chas. E. Felton, Geo. T. Farmer, Walter Mattocks, C. D. Gammon, James Gandner, R. R. Street, John Heiland, J. M. Hutchinson, Henry Stephens, H. W. Loveday, W. N. Lowe, E. W. Lee, W. W. McFarland, W. G. McCormick, John F. Gray, George B. Kerr, Rev. Ed. A. Kelly, Frank C. Roundy, A. M. Hofman, W. L. Shepard, W. P. Freeman, F. B. Norcum, H. D. Nicholls, J. O. Pierson, Chas. E. Rollins, John M. Smyth, Perry H. Smith, Jr., Jas. A. Sexton, H. P. Thompson, E. W. Gillett, Samuel T. White, L. P. Hansen, Geo. R. Grant, G. F. Harmeyer, Geo. McConnell, F. O. Griffin, W. L. Goggin, Geo. Hoffman, Jr., H. G. Purinton, John O. Blake.

E. HOUGH.

No. 175 MONROE STREET, Chicago.

MINNESOTA, Mo., Feb. 19.—A glorious open winter in this part of the State. Prairie chickens wintering finely with plenty of food.—C. P.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

THE MAINE GAME LAWS.

Editor Forest and Stream:

Of "Nor'east's" criticism in FOREST AND STREAM of Feb. 7 no one has any right to complain, least of all the writer he takes to task. One of the chief uses of FOREST AND STREAM, and to many its greatest charm, is the free interchange of views by its readers on subjects of interest to all. That all should agree on any subject God forbid. A dreary world would we have of it if all minds thought alike. Yet to glean good out of any discussion it is the part of wisdom to check the inclination, to which all of us are more or less prone, to question the sincerity of the motives of those who differ from us, and to believe all men wholly bad who do not subscribe to our favorite tenets.

"Nor'east" wastes considerable indignation over the little tale of the moose killing out of season; and calls it "unjust, misleading and necessarily untrue," and wonders that the "editor of our paper would allow such statements to be made through its columns." Nevertheless it is true, every word of it. Why not? The man who fired the shot was only one of several guilty ones. Were not the guide who paddled the boat and the hotel man who harbored the venison equally subject to penalty? As to the procceedings taken by the wardens or Commissioners nothing was said, but it does not follow that there were none. The point illustrated by the anecdote was simply the length guides and hotel men will go to protect visitors who have illegally killed deer, not "the tyranny of the Commissioners," as "Nor'east" seems to have taken it. Our worthy Commissioners have earned the respect and deserve the support of all, and their best friends will not imagine attack where nothing but praise is intended. If a law is unwise, amend it, don't stand off and damn the executive.

Again "Nor'east" is positive that it is "impossible to frame a law to allow a sportsman to carry home his bit of venison and not allow the market hunter to market his spoils to almost any extent." Why has the State found it impossible to prevent the shipment of trout to market, while allowing the angler to take home his box of fish with him? Then why cannot a similar regulation be made for the benefit of a deer hunter? Look at it generously, "Nor'east." You go to the woods and can carry to your home the entire carcasses of three deer, two caribou and one moose; and at the same time say to your companion from New Hampshire, "You can leave your share of the spoils of the chase on the ground to rot, or you can carry it out of the woods to give to strangers, or you can even sell it to a Portland game dealer; but not a shred of hide or hair, not an ounce of flesh can you take to your home. The antlers you would prize so much are legally yours of course, you can have them mounted and hung any place you wish within the State of Maine, and whenever you want to see them we will let you come and look at them." Your friend in astonishment asks, "Do you mean to say that the State of Maine tells the stranger that is within its gates, 'This article is your property, lawfully acquired, and our laws will defend your possession, even imprisoning him who attempts to deprive you of it, but when you leave the State this item of property, absolutely yours, must be left behind." This is clearly not equitable. Is it even lawful? The power to regulate commerce between the States is by the Constitution reserved to the Federal Government, and it is sound law that a State has no more right to interdict commerce in one species of property than another. You may prevent the felling of timber or the killing of deer if you choose, but make either lawful and you cannot prevent him who legally acquires ownership from carrying his property where he wishes. I propose to take my moose to New Hampshire, and if you attempt to prevent me, I shall appeal to the protection of the Federal Courts." If the possibility of this question being brought to an issue is recognized, and intelligent provision made for meeting it, we may find that thereby we have prevented the doors being thrown wide open to the market hunter.

"Nor'east," while giving a qualified approval to the shooting license system, urges that the section of the Constitution providing for "the right of the people to keep and bear arms," would render such a law invalid. This is an error. Several of the States have such laws, New Jersey is an instance, Maryland in a degree another, and the courts have upheld their constitutionality. Again, the laws against concealed deadly weapons, almost universal, have been held to be constitutional as being mere police regulations, and within the province of States and cities to control.

"Nor'east" is very positive that the fawns are not all weaned by September even, and individual instances may give color to this view. At times healthy mothers will continue nursing after a child is able to walk alone. The real point is whether the fawn is able to care for itself by August, for it may continue to suck far into the winter, and certainly follows the doe for a full year or even two. On this point Caton, in "The Antelope and Deer of America," gives us little exact information. He tells us that deer in confinement breed "later and later each succeeding year" (p. 304). That "the fawns are weaned by the time they are four months old" (p. 308). The rutting, however, begins in September (p. 307), and nursing is, of course, over before that. This is by no means uniform, however, as, in referring particularly to the moose, he says, "The rutting season with the old animals commences in September, and the fawns are dropped in May. With young animals this season is later with both sexes. In general, it may be said to commence at the time the antlers of the males are divested of their velvet, and this remark is equally applicable to all of this great family of ruminants, though, as I have shown elsewhere, they are capable of procreation at any other season of the year, and when opportunities are wanting at the proper season they at least sometimes breed at other times of the year" (p. 280). As to the proper season for beginning the chase, he says, "The proper season for hunting the moose is at the commencement of the rut, say in September, when his antlers have perfected their growth, the velvet has been rubbed off, and they have become finely polished against the trees. Then it is that he is in the best condition and the venison is the choicest" (p. 280). When the bull moose "finds himself accepted by an agreeable partner they retire to a deep, secluded thicket on low marshy ground, where they spend their honeymoon of three or four weeks, * * * the male at least scarcely taking food" (p. 278). "During this connubial period the male moose becomes emaciated, and at its termination retires to still deeper seclusion, where, with returned appetite, he tries to recruit his flesh and strength wherewith to meet the rigors of winter; but if he is an old buck he but partially succeeds in this, and if the hunter has to depend on his flesh to supply his camp he needs sharp teeth and a good appetite to make it tender and delicious" (p. 280). This is the condition of the moose in October, a condition analogous to a spent salmon or kelt, and yet "Nor'east" declares this to be the proper season to kill him in, and would not even give the title of sportsman to him who would hunt in September. If deer and moose to any great extent nurse their young in August it would be a valid reason for making that month a close season, but that they sometimes nurse in December even would not affect the question. Surely many of your readers can give us valuable information, gleaned from practical experience, on so important a point.

But to refer again to the reasoning of the original communication. Deer are now killed in Maine in every month from June to March. The killing in summer is by visitors with the aid of guides. The killing late in the winter is by market-hunters for gain. The guides take their parties into the woods in June, July, August and September, because otherwise they secure no profit from the game to themselves, and by reason of this well-known fact they wouldn't "dare to" take any active steps to prevent crust-hunting by others. Our Commissioners and wardens, able and energetic as they are, have been unable to stop this illegal work. Now, if we give the guides a chance to run something in August and September, it will be to their interest to stop killing in June and July, when the fawns are dependent upon the does, and also put it in their power to stop the crust-hunter at his work. "Nor'east" does not answer this by saying that "those lawbreakers are not entitled to any consideration whatever," for this is not a plea for the guide, but on behalf of the deer.

ANTHONY MORCE.

BURSTING OF A RIFLE BARREL.

Editor Forest and Stream:

An instance of the bursting of a rifle barrel came under my observation recently, which presented some unique features. Two boys were shooting at a target with the rifle barrel of a three-barreled Baker gun. After bursting the rifle barrel they brought it to me to find an explanation. The conditions were these: There were three longitudinal rents or splits extending from the point of the forearm about three inches toward the muzzle. The two "ribbons" thus formed between the rents were bulged outward in the middle. A bullet was jammed at their junction, three inches above the forearm. The only explanation I could offer was that a bullet from a previous discharge had lodged in the barrel. But they felt sure that every bullet fired had gone to the target.

After taking away the gun and ramming out the bullet they brought it back and showed me that there were in fact two bullets jammed together. One of the boys then remembered that a cartridge had failed to fire, and after some diversion of his attention from the matter he had extracted the faulty cartridge, which was empty, but he failed to note that it had not been regularly discharged. He inserted a fresh cartridge and attempted to shoot, which resulted in bursting the gun.

My conjecture is that the defective cartridge had no powder in it, and the fulminate in the cap had sent the bullet far enough to lodge as an obstruction in the barrel. The metal of the barrel was very thin and exhibited great toughness of fiber, which was longitudinal and without any cross fibres, as the rents were clean cut and parallel to the axis of the bore.

COAHOMA.

AMASA AND THE FISHER.—Colebrook, N. H., Feb. 11.—A vigorous winter is here at last with not more than one foot of snow in this valley, and a prospect of game wintering well. The first snow that came to stay was Jan. 21. Ward came out from his camp on Dead Diamond last week. He gives an account of trailing a fisher that had carried a trap six miles after breaking the chain. He found that the trail led under the trunk of a large tree that was uprooted on the mountain side, falling down hill, the earth clinging to the roots in a way to form a cavity, the only entrance to which was by crawling under the body of the tree. This is a thing an old guide will not do until every other way to approach a wildcat has been tried. A careful search revealed a 2in. opening through the roots, and hair could be seen inside. The repeater was carefully aimed and discharged. The hair remained in sight, and all was silent inside and out after the echoes had exhausted their force on the sides of those granite peaks. Amasa wanted that fisher. After carefully setting his rifle against a tree he went under that fallen tree headforemost, the light in the little opening was not sufficient to enable him to outline the cat, and thinking of claws he began to grope about for a stick to try the supposed dead animal. After prodding it he came to the conclusion that it did wince a little, but about that time a pile of sticks and leaves broke through within a foot of his head and another head with it! But the size was the surprising part in that scene—as the visage opened, hooked ivories over an inch in length were exposed to view. Ward says there was only room for one to get out of that hole at one time. He wanted to show his respect for strangers and so gave the other chap all the room he could. "How many times did you shoot, Amasa?" "I don't know," was the reply, "but when the smoke cleared away a large bear lay in full view."—NED NORTON.

NORTH CAROLINA GAME LAWS.—Efforts looking to the more efficient protection of game in North Carolina are being made this winter, though it is as yet uncertain whether any needed reforms will be accomplished. Like most of the Southern States, the laws of North Carolina are unintelligent, loosely drawn, and to a large extent local. An attempt is being made to secure a codification of these laws which will condense them, make them uniform and provide for their enforcement. Among the bills now before the Legislature is one entitled, "An act to prevent the total annihilation of wildfowl in the State of North Carolina," which, in view of the unprecedented scarcity of fowl in the West and North during the past shooting season, will have a special interest for gunners all over the land. A special committee of the Legislature was appointed last Tuesday to hear arguments on this bill.

UNCLE TINE'S BEAR STORY.

NOT long since the writer had the pleasure of spending an evening with "Uncle Tine" Withers, who is well known through this country as the "old bear fighter," and although white with the frosts of sixty-seven winters and covered with scars, he is ready to do battle with Bruin whenever he finds him. Among his many stories of bear and deer hunts, and Mexican and Indian war experience, he told the following, which I will try to give to the readers of FOREST AND STREAM as nearly as possible in his own words:

"There had been a bear killed a hog or two down in the bottom not far from my house, and so one morning Meade and me and a nigger struck out to kill it. We didn't have but nine hounds, but they was good ones as ever nosed a trail, and I knowed if the bear hadn't left the country old Bob would find him. Sure enough we hadn't more than got there before they commenced trailing, and pretty soon they jumped him. He led us a chase over some pretty rough swamp for about a mile and then treed. We got there as quick as we could, and found the dogs doing their best to climb a big cypress. About thirty feet up there was a big hole where a limb had been twisted off by the wind and had broke through to the holler. We knowed Mr. Bear was right there, but how to get him was the question. We had no axe, it was a good long way home, and the tree was a big one anyway. Well, as luck would have it, there was a big bamboo vine run away up the tree and seemed to be pretty strong, and about half way up to the hole was a good strong limb that stuck right straight out from the tree. I was pretty active in them days, and I concluded finally that I could climb the vine to that limb, and stand there and poke fire into the hole; so we got some "choctaw" chunks and set 'em afire, and got a long slim pole to raise 'em with.

"When we had got everything ready, I clumb up my vine to the limb and had just got sit down on it, when I heard a clawing inside of the tree, and directly I see a paw laid up into the hole, and then the other paw and then his head. He was a big fellow and he didn't look pretty a bit from where I sat, but I'll give you my word, I was a heap worse scared of Meade than I was of the bear. He was one of these terrible excitable kind of fellows, and he was dancin' around down there with his gun cocked and I didn't know what minute he was going to shoot. He was just as apt to hit me as he was the bear, and even if he didn't hit me, I didn't want a wounded bear coming down on me, so I'd quarrel and cuss at Meade a while and tell him not to shoot, and then I'd talk to the bear. I told him if he had an idea of coming down to just let me know and I'd try and get down first. The bear didn't appear to be a bit bashful. He would look all around, and then at the fellers down below, and then at me—wasn't scared at all, but didn't seem to know what to make of us and the dogs. Now if you don't think I felt sorter shaky, you are mightily mistaken. There was Meade below with that gun, and a bear above that looked like he had just as leave come down as not. I just tell you, it was a pretty tight place, but Mr. Bear finally figured it out I guess, that down the holler was the safest place for him, so down he went. You bet I was glad he took that notion too, and just as soon as he got pretty well down, the fellers below stuck the end of the pole into one of the big chunks and handed it up, and I raised it on up to the hole and pulled it loose. I got down to the ground in a hurry, and by the time I did the fun commenced.

"Of all the rearing and snorting rackets you ever heard in your life, they was in that tree—scratching, snapping, growling and pounding all mixed up. He stayed down there with that fire until we could actually smell burnt hair and cooked meat, but he had to give it up after a while, so out he came, smoking like a tar-kiln, and bounced on to a limb just below the hole, and began licking himself. It was all I could do to keep Meade from shooting until the bear got still, and then he just had to shoot. He turned loose his shotgun barrel and the bear never quit licking, and then he blazed away with the rifle barrel, and the bear sorter snapped at his hindleg. I was laughing so at the smoking bear and Meade that I never thought to shoot until he had made up his mind to come down, and when he did, it was in a hurry. Of course, them dogs they just covered him, and I was awful glad Meade's gun was empty, or there would have been some dead dogs sure. Well the bear soon made a charge and got through the dogs, but he didn't go far before they stopped him again, and then he was good and mad, and I knew he would kill a dog in a minute. Sure enough he did get one down, and as he did I made a rush at the dogs, and getting a little clear space, I put a load of buckshot, wads and all, right into the burr of his ear, and that settled him. As soon as we could get the dogs off we commenced looking for Meade's shot, and where do you reckon it was? Well you can believe it or not, but there didn't a single one of them buckshot hit that bear and the rifle ball had gone through his heel.

"He was a nice fat bear, but that skin wasn't worth packing home." KOKO-KOHO.

WEATHER FOR DUCKS.—St. Louis, Mo., Feb. 23.—*Editor Forest and Stream:* The many sudden changes in the temperature have caused the ducks to keep moving from south to north and vice versa in quite a lively manner. Last Saturday it was pleasant and reports came in thick from all the ducking resorts of good flight, but before the hunters could reach the marshes and lakes they had left, and all because a cold wave struck in here. For a few days we enjoyed a bit of genuine winter and all thought of ducks disappeared from the minds of the sportsmen. Wednesday the wind went to the south and immediately the mercury took an upward shoot. On Thursday it was pleasant enough to lay aside overcoats without feeling in the least uncomfortable. Broad smiles of contentment were plainly visible upon the faces of the sportsmen, as they saw possibilities of returning flocks of ducks to this locality again. They came, and in far greater abundance than at any time this season. Now the duck shooters were happy once again. Bustle would be a mild term to apply to the activity that manifested itself on account of the many telegrams which came pouring from points within 100 miles of this city. Guns were cleaned up, shells loaded, and everything was made ready. But fortunes seems to favor them not; for last evening the wind shifted to the northwest and brought down a regular blizzard accompanied with a light snow. The temperature since yesterday has fallen fully 40 degrees, and the Signal Service says it will go down to zero before to-night. Many of the gentlemen who left Thursday night, no doubt, now wish they had remained at home, where they could toast their toes at their own firesides. Friday evening nearly all of the sportsmen returned to the city thoroughly disgusted with their trips, and they have fully resolved not to venture forth again until the weather has settled.—UNSER FRITZ.

OHIO QUAIL.—The Commissioners recommend changes in the law, to make the open season for woodcock from July 4 to Dec. 15 inclusive; duck shooting to be continued to and including Dec. 31; rabbits and doves to be protected, to prevent so-called sportsmen, under pretense of hunting rabbits, from shooting quail out of season. They urge that the conveying and shipping of quail beyond the boundaries of the State be prohibited; and they say, "We consider this feature very important, as great inducements have been offered violators of this law by parties advertising for large quanties of quail, which they ship to Eastern markets, thereby greatly depleting our fields of this bird which we so much wish to protect."

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

TUCKERTON WATERS—I.

A SOJOURN of five weeks at Beach Haven, New Jersey, last summer, with daily excursions upon Tuckerton Bay and its adjacent waters, gave much familiarity with the resources of the region for sailing and fishing. From Bay Head, which is sixteen miles below Long Branch, all the way to Cape May, the Jersey coast has a continuous line of bays and thoroughfares lying between a narrow line of beach and the mainland. The beach varies in width from one-half to an eighth of a mile, and the bays from six miles to half a mile. From Bay Head to Brigantine Beach the broad waters are nearly continuous and frequently have as much depth as ten feet over extensive areas. From Brigantine Beach to Cape May there is a succession of shallow bays or sounds traversed by narrow and much deeper channels and connected by thoroughfares. Great Egg Harbor or bay is the only exception to this. Numerous inlets connect these waters with the ocean. In the region of the large bays there are but two within a reach of nearly fifty miles. Below Brigantine the inlets are much more numerous.

Beach Haven is situated near the southern limit of the region of the large bays, and at their widest part. It is six miles north of Tuckerton Inlet and about sixteen miles south of the noted Barnegat Inlet and lighthouse. It is essentially a watering place. Good sailing, fair fishing and fine bathing conspire to this result. The regular programme for the day is: Fishing for gentlemen and enterprising ladies frym 8 to 12; bathing for all from 11 to 1; family sailing parties, with some fishing, from 2 to 6. Long and wide areas of deep and landlocked water, over which the wind has as free play as over the ocean, offer facilities for safe sailing seldom equaled. The yachts are all cat-rigged and are about 26ft. long. They are graceful in shape and motion, and are manned by a thoroughly capable set of captains. They are always managed by one person only. Often as many as thirty or forty may be seen at once, with slack sheets and sails flapping in the wind, drifting with the tide, while their occupants are drawing up the weakfish.

The fish most numerously caught here are weakfish, sea bass, barb or kingfish, bluefish and striped bass, here mostly called rockfish. Besides these there is a smaller run of cunners, porgies and spots. The weakfish are by far the most abundant, and are most generally sought for. Throughout the whole season the professional fishermen could get from 150 to 250 per day, averaging in weight nearly half a pound. Parties in yachts would get from 30 to 70 in a morning, though sometimes the numbers ran much higher. The ordinary procedure was to sail a mile or so out into the channel, point up a little into the wind, slack the sheet, and let the boat drift with the tide. The lines are then thrown out over the windward side of the boat. In this way the party drifts over the fishing ground. When it is past the captain hauls in the sheet and sails back to the starting place and takes another drift. Near the turn of the tide the boats sometimes anchor. But with the tide running full there is too much current to reach the bottom through the twenty feet of water. A light wind against the tide gives the best conditions for drifting, for then the boat moves more slowly than the current and stays longer on the good grounds; also there is a fair wind to sail back for another turn. With the wind and tide together everything is reversed, and the result is not satisfactory. The ordinary baits are hard crab, shrimp, clam, mussel and pieces of fish. The first two are mostly used, though the others are nearly as good. The yachts are always liberally furnished with hand lines and bait, but the true angler uses his own pole and tackle. A light strong line, and double or treble snoods and leaders are the right tackle. Anything large and heavy catches too much of the strong current. Even with these a limber pole cannot be handled to advantage.

The right-minded fisherman, however, does not follow this general plan. At certain stages of flood tide the larger weakfish run up the little channels and scatter over the shallow flats, hunting among the grass and seaweed for shrimp and small fish. Through these flats there are occasional deeper places called sunks, and these are points of rendezvous for the scattering and returning fish. To these places the patient angler proceeds, and taking a light pole and fine tackle, he lets his bait float astern, held midway in the water by a due adjustment of cork and lead. If the fish happen to be running well he will have the pleasure of landing five or six (or twice as many) weakfish of two or three pounds weight. In the main channel not one fish in fifty will turn a pound. After various experiments I settled upon a Virginia hook, Nos. 1 to 4, according to the bait used. Soft crab takes the large size, hard crab or clam a medium, and shrimp the smaller. A foot or two of strong leader makes a nice rig to handle, though it may not secure any more bites. One is discouraged from using very fine tackle by the likelihood of hooking a 10lb. shark. I have taken three of such fish in pretty close succession. The weakfish is good when fried fresh, but it quickly loses its flavor. But it is best boiled, and when your three-pounder of the morning's catch is so served for a late dinner, you discover a delicacy of flavor hitherto unsuspected. Taken in the way here described the weakfish may well be classed as a game fish. He is soft of flesh and therefore soon exhausted, but a large one will make things lively for a few minutes. He has a tender mouth and requires careful handling, for one is never certain of his catch until it is actually in the boat.

Next to the weakfish in number come the sea bass. If you take a six-mile sail down to the inlet and fish off Point Creek on the ebb tide, you will probably fill your basket with bass, running from a half a pound to a pound. And when these are fried for supper you will find in them a substantial excellence such as belongs more to beefsteak and mutton chops than to game. They are just what you want to eat when you are right hungry. The bait mostly used for these is cut from the flying fish or smaller specimens of any kind. Crab is not esteemed so much by them, but clams and mussels are readily taken. Pieces of fish, or fish bait, as it is called, has this great advantage, that small nibblers cannot soon destroy it as they can your choice morsels of clam or mussel. Small sea bass are found in various parts of the bay, but the larger ones keep near the inlets. In fact the best specimens do not come in from the ocean at all, and can only be caught by going outside.

The barb, or kingfish, or hake, disputes with the sea bass the first place as a pan fish. Its flesh is hard and close and of fine flavor. Moreover, it is the strongest fish of its size which those waters contain. Even a half pound fish will hug the bottom tenaciously and never fail, when drawn near to the surface, to strike down strongly and compel the giving of line or lowering of the pole. They will average nearly a pound, and if light tackle is used will generally require a little play. They pull more than a weakfish of twice their size. They are found on the points and edges of sandy bars in 10 or 12ft. of water, and their only disadvantage is that they are scarce and rather uncertain. They are fished for with clam or mussel on the bottom. Their mouth is small and under the head like a sucker's, but except in manner of feeding in no other way do they resemble that common fish.

The bluefish is frequently found in the ocean all along the Jersey coast, though it is not as numerous or as large as it is further north. It sometimes enters the bays, however, and some very fine sport was had in the early fall near the inlet. Single small specimens are not infrequently caught, but it is rare to catch them in any quantity with a squid.

Striped bass, or rockfish, are the sweetest fish which the bay affords, but they are mostly scarce and very hard to catch. They have a habit of coming close to the edges of the grassy shores, on flood tides at night, and on cloudy days. They do this mainly to hunt for soft crabs. Their method of capture is founded on this practice: The fisherman selects some grassy point, opposite to which is a smooth, sandy bottom, bare of grass. When the tide is such that it begins to flood by the middle of the afternoon, so that it will be half full or more by dark, he takes his sneakbox to this point an hour or two before the sun goes down, and draws his boat into the grass, and stakes it there. Then he baits his large hook with a generous piece of soft crab, and casts it out on the sandy bottom. In this work even the natives use a pole.

In the majority of cases, while the mosquitoes and gnats fall upon the fisherman, the crabs do likewise on his bait. Meanwhile, as his line is across the run of the tide, the drifting grass is continually clogging it. He is, therefore, kept busy fighting mosquitoes, getting crabs off from his bait and freeing his line from grass. But every now and then, if he is diligent and very quiet, he will find his bait suddenly seized and carried out into deep water with a strong rush. He will now strike carefully, so as to break nothing, and let the fish run till tired. When the struggle is over he may have a three or four or six-pound rockfish, or it may be a weakfish of the smallest figure. If he have three or four such experiences in the evening, he will sail or row home in the closing darkness well contented. If the wind blows briskly the mosquito nuisance is abated, but the crabs and seaweed are a constant factor. The rockfish, alas, is very inconstant, and seven or eight expeditions last summer saw only three fish in all. In most seasons the result would have been better, but it is always uncertain.

I believe that rather better fishing is found in the numerous inlets between Atlantic City and Cape May than the large bays afford. But to those who want a combination of sailing and fishing, nothing much better than Tuckerton Bay can be found on that coast. Besides the yachts, the charge for which is uniformly $5 per day and $3 per half day, a fair run of skiffs and sneakboxes can be hired, in which the amateur can safely and cheaply indulge his love of the water. It was in this way that the writer sought and found both health and pleasure. There is an abundance of shallow water, sheltered by islands, in which the learner can find scope for practice, and some good fishing may be had also without going into the open bay. Yet in ordinary weather these small boats may safely venture upon any of the fishing grounds. The wind was sure to be ahead when we wanted to come home from such expeditions, but no deeper sense of pleasure and consciousness of accession of health were experienced than when beating down from Ma'sh Elder Island in the quiet glow of the summer twilight, the cool night wind tempering the heated brow, and the restful peace of nature soothing the wearied brain. PENN.

NOTES ON FISHES.—In the markets of Washington, D. C., male shad averaging over 4lbs. each were found Feb. 19 in fair supply; this is a remarkably large size for males; they came from North Carolina. Steel head trout, *Salmo gairdneri*, weighing from 12 to 18lbs., are sufficiently common; among them are females with eggs nearly mature. Crevallè, *Caranx hippos*, are offered under the name of pompano. Squeteague of large and small size, and of both the common species, are plentiful. Suckers from the Potomac are abundant.

THE MENHADEN BARONS.

Editor Forest and Stream:

Occasions frequently occur to cause your readers to feel thankful for the existence of a paper that takes so timely, outspoken and manly a stand in behalf of our fish and game interests, as does FOREST AND STREAM, a paper whose high tone, intelligent conduct and progressive policy enhance its value to its subscribers and readers more and more. Not given to ill-advised and immature expressions on subjects within its sphere, its words of counsel, advice or warning merit and in fact receive the fullest consideration.

In the brief space of fifteen lines in an editorial column of the issue of the 14th inst., you have given a concise and forcible expression of views on the iniquities of the menhaden pirates in connection with their descent on the Maine Legislature.

Think for a moment! Think of the great State of Maine taking a backward step and receding from her wise course with regard to her shore fisheries and the use of the seine in the interdicted limit. Such action would be suicidal to her fishing interests. May she never subject herself to such a self-inflicted blow.

Not her own citizens alone, but those of her sister States, look with admiration and satisfaction on the course of the State of Maine in the enactment and enforcement of wholesome laws for the preservation of fish and game. Her example is worthy of emulation, and is being followed. Maine has done much and much more remains for her to do in strengthening and providing for the more thorough working of existing laws.

The three-mile limit law now in force in that State was adopted to check the exhaustion of the fish supply which was rapidly going on in her coast waters ten years since. About the same time the menhaden, from known causes, ceased to visit her shores, consequently the seiners had no incentive to violate that law. The season of 1888, however, witnessed the return of the menhaden in great numbers. It was then that these violators of law, when opportunity offered, operated in defiance of the statute.

Commenting on these violations of law the Kennebec *Journal* remarks that "a member of the U. S. Fishery Commission says he shall have all the State laws removed which regulate seining on the coast." A correspondent in a recent issue of this paper states: "The great Mr. Maddocks, I learn, is going to have the law repealed." Will he do it? He surely underestimates the weight of public opinion in that State and misjudges the temper of the people.

I am informed that Mr. Maddocks operated an oil factory at Boothbay last season, and that he appeared against the State as a witness in a case involving a violation of the law. This is certainly an anomalous position for an employe of the Government to occupy.

Maine knows too well where her best interests lie, to snuff out the light kindled by experience and grope again in darkness. Standing in the front rank as a preserver of fish and game, continually legislating in those interests, having thoroughly competent and active Commissioners, she will not now make a retrogressive move. She receives too much benefit pecuniarily and enjoys too much prosperity directly from her supply of fish and game, to act at the dictation and behest of menhaden seiners.

Massachusetts, in the interest of her shore fisheries, has a law for the protection of Buzzard's Bay. Steamers from Rhode Island went there on several occasions last summer and seined, contrary to law, but were finally forced to retire from the bay. The State of New York, by a recent law, protects Raritan Bay. New Jersey, Pennsylvania and Delaware have taken joint action for the protection of Delaware River. The good work of protection is contagious and is becoming popular. Rhode Island cannot be classed with the States mentioned. She is an unfortunate example of what menhaden pirates can accomplish in the process of extermination. She has able and willing Commissioners, but has practically no laws relating to salt-water fisheries. She once was in the lead with famous fishing grounds, as the departed renown of Point Judith, Narragansett, Barrington, Newport, Seaconnet, West Island and Block Island attest. Now her waters are poverty-stricken and depleted. Yet the oil factories at Portsmouth, with their foreign labor, gather in the dollars for their owners, who laugh in their sleeves at anything beyond the chimes of an oil barrel.

The Church steamers of Rhode Island caught 95,000,000 of menhaden the last season after July 1. This almost incredible number produced, in round numbers, 500,000 gallons of oil and more than 3,000 tons of scrap. The latter commodity more than pays running expenses, and to its value is to be added the snug sum realized from the sale of 10,000 bbls. of oil. The Church influence has dominated in Rhode Island for years, and the fishing grounds have been almost wholly ruined. The monetary loss to the State by the decline of the fisheries is many times in excess of any benefit derived from the Portsmouth factories with their imported labor. The menhaden men are represented in the State Legislature by Capt. Nat Church. As an evidence of the oilmen's influence, this is what an admirer says in substance of Capt. Daniel T. Church:

"He has fought over legislation on the fish question year after year and always came out ahead. He has won pitched battles in the Massachusetts Assembly and in the courts of Virginia and other States."

In the New York Legislature Capt. Hawkins represents the menhaden men. He vigorously opposed the passage of the Raritan Bay bill and characterized it as infamous.

In the days when sailing gear was the only appliance for the pursuit of menhaden, but little, if any, opposition to the avocation existed. It is only since the skinning process became possible and prevalent by the exchange of sail for steam power that opposition has developed, and it will continue with accelerated power till the menhaden men are subjected to the requirements of just and proper State or national laws.

The menhaden men are as but one to a hundred of those unorganized thousands who pursue for pleasure or profit the food fishes of the Atlantic coast. These men have invested their millions voluntarily in an enterprise once circumscribed by no law, and desolate waters have been the result. Now that laws are slowly and surely crystallizing in the vital interest of the whole people, they squeal and attempt to undo the little that has been done for the general good. In short they violate law and boast that they will effect a repeal.

No law along the line of this article exists or is in contemplation, a syllable of which is other than absolutely just to them and the people. Their rights are not paramount, and their business, when properly controlled, will go on the same as now, bringing gold to their coffers (which is apparently all they comprehend), notwithstanding their pretended fears to the contrary.

No interest whatever can suffer by their subjection to law. The net and twine factories will still find a growing demand for their productions. The tackle dealers will flourish as never before, and the millions in money dispensed by summer sojourners will be doubled. This is not all. There are thousands of deserving fishermen along the entire stretch of coast that would be immensely benefited by the revival of their once prosperous calling. Why? Because the conditions known to be the best for the preservation and perpetuation of the food fish supply would be restored to their natural state.

No, Mr. Editor, it is too late in the day for backward steps where such important economic questions are involved. The State of Maine, rather than repeal the law referred to, will, if she continues in wisdom, fortify it for her citizens and the strangers yearly attracted within her borders. She, as well as every other State bordering on the Atlantice north of Hatteras, should be alive to the fact that those who pursue menhaden for their oil, and those whose dollars are invested in such enterprise, are not safe advisers on the food fish question. They are not vigorous and whole-souled laborers for the restoration and perpetuation of the food fish supply.

At the yearly dinner of the Massachusetts Fish and Game League in Boston last month, Congressman-elect Randall advised the holding of conventions in each State, and then a general convention in the interest of fish laws for the Atlantic coast. Such action would undoubtedly result in much good.

Fish propagation by nation, State or individual must be supplemented by protection to secure the best results. Propagation and protection are properly inseparable. The three-mile limit, as applied to menhaden seiners, supplemented by a close season, will pave the way for the revival of the shore fisheries.

The autocratic and dictatorial methods in vogue with the menhaden men render it imperative that they be legislated into reasonable bounds. They must be made to respect the fact that menhaden are in existence for other and more important uses than that of enriching them at the expense of the people.

If the pursuit of menhaden as conducted with steamers was devoid of harm, the outcry against it would not be voiced. It is by reason of this outcry, wide-spread and determined, that it must be patent to every one that unrestrained seining is productive of ill effects. The warfare is waged to restore that which has been taken from the people by the menhaden barons.

In keeping then, with the spirit of the age, when economic questions and natural resources and possibilities are being investigated and carefully considered, let Maine add to her present law if need be; let Massachusetts do the same and let Rhode Island re-assert herself, throw off the domination of the menhaden barons and place her waters under such wise laws as shall restore their former preëminence.

Uniform laws along the entire coast are much to be desired; these, reënforced by a general law, are confidently looked for in the near future. ARTHUR MARTIN.

WASHINGTON, Feb. 16.

CARP AND SUCKERS AGAIN.

Editor Forest and Stream:

In last week's number your correspondent, "H." casts objections at suckers and carp, and he states that his methods of observation are somewhat faulty by saying that their food consists of dead and decayed substances that are garnished with mud. Now, as a matter of fact, the food of the *Cyprinidæ*, which are commonly known as suckers, consists principally of the slippery coverings of stones and sticks, and this material is composed, not of dead matter, but of the very loveliest of diatoms and desmids and algæ and fungi. The carp are fond of the larger algæ and more highly organized plants. The reason why suckers are not very good eating is because their pretty delicate stomachfuls have a peculiar odor that happens to be disagreeable to most people.

An old farmer, at whose house I occasionally stop when on hunting trips, goes to town five or six times every year, and about once a year he buys at a corner fish wagon a lot of suckers that have been caught at some time in the distant past. These he tosses into the sunny back of his wagon, along with the calico, crackers, crockery, lamp wicks, oats and hoes, and takes them home to the folks. He says they don't care very much for fish at his house anyway.

I will not champion the cause of the sucker, but for the carp I have a good word, and this good word is superfluous among readers of FOREST AND STREAM, who are familiar with the subject of European table fish. The carp properly prepared, boiled and served with butter sauce and small boiled potatoes, is a luxurious addition to our table; and this expression of sentiment on my part is not original. It may be heard in any first-class restaurant in northern Europe. It is true that the flesh of the carp is redolent of the odor of various algæ and diatoms when the fish has been recently taken from a warm pond, but the particular flavor rapidly disappears if the fish is put down the well for a few days before being killed. It is not half as much trouble to sweeten a school of carp as it is to fatten one hog, and the profit of the former work may far exceed those of the latter. I profess to be something of a connoisseur at the table, and am willing to make the assertion that "qualified carp" is delicious. ROBERT T. MORRIS, M.D.

NEW YORK, Feb. 22.

"WHERE THE TROUT HIDE," Kit Clarke's new book, is announced for publication during the coming week by Brentanos'. It will be handsomely illustrated and printed upon the finest quality of paper. Mr. Clarke is often aggressive, and usually obstinate in his views, yet always an ardent angler, and his volume will doubtless prove interesting. The author has made a careful study of the wininnish of Lake St. John, and after fully describing it, says: "It has been my good fortune to struggle with hook and line against finny competitors in nearly every quarter of the world, but never have I met so heroic a combatant as the ebony mottled wininnish of Lake St. John."

MORE PICKEREL—LESS TROUT.

IN the stocking of inland waters, a grave mistake has been made by the Fish Commissioners of more than one State. Too great prominence has been given to certain game fishes, the favorites of sportsmen, and to fancy kinds from distant localities, and too little regard had for certain other and coarser kinds, capable of yielding large quantities of cheap and valuable food for the people.

Another mistake has been the experiment, too frequently tried, and often at a considerable expenditure of funds, of putting certain favorite kinds into waters in which they had not previously existed, without any certainty that their surroundings would be favorable to development, instead of restocking with indigenous species. As a rule, the plan should be, not to introduce new kinds, that, under new conditions, might or might not thrive, but to restock exhausted lakes and streams with the species natural to them, and to keep up the supply in waters not exhausted by putting in annually enough fry to supply the annual waste caused by legitimate fishing.

Another mistake, more or less plainly seen in nearly all codes for the protection of fish and the regulation of fishing, is the attempt to keep up the supply mainly by preventing the fish from being taken, instead of so increasing the production as to allow them to be taken in increased quantities. To say that to enable the people to catch a great many fish you must prohibit them from fishing, is an extravagant expression of the underlying idea, but is nevertheless a truthful one. Two or three examples will illustrate the points I wish to make.

The Jordan and the Boyne are natural trout streams. Formerly they swarmed with the speckled trout. They have been fished out. To attempt to stock them with bass or pickerel, or any similar fish, would be folly. We do not know whether the rainbow trout, the landlocked salmon or other members of the salmon family, from other localities, would thrive in them or not; but we do know that no streams were ever better adapted to the development of the sportsman's favorite, the speckled trout. Let the Fish Commissioners fully restock these streams with this species, and forever keep them fully restocked, by putting in annually a liberal supply of young fish. Then let the sportsmen fish to their hearts' content, only restricting them to an open season of reasonable length and to the taking of fish of not less than a certan size.

Again, Houghton Lake is a natural pickerel pond. Once it was alive with pickerel, bass and wall-eyed pike, the pickerel predominating in numbers. It is well adapted to the production of these food fishes. A gentleman whose business has been partly the marketing of the fish from this lake, states that within a few years he has handled more than a hundred tons. But the supply is failing. Let the Commissioners annually put in half a million of pickerel fry, and bass and wall-eyed pike in proportion, and Houghton Lake will continue to be a source of food supply, in comparison with which in value a hundred trout streams like the Jordan and the Boyne would dwindle into insignificance. M. L. LEACH.

TRAVERSE CITY, Mich.

FLORIDA KINGFISH AND TARPON.

COCOANUT GROVE, Fla., Feb. 16.—Now is the season for kingfishing in the open waters between Cape Florida and Foney Rocks Light, where they fairly swarm. The great silvery, gamy fellows can be had in any number by anybody who will go out for them—that is, if he is properly equipped and knows how to catch them. The common mode of fishing for them is by trolling with a squid from a quick-moving sailboat, but Mr. Edward Prince, of New York, has recently demonstrated that they can be successfully taken with a rod. During the past week he has caught several weighing from 20 to 40lbs. apiece, with an ordinary bass rod, and all the handliners now stand ready to follow his example.

The upper end of Biscayne Bay swarms with tarpon at present, but it is rather too early in the season for them to gorge bait. Messrs. T. B. Asten, Dr. Grymes, Edward Prince, T. F. Falls and Frank L. Anthony, all expert tarpon fishermen, are now here experimenting with this gamiest of game fish; but thus far without making a catch. They report having caught sight of larger fish than have ever been seen on the west coast, and have had many bites; but the fish will not swallow the bait. They merely take it into their mouths and immediately eject it. Two of our native fishermen went out yesterday, and in less than an hour one of them had captured three tarpon with a grains. One of them was a splendid big fellow, weighing 145lbs. The ill success that has thus far attended the efforts of the rod and reel fishermen is doubtless due to the fact that tarpon rarely gorge bait before March. That month and April make the tarpon season, and if any one wants them let him come and get them during these eight weeks, when they are guaranteed to be on hand in quantities to suit all who seek them.

O. K. CHOBEE.

STEAMBOATS ON RICHARDSON LAKE.—Boston, Feb. 19.—I have been expecting to see some mention in your paper of the steamboat troubles on the Rangeley Lakes, or rather on Richardson and Cupsuptic. I call your attention to the matter, as I believe that it will be of interest to all sportsmen who go into this region. As I understand the matter, Capt. Barker, who has heretofore owned the only steamers on these two lakes, has had everything in his own hands. This winter, Billy Soule, who owns the fine camps on Cupsuptic, brought up a steamer and petitioned the Maine Legislature for a charter to run on the two lakes. At once Capt. Barker put in a counter petition for exclusive right to run steamers on these ponds. I may be misinformed, and if so shall be glad to be put right, but under present circumstances I think these lakes should be free to every one, and that there should be no monopoly of any of them in any way. —J. S. C.

SCARCITY OF COD.—For some time past the returns from the inshore fishing grounds and George's Bank have shown a great falling off in the catch of cod. The fishermen believe that the scarcity on George's is due largely to the extensive use of trawls on that bank by haddock fishermen. This fishery is carried on from Oct. 1 to May by a fleet approximating 150 sail. Capt. J. W. Collins informs us that such a fleet will use fully 2,500,000 hooks while fishing for market chiefly on George's Bank.

Massachusetts Net Fishing.—The committee on fisheries and game for Massachusetts will give a hearing at the State House, Boston, to-day to parties interested in the expediency of amending section 70 of chapter 19 of the Public Statutes, so that no person may be authorized to construct fish weirs within the limits of any city or town lying upon tide water, unless the people of said town or city shall by vote authorize the mayor and aldermen of said city or the selectmen of said town to grant such authority; that no license to set pounds, weirs, traps or fykes shall be given for more than one year, and that no license shall be given to any person or persons which does not locate or fix the place by metes and bounds where the same is to be set, nor upon land of another person, or in the tide waters upon the same.

Tarpon up a Tree.—Some one has redrawn the illustration of a tarpon hanging to a tree, given originally in these columns, changed the face of the angler, put on eye-glasses and made him look like a New York angler editor, and sent the thing on a wild syndicate career through the papers from Dan to Beersheba.

Shad or "Whitefish."—The first shad from a tributary of Chesapeake Bay reached Baltimore Feb. 22; they were of good size and in fine condition. Among the negroes of the lower Potomac, in the time of George Washington, the shad was commonly known as "whitefish."

Fisheulture.

MINNESOTA FISH COMMISSION.

THE fourteenth and fifteenth annual reports of the Minnesota Commission of Fisheries, from July 31, 1886, to July 31, 1888, repeat the story of difficulties overcome and great results accomplished, together with the welcome news of a healthy growth of public sentiment in favor of fisheulture and protection. The generous assistance rendered by the railroads in their efforts to minister to the public good is gratefully and conspicuously acknowledged by the Commissioners. Some of the serious obstacles to progress are mentioned in the following extracts:

"We want remedied, if practicable, the irregularity of drawing our appropriation from the State treasury. If possible, that we may have specified sums at specified times at our disposal, that the proper bills and accounts may be liquidated with regularity and promptness. In short, the demands upon the Commission to be fully met require that our appropriation be increased to $10,000 per annum at least. The demand for more fish comes to us from all parts of our State; an unending and insatiable plea, 'Give us more fish,' comes from every side. In our attempt to meet this larger and ever increasing demand for distribution and the unexpected and unusual expenses added to it, we are in debt about $3,000 to our superintendent, who has allowed his pay to accumulate that other necessary expenditures might be made; of the above amount we owe $2,348.30.

"We need also some provision to pay for the inspection of dams and the location of fishways. With the meagre allowance of money for the work we have calls to do in fishculture and distribution, we have not felt authorized to use it for that purpose and have hesitated in so using it. With the pecuniary aid of those largely interested, we have inspected a number of dams of Cannon River and Cottonwood River, and located fishways which have been built. We find it necessary to have an attorney to conduct the proceedings and manage the prosecutions when necessary. Experience has demonstrated that dependence upon the county attorney for assistance in such matters is most unreliable and expensive, from its vexatious delays which are sometimes caused by the evident reluctance to offend those who may be called upon for a vote, which fear seems to check inclination to any prompt and vigorous action. We need provision for meeting the additional cost of transportation since some of the railroads over which we are necessitated to go have withdrawn passes.

"That our work is important and valuable and well done, we have so many evidences on every side that we feel encouraged to ask more liberal appropriations to go on and keep Minnesota abreast of the progress making in our sister States of practical fishculture. We are not ashamed of our record among them. We desire still to hold our place in the front rank and continue to be distinguished for the excellence and success of our work, which has the commendation, we are proud to say, of every one who has investigated our hatcheries and ponds. Among them are not only the best fishculturists of America, but also several eminent European proficients, who have complimented us in a very gratifying manner upon our modes of culture and success.

"The community are demanding more work of the Commission every season, and the Commissioners are not only willing but desirous to supply every citizen who has suitable lake or stream in his vicinity with the fish most suitable for the waters of the locality. With the increased money we have asked for at our disposal this enlarging demand can fairly be met, and we feel justified in saying no such moderate outlay of the public money as is asked for will give so universal and unusual satisfaction as the sum appropriated and expended in the propagation and distribution of food fishes to the people of the State."

DISTRIBUTION IN 1887.

German carp	2,695
Whitefish	10,000,000
Wall-eyed pike	3,900,000
Rainbow trout	11,000
Landlocked salmon	10,000
Native brook trout	292,000
Lake Superior trout	96,000
Black bass	35,500
	14,347,195

DISTRIBUTION IN 1888.

Carp	522
Whitefish	10,000,000
Wall-eyed pike	1,970,000
Rainbow trout	28,000
Loch Leven trout	10,000
Native brook trout	434,000
Lake Superior trout	147,500
Brown trout	10,000
Black bass	3,000
	12,603,022

"Carp have proven to be prolific, so much so that one can buy either the dead or living fish in the markets of St. Paul or Minneapolis. Carp, like pigs, will stand much abuse; either will survive being kept in a mud hole, but it spoils the flavor of the meat of both unless they have a chance to recuperate on proper food and clean habitat. Complaint is made sometimes that they taste of mud, which is not to be wondered at, considering how little care and attention they receive to make them palatable compared with the pains taken in Europe to give them improved quality and flavor. It should be borne in mind also that good water makes good fish, and that plenty of water is required. I have the testimony of one man at least that 'a wash tub full of water in the warm cellar all winter don't seem to do, as they all died.'"

We are somewhat surprised to learn that the mongrel whitefish, *Coregonus tullibee*, is one of the most important species in Minnesota; it is represented in the National collection by only a few very poor specimens.

The beneficial result of artificial propagation of the whitefish is fully admitted by the fishermen who have long doubted the wisdom of the work. The subjoined extracts from a Duluth newspaper are from the testimony of men engaged in the fisheries:

"The season has been a remarkably good one at the island, fish having been plenty and in good demand, in fact the demand for Lake Superior whitefish and trout is growing so rapidly all over the West and Southwest that it cannot be supplied. In the season just past, fishermen have caught a great many of the young fish planted in the lake by the State Commission in late years, these fish having now begun to arrive at a size and age when they become valuable. If there had at any time been doubt of the value to the fishing industry and to Duluth of this system of planting whitefish and trout the experience of this season will quickly dispel such doubt. Of the total catch a very large proportion have been of the planted fish, and the lake, which three or four years ago seemed about to become depleted of these magnificent food fish, contains now more than ever. There is no reason why Lake Superior should not be a vast food reservoir, and the establishment of the new hatchery, the greatest in the world, will do much to make it so.

"A new fish firm, composed of experienced men in the business and backed by a large amount of capital, is now making arrangements to move its entire plant from one of the lower lakes to Duluth. Their coming will give a wider market and competition, and will aid in making this city what it is surely destined to be, a stupendous fish market. Already Duluth handles more fresh fish than all other points on Lake Superior combined, and this trade is destined to grow rapidly."

The new arrangement by which the United States Fish Commission will relieve Minnesota of the labor of the whitefish hatching is very acceptable to the State Commissioners, whose approval is thus expressed:

"Hereafter the State Commission will relinquish the whitefish work on Lake Superior to the United States Fish Commission, which will carry it on with an efficiency and energy from their larger and better appointed hatchery impossible for us with our limited State resources and modest equipment. We are glad of their aid and they are glad to help us. Indeed, Commissioner McDonald has added greatly to the scope of the United States Fish Commission work, reaching inland and establishing stations undreamed of until he, with his broad and comprehensive planning, made them feasible, and we bespeak for him from our State's delegation in Washington their support and encouragement in carrying out the great national work he is accomplishing."

The United States station at Duluth has a capacity for 100,000,000 whitefish eggs, besides an equal number of ova of wall-eyed pike, and of lake and brook trout an unlimited quantity. The establishment is under the charge of the following persons: R. O. Sweeny, superintendent, fishculturist; M. S. Root, foreman, fishculturist; Andrew McCormick, assistant fishculturist; R. O. Sweeny, Jr., engineer; Peter Dubé, first fireman; Daniel McLachlin, second fireman; Mrs. A. McCormick, housekeeper.

The notes relative to the life history of the food fishes in the hatchery are of very great interest. The rainbow trout, which causes much complaint in our coastal streams by its wandering instincts, is a favorite in Minnesota, where it grows rapidly and does not go astray. The Loch Leven trout does not grow so fast as the native fish, nor is it so prolific in eggs; but 10,000 fry were reared from fish obtained from imported eggs, and the outlook for the future is promising. The brown trout yielded for the first time this year eggs which produced 10,000 fry. The breeding fish are healthy, vigorous and growing rapidly. Brook trout are thriving remarkably; although over three-quarters of a million have been planted, the demand is far from being satisfied and the number of anglers is steadily increasing. Landlocked salmon have done well in mill ponds and clear, cold spring streams.

Black bass fry were collected Aug. 18, Sept. 7 and Sept. 16. In 1887 wall-eyed pike began spawning April 28 and were hatching fast May 12. In 1888 the first spawners were caught May 6, twenty of them yielding 300,000 eggs, and fry were coming out rapidly June 4. Doubtless some were hatched earlier. Whitefish eggs received Jan. 28 began to hatch March 16 and all were out by the 29th. Loch Leven trout spawned from Dec. 19 to 25. Brown trout spawning ended Dec. 20. Landlocked salmon eggs placed in the hatchery March 7, and some of the fry were planted May 25. Rainbow trout spawned from March 16 to April 9. Brook trout commenced spawning one year Oct. 21, the earliest date observed at the hatchery; in 1885 the earliest was Oct. 24. Feb. 19 all of the native brook trout eggs were hatched.

THE HALIBUT FISHERY.—The catch of halibut at the present time on some of the banks which for a number of years have been almost deserted by fishermen is much larger than usual. This may be due to some extent to the remarkably fine winter weather, which has allowed a more extensive use of trawls than has been possible for many years. The grounds yielding good returns are Quereau and the Le Have ridges. At Yaquina, Oregon, a new fishing company, with a capital of $250,000, will engage in the fishing for cod and halibut. Their outfits will be furnished by a firm in Gloucester, Mass., and the company will be prepared to cure their fish by salting or smoking and to ship them either fresh or cured.

WALL-EYED PIKE HATCHING.—The U. S. Fish Commission is making arrangements to hatch, in the spring, 100,000,000 eggs of the wall-eyed pike at Sandusky, Ohio. Of these Pennsylvania will get a large share for the Susquehanna, Delaware, and other suitable rivers. In the former river the species seems to be scarcely holding its own. A few adults have been transferred from the Susquehanna to the Delaware in the last two or three years by the Pennsylvania Commission.

The Equitable Life Assurance Company presents to-day on another page its twenty-ninth annual statement. Nothing could show better than this statement the enormous growth of Life Insurance in this country within the past few years, especially when it is managed by shrewd and conservative business men. The amount of assets on the ledger Jan. 1888, was $79,297,955.46, while on Dec. 31, 1888, it was $89,427,026.92. Of these assets more than twenty-five millions are loaned on bond and mortgage, and over thirty-four millions invested in United States stocks, State stocks, city stocks, or are held in trust companies; real estate accounts for twenty-two millions more, and loans on collateral and cash in bank for more than six millions. During the year nearly twelve millions were paid out to policy holders on claims by death, matured endowments, dividends, surrender values, annuities and discounted endowments. The statement shows a total undivided surplus over all liabilities of more than twenty millions. Persons who contemplate life insurance may study this statement with profit.

Lafayette, Ind., Aug. 21, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Dear Sir—I am pleased to be able to give you a most satisfactory account of the paper shells you sent me. I have used Schultze powder altogether for the last seven years, with Eley's shells, and yours are the first perfect substitute I have found, and I shall take care to recommend their use. (Signed) W. Graham, Champion Shot of England.—*Adv.*

The Kennel.

FIXTURES.

DOG SHOWS.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club Utica, N. Y. James W. Dunlop, President.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

ST. BERNARD CLUB.

AT the meeting of the Board of Governors of the St. Bernard Club, held at Madison Square Garden Feb. 19, the following members were elected: Messrs. W. H. Warder, Springfield, O.; I. V. Hecker, New York; J. Lohman, Orange, N. J.; W. T. Fraser, Detroit, Mich.; W. W. Macfarlane, New York; Hon. J. S. Wise, New York; J. S. Dudley, New York; W. E. Connor, New York; Fred Kimball, Worcester, Mass.; B. P. Johnson, New York; R. R. H. Durkee, Chicago, Ill.

At the annual meeting held at the Hoffman House at 7 o'clock on the same day the following were present: Miss A. H. Whitney and Miss Chandler, Lancaster, Mass; R. J. Sawyer, Menominee, Wis.; R. Stucky, Pittsburgh, Pa.; E. H. Moore, Melrose, Mass.; J. H. Long, Boston, Mass.; W. H. Warder, Springfield, O.; Thos. B. Lee, Toledo, O.; H. S. Pitkin, Hartford, Conn.; J. Lohman, Orange, N. J.; W. H. Joeckel, Hoboken, N. J.; Lorenzo Daniels, New York, B. P. Johnson, New York; E. B. Sears, Melrose, Mass.; K. E. Hopf, Arlington, N. J., in the chair.

The new constitution and by-laws were adopted. The latter provided for a club album of photographs of winners of club specials, one copy of which may be obtained at cost by members of the club. The correct measurements, weight, color, etc., of each winner to be recorded in the album. The standard as adopted by the Swiss St. Bernard Club at their meeting last June, modified so far as markings are concerned. The collar had been included in the obligatory markings. Now the standard reads: "Absolutely necessary markings are: Noseband (white around muzzle), blaze, chest, legs and tip of tail. Collar, or white spot on nape of neck are desirable." The officers were re-elected for the ensuing year, President, K. E. Hopf; Vice-Presidents, E. H. Moore, R. J. Sawyer and Miss A. H. Whitney; Treasurer, W. H. Joeckel, Secretary, Lorenzo Daniels. To complete the number of the Board of Governors, nine were elected as follows: Rev. W. H. Walbridge, John Lohman, S. B. Macfarlane, B. P. Johnson, R. P. Durkee, W. S. Diffenderffer, J. B. Lee, J. W. Dunlop and Geo. M. Elwood.

The club is in a flourishing condition and many applications for membership are coming in. The meetings of the Board of Governors in future will be held on the second Monday of each month.

THE AMERICAN MASTIFF CLUB.

THE annual meeting of the American Mastiff Club took place at the Madison Square Garden, New York, on Wednesday, Feb. 20, at 2 P. M. Among the members present were Messrs. Winchell, Cook, Belknap, Underhill, Herbert Mead, Stevenson, Swords, Banks and Derby. The report of the treasurer showed receipts from all sources during the last year $936.88; the expenses for the year $438.24, leaving a balance in the treasury of $498.64. The list of members numbered fifty-two. Fifteen new members have been added to the list since the last year. The secretary presented a correspondence with Mr. W. K. Taunton of the Old English Mastiff Club, and announced that Mr. Taunton had offered as a breeder's prize a gold challenge medal, value $50, for the best American-bred mastiff, the contestant to be under two years of age. The secretary also stated that the executive committee had offered at the New York show of 1889, a new cup, value $300, to be known as the Westminster Challenge cup, for the best dog or bitch under three years of age, the property of a member of the American Mastiff Club. In addition to this the club's three silver cups and medals were offered for competition at the same show. At the coming Chicago show the American Mastiff Club offered three silver cups and a money prize of $25 for competition among club members. The club's silver medal was also offered at the approaching Albany and Philadelphia shows. The officers elected for the ensuing year were as follows: President, Robert Lenox Belknap; Vice-Presidents, Herbert Mead, Edward Dudley and F. T. Underhill; Executive Committee: R. L. Belknap, Herbert Mead, Edward Dudley, F. T. Underhill, R. H. Derby, C. R. Colwell, W. R. Stevenson, C. C. Marshall, J. L. Winchell and James Rawle; Secretary and Treasurer, R. H. Derby.

WORCESTER DOG SHOW.—Worcester, Mass,, Feb. 25. *Editor Forest and Stream:* Arrangements are progressing favorably for the first annual bench show of the Worcester Kennel Club. The premium lists are to be sent out this week, and as we offer $1,500 in cash prizes, besides a large number of specials offered by friends of the club and business houses, we hope to receive a large entry of dogs. It is our purpose to have everything square and fair and to secure competent judges. Our dates are the week following the Boston show, and we shall get special railroad rates for exhibitors at that show, who will stop over in Worcester. We have hired the Worcester Skating Rink for the week of the show, and it is very hard to find a more suitable place. There is a large yard attached, surrounded by a 12ft. fence, large enough, in fact, to turn the whole show into for exercise. The rink is large enough to accommodate 700 or 800 dogs without crowding in the least. We have contracted with Spratts Patent to bench and feed, and have secured Mr. William Tallman as superintendent.—Edward W. Dodge, Secretary Worcester Kennel Club, P. O. Box 988.

THE POINTER CLUB.—A meeting for the purpose of perfecting the organization of The Pointer Club of America was held on Wednesday afternoon, Feb. 20, at Madison Square Garden. Following is the list of officers: President, John S. Wise, of New York; Vice-Presidents, James L. Anthony and F. R. Hitchcock, of New York, B. F. Seitner, of Dayton, O., and A. C. Collins, of Hartford; Secretary and Treasurer, George La Rue, of New York. Executive Committee—The above named officers and C. M. Munhall and J. R. Daliba, of Cleveland, Charles Heath, of Orange, N. J., James P. Swain, Jr., of New York, J. H. Winslow, of Philadelphia, and J. M. Arnott, of New York.

FOREST AND STREAM.

SUPPLEMENT No. 2——NEW YORK DOG SHOW.

NEW YORK DOG SHOW.

THE thirteenth annual dog show of the Westminster Kennel Club, held at Madison Square Garden last week, was the best both in number of entries and excellence of management that has ever been held in this country, and we were assured by several exhibitors who have attended some of the recent large shows abroad that so far as good management goes, New York is far ahead and well up both in number and quality of the dogs shown. This may well be believed when we take into consideration the fact that very nearly nine-tenths of the winners in the challenge and open classes are well-known winners at the principal shows in England, and in many cases they are acknowledged to be the best representatives of their breed living. Quite a number of recent importations succeeded in carrying off the honors in their respective classes, while a number of others with important wins to their credit had to be content with honorable mention. Aside from the interest one naturally takes in inspecting good specimens of the different breeds, the knowledge gained by the breeder and fancier in comparing the recent importations with those that have been in the country for some time and with those that have been bred here, was of inestimable value; and it is to be hoped that with the vast quantity of good material we now have we shall soon see a marked improvement in our American-bred dogs. This much to be desired improvement has already begun in some of the breeds, and we hope to see it continue and extend to all breeds until it will no longer be necessary to send to England to obtain a winner even when the best are competitors. Any one with plenty of money can purchase a sure winner, but, as we have often remarked, the breeder of an exceptionally fine specimen is entitled to far the greater honor. We were greatly interested in looking over the native-bred ones and note with pride that there were many very fine specimens among them, and some that promise to give the best a good fight for the honors when they are mature.

The mastiff and St. Bernard classes were a wonderfully good collection, better than has ever before been brought together in this country. There was also considerable improvement in the pointer classes, and the youngsters were the best that have ever been shown at New York. The improvement was especially noticeable in legs and feet, and if breeders continue the good work their dogs will at least have something to stand upon. The English setter classes were not up to those of former years. Why this should be so we are at a loss to comprehend. A large amount of money has been expended on this breed, and yet we have comparatively nothing to show for it. We were also disappointed in the Irish setters; they were not nearly so good as we expected to see. Outside a few of the winners the rule was, coarse heads, awkward legs and bad form or color, not as combination, however, but some one of these defects was apparent in by far too many instances. There was an improvement in the black and tan or Gordon classes, although they were far from being an even lot so far as type is concerned. Now that the American Gordon Setter Club has taken hold of them we shall expect to set this handsome breed come out strong in the near future. The spaniel classes filled only fairly well, although many of the best in the country were present.

The collies were very good, but not quite up to those of last year, the puppies outside the winner being a poor lot. The fox-terriers were the largest and best collection that we have ever seen together, and we were pleased to note among them quite a number of good youngsters, some of them being exceptionally good. Many of the terrier and toy classes were much better filled than we have before seen and among them were some very fine specimens. There appears to be an increasing demand for almost all breeds, and a large number of sales were made during the show and in many cases good prices were realized.

The weather during the show was all that could be desired and the attendance was even better than last year. We were informed by several members of the club who are undoubtedly excellent judges in the matter, that the number of beautiful women who visited the show is something unprecedented in the past. As our own eyes at every turn beheld vast throngs of brave men faultlessly attired, and as we all know that chivalry is ever found in attendance upon beauty, we could readily believe this. We certainly have never before seen at a dog show such well-dressed and well-behaved crowds as thronged the Garden every day and evening of the show, and the best of it was that every one appeared to be delighted with the exhibition. As one of the daily papers aptly put it, in a startling headline, "Fashionable Society Going to the Dogs." No show was ever better advertised, nearly all of the dailies gave us columns of "dog talk" every day, some of it gossipy and interesting and not a little of it intensely amusing to those who know a little something about dogs.

The managers of the show are deserving of great praise, and they may well feel proud of the very able manner in which the thousand and one details were carried out. We have never attended a show where everything appeared to run so smoothly. Mr. Mortimer, the superintendent, covered himself with glory, and fully demonstrated that he not only knows what is necessary to be done, but that he also knows just how to go to work to accomplish it. There was quite a change from former arrangements in the benching. Instead of placing the large dogs, as has been the custom heretofore, around the sides of the building, the space was open and the dogs were benched in six double rows extending the length of the building, except in the center, where a space 72ft. square was devoted to the judging rings. This was divided into six rings of varying size, and as soon as the judging was over the inside partition was taken away, giving the whole space for an exercising ring, which was filled a large portion of the time with dogs of all descriptions, from the lordly St. Bernard to the diminutive toy, and eager faces surrounded the ring all aglow with interest, watching the beautiful animals as they took their exercise and indulged in many a sportive antic.

It was an interesting and very instructive sight to many to see dogs whose looks denoted a most ferocious and quarrelsome disposition, fraternize with others equally unpromising so far as looks are concerned, and after the briefest of introductions, join in a game of romps around the ring and playfully tumble over each other and their companions to the evident delight of all; even the sedate deerhounds appeared to enjoy the fun and occasionally would join in a romp with some chance acquaintance, while the beautiful Russian wolfhound, notwithstanding the fierce and bloodthirsty character given him by some of the daily papers, was one of the most playful and frisky animals that we saw in the ring. Professor Parker with his band of trained dogs amused large audiences, giving a very good performance every evening and in the afternoon after the first day. The large hall over the Madison avenue entrance was used for benching the beagles, toys and some of the terriers, making quite a respectable dog show of itself. There were two good-sized judging rings at the upper end of the hall, making it quite convenient, as the dogs did not have to go down stairs to be judged.

The benching and feeding was done by Spratts Patent in their usual excellent manner. The attendants appeared to be of a better class than is generally seen, and their duties were performed in a painstaking manner. Many of them obtained the confidence and love of the dogs in a remarkable degree, while others did not succeed at all. We noticed one young fellow in particular who apparently had the good will of every dog that he came in contact with, and when he passed through the aisle over which he had charge every tail was wagging and every eye followed him as long as he remained in sight. These are the sort of men for attendants, for dogs as well as other animals thrive best under kindly care, and nothing will put them out of condition sooner than a want of sympathy between them and their keeper. We have had much to say in past years regarding the very bad practice, common at all shows, of benching together dogs of different classes owned by one exhibitor. Last year Mr. Mortimer informed us that a reform would be inaugurated at the next show, and we are pleased to note that the dogs were benched consecutively according to their numbers. Consequently when they were wanted the veriest tyro of an attendant could at once bring up any dog called for, and we have never seen the judging ring served so well and expeditiously as at this show, and we were assured by the managers that under no circumstances will the old plan ever again be allowed. Other shows will do well to take a note of this, and by adopting the plan save themselver much of worry and no end of trouble.

The catalogue was a model in its way, and is the best one, taken as a whole, that we have yet seen. The type was large and plain, and the senseless publication of the long list of winnings that we usually see was omitted. The list of special prizes was published at the head of each breed, and, best of all, the dogs were given but one number each. There were 1,372 regular entries, and some 200 re-entries in other classes, but in the extra classes the original number was retained, greatly to the convenience of all, even the reporter was not a little benefitted thereby, and thankfully acknowledges and blesses the thoughtful care that lightened his labors. On Wednesday morning we were agreeably surprised to receive a copy of the catalogue with the awards plainly printed opposite the numbers of the winners. Although not absolutely correct, the work was better done than we expected to find, as in making up the list for FOREST AND STREAM we had no end of trouble owing to the hurried manner in which the slips for the press were copied from the judges' books. This will account for the number of corrections which will be found below.

For the past three years at each show we were informed that this was the last dog show to be held at Madison Square Garden, and in consequence were not surprised to hear the old story again last week. There seems, however, to be better grounds for the report, and there is a strong probability that the present structure has seen its last dog show. We were shown the plan of the new amusement building, which it is proposed to commence next May and complete in season for the horse fair in November. The plans include an amphitheater about the size of the present one, a concert hall on Madison avenue, capable of seating 3,000, modeled after the great Wagner Hall at Bayreuth; a small hall with a seating capacity of 700, and smaller rooms that will answer for committee or waiting rooms, as may be needed. We are assured that everything will be on the most liberal scale and that nothing will be left undone to make the resort worthy the great city which is sadly in need of just such a place in which to hold its annual dog show. We are informed by Mr. Hitchcock, the secretary of the W. K. C., that the corresponding week in February is claimed for the New York show, and that the premium list will be on a much more liberal scale than that of this year. This will be welcome news to old exhibitors, and we have no doubt that many new ones will be added to the list. Judging begun on Tuesday shortly after half past ten, and with the exception of the black and tan setter classes and some of the specials, it was finished before dark. As a whole it was better performed than is usually the case at this show, some of it, however, as will be seen by the subjoined report, was not up to the mark, and there were mistakes that should not have been made.

Following is a list of the judges and the classes assigned to them:

Mr. C. C. Marshall, mastiffs. Miss A. H. Whitney, St. Bernards, Great Danes and pugs. Mr. John Davidson, bloodhounds, deerhounds, greyhounds, English foxhounds, pointers, English and black and tan setters and English retrievers. Mr. Max Wenzel, Irish setters. Mr. James Luckwell, spaniels. Mr. Geo. C. Clark, Chesapeake Bay dogs. Mr. D. Baillie, Newfoundlands and all terriers except fox and bull-terriers. Mr. N. Elmore, American foxhounds and beagles. Messrs. Martin Dennis and J. D. Shotwell, collies. Mr. A. Belmont, Jr., fox-terriers. Mr. E. S. Porter, bulldogs, bull-terriers, basset hounds and dachshunde. Mr. F. B. Fay, toy spaniels. Mr. J. R. Pierson, poodles, Italian greyhounds, Mexican hairless and miscellaneous.

Following is a list of the additional awards, corrections and special prizes:

ADDITIONAL AWARDS AND CORRECTIONS.

In the mastiff novice class, Dr. H. F. Praeger's Duc de York was 3d instead of Minting, Jr. In the mastiff bitch puppy class, J. L. Winchell's Tigris II. was 2d instead of Edda. In rough-coated St. Bernard dogs, P. J. Egan's Egan's Barry was com. instead of Wallace; in bitches, Keystone Kennels' Madoken was very high com. and B. P. Johnson's Kate was com. instead of high com.; in bitch puppies, C. Heim's Bedford Flora was high com. In smooth-coated bitches, J. Kevan's Appoloula was very high com. and Erminie Kennels' Erminie was high com.; in dog puppies, Erminie Kennels' Matterhorn was high com.; in novice class, C. G. Shelly's Macduff was very high com. In large pointer dogs, Bryn Mawr Kennels' Bang was com. In small bitches, G. M. Cornell's Revel VI. was 1st and Meally's Baby was very high com. Polka was unnoticed, and S. S. Banks's Daisy of Naso was com. In the English setter novice class, Nahmke Kennels' Peveril was very high com. and their Stray Shot was com. In Irish setter dogs, C. H. Thompson's Desmond II. was 2d instead of Rory O'More IV.; F. P. Jordan's Jefferson and L. V. J. Backer's Irish Laddie were high com.; Meadowthorpe Kennels' Meadowthorpe Rover was com. and Rory O'More IV. and Romie were unnoticed; in the novice class, Prof. L. P. Braive's Royal Ruby was very high com. In foxhounds (English), Rockaway Hunt Club's Warrior was 2d and G. H. Mercer's Warrior was 3d.

In the field spaniel challenge bitch class, Oldham & Willey's Miss Newton Obo won; in open class as published last week, for bitches read black, dogs; in the other than liver or black class, Nahmke Kennels' Tansy was com. In the open collie dog class, Fairview Kennels' Donald was 3d and Guy Mannering very high com., Roslyn Torfrida was 4th and Metchley Surprise was very high com. In the bulldog open class, J. E. Thayer's Quasimodo was very high com., P. Sharkey's Carlo Rouche high com., and C. L. Collins's Bendigo and T. S. K. Hawkhurst's Cribb com.; in bitches, R. B. Sawyer's Beatrice was 3d. In beagle bitches, Lewis Bros.' Banner Queen was 3d, and T. B. Manly's Arbutus and Barberry Kennel's Lonesome were com. In fox-terrier dogs, J. E. Thayer's Luke was reserve instead of Banquo, and L. & W. Rutherfurd's Warren Strapper and Warren Sophist were com.; in the bitch puppy class, H. P. Frothingham's Fidget was com. instead of Stanly Cauliflower; in the novice class, F. Hocy's Vignette was 3d. In Irish terrier dogs, H. Dinning's Wasp was com. In Bedlington terrier dogs, 1st and 2d were disqualified and the 3d winner Punch was 2d. In Yorkshire terrier bitches, W. C. McClellan's Nellie was com. instead of in the toy class. In pug dogs, O. Eggeling's Clique was reserve. In the miscellaneous class, Miss Lewis's Carlotta won 2d instead of Budge.

SPECIAL PRIZES.

MASTIFFS—Kennel, E. H. Moore; best, Minting. Mastiff Club specials: Taunton challenge medal, Melrose Prince; American-bred, the same; puppy sweepstakes, Lady Gladys. Owned by members: Best, Minting; under three years, Alonzo; best bitch, The Lady Coleus. St. BERNARDS—Kennel, E. H. Moore; best rough bitch with two of her produce, Gemma I., with Barry II. and Alpine Chief; smooth, Monastery Mercedes, with Monastery Myrtle and Monastery Nell; rough puppy sired by Hector, Montrose; smooth, Trojan Hector. St. Bernard Club specials, for members only: Best smooth, Victor Joseph; rough, Ben Lomond; smooth stud dog, Victor Joseph, with Nevis and Nigel; rough, Otho, with Vindex and Chrysa; American-bred smooth dog, no entry; bitch, Monastery Myrtle; rough dog, Otho; bitch, Madoken. Kennel bloodhounds, Brough & Winchell; deerhounds, J. E. Thayer; greyhounds, H. W. Huntington; pointers, Chas. Heath. Best pointer, Graphic; sired by Tammany, Tory White; dog with field trial record, Duke of Hessen; bitch, Lalla Rookh. Kennel English setters, F. Windholz; best, Count Howard; dog with field trial record, Roger; bitch, Manitoba Belle. Kennel Irish setters, C. T. Thompson; dog with field trial record, Desmond II.; bitch, Daisy. Kennel Gordon setters, Meadowthorpe Kennels. Kennel American foxhounds, E. W. Jester. Best Chesapeake Bay, Rum. Kennel spaniels, Oldham & Willey; field spaniels, the same; cockers, the same; best field spaniel, Glencairn; puppy, Darkness; Clumber, (2) Newcastle. Kennel collies, Chestnut Hill Kennels; best, Scotilla. Bull, Rabagas; bull-terrier, Cairo; kennel beagles, Somerset Kennels; fox-terriers, L. & W. Rutherfurd; American-bred puppy, Hillside Dandy; brace wire-haired, Billet and Capsicum. Fox-Terrier Club specials: Challenge cup, Valet; best dog, the same; bitch, Richmond Dazzle; dog puppy, Hillside Dandy; bitch, Warren Sparkle; pair, Raffle and Diana; pair of puppies, Hillside Dandy and Hillside Freda. Best black and tan terrier, Meersbrook Billy; Yorkshire, Bradford Harry. Kennel pugs, Dr. M. H. Cryer; challenge cup, Bessie.

MASTIFFS—(MR. MARSHALL).

This was probably the best class of mastiffs ever seen at an American show. There were manifestations of dissatisfaction over several of the awards, but in justice to the judge, who made his debut on this occasion, we must say that but few mistakes were made, and those that we noticed were not of a serious nature. Maximilian's magnificent son Minting had the challenge class for dogs to himself; but what difference would it have made if he had been opposed by a hundred competitors? He is even a grander dog than he was last year, and in his present great form we believe him able to give points and a beating to any mastiff in the world. The hundred dollar challenge cup and the special prize of twenty-five dollars for best mastiff in the show were literally at his mercy, although we heard it said that the judge considered Alonzo very nearly his equal. Wacouta Nap, the other entry, was absent. In the bitch class The Lady Clare, another good one, had as her only competitor Duchess. Both were in good condition, but Beau's handsome daughter won with several points to spare. The open class for dogs, which contained twenty entries, brought out some really good dogs which were carefully and well judged. Mr. E. H. Moore's Alonzo scored a rather easy win, being several points ahead of his competitors. Defects: Skull not quite flat and not showing enough volume, especially in cheeks; set of ears not quite right; color of eyes a couple of shades too light; chest should be wider; hindquarters not perfect but good; coat rather long and coarse and showing slight waviness. In other points he is a very hard dog to beat, and is probably the second best mastiff dog in America. Competition for second honors was very keen between Melrose Prince, formerly Crown Prince, and Sears' Monarch. The first named won first in the puppy class at Boston last year, and our report of him was as follows: "Third prize went to Crown Prince (a poached name, Mr. Moore), a rather promising puppy by Ilford Caution. He has the same defect that The Shah had, viz., a domed skull, very well in a bloodhound or Irish setter, but not what we want in the mastiff. He has a short, blunt face of fair volume, but is cut away too much in front of the eyes, and has plenty of ear. The light Crown Prince face markings do not add to his appearance, and his condition at present is not good. Still, he is a good puppy, perhaps the best I have seen in America, and if all goes well with him he will be heard from next spring." This criticism was correct, but the dog has put on cheek muscle since then, and his head, taken altogether, has a much better appearance. Monarch has the advantage in massiveness of body and is slightly the more truly formed. Crown Prince has the best of it in muzzle, depth of head and true mastiff character. After weighing carefully all points positive and negative, we cast our vote in favor of the son of Lord Raglan. Moses, who beat (Heaven save the mark) Alonzo at Richmond was well placed fourth, and certainly he got all he deserved in the company he met on this occasion. Defects: Skull and muzzle lacking in width; too much length from eyes to nostrils; ears too large; forehead not quite flat; would be improved by more wrinkle; limbs a trifle light in proportion to bulk of body; coat not first-class; body rather short. A big, fine, massive dog, not showing enough of that indispensable requisite—character, without which no dog can be ranked in the first class. It is a credit to Mr. Marshall that he detected an absence of a something which the eye of a novice would almost surely overlook. Regulus, vhc., needs no description, being well known to our readers. He was properly placed. Wolsey, hc., bears but slight resemblance to his great ancestor of that name. Defects: Muzzle too long and lacking in depth and width; skull not having much volume; rather short between the couplings and not low enough; should have more bone; feet not first-rate. With all his defects he is a better dog than Bruce VI., also hc. Bruce VI., to which we just referred, has a very shallow head, poor eyes and expression, and is rather light in bone and not good in feet. He has good body and coat and stands well behind. Kaffir, c., lacks in skull and muzzle, is not quite straight in front, a trifle weak in knees, wanting in substance, too leggy and not perfect in hindquarters. Court, unnoticed, is houndy in head, long in ears, leggy and unfit for the show bench. Judge, also unnoticed, is a wolfish-looking weed that would make a better show in Central Park than at a dog show. Major General is a large animal that contributed more than a share of the noise. Sire, un-

known. Dam, Juno. Cæsar, another of the unnoticed division, is an undersized, spike-nosed, light-eyed, coarse-coated yellow dog. Date of birth, breeding and pedigree unknown. He will doubtless beget puppies that will bark as loudly as other puppies. Lyon and Tiger, both unnoticed, are also registered dogs of unknown pedigree. Dogs like these prove a means of educating the public. Lion (Jurgens'), Thor and Lord Brougham are not show dogs.

Bitches were a nice even lot with the Melrose Kennels well to the front. In this class Mr. Marshall did not place his dogs so well. First prize was given to The Lady Coleus, and we indorse the decision. Muzzle lacking in depth and width, stop not quite right, good skull, ears light in color, face should be more wrinkled, underhung to a considerable extent, throaty, stout, cylindrical body, of true formation, limbs well set, would be improved with more bone, good stern, hocks too straight and not quite clean, moves well. A good-looking bitch, with excellent coat and showing character and quality. Countess of Dunsmore, second prize, got more than she was entitled to. Foreface somewhat long, but not pointed, skull and muzzle should be wider, ears of good quality but too long, forehead fairly well wrinkled, nice black points, excessively throaty, good between the extremities, light behind and showing slight weakness, stands on proper forelegs and feet, coat better than average, does not move well behind. A bitch that has a number of defects and shows character and quality withal. We would probably have placed her third. The Lady Phyllis, placed third, is also a new one, and like the first and second prize winners is sired by the English champion Beaufort. We thought her over-rated in the company she met. Head small in proportion to size of body and lacking more especially in depth, ears small and of good quality but not quite black, head only fairly well wrinkled, stands too low at the shoulder, massive body and good legs and feet, would be improved by more bone, coat as good as average. A specimen that shows her good breeding. Fourth prize went to that sterling combination of quality—The Lady Dorothy. She was shown too light in flesh, but for true mastiff properties she had no equal. We did not notice anything wrong with the hindleg that showed lameness last year, and our decision would probably have been The Lady Coleus first, The Lady Dorothy second, Countess of Dunsmore third and The Lady Phyllis fourth. Mayflower, that won first last year in this show, was vhc. Her condition was not good. If this bitch will breed she should be very cheap at the catalogue price of $150. Her dam, Cambrian Princess, had but few equals, and her sire, old Beau, was a dog of sterling worth. Lady Gladys, vhc., is not black in nose and her muzzle lacks volume; her ears are fawn, which does not add to her appearance; she shows character. This is not the old champion of the same name, and the keepers of the stud book should have refused the entry. Medusa, hc., is small in head, narrow in muzzle, defective in ears, rather light in bone, somewhat coarse in coat and undersized. Wanda, also hc., is plain in head, light in eyes, heavy in ears, and not quite straight in front. Lucy, hc., is well known, as is also Boss Lady Clare that took c. The company was too select for them.

Pharoah Queen was about the best of the very ordinary lot entered in the novice class. Skull fairly good; muzzle not sufficiently blunt; head fairly well wrinkled; rather short in back; not quite straight in front and light in bone; hindparts defective, being too light from hips to hocks and showing slight weakness; a trifle leggy; good coat and color; does not travel well behind. A bitch of average size, and showing character notwithstanding all her defects. Countess, a daughter of Homer, made a good second. She is neither first-class nor very defective in any point, but is too small to compete against the cracks. Duc of York, third, was not on the bench, and we did not see him. Friar, vhc., is a big, characterless red dog, with white on underpart of body, long, houndy ears, straight hocks and nasty shallow head. We thought him lucky. Rollo, hc., lacks in volume of muzzle and skull; head not well wrinkled; body too short, light in bone; wrong in feet. With all his faults he is a better dog than Friar. As many of the puppies were removed on the second day of the show we had no opportunities of comparing, and shall say little about them. Gurth, first in the class for dogs, is too young to criticise with certainty of being right. He has a head of average merit, and is fairly good in body and limbs, but his ears are decidedly too large. Mr. Rothermel's entries in this class are all bad in ears and not first-class in head. Linden King, third prize, is slightly peaked in skull, rather long in ears and not first-class in other respects. He should develop into a dog of more than average merit, but we feel positively sure that he will never render a good account of himself when shown in a strong class. Rex, hc., is smutty in color and has large, badly carried ears, yet he shows character. Lady Gladys, that we have already described, was first in the corresponding class for bitches, with Tigress, from the same kennel, second. The last named has a Dudley nose, and is minus black points; color of eyes light; muzzle too small in proportion to size of skull; body truly formed; stands on strong, sound legs and proper feet; shows character. Helen, third prize, is off in ears and her head will never be in the first class. The same may be said of Medea, vhc. Baby Bunting, hc., cannot possibly develop into a show dog. Muzzle very shallow; ears large; skull better than muzzle, but not first-class. Her body is the best part of her. Juliette, unnoticed, has a bad head, eye and expression, is not straight in front, and lacks depth and width of body. April Queen, also unnoticed, is leggy and light, and has a plain head. Mrs. Browning's Lucy is peaked in skull and large in ears. She has a fair body and plenty of bone. Mrs. Browning showed another Lucy in the open class for bitches. Mastiff pedigrees will be so badly mixed in a few years that the stud books will be valueless, in fact, the less a man sees of them the better it is for him. The Mastiff Club's challenge cup, for the best mastiff bitch the property of a member, was won by The Lady Coleus, beating the Lady Clare. There is plenty of room for difference of opinion over this decision.

ST. BERNARDS—(MISS WHITNEY).

These classes were well filled and the quality throughout was as good as we have seen at any show in this country. There is, however, no getting away from the fact that although the entry was very large and a number of the dogs good, there was not a really first-class specimen in the show. This statement will not meet with favor from a number of St. Bernard men with whom we are acquainted, but its strength will be found should they attempt to disprove it. Where, may we ask, was there a Leila? Otho, Ben Lomond, Burns, Hector and several others are what may be rightly termed good dogs; but we look for a higher standard of excellence, knowing that these dogs were not brought into competition with *la crême de la crême* of the St. Bernard world.

Of the three entries in the challenge class for rough-coated dogs one of these, Duke of Leeds, was absent, and his old competitor, Otho, had not much trouble in beating Barry II. The winners in the corresponding class for bitches are well known, and the competition was interesting. We have seen Gemma I. looking much better than she did on this occasion, and we would have given our vote in favor of the Melrose representative, who was well shown. Competition in the open class for dogs was close and exciting. The cause of the hubbub was the meeting of Ben Lomond and the Western crack Burns. Lysander, too, was expected to render a good account of himself. Mr. Sears pinned his faith to Plinlimmon, Jr., and the Hospice Kennels did not despair of the chances of Alpine Chief, while the Contoocook Kennels looked to Kastlehorn II. to repeat his Boston victory. Quite a number of others in the class showed more than average merit, and taken as a whole it was the best class of rough-coated dogs that we have seen in America. After spending more time than we thought was necessary to reduce the dogs to a quartette, the painstaking judge got Ben Lomond, Burns, Plinlimmon, Jr., and Lysander weeded out from the rest, and after a most careful and searching examination of each one placed them in the order named. Ben Lomond is a handsome and exceedingly catchy-looking dog. His rich orange color, and markings white as driven snow, good size and superb coat, average forelegs, good feet, fairly good body and excellent brush, will always win for him a host of admirers. The appearance of his head would be decidedly improved by black facings and orbits, but its formation, while not perfect, is decidedly better than average and may be called good, although it is not quite first-class. In eyes and expression he might be much better, and the failing here is evidently a legacy from Smith's old Barry. The chief defect in his head is an absence of sufficient depth, both through skull and muzzle, and if his eyebrows were a trifle heavier and his eyes better set he would, we think, show more character. He has neat ears, a lengthy, strong neck and head that is well set and well carried. He is good in body, but would be bettered by additional length and massiveness, and his hindquarters would be improved by width, and his hocks by strength and more bend. He does not use his hindlegs in very good style, but he stands well and has unquestionably a grand appearance. Taken all in all he is one of the very best dogs of his breed that has ever been exhibited in this country. We are inclined to indorse the decision in his favor, but cannot for a moment uphold the groundless statement of many that he won "way off, with many points to spare." Looking at dogs and not at owners we find Burns better in formation of head, decidedly longer in body and more truly formed between the couplings; but he does not stand well in front, is much too straight behind and moves off his hindlegs with a decided straddle. If he could exchange his rusty color for the burnished orange and the white of alabastine hue of his competitor, we have an idea that some of those who seemed in a great hurry to hoist Ben Lomond's number would have been equally as anxious to have called for Burns's. They are good dogs, and the one that wins does it with a very narrow margin to spare. Given a good head the third prize winner would beat either Ben Lomond or Burns, but he fails just where a dog of this breed must be fairly good to compete successfully in good company. The excessive wrinkle on his head only adds to his otherwise rather houndy appearance, and we thought him in the right place, closely pressed by Lysander, whose good top won him a host of friends. Unfortunately, he is wrong on his legs all around, and the redeeming features were not sufficiently manifold to pull him through. Kastlehorn II. and Alpine Chief, both vhc., are well known to our readers. Chief's washy color is dead against his chances of winning when he meets a good class, but he is a dog of rather nice type; whereas Kastlehorn II. is a bit plain. Foothill Hector, vhc., lacks in depth of muzzle—a rather plain head. He is also leggy, but stands on strong, straight legs. He will do better when he is put in show condition. Macduff, vhc., stop not deep enough; muzzle too light; ears not well carried; not sufficiently massive; not quite straight in front. Sir Phillip, vhc., not clearly cut below the eyes; stop not sufficiently defined; forehead too prominent; head would be better if blaze were not so wide; stern carried too high; undersized; not in good condition. A useful, second-class dog that may be heard from again. W. Scott, vhc., head and muzzle lacking in volume; bad eyes and a wolfish expression; massive body; good bone; not quite straight in front; coat curly; good hindquarters. Ivanhoe, vhc., very defective before the eyes, his most prominent defect. Bruce II., hc., slightly underhung; not quite right in muzzle; light in body; not first-class in hindquarters; ring-tail; undersized. Huguenot, hc., fairly good in head; eyes not right; good ears; undersized; light in body; coat scanty. King Cole, hc., light eyes; wrong expression; bad head; truly formed body; left ear badly carried; wrong markings; not a show dog and very lucky in receiving mention. LeRoy, hc., skull too wide; muzzle small in proportion to volume of skull; bad ears; the left always wrongly carried; brow too prominent; not straight in front; light in middle; tail not well carried; an undersized and plain-looking dog. Carlo II., hc., not a good head; wrong markings; poor legs and feet; undersized. Vindex, hc., fairly good in head properties; bad behind; not sufficiently massive in body; curly coated; a light-built specimen. Prince of Orange, hc., stop, eyes and carriage of ears not correct; body decidedly better than average; markings not quite right; light in hindquarters; coat showing curliness; an undersized specimen. Adonis, c., expression not good; plain in head; body lengthy and well formed; markings defective. Leo X., c., poor head and expression; bad ears; washy in color; coat not in good condition; undersized; lacks character; not a show dog. Jovis, c., light eyes; defective ears; wretchedly bad head; good body; not a show dog. Egan's Barry, c., head very defective; ring-tail; fairly good body and limbs. An undersized and plain-looking dog. Alert, hc., long and light in muzzle; roached in back; bad behind; not at all a credit to his sire, Save, who was a really good dog. Sheila, hc., wretched head, which attracted far less attention than his handsome collar.

The bitch class was decidedly above average, but we failed in finding a really first-class specimen. Several new ones were brought out, including Saffron, Lady Wellington and Lady Aveline. Saffron won, but she was very closely pressed by Lady Wellington. Both have been prominent winners in England, but we must say that we look for something of better quality than either. We will take Saffron first: Skull and muzzle should be more massive; foreface rather longer than we like; eyes showing too much of the haw; fairly good ears; stands too high behind for height at shoulder; body of good length, and would be improved by more substance; light in bone; stands on bad feet; hindquarters should be stouter and back stronger; excellent brush; nice straight coat; a fairly good specimen. Lady Wellington: Stop should be deeper; face below the eyes should be more clearly cut; skull excellent; muzzle first-class but for the defects just noticed; ears not well hung; grand, massive body; stands on excellent legs and feet; fairly good behind; coat not in good condition and showing slight curliness; tail not well coated; a massive specimen that, when shown in good condition, will, we think, beat the winner. Recluse, well known, was third. Lady Aveline, fourth prize: Snipy; defective in ears; a rather sheepish face; lengthy body; not straight in front; rather light from the hips down; coat not quite right. Not a specimen that can beat a really good one. Miscabel, reserve: Head fairly good; ears not quite right; lengthy body of fairly good formation; bad tail; quite as good as the fourth prize winner. La Duchesse, vhc., needs no description, being well known. Madoken, vhc.: Stop not quite right, otherwise a fairly good head; lacks black facings and orbits; fairly good in body; not in good coat; in fact, not quite in show condition. Tenia, vhc.: Cheeks too prominent; muzzle entirely wrong; light eyes; massive frame; straight behind; has a short ring tail; coat inclined to be curly. Lakme, vhc.: Cheeks prominent; ears badly carried; fairly good in muzzle; markings not correct; an undersized specimen whose best points are behind the head. Monastery Nell, hc.: Fairly good in head properties, but not first-class; straight behind; an undersized specimen that was worth another letter. Beda, hc., second at New York last year under the same judge, and fully described in our report, was surely worth at least another letter. Empress, hc., well known and worth another letter. Chrysa, hc.: Bad head; undersized; plain; light in color; not nearly so good a bitch as Beda. Kate, c.: bad eyes; sour expression; not good in markings; not straight in front; light in hindparts; a white and brindle showing little character. Lady Gay, c.: A plain-headed and undersized specimen. Fanchon, c.: White head; wall-eye; hound ears; not a show bitch.

Puppies were more numerous than usual, but showed a decided lack of character throughout, in fact, there was not a fairly good one in the show, and we begin to despair of any one breeding a dog that can compete successfully against the imported ones. Montrose won in the dog class. There is already a registered dog of this name, and the owner should be compelled to find another, notwithstanding the fact that the stud book committee accepted it. Head very coarse; good bone and fairly good body. A specimen that when matured will probably take rank with the highly commended division. The second prize winner was early removed, as was also the third prize winner, and we did not see either. Boucicault, vhc.: Wretchedly plain on head; will never develop into a show dog. Othello, hc.: Snipy, wrong in stop, sheepish; not a show dog. Don Roderick, c.: A snipy, plain-headed puppy, poor in color and wrong in markings. Glacier, c.: Bad head, color and markings; not a show dog, and never will be. In bitches Lady Aveline, fourth in the open class, won first, followed by the snipy, light-boned Lady Beauty, whose main charm is in her name. Our notes on Lady Agnes, the third prize winner, are as follows: Wretchedly weak head, straight behind, small feet; not a show dog. Blanche Hector, vhc., is another poor one. Head shallow, bad eyes and expression, ring-tail. Duchess of Albany, hc., is a bad puppy with a good name. Princess, hc., is washy in color, very defective in head and altogether unpromising. Virginia Queen, c., was very lucky in receiving mention; bad at both ends. Victoria the Great, c.: A great deal of name and very little pup.

The challenge class for smooth-coated dogs brought out Rigi, Victor Joseph and Hector. Hector, in very poor condition, had to give way to his less typical competitor Victor Joseph, who was shown in the pink of condition. Our opinion of these dogs is well known to all readers of FOREST AND STREAM. A good dog out of condition cannot beat a fairly good one that is shown in tip-top shape, and we indorse the decision. In the corresponding class for bitches Daphne fairly beat Thisbe. Beauchamp was the winner in the open class for dogs, but he had a very narrow squeak. He held the same position at New Bedford. Excellent muzzle; cheeks rather too prominent: correct ears; good eyes and expression; excellent forelegs and feet; body rather short and would be improved by massiveness; hindquarters light in proportion to foreparts; coat too long for a smooth and too short for a rough-coated specimen, and giving him an equal right to compete in either class. In other words, he is neither a rough nor a smooth-coated specimen. Nevis, a son of Victor Joseph, was second. He is cleaner in cheeks and better below the eyes than his sire, in fact he has a better head; good eyes and expression; neck strong and of sufficient length; straight forelegs and excellent feet; would be improved by more bone: back rather hollow; hindquarters fairly good, although the hocks are not quite right; bone would improve him; stern carried too high; moves fairly well; a good second-class dog that might have exchanged places with the winner. He is only twenty months old. Adonis II., third prize, cheeks too prominent; muzzle slightly pinched near the nostrils; expression not quite right; fairly good ears; shoulders defective; crooked in front; massive in body; ring-tailed; moves fairly well; a low-standing and rather plain specimen. Sir Rogers, fourth prize, round in cheeks; faulty behind; would be improved with more bone; not a good one. Nigel, reserve, head fairly good; neck showing excessive throatiness; not straight in front; ring-tailed; straight behind; moves badly; above average in size. Barry, vhc., was third at New York last year. Pluto, vhc., cheeks showing fullness; muzzle lacking in volume; ears not quite correct; straight behind; good coat; a dog of average size. Lord Hector, unnoticed, was in poor condition. Don, hc.: Plain head; wrong expression; ears not well carried; light in bone. Monitor, hc.: Cheeky; rather light in eyes; truly formed in body; straight behind; undersized. Sam, hc.: Right ear defective in burr; plain in head; wrong in markings; bad expression; straight behind; undersized; lacks character. Montreux, c.: Head slightly defective; straight behind; high tail; good color and markings; undersized; a better specimen than Don Mars, c.: Weak in foreface; lacking in depth of head; good in color; undersized; lacks massiveness of body.

First in bitches was won by Burton Belle, a daughter of the English champion Guide. Good head, yet not perfect; excellent ears; very bad behind; loin not very strong; correct legs and feet; a trifle leggy; would be improved by more substance; good stern. Monastery Myrtle, second prize: Muzzle should be deeper and blunter; color of eyes rather too light; skull and ears fairly good; forelegs not quite straight; back rather hollow; body stout and lengthy; good stern; coat rather too long; would be improved by more bone. Monastery Mercedes, third prize: Rather long from the eyes forward and muzzle not sufficiently deep and blunt; head lacks volume all through; body lengthy and well formed; thighs too light; hocks not strong, coat should be shorter; an undersized specimen that shows good breeding through all her defects. Meadowthorpe Nora, fourth prize: Head just fair; ears rather large; coat too long; second thighs light; tail too heavily coated, in fact it resembles too much the tail of a rough-coated specimen. We thought she crowded the third prize winner. Alpine Queen, reserve: Cheeky; muzzle too small; neck showing excessive leather; straight behind; coat too long; not well shown. Abbess, vhc.: Not clearly cut below the eyes; expression not correct, ears not well carried generally; forelegs not straight; knees weak; body fairly well formed; better than average in hindquarters; does not stand well; average size. Elsie, vhc.: Full in cheeks; coarse in head; undersized; hardly a show dog. Lola, hc.: Head coarse; ears not well hung; head markings not perfect; fairly good in body; excellent legs and feet; coat very coarse; badly shown.

Puppies were a poor lot as usual. Mr. Draper won first with a well grown one that stands on good limbs, but his head will not do. Victor Van, second prize, is defective in head; washy in color; wrong in expression and will not make a show dog. St. Michael, third prize, has a wall-eye; bad muzzle and expression; washy color and is straight behind. Trojan Towzer, from the same kennel as the winner, took the reserve. He has the same defects as his kennel companion. Prince William, vhc.: Is snipy and sheepish looking; he will not develop into a show dog. Alaric, vhc.: Brow too prominent; ears not well carried, but should improve; coat too long; will not develop into a show dog. Guide II., hc; has a wide muzzle, but it lacks depth; we do not think that he will be heard of again. Bache, hc., was in very bad condition or would have doubtless been higher on the list. Robert Elsmere, c., is of similar type to his kennel companion Alaric, and he may develop into a better dog. First in puppy bitches was given to Veneta. We think she is better now than she will be six months hence. Her head looks like going wrong. Flora Hector, from the Hospice Kennels was second. She is poor in color, plain in head and was badly shown. Thisbe Wagner, third prize, is only fair in head and might be very much better in markings. Her body and limbs are promising. Linda, vhc., is defective in head, but fairly good in body. Beauty, hc., is beautiful in—name. Burton Belle and Ivanhoe, first and third in the novice class, have already been noticed, and the same may be said of W. Scott. The red ribbon went to Roland, a sour-headed fellow that is not one of our sort.

BLOODHOUNDS—(MR. DAVIDSON).

There were four entries in these classes. Premier III.

scored an easy win in the dog class over the unmatured youngster, Barnaby Scott. He is a black and tan, with a head possessing more than average merit, being fairly well peaked, clean cut, and otherwise a decided improvement on what we have found in other dogs of the breed that have been exhibited in this country. Its most conspicuous failing is lack of wrinkle, and in this respect he is certainly very deficient. In body, hindquarters and shoulders he is very much above average, but his feet could be improved upon, and he lacks in bone. The second prize winner may be heard from again. He is a black and tan with good bone, a well knit frame and excellent legs and feet. His head is not lean enough for our fancy, and his ears at present do not lie close. He should develop into a useful sort, but will never, we think, be first-class. First in bitches was won by Barnaby Nell, a litter sister to Barnaby Scott. We thought the judge right in placing her over her dam, Ripple Buxom. She has promising head, excellent wrinkle, good shoulders, the right sort of legs and feet and looks like developing into a good one. Ripple Buxom has beautiful ears and the best of legs and feet. She is also a stout-built bitch of a very useful sort. In head, and wrinkle we could improve upon her. All of these dogs were exhibited by Messrs. Brough & Winchell.

NEWFOUNDLANDS—(MR. BAILLIE).

There were eight entries in these classes, and one Newfoundland, Meadowthorpe Prince George, who was fully described in our Buffalo report. He is a good dog, without being quite a first-class one, and can show a clean pair of heels to anything of his breed in the country.

GREAT DANES—(MISS WHITNEY).

The quality in these classes was better than we usually find, but there was not a really good one in the lot. First prize went to the red, or fawn dog Triton. Head should be longer and cleaner, with better expression; neck not quite clean; body cylindrical as seen in the mastiff; back rather hollow instead of being well up; loin should be more arched; hindquarters fairly good; stands on clean, strong forelegs and the right sort of feet; coat excellent; moves well; size above average; symmetry not of a very high order. Sultan, second prize: Cheeks too prominent; eyes light in color; expression not correct; throaty; not straight in front, but strong in bone; feet well formed, but turning outward; ribs not well sprung and loin not sufficiently arched; back ribs should be deeper, extending further backward; a dog of fair size and average quality. Ramyr, third prize: Weak head; very throaty; light in bone; fairly good in body; undersized; lacks character; not a winner in good company. Bella, a red or fawn bitch, scored in the next class. Head fairly good in outline, but too small; throaty; free, well-placed shoulders; good legs and feet; light in bone; well formed body; a second-class specimen. Irene, second prize, is a blue mottle that is little, if any, inferior to the winner. Her white nose, defective muzzle and rather full forehead were probably the points that put her back. Wolga, third prize, is an undersized light brindle, rather weak in head, a trifle light in bone and somewhat deficient in hindparts. The judge overlooked the black dogs shown, on the ground that the color is not a legitimate one. We will have something further to say on this subject on another occasion.

DEERHOUNDS—(MR. DAVIDSON).

Mr. Thayer, as usual, took all the awards in the champion classes with his splendid team Chieftain, Highland Laddie, Wanda and Ramona, but in the open class for dogs his beautiful Robber Chieftain, that is shedding his coat and was shown too low in flesh, had to give way to Meadowthorpe Factor, a good-looking dog barring his rather plain head. Robber Chieftain has all the best of it in head, is better in shoulders, hocks and quality of coat. We would have placed him first. The winner returned home with the Hillside Kennels' dogs, and he should do a lot more winning for his popular owner. Fergus, third prize, seemed all tucked up. He was described in the report of the St. Paul show. The other entries in the class were a long way below the form shown by the first and second prize winners. First in bitches went to Olga who was placed behind Theodora at the same show twelve months ago and by the same judge. When Theodora won and Olga took second we indorsed the decision; and now that Mr. Davidson has reversed it we do not indorse him. Both bitches were in good condition; and if Theodora was good enough to win in 1888 she is good enough to win in 1889. Pride of the Heather, Highland Lassie and Lady Dare, the other entries in the class, are old faces. Only one puppy was shown. He is weak in muzzle, light in bone and does not stand well; in other points he will do, but he never will be a show dog.

GREYHOUNDS—(MR. DAVIDSON).

Balkis, Memnon and Lancashire Witch were the entries in the challenge classes, and of course took the prizes. The placing of Memnon over Balkis was, we think, an error of judgment. Caliph's once great son has lost his mouth, he shows no muscular development, and is in poor condition generally. Fortunately somebody got the numbers mixed, and Balkis will go on record as having won the prize. He was clearly entitled to it, for Memnon was in no condition for the bench, and was merely entered to make up a team of four to compete for the kennel prize. We feel quite sure that if the judge had examined the dogs more carefully he would have given the blue ribbon to Balkis. First in the dogs (open class) was given to Meadowthorpe Douglas Fleming, who was not in fit condition to be shown. We would have turned him out of the ring. Second went to Fleetwood, who took first in the puppy class last year, and between this dog and Highland Chief it was a very close thing. Highland Laddie, who is also known to our readers, made a very good vhc. Prince, c., is not a show dog. In bitches Dora scored first in a very poor class: head round; muzzle cut away below the eyes; shoulders rather heavy; rather flat-sided; strong in loin; good, powerful quarters; hocks defective; stands good on forelegs and feet; not a show bitch. Highland Lassie came next: weak before the eyes; ears well carried, but rather large; neck fairly good; ribs not sufficiently sprung; loin flat; hindparts too straight; stands on beautiful legs and feet; coat and tail rather coarse; an undersized specimen. Gyp, third prize, is not a show bitch, and we would have withheld the prize for want of merit. Head long, but very plain; ears too large; slab-sided; lathy; leggy; light in bone; bad in feet; moves very queerly behind; bad hocks; lacks power all over.

POINTERS—(MR. DAVIDSON).

The Westminster Kennel Club exhibited "not for competition" a useful-looking lot of seven. Of these Bang-Bang and Naso of Kippen were in bad condition, and showed signs of having been recently dressed with mange cure. Next came the Graphic Kennels, also entered "not for competition." They were in elegant condition, a credit to their keeper. There were three entries in the challenge class for heavy weight dogs, and of these but one faced the judge. We had heard all sorts of rumors about Graphic's condition. He was blind in one eye, and had gone wrong here, there and everywhere; in fact, we were to look out for a wreck. In justice to the owner we will say that we have seldom seen Graphic looking better. He was neither blind nor a cripple, and we doubt if the pointer lives that can beat him to-day. In the bitch class the truly formed and sturdy Mealy was unopposed, and in the open class for heavy weight dogs that really good specimen Duke of Vernon, whose points good and bad are by this time well known to our readers, scored a very easy first. Second prize went to a new one, Pontiac, a splendidly bred one, not quite clean below the eyes, and muzzle not sufficiently square, a rather weak foreface, good skull, neat ears, very throaty, neck would be improved by more length, wide in front, shoulders heavy, good bone, feet better than average, pasterns sloping too much, formation of chest very defective, good loin, stifles and hocks; a hardy-looking second-rater showing coarseness throughout. We thought the judge gave him more than he was entitled to in this company. Our choice for the place would have been the fourth prize winner, Brake. Freedom, who took third, was first last year. We thought him in his right place here. Tory White, vhc., is only fair in head, has light eyes, is throaty, a trifle leggy, lacking in substance, and neither strong in loin nor in hindquarters. Sachem, vhc., deserved his card, Coroner, Scott and Master McGrath are not show dogs. Bang, c., was out of condition; he is a better dog than the second prize winner. N. J. Dash, Jimmie and Trinket's Cash were absent. First in bitches was won by Mr. Chas. Heath's Bloomo, a well bred one that is not up to high class form. She was first at Richmond, but we do not think she has ever been described. Skull rather wide, muzzle lacking squareness, ears of good quality and well set, but the left not well carried, eyes too light, throaty, rather wide in front, set of forelegs not first-class, body fairly good, a trifle straight in hocks, good feet, rather light in bone, fairly good in stern. She had not much trouble in beating Devonshire Countess, but she is not in the same class with the good ones. Devonshire Countess and Nell, second and third prize winners, are well known. Belle Randolph, vhc., while not by any means a crack, should have been higher on the list. Lady Snow, Ruby and Daisy Ranger have been criticised time and again in these columns. Ion, fourth prize, has a good head, and stands on truly formed legs and feet. She is very throaty, and much too wide in the chest. The quality in this class was not of a very high order. There were no entries in the challenge class for light weight dogs, but the bitch class brought out a couple. Juno S. and Queen Fan, the former of which won with very many points to spare. Both are well known.

The light-weight class for dogs showed some quality, and the competition between the first and second prize winners was very close. King of Kent's victory over Duke of Hessen was a popular one, but those who stated that the dog won easily, did not, we feel sure, give themselves the trouble to carefully examine Duke of Hessen. Mr. Hitchcock's dog has decidedly the best of it in head, shoulders, forelegs and in feet, also in set of legs. In spring of ribs, loin, strength and symmetry of hindquarters, and in carriage tail Mr. Dexter's son of Priam and Kent Baby holds a clear lead. There is plenty of room for difference of opinion about these dogs, and, as the judge had better opportunities of examining them than we had, it is possible that if we were called upon to decide the question we would cast our vote for King of Kent. Fashion, third prize, was first at Buffalo. Ned B., fourth prize, is also well known. Bon Ton, vhc., is of wrong type and too closely resembles his sire, Sensation, who would not be in the highly commended division in these days. Glaucus, hc., has developed into a coarse dog. Naso of Troy, c., while rather weak in head, has good legs and feet, and might have been raised a peg. First in the corresponding class for bitches was given to Revel VI., a rather good-looking daughter of Donald and Revel III. She is a white and liver, lightly ticked, and is good in coat and color; good skull and muzzle; color of eyes rather light; ears not perfect in fold; neck throaty; good chest; average shoulders; excellent forelegs and feet; stifles and hocks not perfect, yet not bad; second thighs light; tail of good formation, but not correct in carriage; a bitch showing character with quality. Lady Norrish came next; weak in foreface and not square enough; cheeks too prominent; ears not well carried generally; neck rather coarse; good shoulders; excellent feet; would be improved by more bone; is a trifle leggy; a white and liver bitch showing character with quality, yet not up to high class form. Stella (Hitchcock's) took third, and we thought her rather lucky, as she was out of condition and is weak in head. Mayflower, hc., we thought, deserved another letter. Stella (Bellman's), vhc., is full in cheeks, light in eyes and wrong in stern. Lapford Pearl, unnoticed, although leggy, deserved a card. As very many of the puppies were removed on the second day of the show we must pass the classes.

ENGLISH SETTERS—(MR. DAVIDSON).

Rockingham and Royal Prince II., both in good form, won the challenge prizes for dogs, and the beautiful Cora of Wetheral was unopposed in the corresponding class for bitches. In the open class for dogs the English crack, Count Howard, won, and also secured the special for the best setter in the show. We have always held that a first-class dog would beat either Rockingham or any other English setter in this country that we have seen. Count Howard *is* a first-class specimen, and the position which he held on this occasion goes to show that the dogs which have been exhibited are unable to hold their own when brought into competition with the typical. The winner is not perfect in head, yet it is a good head. We would like to see a little less width in skull, a cleaner muzzle and more development of occipital bone. He also shows some jowl. With the exception of these defects, none of which are very conspicuous, Count Howard is a clinker, the best English setter that we have seen in America. Roger, another good one, was second, with Cincinnatus third. The last named is of different type. He is a white, black and tan, showing much quality, and has the appearance of a goer. Head clean and showing character and quality, but a trifle bitchy; ears nicely set; ribs should be more sprung; good shoulders, legs and feet; back, loin and chest rather light; stifles should be more out, with hocks not so wide apart; stern not straight; rather leggy; substance throughout would improve him. Fourth prize was given to Lindo, a son of old Gladstone. He stands on most excellent legs and feet, and is decidedly above average in head. He falls too much from the hip, is not first-class in chest and might be stronger in loin. He is also throaty, rather leggy, and is not good in tail. Pride of Dixie was vhc., as usual. His plain head will always put him back when he meets a good class. Fluke, vhc.: Shallow in muzzle; light in eyes; set of legs not correct; is not quite straight in front; light behind. Peveril, vhc., was first in the puppy class last year. He is fairly good in head, better than average in limbs and has a workmanlike appearance. Manitoba Gladstone, hc., was in good condition; we liked him better than Pride of Dixie. Sylvan, hc.: Fairly good head; light eyes; legs not well set and not quite straight; loin flat. His head is the best part of him. Meadowthorpe Heather, hc.: Head decidedly above average; color of eyes too light; rather throaty; shows character; wrong behind; moves stiffly. Don Petrel, c.: Light in bone; poor feet; loin flat and light; ribs not very well sprung. Gloster II., c.: Plain in head; shoulders badly placed. We looked for a better class, and are of Mr. Davidson's opinion that the English setters are not being improved. With Count Howard and Roger out of the class they would have been anything but a good lot. Princess Beatrice and Haphazard, that were first and second at Richmond, won the prizes here, but exchanged places. At Richmond it was Haphazard first, but Mr. Davidson preferred Beatrice. It is a very close thing between them. We will reserve our opinion until we have better opportunities of examining them. Haphazard has the better top and Beatrice all the best of it in legs and feet. Chautauqua Belle, third prize, must have been very closely pressed by Calico, vhc. Both are well known and need no description. Stray Shot, hc., is plain in head and light in eyes. Maud Foreman, hc., is not good in muzzle, her elbows are not just right, and she is not quite straight in front nor perfect in loin. Her condition was against her. Frolic Bondhu, unnoticed, deserved mention. She is not good in head, but possesses good points. We did not see any of the prize winning puppies. Don Quixote and Donna Juanita had been removed long before we came to the class.

IRISH SETTERS—(MR. WENZEL).

Chief, Tim, Rosie and Bonnie were exhibited by the judge "not for competition," and the challenge class for dogs contained Gip, Elcho, Jr., and Blarney. All were looking well. The New Hampshire dog won with something in hand. He beats Blarney more especially in head, shoulders and set of forelegs. There were two entries in the bitch class, and if Mr. Wenzel had been appointed to select the worse of the two he could not have discharged his duties in a more competent manner. Nellie was placed over Mollie Bawn. It is scarcely necessary to say that Mollie is all over the better specimen. First in the open class for dogs went to Dick Swiveller, a dog with an average front, but very defective behind the back ribs. Desmond II., second prize, is all wrong in head. Dee, third prize, was second at the same show last year. He is not first-class in head, is light in eyes and might be better in hocks. In chest, loin, back and quarters he will do. The best part of him is behind the head. Eleo, fourth prize: Head not clean; neck heavy; shows character. Patsy, vhc., was the best dog in the class, barring his size. Ned, vhc., is well known. Dock, vhc.: Head only moderate; not quite straight in front; light in loin; stern too high; good color. General Burnaby, vhc.: Head just fair; back flat; slab sided; too straight behind; short from hip to tail; good color; body should be deeper. Redstone, hc., is well known and is a better dog than General Burnaby. Rex, hc., got more than he deserved. He has a wide, coarse, flat head, is straight behind and wavy in coat. Glencho III., unnoticed, while not first-rate in head, is a very much better dog than Rex. Chief II., high com., is an old face. Rory O'More IV., c., is coarse in head and light in color. Red Belle, winner in the bitch class, is known to our readers. Winnie II., second prize, was not on the bench when we called. Grace, third prize, was not deserving of the award. She has just a fair head, but is flat-sided, bad in legs and altogether wrong in feet. She shows weakness in knees, is light in her thighs, not good in hocks, wrong in tail and a very poor specimen generally. Bessie Glencho, M'liss, Elsie II. and Lady Fawn are all better specimens. Maid, fourth prize, was also rated too high. She is curly in coat, wrong in hindfeet, rather flat-sided, and not the equal of some of those placed behind her. The best specimen in the novice class was Redstone, who took third.

GORDON SETTERS—(MR. DAVIDSON).

Little Boy and Don, both in good condition, took the challenge prizes for dogs. Beaumont was absent and Royal Duke not for competition. The corresponding class for bitches brought out Rose and Roxie. Rose is a very poor specimen, and Roxie must have won with a very large number of points to the good. Open dogs contained fourteen entries and comprised representatives of all types. Meadowthorpe Heather Harold by some persons is considered a very good specimen. We think it high time that somebody produced a dog of better type than he. Muzzle should be deeper and squarer; skull fairly good; well set ears; throaty; legs not first-class; weak in knees; feet fairly good; loin flat; ribs should be more sprung; thighs light; tail not very well carried; coat better than average; lacks true character. A winner in a weak class. Meadowthorpe Heather Roy, placed third, was first at Richmond. Leo B., second prize, although a long way removed from first-class form, was about as good as anything in the class. Ronald, fourth prize, is hardly worthy the name of the beautiful champion of days gone by. He is passable in front, but his hindquarters will not do for us. The others were a medley lot of all types, sizes and shapes. Bright, c., is undersized, broken in coat and bad in head. Ben, vhc., is light in tan, cheeky, sour and raw-looking. Kent IV., vhc., is wrong before the eyes, rather sour in expression and straight behind. Ned, vhc., is straight behind, would be improved by more bone, is a trifle leggy and lacks power behind the short ribs. His head is the best part of him. In bitches the peerless Belmont distanced everything in the Gordon classes. She is not perfect in foreface and could be improved upon in two or three other points, but taken all in all she has no equal in this country. Jesse and Becky Sharp, second and third prize winners, may be passed, as every exhibitor of the breed knows them well. Meadowthorpe Blossom, fourth prize, is wrong in forelegs, light in quarters and not good in neck. In other points she is above average. Venus, vhc., is shallow in muzzle and undersized. Princess Rose, hc., is wide in head, coarse, and lacking in size.

FOXHOUNDS—(MR. DAVIDSON).

The English hounds were a splendid, even lot, and were about properly placed. The winner of third was as good as anything in the class, but his age and condition set him back. He was badly affected with mange, and should have been removed from the show, as was the bitch Passion, from the same kennel. The winning bitch had the best head of the lot, but was not as good in body as some of the dogs; besides that, she was very wide in front and out at elbows, and deficient in coat and brush. In the class for American dogs, the judge, we think, made a mistake, as the winners of first and second are not the right type. The third winner and Mount were nearer the correct type, and we preferred them to the winners of first and second. In American bitches only two were shown, and these were rare good ones. Would like them with more substance and better coats and brushes. They were properly placed. What a motley lot these American hounds are at a show compared with the grand and uniform English hound. Would it not be a move in the right direction for American foxhound men to get up a standard for these hounds? Then only can they expect to develop a definite type.

CHESAPEAKE BAY DOGS—(MR. CLARK).

There were nine entries in these classes, and all were present except Polly, the winner in the bitch class here last year. We expected that the very liberal special offered by the Palmer Island Club would bring out a much larger entry. In the open dog class first went to Rum, and he also won the special. He is well known. Bounce, winner of second, is a well made dog, but under size and lacking in bone. Sailor, placed third, is a typical dog of good size, and with excellent legs and feet. He and Bounce should have changed places. In the bitch class Ripple, placed third, should have been first, as the others are too small, and were not in good coat or condition.

RETRIEVERS—(MR. DAVIDSON).

There were two entries in this class, Meadowthorpe Diamond and Meadowthorpe Pearl. Both are defective in head and coat, and would not be winners in good company.

SPANIELS—(MR. LUCKWELL).

The judge commenced by turning Rover out of the ring for want of merit, and Nellie was only deemed worthy a c. card. Irish water spaniels are always a weak class at New York, and fanciers of the breed never look for good ones. The Kerry Gow was absent. Clumbers had only two entries, one in the challenge and one in the open class. Both should have been turned out of the ring for lack of condition. Compton Bandit and Miss Newton Obo were unopposed in the challenge classes for field spaniels. Bandit was looking fairly well, and Miss Newton Obo was not at her best. Glencairn, Messrs. Oldham & Willey's recent importation, won very easily in the next class from his kennel companion, Newton Abbot Lord, who is well known. Glencairn is a long, low, stout-built dog, with great bone and a very handsome outline. His head shows slight coarseness, his shoulders are not well placed, and he does not stand very well in front. His coat at present is not in good condition, and we

shall expect to find him a much improved dog by the time of the Boston show. Taken all in all, he is a very good dog, and when he and Darkie meet the judge must understand his business if he renders a correct decision. Compton Brigand, third prize, is much above average in head. Defects: Eyes a couple of shades too light; elbows not in good position; not straight in front; leggy; short in coat and feather; a dog that will win prizes when not opposed by good ones. Nil Desperandum, vhc.: Average length of body; limbs not what they ought to be; coat rather curly, but may improve; head of cocker type. Prince Charlie, hc.: Head of wrong type; not a show dog. Jerry, c.: Head defective; leggy; coat not in good condition.

First in the bitch class was won by Newton Abbot Lady II., who was removed shortly after the judging. Lady Abbot, a well-known winner from the same kennel, was second. Darkness, third prize, is not at all good in front. Black Flash, vhc., shallow in muzzle, light in eyes, short in ears, cocker type of head, fairly good behind the occiput. In the class for liver dogs Messrs. Oldham & Willey scored a clear win with the Richmond winner, Newton Abbot Don. Newton Abbot Skipper, another well-known one, being second. President was absent. In the class for bitches of the same color Bridford Ruby, an old winner, was unopposed. The class for dogs other than liver or black found Newton Abbot Laddie, who was first at Buffalo, an easy winner, with Adonis, a dog of wrong type, second, and Charlie II. third. The last named is of cocker type in head, and is also too short in body and too high on the legs for a field spaniel. Toby, vhc., is a black and tan of cocker type. Little John, hc., has a bad head, is leggy and not of true field spaniel type. There were two entries in the challenge class for cockers—Doc and Black Pete. The latter is not true to type, especially in head. He is the handsomer spaniel, but Doc is the better cocker and should have won. In bitches the beautiful Miss Obo II. had no trouble in beating her kennel companion Chloe W., and the Mamaroneck Kennel was to the front again in the next class, winning first and second with Jersey and Baby Obo. Fri-mousse, third prize, is a new one. Muzzle not sufficiently square, light in eyes, skull fairly well formed, average ears, good body, which could be improved by massiveness, rather light in bone, a trifle leggy. We like Dandy W., vhc., fully as well. Black Joe, hc., is coarse in head, coat not in good condition, and ribs not very well sprung.

The corresponding bitch class brought out a new one in Sensation, who won first: Muzzle should be deeper, cleaner before the eyes and better lipped, eyes and ears excellent, legs better than average, yet hardly first-class, body stout and truly formed, feet should be rounder and more compact, hindquarters built on good lines, stern should be stronger, coat not quite straight. A rather nice specimen, and one that should do some winning when not opposed by the cracks. Dolly Obo, second prize, and Beatrice W., reserve, are well known winners from the Mamaroneck Kennels. Lacco, third prize, is not one of our sort: Muzzle defective, eyes light, elbows out, feet not first-class. A dog possessing a number of defects, yet showing some cocker character withal. Hornet, c., should have been higher, and the judge evidently held the same opinion, for a little later on in the day he placed her first in the puppy class. She has a rather sweet head, a well turned body and fairly good coat, but is very crooked in front. In the class for dogs other than black, Silver King, first at the last show, won again, with Little Dan second. The latter is defective in muzzle, light in eyes, not straight in front and at present not in good coat. He will probably improve. Third went to the black and tan Mint: Light in muzzle, leggy, small in bone, not correct in carriage of ears and of wrong type. The winners in the bitch class, Lady of Learning and Vermillion, being well known need not be described. Trimblemouche, third prize, is one of Mr. Thomas Aldrich's world beaters: Bad eyes, underhung, good in bone, but not quite straight in front, rather cheeky, not deep enough in muzzle, body wide enough but lacking in depth, shows some character through all her defects. Dora, vhc., has been described many a time in our columns. There was not a good puppy in the show.

SHEEPDOGS—(MESSRS. DENNIS AND SHOTWELL.)

Mr. Shotwell and The Hempstead Farm Company exhibited not for competition about a dozen dogs, none of which would have been able to win if entered for competition. Dublin Scot and Scotilla were the entries in the challenge class. We have held from the first that Scotilla is a better dog than Dublin Scot. This opinion has been ridiculed by novices and indorsed by judges. Scotilla won. In bitches Flurry II., who is vastly better in coat than her competitor Bonnie Brae, won again for the Chestnut Hill Kennels, and in the open class for dogs Charleroi II. had a rather easy victory over his thirty-two competitors. He is shedding and was not seen to advantage. In cleanness of head and carriage of ears, position of shoulders and set of forelegs we could improve him. He is a good dog. Clipper, looking very much better than he did at Buffalo, was second, with Far View Donald third. This is a new one: Skull fairly good at present, but looks like going; muzzle should be cleaner—sharper; eyes too round; ears too large and not well carried; good body; proper legs and feet; coat rather too soft, especially on sides of body; good brush; moves well. A dog of nice size showing some quality. Sir Walter Scott, fourth prize, is also a new comer. He is a sable and white, by Dublin Scot out of Effie Dean II. Forehead too round; ears small, but not sufficiently erect; muzzle of good length and better than average in formation; excellent forelegs and feet; fairly good shoulders; falls away too much behind the hips and shows slight weakness, especially in second thighs; stifles and hocks should be more bent; good brush; coat too soft and fluffy. A dog that we fear will not improve with age. Old Nullamore, vhc., was in fine shape and deserved his card. Prince Charlie, vhc., has made rapid improvement since Buffalo. Surbiton, hc., deserved another letter. A great mistake was made in overlooking Meadowthorpe Reality, who is well known. He should have had vhc.

Jakyr Dean was just about the best of the bitches. She has plenty of length of head, but it lacks a little in quality and character; ears carried too low; fairly good shoulders, legs and feet; body would be improved by more length of loin; coat too short and undercoat scanty; excellent brush. A fairly good specimen. Adila Doon of Nesseldown is a new one from Mr. Kyle's long-named vocabulary. Forehead too prominent; skull showing slight coarseness; face not right about the stop; ears not sufficiently erect, in fact, the right is a button ear and both are too large and of wrong formation; color of eyes too light; good legs and feet; coat should be heavier, especially on neck and on sides of body, and it should be harder; good brush; moves fairly well. Third was won by Sky Pilot, a light sable and white, showing some quality. Brow too prominent; muzzle should be sharper, in fact, the whole head ought to have a neater appearance; ears not sufficiently erect; loin should be more arched; chest, forelegs and feet fairly good; topcoat and undercoat should be heavier. Fairview Donald and Sir Walter Scott, already described, were first and third in the novice class, the pair being separated by Zulu Princess II., whose defects are as follows: Forehead too full; foreface should be sharper; ears not sufficiently erect; body rather light; coat too soft; brush carried too high. In smooth coats Lady Bird and Spot were first and second as usual. Sir Lucifer had the class for bobtails to himself, and of course won.

POODLES—(MR. PIERSON).

Styx and Brigand, Mr. Sanford's well-known winners, were first and second in the class for black dogs, and there was an unknown one in the class that can and will give the best of them a hard tussle for premier honors when the dogs are brought under competent judgment. Boy II., one of the grandest poodles ever exhibited in this country, was given vhc. The placing of Nanki-poo, a third-rater, to say the very most in his favor, over this beautiful dog, is one of the most unjust and unpardonable decisions we have ever seen made at a dog show. Boy II. is actually a better dog in every point, from the tip of his nose to the end of his tail. Pierrot, hc., is also a better dog than the third prize winner. The awards in this class were loudly condemned. There was nothing good in the corresponding class for bitches, and in the class for dogs and bitches other than black, Rex, Regina and Marron were a wretched trio.

BULLDOGS—(MR. PORTER).

Bill, Merry Monarch, Hillside and Robinson Crusoe were the entries in the challenge class for dogs, and Crusoe, as usual, won well. Britomartis, one of the grandest specimens that ever adorned a show bench, took the prize in the next class without opposition, and in the open class for dogs Rabagas was certainly the best of the nine that were shown. After all that we had heard about him we certainly expected to find a better looking dog. He is defective before the eyes and might be much better in body, and his gait does not suit us. Mr. Porter showed a lot of pluck but very little judgment in placing him over Britomartis for the special. We are always pleased to see a great winner dethroned by a better specimen, but Rabagas can no more beat Britomartis than we can climb a beanstalk to the moon and come down safely. Portswood Tiger, winner at Buffalo, Syracuse and Richmond, was placed equal second with Monarch VI., a dog that beats him in head properties, but is decidedly inferior behind the collar. There was only one puppy, and he a bad one.

BULL-TERRIERS—(MR. PORTER).

In the challenge class for dogs Cairo, Jubilee and Grabber were the competitors. Cairo won. We care not a fig for his brilliant record, he has gone wrong in head and shoulders, and should have given way to Jubilee, that was in the pink of condition, and is a better dog to-day, whatever he may have been a couple of years ago. Bonnie Princess, a well-known and beautiful specimen, had not much trouble in beating Lady Tarquin, who was not at her best. First in the open class for heavy-weight dogs was won by Mr. F. F. Dole's Trentham Baron, a big, fine, but raw-looking dog, that will render a good account of himself when he is shown in good condition. The Earl, second prize, and Tony, third prize, are old winners. We thought that Tony's good head should have taken him in front of The Earl. True, he is light in eye and he is developing cheek muscles; but The Earl's weak foreface more than counterbalances these defects. In body, legs and feet Tony has the best of it. Americus, hc., and Hempstead, c., are both of them very defective in head properties. Royal Rose, first prize in heavy-weight bitch class, is not first-class in front, and her coat at present is not in good condition. Minerva, second prize, is an eight-months-old puppy, whose light-colored nose and eyes will always prevent her winning in good company. She is good in body, legs, feet and stern, but will never be better than she is to-day. Duchess, third prize, is too full in cheeks, but has good eyes and grand body. Queen Bess and Miss Nora, vhc., are well known ones of a useful sort. White Rose II. and Venom were absent. Leight-weight dogs were a wretchedly bad lot, and Mr. Porter was right in withholding the prizes. Marguerite, Venus and Nell Bright, winners in the corresponding class for bitches, are well-known winners. The first-named is quite a nice bitch, but her tail needs looking to, or we had, perhaps, better say that the owner gave it too much attention and the judge gave it too little. Nell Bright runs too much on the English terrier type, and Venus is full in eye, weak in foreface and long-cast. The others were an indifferent lot.

BASSET HOUNDS—(MR. PORTER).

First prize was withheld in this class, not a really first-class specimen being shown. The winner of second is deficient in crook and has bad feet, and is too narrow in chest. The winner of third has been described before. Two of the others were big coarse specimens of no merit. Saranac, the remaining entry, was a fine specimen of the American beagle, with a very good head.

DACHSHUNDE—(MR. PORTER).

These classes were very well represented. Rubenstein, not in the best form, won again. We preferred the winner of third for second place, as he is the best in all points except crook. Fretzel, Jr., vhc., is wrong in skull and lacks quality throughout. Black, hc., is a decidedly inferior specimen. He is poor in crook, deficient in body and lacks bone and substance all over. Head fairly good. Temper and Lump Blossin deserved at least a letter. The others in this class are unworthy of comment. The winner in the bitch class has a very good head, but is deficient in crook and chest, and lacks bone and substance. Outside of her lack of bone we like the second winner full as well as the first. The third prize winner was undeserving of the award. The remaining ones are not worthy of any particular mention. In the puppy class Thelma, winner of first in the open bitch class, and Lion, winner of third in open dog class, were first and third respectively. We preferred the last-named to the winner of second in this class. Gypsey lacks in bone and substance throughout, yet deserved her three letters, as did Paulette. Blaise, Delphine and Disiree are a nice trio of youngsters, that with more age may do to show again. Linda we thought a pretty one of the light variety. The others will never improve on their record made here.

BEAGLES—(MR. ELMORE).

The entries in the beagle classes fell far short of what ought to be brought together at New York. Rattler III. and Trailer met in the challenge dog class and the former rightly won. Bounce, and all other entries of the Somerset Kennels, only competed for the kennel prize and were not entered for competition in their respective classes owing to the lack of condition in these entries. Myrtle the only entry in the challenge bitch class, received the award. She is deteriorating. In the open class, Frank Forest, formerly Frank, won. He is well-known. Harkaway, winner of second, should never go higher. He lacks in head and carriage of ears; is out at elbows: bad in feet and long in loin. Young Weller, the winner of third, is well-known. Racket II., a son of old Cameron's Racket, despite of his being shown in very bad shape, should have been placed higher. We liked him well enough for second place. In good form this dog will do better. The other entries for competition, Riot and Leader, are well-known. The former has not improved and the latter is clearly out of show condition. His head was badly disfigured. Lee II. is not a show dog; is plain and wedgy in head; ears short and badly carried; body coarse. Jupiter, Storm and Goodwood Rattler, the Somerset Kennels' entries in this class, are well-known. Their other entry, Tragedy, is a plain and deficient headed dog; ears rather short and not well carried; out at elbows. He is a useful looking dog, but we think he will go over the 15in. limit. In bitches Melody II., a new one, made her debut. She is a good one, with the exception of a deficiency in feet, coat and brush, and we would prefer her with more bone and substance. Trinket, the winner of second, is well-known. She is not a show bitch. The third winner, Bannerqueen, is a nice little one but shown in miserable condition. Belle of Woodbrook, Cloud and Hope were the well-known entries of Somerset Kennels in this class. Lonesome, one of the remaining entries is not a show bitch. Arbutus the remaining one in this class and the only entry in the puppy class is rather a coarse one. Ought to make a useful one, but will hardly prove a dangerous competitor on the bench.

FOX-TERRIERS—(MR. BELMONT).

This was the judge's first appearance in the ring, and considering that he is a dog man of two years' experience he got through his work in the regular classes in a fairly satisfactory manner. His ring steward proved himself an invaluable official, and the work was gotten through with in an expeditious manner. There were three dogs in the challenge class and the prize was given to Valet, who had nothing better to beat than Splauger and Belgrave Primrose. The dog was in poor condition, but he accomplished the task easily enough. The prize in the corresponding class for bitches was at the mercy of Richmond Olive. Diana, placed second, should have been ordered out of the ring. She has hardly a tooth in her head, is all wrong in front and so weak in her hindquarters that when her handler gave the chain a pull she fell over broadsides. The old bitch should have retired long ago, but her presence in the ring on this occasion proved that any kind of a cripple can win prizes. Village Belle, should, of course, have been second. The open class for dogs brought out a large and rather useful-looking lot. Messrs L. & W. Rutherfurd were again first with Raffle, who is weak in foreface, not flat in skull, deficient in carriage of ears, a bit sheepish in expression, not quite straight in front and soft in coat. The position should have been held by Raby Mixer, who was second. Veronese, third prize, is cheeky, shows jowl, does not carry his ears close or well forward, is not quite straight in front, a trifle cow-hocked, and is not quite right in coat. He should have exchanged places with Reckoner that was fourth. This dog, like Raby Mixer, has been the round of the shows and needs no description. Banquo, vhc., got more than he was entitled to. He is very plain in head, stands very badly in front, is wide in chest, weak in knees and decidedly defective in shoulders. Raby Jack, hc., is a very much better terrier. Suffolk Trap was also rated too high; he has a very plain head and innumerable faults behind it. Jack, vhc., is round in skull and long-cast. Warren Sampler, c., is a very coarse and plain youngster, in fact, not a show dog. In bitches Mr. Thayer scored first, second and third with Richmond Dazzle, Princess and Fraulein Mixture. The last named is a weedy toy and should have given way to Rosa Canina, who was vhc. Warren Dainty, vhc., is very soft in coat, she has good legs and feet and shows character. This last named bitch is also a better terrier than Fraulein Mixture.

The wire-haired classes were filled with a lot of indifferent specimens. There was considerable dissatisfaction expressed over the award in favor of Suffolk Settler, who was exhibited by the superintendent. There is very little to choose between him and the second prize winner. The judging for the specials was worse than a lottery. The prize for the best dog was given to Valet. In the condition in which he was shown he had no right to beat either Raby Mixer, Raffle or Mr. Thayer's good puppy Hillside Dandy. The crowning blunder was the awarding of the brace prize to Raffle and the crippled Diana over Raby Mixer and Richmond Dazzle. We hope that we may never again be an eye witness to such a miserable display of ignorance. Another conspicuously unjust decision was the awarding of the $300 Grand Challenge Cup to Valet over Richmond Dazzle. No dog in his condition that ever lived could fairly beat Richmond Dazzle as she appeared on this occasion. If decisions like these are permitted to pass unnoticed, dog shows in this country will soon be a thing of the past.

OTHER TERRIERS—(MR. BAILLIE).

The judge of these classes has had considerable experience with several of the rough-haired breeds, and he acquitted himself in a satisfactory manner. In the class for Airedales, Pin had to give way to Fred, Jr. It is a very close thing between them. Breeda Tiny, in poor condition, was the only entry in the challenge class for Irish terriers. Her kennel companion, Breeda Jim, who is equally well known, was placed over Dennis, another well-known winner. He is better in coat than Jim, but his rather weak foreface and cankered teeth lost him the prize. Roslyn the Micky, placed third, is a young dog with natural ears. He is neither first-class in head nor body. Bedad, hc., was first at Syracuse. Garryford II. was absent. The winner in the bitch class is a specimen of far more than average merit, and one that will doubtless be heard from again. The second prize winner is not good in head, and the same may be said of Roslyn Nora that was third. The balance of the class was composed of workmanlike-looking dogs. In the class for Welch terriers Which, better in head, ears and coat than T'other, won very easily. Highland Laddie, the only entry that was for competition in the Scotch class, was given second, first being withheld for want of merit. The dog is so much superior to most of the specimens exhibited at shows in this country that we would have placed him first. Dandies were not a good class. Border Wang, who was bred by the judge and sold for a five-pound note, was the best of the lot. He has been written up as "the grand Border Wang," and a whole host of misleading encomiums have been piled on him. The truth is, that when he finds himself in competition with a dog like Meadowthorpe Rover he will be outclassed. Meg Merrilies, second prize, is wedge-faced and soft in coat. Meg, third prize, is well known. She, too, is defective in head and coat. It was well for these dogs that Meadowthorpe Rover and Meadowthorpe Wonder were not for competition. First in the class for Bedlington dogs was given to Syrup H., second to Barney and third to Punch. The handler of the third prize winner lodged a protest against first and second on the ground that they had been trimmed. Both dogs were disqualified and the class rejudged, when Punch was placed second, the other prizes being withheld. We would be much surprised to find that Mr. W. H. Russell, the owner of Syrup H., had attempted to impose on the judge. Gray Bess, first in the bitches, is a fairly good specimen, by old Sentinel and out of Elswick Sue. The class for Skye terrier dogs was an exceptionally good one. The winner turned up in Lovet, an excellent specimen, with good texture of coat, long and low, nicely feathered and with well carried ears and average head. Gladstone Boy, well known, was second, closely pressed by Sir Roger, who is harder in coat and good in feather, but not right in head and ears. Monarch, vhc., is overshot to a considerable extent. Claymore, c., owed his position to bad condition. When well shown he is decidedly better than a number of those placed over him. Any of the other noticed dogs in the class would have been able to win first prizes a couple of years ago. Peggy, first in bitches, is no match for the second prize winner when the latter is shown in good condition. On this occasion she was out of coat and was beaten by a short-bodied and rather weedy competitor. Highland Lassie is better than average. Meadowthorpe Coila, not for competition, is a beautiful bitch. Two Clydesdale terriers, the first of the breed exhibited in this country, competed in the special class provided for them. They are a good deal on the order of the soft-coated Skye terrier. Black and tans were a strong class for this country. Meersbrook Billy was first in the dog class. Defects: Color not quite clear; rather weak before the eyes; color of eyes a couple of shades too light; body rather shallow; tail defective; hindquarters not first-class; too leggy. Buffalo General, second prize. Defects: Rather weak before the eyes; not quite straight in front; set of legs not correct; breeched; rather cheeky. Beppo, reserve, is coarse in head, but better than average in other respects. First in the class for bitches was won by Meersbrook Girl, a sweet specimen exhibited by Mr. H. T. Foote. Head excellent and could only be improved in brow, which is slightly prominent, and just in front of the eyes; eyes a trifle large and a shade too light in color;

does not stand quite straight in front, especially below the knees; excellent in body; feet not bad, but might be better; excellent hindquarters; tail not first-class; it should be shorter and finer, and the tan on the underside should not run to the tip, but terminate over the vent; color rich and good; all other markings correct; a trifle light in bone. A specimen showing great quality. She might be better in coat. Meersbrook Maiden came next. Good head and eye; excellent neck; shoulders not quite right; ears not well carried; forelegs not perfectly straight; has a white patch on breast; rest of markings correct, also color. In the class for white English terriers we like Diamond Spark, reserve, better than either Lovely or Snowflake. All are wrong in head, loin and tail, and all were badly shown. It takes an expert to show a white English terrier in good shape. The first, second and third prize winners for Yorkshire terrier dogs are well known. Bradford Harry, in great form, scored an easy first. First in bitches went to Jesse, a bitch of far more than average merit. The others in the class were several points below her form. Toy terriers were, as usual, a very weak class.

PUGS—(MISS WHITNEY).

In the challenge class for dogs Dr. M. H. Cryer, with sire and son won the prizes, Max and Dude winning second and first in the order named. Bitches, the Doctor was again to the fore with Bessie first and Vesta second. The open class for dogs was not strong, Guess taking first. He is a trifle large, good in wrinkle, eyes, mask and ears, body not quite cobby enough, fairly good stern. It was a close call for Guess to beat the vhc. Bob Ivy; although a youngster and lacking substance, he is of the right size, his face is smothered in wrinkle, he has good chop, fair eyes, short face, and we prefer him to Mikado, the second prize winner, and to Othello, the third prize winner, both being too large to be in the money. There was nothing among the lettered victims worthy of mention. Tommy, vhc., has faulty ears, and, like the vhc. Jim-Jam, he is too large for a fashionable pug. Jim-Jam's color, eyes and movement are good. Baby Bunting, hc., is too smutty in markings. Bitches: The reserve, Rustic Queen, is by no means faultless, but was the best in the class. She is the proper size but is lacking a trifle in substance, has pug nose and eye, and is good in tail. Bo Peep II., second prize, has a long nose, and we would probably have put Myrtle, third prize, over her, although we do not like Myrtle's pinched face. Daisy II., hc., is good in body color, nice eyes, ears not the regulation black. Duchess, hc., has large ears. Puppies: Bob Ivy, first prize, was the only winner in this class that had not been removed from the garden when we reached the puppies.

TOY SPANIELS—(MR. FAY).

Roscius, in the absence of Duke and Milwaukee Charlie, won the challenge prize for King Charles, dogs or bitches. The open class for dogs and bitches had only six entries, with one absentee. We expected to see a larger number of these little aristocrats. Mr. Fay should bear in mind that King Charles spaniels are "black and tan without white." Dorothy, vhc., the proper size and shown in good feather, was by far "the pick of the class;" she has a grand head, deep chop, splendid eye, good ears, well set on and long in leather, and is a sturdy, well-built toy that moves well in the show ring. Romeo, the third prize, should have been second to Dorothy; he excels her only in shortness of nose. Blossom, second prize, pressed Romeo very close. Both are the right size, and both are faulty in movement. Romeo has the best head, his ears are set rather high and his tan markings are not quite right. Blossom has splendid feather, nice tan markings, short face and fair eyes. Monkey, first prize, was shown in good form; she has a handsome head, and her tan is rich in color. Her nose is very short, and she is of nice size. Her muzzle is faulty, and movement not good. Blenheims were not out in great force. King Pippin, alone in the challenge class, won the prize. The open class for dogs and bitches had only two entries, both very fair specimens. Mrs. Hawxhurst's good-bodied Rex won over Mrs. Lucy's Queenie. We prefer the latter's size, and her skull is higher than Rex's. Both are faulty in ears, but are good in loin and they move well in the show ring. Prince Charles and ruby spaniels: Three entries. Lilly, a Prince Charles, not in her usual form, won first. We prefer Sweet Violet, who has a better skull and markings, is of better size and was shown in nice feather. Ruby, third prize, and the only ruby in the class, was not in show form. Japanese spaniels: Four entries. First was given to Wee Wee, nice in size and a very fair specimen. She must have been caught by the tail in a door jam or the Jap fakir put in some fine work. The result of the "accident" is that a portion of the tail falls limp over the back, thus giving the required curve; the operation gave to Wee Wee's stern a finished look. Second prize Una is faulty in head and ears; her black and white is well blended, her tail is well carried over the back, she has the crescent and royal mark on the skull and is fairly short in nose. Third prize Jap has a plainish head, her black and white markings are not well blended; she carries a good tail and was shown in good feather. We preferred Mrs. Clark's Ootah, vhc., who is smaller than Jap, has better head and shorter face; her tail is not well carried; her color, lemon and white, is not the regulation color for the breed. Toy spaniel puppies had only one entry. A Prince Charles named Otto was awarded first prize; he is just a fair specimen.

ITALIAN GREYHOUNDS—(MR. PIERSON).

The judge of this class has had little, if any, experience with the breed, but he managed to get through his work with only one serious mistake. Miss Van Buren's old favorite Fannie again took the blue, closely pressed by Cupid. Molly was given third and Bessie was unnoticed. It was here that the blunder was made. There is little, if anything to choose between these specimens. If Molly was good enough for third, Bessie should not have had a letter less than vhc. reserve. Mr. Pierson does not understand the breed.

MEXICAN HAIRLESS—(MR. PIERSON).

Me Too, that was placed equal first with Chiquita last year, was given first and Chiquita was placed third. White Wings, that took third in 1888 and was not considered nearly so good a specimen as Chiquita was placed second. Mr. Pierson, we believe, judged on both occasions. Nobody, of course, understands the breed and we would like to see the man that can understand the judging.

MISCELLANEOUS—(MR. PIERSON).

Ivan Romanoff, a Russian wolfhound, was the best of the heavy weights, and won. He is not a first-rater, and would be outclassed if placed in competition with the beautiful dog that was exhibited some years ago by Lady Emily Peel. The best Dalmatian that we have seen in America was second. He is defective in head and chest, and is not first-class in body. Barring his ears, he is well marked. The third prize wiuner was entered "breeder and pedigree unknown;" but the gentleman in charge of him, taking us for a greenhorn, volunteered the information that he was bred by Prince Bismarck. He is a mongrel, and the prize should have been withheld. The light weights were a wretchedly bad lot; and we will spare the owners the pain of reading criticisms which, if written, would be severe.

THE ST. BERNARD CUPS.—The premium list of the Mascoutah Kennel Club for the dog show to be held at Chicago is wrong. The cups offered by the St. Bernard Club are for best rough-coat, smooth-coat, American-bred rough-coat, American-bred smooth-coat, regardless of sex, instead of dog and bitch, as in premium list.

AMERICAN KENNEL CLUB MEETING.

THE annual meeting of the American Kennel Club was held Thursday, Feb. 21, at 44 Broadway. President Belmont called the meeting to order at 11:30 A. M.

MR. PESHALL—Mr. President, before anything is done at this meeting, I desire simply to have the minutes show that I enter a protest against any meeting being held at this time under the constitution of the club.

The following answered to the roll call: Albany K. C., W. C. Hudson, Gordon Setter Club, F. M. Bennett. Fox-Terrier Club, E. Kelly. Mastiff Club, Herbert Mead. Beagle Club, A. D. Lewis. Cincinnati Sportsmen's Club, P. C. Ohl. Cleveland Bench Show Association, C. M. Munhall. Hartford K. C., A. C. Collins. Michigan K. C., Maj. J. M. Taylor. Massachusetts K. C. of Lynn, R. Leslie. Maryland K. C., H. Malcolm. Mascoutah K. C., Jas. Mortimer. New Jersey K. C., C. J. Peshall. New England K. C., F. B. Fay. Philadelphia K. C., T. H. Winslow. Rhode Island K. C., N. Seabury. Augusta, Ga., A. P. Vredenburgh. Rochester K. C., Dr. J. P. Gray, St. Paul K. C., H. F. Schellhass. St. Bernard Club, E. H. Moore. Southern Field Trials Club, J. L. Anthony. Virginia Field Sports Association, J. S. Wise. Westminster K. C., J. O. Donner. When the New Jersey K. C. was called, Mr. Peshall said, "I am present under protest."

MR. ANTHONY—I move, Mr. Chairman, if Mr. Peshall protests this meeting, that his credentials be not received.

THE CHAIRMAN—The motion is out of order at present during the calling of the roll. The protest has been entered, and it will come up for discussion afterward.

The secretary announced that there were eighteen members present.

MR. PESHALL—Mr. Secretary, I would ask how many clubs are members.

THE SECRETARY—Thirty-six.

THE CHAIRMAN (to Mr. Peshall)—I beg your pardon, sir, but it is customary to ask for the floor, and if you desire the floor please address yourself to the chair.

MR. PESHALL—I am simply asking a question of the secretary at present.

The secretary proceeded to read the minutes of the last meeting.

MR. PESHALL—I move, sir, that we can now do nothing, because there is not a quorum. Eighteen members do not make a majority of thirty-six members.

THE CHAIRMAN—The subject is open for discussion as to the interpretation of the constitution.

MR. PESHALL—I have the universal law, Cushing's Manual, which provides that a majority of all the members must be present.

MR. ANTHONY—I rise to a point of order. I declare that Mr. Peshall has no right to be represented here. If this is a meeting, his credentials are not in proper order, and he can't say anything at all. If this is not a meeting, he has no right to talk. I want that question disposed of before he has any right to argue any question here.

MR. PESHALL—I raise the point of order that we have not a quorum, and I take it for granted that no business can be done. I believe this is the universal rule. [Reading extract from Cushing's Manual on Quorum. Two or three members having entered in the meantime.] There being a quorum present now, I will withdraw my motion.

MR. ANTHONY—I desire to move that Mr. Peshall's credentials be not received, on the ground that he objects, you understand, to the legality of this meeting. He protests it. Now if he protests the legality of the meeting, he can't take advantage, you understand, of his own position. He can't ride two horses at once. Either this is a meeting or it is not a meeting. If it is a meeting, and his credentials are accepted, he thereby debars himself, you understand, from any such motion as he made originally.

THE CHAIRMAN—Mr. Peshall presents his credentials under protest. I do not think it is possible to reject them. Mr. Peshall presents his credentials under protest. I think that is quite in order.

MR. ANTHONY—It is quite in order, Mr. President, for the associates here to say whether they shall receive Mr. Peshall as a delegate from the New Jersey Kennel Club. I move, therefore, that Mr. Peshall, as he seems to come here to raise a question on every question, that his credentials be not received.

MR. PESHALL—I simply say that, representing New Jersey, I have nothing to say upon that question. I leave it to the delegates. I will simply say that I was unanimously elected the delegate of the New Jersey Kennel Club at the last meeting.

MR. ANTHONY—Mr. President, the reason I made this motion is this. I may just as well explain my position. I am a new member here. I attended it because I know exactly the position that Mr. Peshall has assumed—a personal one.

MR PESHALL—I don't want to argue this question now.

MR. ANTHONY—When I get through then you may talk. (Continuing)—a personal one as between himself and the president of this association. Now, Mr. Peshall resigned in a huff as a delegate from the New Jersey Kennel Club, taking up his skirts in his hand, and going out of this office in a great hurrah, declaring that he was going to disconnect himself entirely from the American Kennel Club. His pen and brain have been active in opposition to this club right straight through. I might if I chose to be personal offer exactly the same resolution in regard to Mr. Peshall that Mr. Peshall put himself upon the books of this association in regard to James Watson, and that is that he was continually fighting windmills, and making himself obnoxious, you understand, and interfering with the business of the associates of this club. That is exactly the position Mr. Peshall has occupied since he withdrew from this club, and his only object in coming back here to-day is simply to clog the wheels and impede the progress this club has made. Now that is the reason that he made that motion.

MR. PESHALL—Mr. President, I don't know that I care about saying anything on the subject at all, excepting this, that I desire to correct one statement made by the distinguished gentleman representing—what club?—the Southern Club, and that is that I am in seeming opposition. I have been a member of this American Kennel Club for several years. I am now. My resignation, I believe, was not acted upon—so the secretary informs me—at the last meeting. I stated that I was going out, and I gave my reasons for it, and I gave my reasons to the club that sent me here. The motion that I made that Mr. Watson be not received was upon the ground distinctly stated—and I want it now distinctly stated, and I want the country to understand it, and I want the very club that Mr. Anthony represents to understand it—that he was publishing a book, a registration, in opposition to the one that we have established. That was the point. And, sir, Mr. Anthony and his friends have gone through this country saying that I am against this American Kennel Club. He has given that out. I have been for this American Kennel Club from the day it was started to the present day. I am opposed to certain rules, and I have a right, sir, to stand here and fight them; and if Mr. Anthony can gather together from this country delegates enough so un-American as to say that I have no right to fight these rules, I say that I will go out of here and bow willingly, gladly, and let the New Jersey Kennel Club say whether they will sustain me or not. I do not ask the delegates here to sustain me. If the meeting is packed, which I do not believe, I say act; I do not want to take up your time. I don't believe it. I look around me and see men representing clubs from different parts of the country, delegates that do not belong to the clubs they represent, coming here from all over the country. We never had such a meeting as is here to-day. Never has there been so many clubs represented. And why? How many proxies? We did away with that, but in effect it is the same thing. Here is my friend Mortimer. He is a good man. Who does he represent? He stands here representing the proud city of Chicago. Where does my friend Anthony come from and whom does he represent? Where is the club that is back of him? He is no member of the Southern Club.

MR. ANTHONY—I desire to correct the gentleman. That is absolutely and unqualifiedly false. I am not only a member of it, but the club represents a membership of 75 or 80.

MR. PESHALL—I did not know that. But I might go around here and pick out men who do not belong to the clubs they represent. I stood here and fought that thing. And why? Because this American Kennel Club has been controlled just under such circumstances. Major Taylor hauled out of his pocket seventeen proxies at one meeting—or was it fourteen? I want to tell you now, gentlemen, all I have to say is, you just adopt that motion, and I dare you to do it.

MR. MUNHALL—Mr. President, I move that the motion of Mr. Anthony be laid upon the table.

THE CHAIRMAN—I was simply going to say a word before putting that motion. The objection raised was as to the validity of calling the meeting at this time, because the constitution states that the meeting shall be called by the president during the spring, at one of the prominent spring shows. That has always been at the time of the Wesminster Kennel Club show. The officers deemed it advisable, and thought they were carrying out the general sentiment of that provision, by calling the meeting during the show of the Westminster Kennel Club, which, after all, came but a week before the expiration of the winter itself. That was done for the purpose of getting this largely attended meeting, which Mr. Peshall says is such an extraordinary one, and which we could hardly have hoped for if we had called it at any other time during the spring, unless perhaps at Boston, and that might have been very inconvenient and rather late, going so—

MR. PESHALL (interposing)—Mr. President, will you allow me to interrupt you a moment, just to ask a question. I will ask you if the constitution under which we are at present acting was not adopted after the time fixed for the New York show was published?

THE CHAIRMAN—After the time fixed for the New York show, yes, sir. However, the only question that can arise now is as to the validity of this meeting. I doubt if any delegate would object to it, or bring the law to bear upon your actions here to-day so as to render them invalid, which I suppose might be done if Mr. Peshall chose to. It is for you to consider whether you want to go on with this meeting and run that risk. If you do, continue the meeting, there is a quorum present now. Personally, under the circumstances, as I find this question really arises from a matter relating more to myself than to anybody else, I would very much prefer if these gentlemen would withdraw their motions, allow Mr. Peshall to have his credentials acknowledged, and to take part in this meeting, and do what he considers right.

MR. ANTHONY—I will withdraw the motion.

MR. PESHALL—And I withdraw the protest.

THE CHAIRMAN—After the reading of the minutes of the last meeting it will then be in order for you to elect an officer, and after that, all the objections Mr. Peshall has may be considered.

MR. VREDENBURG—I rise to correct Mr. Peshall in one statement he made—a pretty broad one.

MR. PESHALL—I have withdrawn the protest now.

MR. VREDENBURG—I am not talking of the protest at all. There is one delegate present who is not a member of the club which he represents, and that is myself, representing the Richmond County Association. Every other delegate who has answered to his name is a member of the club which he represents.

MR. PESHALL—I am very glad to know it, Mr. Vredenburg.

The minutes of the last meeting were then read and adopted. Secretary's report read and accepted, also treasurer's report.

Election of officers being then in order, Mr. Winslow took the chair.

MR. ANTHONY—Mr. Chairman, I nominate Mr. August Belmont, Jr., as president of this club. In making the nomination I desire to say one or two words. It is very seldom that any club is so fortunate as to have as its head a man like Mr. Belmont, who has given his time, his thought and his money most liberally to carry out the desires of the owners of good dogs in the United States. It is a thankless task at best to come forward and to stand as the butt of sarcasm and personalities and everything else. Leaders in all movements, however, have to submit, with what grace they can; but I, sir, wish to state here that August Belmont, when he was elected president of this club, and during the time that he has held that office, has done more than any ten men in the United States have done to forward the doggy interests of this country. He is the right man in the right place, and no change could be made which would meet, I believe, the approval of a single delegate here.

MR. PESHALL—Mr. President, I desire to nominate a man for the office of president of this club, and I shall nominate one who is known to each and every one of you; a gentleman that I think will make a president of the club that when we meet here at the next annual meeting we can all gladly vote for again. I am sorry to say that I am compelled to place in nomination another candidate, especially under the circumstances, but I have reasons to object, and my objections I consider very solid ones, to the re-election of the present incumbent. The gentleman that I name I hope each and all of you will vote for. I am satisfied that no one can say aught against him. He has been connected with this club not for the last few months, after it had reached the pinnacle of its success, but one who has been connected with it from almost its very inception; a man who has a level head; a man who will not call a meeting except when it is so provided; a man who will not make contracts for publications until he is authorized to do so; a man who will guard and watch in every act the constitution and by-laws, and carry them out. Gentlemen, I nominate for the position of president of this club, and I ask every member to vote for him, whether he will accept it or not, J. Otto Donner, of the Westminster Kennel Club.

MR. DONNER—Mr. President, this is rather a surprise to me. I thought I had absolutely refused to entertain such a proposition long ago. I cannot think of it.

MR. WISE—With your permission, Mr. Chairman, I desire to second the nomination of Mr. Belmont. There is no member of this club with whom I have been more intimate or more friendly than Mr. Donner, and there is no man in it who would make a better president, but we have a president who is most acceptable, I think, to the great majority of the club, whose record, in spite of the little misunderstandings which are always incident to the thankless duties of a president, is most excellent, who has been called upon to defend the club, has given it his time and attention, and who has done so in a way, I think, that entitles him to its gratitude. I do not think that he has committed any act in the course of his administration which could justly be construed as a violation of the constitution, or a disregard of his duties as president. My friend Mr. Peshall, as Mr. Donner has said, has no authority for the nomination he has made, and I think before a great while he will find that the club has acted with wisdom and cool judgment in re-electing Mr. Belmont. I am sure that our president has been deferential and courteous and kind to every member of the club, that he has discharged his duties faithfully, and I believe in the maxim—When you get a good servant, as long as you can make him serve you, do it. Therefore I second the nomination.

There were 23 votes cast, of which number Mr. Belmont received 22 and Mr. Donner 1.

MR. DONNER—I move that it be made unanimous, and ask Mr. Peshall to withdraw my name.

Mr. Peshall—I cannot consistently do it, Mr. Donner. I will state this, Mr. Chairman, that I had occasion to write Mr. Belmont a letter, and he had occasion to reply to it, and I am willing to submit that letter to any gentleman in the house, and if he says to me to make it unanimous I will do so.

The Chairman—I do not think that comes within the meeting at all.

Mr. Peshall—I am willing to submit it to any one, and if you say so I will be very glad to make this unanimous.

Mr. Anthony—I object to the introduction of any personal matter in this club, outside the club.

Mr. Wise—I rise to a point of order. Debate is not in order until the vote is announced by the Chairman.

The Chairman—Gentlemen, the result of the balloting is 23 votes for Mr. Belmont and 1 for Mr. Donner, the total number of votes cast being 23. Mr. Belmont is elected.

Mr. Belmont took the chair and said:

Mr. Belmont—Gentlemen, I can only say to you in taking the chair that in accepting your election for the ensuing year I feel very much flattered at your expressions of confidence, which I had no real reason to believe that you did not feel. At the same time I naturally, having been instrumental in bringing about a number of changes in the club, and trying to the best of my ability to carry them out as it seemed to me you might desire, and you certainly expressed yourself as desiring, I felt a little anxious to be indorsed, not to serve you again if you did not wish me, but to be indorsed for what I had done during the past year, I thank you again for that.

Mr. Peshall—Mr. President, before there is any business I desire to move, under the circumstances, that the vote be made unanimous.

Mr. Anthony—I rise to the point of order that it has already been decided, and the record made. It is too late to introduce any such matter as that. The vote has already been announced. I object.

The Chairman—I will sustain the point.

Mr. Thomas H. Terry was elected Vice-President.

The Chairman—Under the new constitution, gentlemen, it is necessary for you to appoint three members of the Advisory Committee, under Article 22. And before taking up that subject it will be necessary for me to report to you on the question of a conference with the National Dog Club, and the subject then can be disposed of. Dr. Perry came to New York and waited upon the officers of the club, as you know, here. I then visited Dr. Perry in Boston, and we came to an agreement practically covering the expression of your opinion on the subject at the last meeting, which was that the National Dog Club should abandon its rules and name and become part of the associate membership. At the same time, they did not feel as if they could abandon their organization entirely and break up in disorder, and without any recognition at all they thought they would not be able to carry such a proposition through their members; and it was deemed best to keep their club together and pass it into the associate membership in an organized way, and I supposed, under the circumstances, if they were acceptable to you at all, that you would not object—they would bring in between 100 and 200 members—would not object, as they were going to have two delegates, to giving them some more serious recognition in the club, and as a matter of courtesy, if any officers were created for the associate members, that we would recognize their present officers. I told them I didn't have any objection to that, but of course I could not bind the American Kennel Club to any such plan, but that changes in the constitution would be submitted providing a president, vice-president and secretary for the associate members. Their duties would be merely nominal, and then if they really had enough associate members, and the Kennel Club thought it advisable, their officers would be elected to those positions. That seemed to satisfy them, and the president sent out a circular to the associate members, calling a meeting on Tuesday, the 19th, to take action on the subject. That meeting was called, and the following memorandum of conditions upon which the National Dog Club could be amalgamated with the American Kennel Club was submitted. [Reading memorandum.] Now they do not mention anything about the officers at all, but the idea was to give them one place by making the alteration—one place on the Advisory Committee, and give them a president and one other officer if they qualified for say two delegates—to let those delegates be officers. The amendments to Article 8 would be [reading amendments]. You see that would be purely clerical. It gives really no power whatsoever to the officers of the associate members, and it allows for the two delegates a sort of honorary position.

Mr. Anthony—I move, Mr. Chairman, that the amendments to the constitution as read be adopted, in order that we may take a vote upon this other question.

Mr. Peshall—I object.

A Delegate—Were they properly submitted?

The Chairman—They have been properly submitted. They were sent to all the papers and published in the *Gazette*.

Mr. Peshall—If that is the case I withdraw my objection as to that.

The Chairman—These are the same that were published in the papers, and the proper steps were taken. Of course the reasons for them were not stated publicly.

Mr. Schellhass—In passing these resolutions, does that imply that associate members will be accepted upon the conditions embodied in that letter?

The Chairman—Not at all. I should think that if you are satisfied to admit them, then it is well enough to vote this, but if you are not going to admit them, that is quite useless.

Mr Schellhass—The point I wanted to bring up was that in that statement it is said that all the present members of the National Dog Club must be accepted—all the present members of the National Dog Club, or such names as they put forward. There should be a clause there stating that no parties shall be accepted who have been expelled from the American Kennel Club, or disqualified.

The Chairman—I think under their rules, if I remember rightly, they recognize our disqualifications.

Mr. Schellhass—I don't know whether they do or not.

The Chairman—I have no doubt they would accept any qualification of that kind on the part of the American Kennel Club, that they would all be received as members except such parties as are disqualified now.

In explaining his vote Mr. Peshall said: "Mr. President, I want to explain my reason for voting. I am against an associate membership in every particular, in every way, but I recognize the fact that if we have one these amendments are necessary, and while I am against the associate member in every way, I yet vote for these amendments under the circumstances."

The amendments were declared adopted.

The Chairman—Now the election of an advisory committee is in order. It is necessary to elect three members. Now, if it is your wish to allow the National Dog Club, if they qualify, as many as two delegates, to have two of these offices, the only way that could be done would be by electing these three members of the advisory committee, two of which would be ready to resign later, when the National Dog Club qualifies, in favor of their officers, or they can resign immediately.

Mr. Donner—Will that be the result to give them two out of five votes?

The Chairman—I made a mistake; only one position; it is the president who has to qualify.

Messrs. Anthony and Wise were elected members of the advisory committee. Mr. Lewis was elected a member of the stud book committee.

The Chairman—There are two subjects to come up before you, the subject of the National Dog Club and the question of the Canadian Kennel Club.

Mr. Anthony—I move that the communication of the officers of the National Dog Club be received, and the president be instructed to meet the gentlemen and comply with their request upon the terms as read. Motion carried.

The Chairman—It is proper for me to state here that in connection with this, I had to do that on my own responsibility, and I think I must report it to you, although the contracts are not signed. I took it upon myself to make arrangements to buy the *American Kennel Register*, because it was naturally a [rival] publication of the *Gazette*, and you appointed Mr. Peshall a committee six months ago, I believe, to wait upon the Forest and Stream and see whether the purchase could be made. When I found that the National Dog Club would come in, and that it would be a very desirable thing at the same time to suppress the *Register*—that in fact the suggestion came from Dr. Perry himself, and he said he would buy the *Register* from the Forest and Stream, and that the *Register* then would be handed over to us and suppressed. The contract has been drawn up, and I believe the purchase price has been paid by Dr. Perry, and in connection with their coming in they hand that over to us. Now, if you want to act upon the price, or if you want to ratify it, it is in order, or if you want to leave the matter in the hands of your officers, so that it shan't become public, which perhaps might be the wisest plan—but having taken that step I thought it necessary to report it to you and leave it to you to do whatever is best.

Mr. Anthony—I think it is a delicate matter. It is one of those diplomatic things that ought to be left to the officers to close. It is virtually closed now, but, at the same time, it might be wise not to give too many of the details for publication. I move that the matter be left with the president of the club.

Mr. Peshall—I think the matter is well known. I heard it on the streets. I think it is best to ratify it.

The Chairman—If it is well known perhaps it is as well to ratify it.

Mr. Peshall—The sum is $500.

Mr. Anthony—I move that the arrangement made by Mr. Belmont in regard to the purchase of the *American Kennel Register* be ratified, and that the officers be empowered and instructed to carry out the same.

The Chairman—I wish to say to you this, that in the contract there are restrictions with regard to selling the *Register* to any competitor, and in publishing the *Gazette* we are a competitor of the Forest and Stream. Consequently the American Kennel Club cannot purchase the *Register* directly. That would be in violation of the contract, and, personally, my relations with the Forest and Stream are not such as would lead me to make any personal contract with them. That is why it was done through Dr. Perry, and if you will, perhaps, put the motion this way, that the club appropriate a sum to be left to the discretion of the officers for the purchase of the *American Kennel Register*, the contract can be carried out with some individual and the same object will be attained, and the money can be appropriated and we do not really become the direct purchasers, but there is the money to pay for it.

Mr. Anthony—I will modify my resolution in accordance with the suggestions of the president.

Mr. Peshall—Mr. President, I move an amendment to it, that the parties who are managing it be allowed to remain in their management until the matter is closed. Motion carried.

It was voted to recognize the wins of the Canadian Kennel Club, without requiring registration in the *A. K. C. Gazette*. After much discussion it was voted to amend the wording of the Gordon setter resolution adopted at a previous meeting as follows:

Resolved, That the Gordon setter is a black and tan setter, with no out-cross of any kind for three generations on the side of both sire and dam, such a dog to be known as the American Gordon setter, and that dating from Jan. 1, 1889, all dogs must show the 62½ per cent. of Gordon blood, as defined here, to be registered as American Gordon setters.

The subject of removing the disqualification of the setter Kenmore was referred to the advisory committee. The Toledo, Connecticut State, Rensselaer and Worcester clubs and the South Carolina Poultry and Pet Stock Association were elected members. The Western Pennsylvania Poultry Society and Stafford Kennel Club were dropped, and the National Poultry and Bench Show Association of Atlanta is to be instructed to pay its dues. It was voted to recognize the wins of the Lynn show under whatever name the club might give it.

Mr. Vredenburg was re-elected secretary and treasurer.

Mr. Peshall—Before we adjourn I want to move that the Advisory Committee of this club take steps for its incorporation under the laws of the State of New York; that the said committee have power to obtain said incorporation for the benefit of all the members. That is a matter that ought to be attended to. Any other club can be incorporated and take our name.

Mr. Belmont (Mr. Donner being in the chair)—I move that the officers be instructed to get the opinion of counsel upon the subject of the advisability or not of incorporating, then communicating that opinion to the various delegates and receiving their opinion on the subject in writing, giving to the officers power in case say two-thirds of the delegates favor the incorporation of the club that the officers then go to work and do so.

Mr. Peshall accepted Mr. Belmont's amendment, and the motion as amended was carried.

Mr. Peshall—There is one thing now that I want to call attention to. I want to give notice that I will, in time for the next meeting, offer an amendment to the constitution and by-laws in regard to the *Kennel Gazette;* and I will say now that, realizing the way that a majority of the delegates feel upon this subject, is one reason why I ask that this club be incorporated. If we are going to publish this paper we do not know where the liability may commence and where it may end—not that they could get very much out of me, but still it is a matter that we ought to look to. I know there are some members of my club that are quite wealthy, and I don't care about laying them liable to a libel suit in a way which might come. I don't say it will, but it might come; we don't know. That is my reason for asking the incorporation of the club; one reason, if we are going to publish a paper, because I finally came to the conclusion that we will not always publish a paper of this kind. If we are going to publish a paper, I want a paper. I want it so chock full of new meat and raw meat that when it comes to the members of any club they may laugh and be entertained, and read something that will do them some good.

The Chairman—I thought you stated that it made too much competition with the regular publications.

Mr. Peshall—I say, sir, if you are going to ignore that fact, I am against it under all circumstances, but we are representing many clubs here, and I say if we are going to impose a paper upon them, let us give them a paper that will do them some good; that will cause them to pray or swear, one or the other. That's my theory. That's my doctrine.

Mr. Anthony—You have been doing both.

Mr. Peshall—Yes, I do a little of both. I say if they are willing for us to publish a paper, if they withdraw their objections, which I believe they will, I am in favor of giving the members of the American Kennel Club a paper that is a paper, if we can get it up. I don't think that there is a club in America that is willing to create a baby, and then hold a bottle, and sit there with a diaper around it and nurse it, and say, "You shan't grow." It is un-American.

Mr. Anthony—Let us get the baby.

Mr. Peshall—We have got it. The baby is here. Now I say if we are going to go to these people, let it grow. I shall never vote for a bag of bones. I give notice of this. I may have several amendments between now and the next meeting. I want to ask whether these amendments date from the time they are received by the secretary or from the time they are published?

Mr. Vredenburg—Well, the secretary will publish them as soon as he can get them type written.

Mr. Belmont—The American Kennel Club after its meeting to-day is not likely to want to make any changes. The officers and all connected with the publication of the *Gazette* and the business management of the club are very much pressed for time. They have got a great deal to do, and particularly at the end of the month, although they are not men of leisure in any instance. They are occupied so constantly that they have to work late at nights, and it seems to me that under the circumstances, and after what has occurred to-day, the Kennel Club should not be burdened with any unnecessary work, and any propositions that are not likely to go through. I think that courtesy ought to prevent Mr. Peshall making any more propositions of the kind. But if they are made it seems to me that they had better be sent out to the delegates and give them their thirty days, and have them vote them by writing, and not take up our time at the next quarterly meeting with another futile discussion. What has been done here to-day has been done carefully, and what has been done before this meeting has been done carefully, and I do not believe anybody wants to make any more changes. Perhaps they do, but if they do they do not want to have their time taken up.

Mr. Peshall—Mr. Chairman, I would say in reply to that this, that I will submit at the next meeting of the New Jersey Kennel Club when we discuss these matters, the proposition made to them by the president of this club in regard to the New Jersey Kennel Club offering any amendments, and if they look upon it in the same light that he does, why I shall advise that that course be pursued. Of course if we cannot offer any amendments, even if they strike the club favorably, that would be passed, why of course as he says it would be hardly worth while to take up the valuable paper here, or the time of the club with them.

Mr. Anthony—I just want to say one thing. We have had a vote to-day, and there has only been one vote in favor of any proposition. He has outlined this same course for a very long time, and if he makes any amendments of the kind he proposes, they will meet with exactly the same fate. But of course if he chooses to make the amendments, we have got to listen to them when they come up, but I move now that we adjourn. Carried.

THE NATIONAL DOG CLUB.

A MEETING of the National Dog Club was held at the Putnam House, New York, Tuesday evening, Dr. J. Frank Perry the president in the chair, to take action upon the proposed amalgamation with the Associate Membership of the American Kennel Club. Dr. Perry presented the question as follows:

To the Members of the N. D. C.:

I have already reported to you in brief the results of the conference between the president of the A. K. C. and myself.

In advocating the radical changes which I have recommended I have but a few words to offer. When I proposed the formation of the N. D. C., I was actuated by a desire to promote the interests of the canine world, and now, in advising an amalgamation with the A. K. C., it is the same motive which moves me. What has happened during the brief history of our club must be known to you all. Starting with a definite purpose we have steadily pursued our course until that for which we have striven has been accomplished. Our formation was a necessity, for at the time individual breeders had no organization with which they could affiliate and to which they could submit their grievances. Now the condition of things is very different; instead of no club there are two—the N. D. C. and the Associate Membership of the A. K. C.

Two such clubs cannot exist without coming into collision. However much harmony might be desired, it would be impossible. But, one thing is possible, and that is amalgamation.

It would be proper under ordinary circumstances to expect the junior club to merge into the senior. Indeed, we should be justified in demanding this proceeeding in the present case if we had been striving only for our own aggrandizement. As it is, however, let us sink all minor considerations, and by joining the Associate Members of the A. K. C. show ourselves above such a small thing as a name. However much we may have felt at our inception that the A. K. C. was somewhat remiss in protecting the interests intrusted to it, such is no longer the case. At present it is doing all that can be expected of it, and should receive the support of all those who have the real interest of the doggy world at heart. Whether these changes have been brought about by the existence of our club, is not for me to say, and indeed it is immaterial; let it suffice that they have taken place.

One or two questions which have been asked me it may be well to notice briefly. We go into the Associate Membership Club as a body and are not voted upon singly. Such a method as the latter—giving the original members of the Associate Membership Club or the A. K. C. an opportunity to reject those whom they pleased—would not be amalgamation, and it has never been contemplated by Mr. Belmont or myself. It must be thoroughly understood, however, that after joining the Associate Membership we become once more only individuals, and have no extra rights or privileges, nor any added value to our numerical strength from the fact of our having composed the N. D. C. The only way in which we can be of the greatest service to the breeders of America is by acting solely with a view to their advancement, and carrying our points in the club, not by numerical strength, but by the soundness and fairness of the propositions which we may from time to time advocate.

And now, fellow members, my task is done. The way is clear before you to an honorable peace. If any thought of hidden motive on the part of those who once opposed us lingers in your minds, I pray you dismiss it. We have been met with fairness and with honest intentions ourselves, we should give the other side credit for the same feeling. By a cheerful acquiescence on our part in the proposed amalgamation let us show those who have looked upon us with something like suspicion, that we had a fixed purpose in view, and having accomplished that, we can promptly step aside, asking no homage or reward, and leaving the doggy world to judge the rightness of our motives.

J. Frank Perry.

After some discussion it was voted that the club would amalgamate upon condition that the members of the N. D. C. should be admitted to the A. K. C. Associate Membership in a body, *i.e.*, without being voted on individually; that the secretary of the N. D. C. should be given thirty days in which to file with the secretary of the A. K. C. names of N. D. C. members desiring to join the A. K. C. Associate Membership, such individuals to be constituted members of the A. K. C. from the date their names are filed (with the dues) for the current fiscal year; that the A. K. C. should assent to the prescribed conditions at once; and that the meeting of the Associated Members should be postponed to the Boston show.

As these terms were concurred in by the A. K. C., at its meeting on Thursday, the amalgamation of the two clubs may now be regarded as a thing accomplished; and with the going over of its members, or a part of them, into the A.K.C., the National Dog Club will dissolve.

THE COLLIE CLUB.—Rahway, N. J.—*Editor Forest and Stream:* At a special meeting of the Collie Club held at Madison Square Garden it was decided that the "President's Cup" for the best collie exhibited by a member of the club, be competed for at the coming show of the Philadelphia Kennel Club; also that a silver medal be awarded to the best collie bred in the United States or Canada. The stud dog stakes will be decided at the same place. It being considered desirable to change the time of holding our annual meeting, the next one will be held during the Philadelphia show, and thereafter at the W. K. C. show in New York. The club have offered the following special prizes at Troy, Albany, Utica and Rochester bench shows: $10 for the best collie dog or bitch in the open class bred and exhibited by a member of the Collie Club. Silver medal for best collie dog or bitch in the show.—J. D. Shotwell, Secretary.

DOG TALK.

THE late Mr. R. C. Van Horn, of Kansas City, Mo., expressed a wish before he died that his Irish setter dog Patsy D., should be sent to Dr. Wm. Jarvis, Claremont, N. H., and the dog arrived at his new home last week. Patsy is well-known as a winner both at field trials and on the bench. Dr. Jarvis has also received from the kennel of Mr. H. J. Gogarty, East Dublin, Ireland, the Irish setter bitch Viola, winner of first and special for best puppy at Dublin 1886. She was whelped June 26, 1885, and is by the well-known winner Frisco and out of Zeta.

We are sorry to note that the pointer dog Old Black Joe died Feb. 5, from pneumonia. It will be remembered that he won both the Derby and All-Aged Stakes at the recent field trials of the Pacific Coast Field Trials Club.

We understand that the Rhode Island Kennel Club is negotiating with the State Fair Association with a view of holding a dog show next fall in connection with the annual State Fair.

We are informed that several prominent spaniel exhibitors, members of the Spaniel Club, requested the managers of the Boston dog show to give the spaniel classes to Mr. Mason and that the request was granted.

Mr. F. Windholz may well feel proud of the record of his dogs at the New York show last week. Four firsts in the two challenge and two open English setter classes at such a show is indeed a wonderful record.

We have three communications on coursing which will be given next week; and more fox-hunting discussion and description.

Dr. M. H. Cryer's Skye terrier dog Gladstone Boy was taken on Saturday morning from the New York dog show by mistake and another one left in his place, but as the tag was missing he could not be identified. This was the only mistake of the kind that was made, and it is presumed that the person who took him will return him as soon as the mistake is discovered.

Mr. C. H. Mason declined judging the American foxhound and beagle classes at Boston upon the ground that he was not thoroughly up in the breeds. If some of our judges who undertake to pass upon breeds with which they are not familiar would do likewise it would be better for the exhibitor.

There are two Massachusetts Kennel Clubs. One is the old club, headquarters at Boston. The other is the Massachusetts Kennel Club, Lynn, Mass., of Lynn. Each is incorporated. They are at odds over the name. The old club maintains that the new infringes its title. The new claims that the old is practically dead, and stress is laid upon the "Lynn, Mass.," part of the name. Talk says the dispute will be carried into court. The American Kennel Club has voted to recognize the Lynn awards under whatever name the show may be held. What is there then in the way of peace? Let us have it. If the Lynn members change their name in time to put a new one in their catalogues everything will be serene. A graceful deference to the feelings of the old Massachusetts club and the adoption of a distinctive title will win for Lynn approval and entries. One name is as good as another. The repute for it, bad or good, must be made by the club. If their show is successful their name will take on lustre; if the show fizzles, no name, not even one so distinguished as that of the Massachusetts Kennel Club, can pay the deficit.

A mastiff breeder wishes to know who has the largest mastiff bitch in this country. We will be pleased to publish weights and measurements.

At a recent dog show an exhibitor insisted upon taking his dog to his room at the hotel. At 10 o'clock the next morning the chambermaid found the exhibitor sound asleep on the floor and the dog curled up in the middle of the bed.

We have received from the St. Joe Kennel, Niles, Mich., an excellent photograph of their well-known pair of mastiffs Wacouta Nap and Queen of Ashmont.

The Collie Club offers a special of $10 for the best collie owned by a member of the club, and a silver medal for the best collie, bred and owned by a member, at the Rochester show.

The black cocker spaniel Juba, owned by the Nahmke Kennel, died from pneumonia at the show last week. With the exception of an unweaned puppy that apparently was smothered by being overlaid by its dam, this was, so far as we could learn, the only death during the show.

The *Daily Graphic* of last Saturday contains a full page illustration of a number of the best dogs that were at the show last week. The drawings were made from the portraits in "Our Prize Dogs," and are exceedingly well done. Accompanying the illustrations are extracts from Mr. Mason's criticisms of the dogs. There will undoubtedly be a great demand for these pictures, and those who wish to secure a copy should send at once to the office of the *Graphic*, 39 Park place, or, better than this, send to this office for a copy of the book.

The *Sun* publishes the following: "Way over on the East side, on Mangin street, near Stanton, is a blacksmith shop in front of whose doors can be seen almost any time a crowd of wondering onlookers. The cause of their presence is the fact that the bellows of the forges are worked by dog power. In one corner of the shop is a wheel about 8ft. in diameter and wide enough for a dog to stand in. When the wheel is at rest the dog stands in much the same position as the horse in a child's rocker, with his head always turned toward the forge awaiting his orders. When told to 'Go ahead!' he at once starts on a brisk trot which makes the wheel turn around rapidly, and by means of a crank and lever the power is conveyed to the bellows. As the manufacture of spikes is the main feature of this smithy, the fires have to be kept always bright, and consequently a force of four dogs is necessary to do the work. Each dog works for one hour and then rests for three. The boss of the shop, a brawny and good-natured German, takes pride in his dogs, and says that it costs him about $3 a week to feed each one. The intelligence of the dogs is certainly a matter of wonder, and people are never tired watching them at work and bothering the workmen with all sorts of curious questions. These dogs save the owner quite a sum of money, as otherwise it would require at least the services of two men or a small engine to do the work."

THE PREFIX BRADFORD.—Bangor, Me., Feb. 16.—*Editor Forest and Stream:* I claim the prefix Bradford, for use with names of Yorkshire terriers bred by me. It is not desired that this claim should conflict with the claim of John F. Campbell to name of Bradford Kennels, published last week. I claim no name for kennels, but the prefix Bradford to names of my Yorkshires. It is very probable that as I own Bradford Harry and Bradford Lill, both named in Bradford, Eng., and winners of note, that I shall identify their offspring by the prefix I have claimed.—P. H. COOMBS.

BOSTON DOG SHOW.—The Bench Show Committee of the New England Kennel Club advises us of the following additions to the premium list: Novice classes for St. Bernards (one class), pointers (one class), English setters, Irish setters, black and tan or Gordon setters, spaniels (field and cocker any color), collies and fox-terriers; dogs and bitches to compete in all classes; prizes will be $10, $5 and medal. There will also be challenge classes for black and tan or Gordon setters. Mr. Chas. H. Mason will judge all spaniels except toys, and Mr. A. C. Krueger will judge foxhounds, beagles, basset-hounds and dachshunde. A large number of valuable specials have been offered, including one of $25 each for best dog or bitch that has not won first prize, to mastiffs, St. Bernards, pointers, setters (all breeds to compete), spaniels (all breeds to compete), and fox-terriers. Specials are also offered for best Clumber spaniel, poodle, and kennel of not less than four Irish terriers. The Beagle Club also offer specials for best dog and best bitch owned by a member.

THE EASTERN COURSING CLUB has been organized for the purpose of affording facilities for the enjoyment of the sport of coursing hares with greyhounds. Suitable grounds have been selected on the line of the Long Island Railroad, and arrangements have been made for the proper care of the hares, of which an abundance will be in readiness for the fall meeting of the club. All ladies and gentlemen who are now, or who intend to become owners of greyhounds, are invited to attend a meeting to be held at the Hoffman House parlor on Saturday evening, March 9, at 7 o'clock. The following named gentlemen are the organizers of the club: E. H. Blackam, W. B. Growtage, E. Garbitt, T. Mortimer Thorne, Jr., J. Herbert Watson, H. W. Huntington, A. Leeming, C. Torrey. Address The EASTERN COURSING CLUB, 253 Fifth avenue, N. Y.

LYNN DOG SHOW.—The premium list of the inaugural dog show of the Massachusetts Kennel Club, Lynn, Mass., to be held at Odd Fellows Hall, March 26 to 29, is now ready for distribution. 126 classes are provided for, with prize in challenge classes of silver medal, and $8, $4 and diploma in important open, and diplomas in puppy classes. The club also offers kennel prizes of $15 each for mastiffs and St. Bernards, and $10 each for pointers, setters, spaniels, collies, pugs and fox-terriers. There will also be a large number of special prizes offered for the different breeds. The judges are Miss A. H. Whitney, St. Bernards, Newfoundlands and pugs. Mr. A. C. Krueger, foxhounds, beagles, basset hounds and dachshunde. Mr. James Mortimer, the remaining classes. Entries close March 11. The address of the secretary is Mr. D. A. Williams, Box 5, Lynn, Mass.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

WORCESTER.—Will a bull-terrier pup, fourteen months old, who has become partially deaf from slapping on the head, ever recover his hearing? Would cutting his ears in any way endanger his recovery. Is there any law in Massachusetts forbidding cutting the ears? Ans. 1. That depends upon the extent of the injury. 2. No. 3. No.

QUANCETT, Attleboro, Mass.—My English setter pup is troubled with a diarrhœa, slimy and colorless, sometimes a tinge of blood. Have fed scalded milk and baker's crackers (dry), but see no improvement. The diarrhœa is worse during wet and rainy weather. Ans. Dysentery—Get the following pills and give one every morning and evening, concealed in a small morsel of meat, until trouble has disappeared:

℞ Camphoræ.....grs. x.
Pul. opii.....grs. v.
Mix. Fit. pil. No. 10. Sig. one night and morning.

WASHINGTON, D. G., Aug. 24, 1888.—*The U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I have used about 16,000 of your Climax paper shells this year, and not a single bursted head. As long as you keep them up to their present high standard I will continue to use them in preference to all other makes. Very respectfully (Signed) JAMES M. GREEN, of Green & Cunningham.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SPRINGFIELD, Mass., Feb. 21.—These scores were made this evening in the rifle and revolver matches at the range of the Smith & Wesson revolver club by the two teams:

Rifle Match.

NEWARK, N. J.—John Coppersmith, of the Our Own Rifle Club, of Newark, N. J., is practicing rapid shooting. On Wednesday afternoon, Feb. 20, on the 100ft. range of the club, using a Ballard .22cal. singleloader, he accomplished the feat of firing fifty-two shots in eight minutes and fifty seconds on a two-inch bullseye, getting forty-eight in the eye and the others but an eighth of an inch off.

CHICAGO, Feb. 16.—The following scores were made by members of the Chicago Rifle and Revolver Club this evening at 551 State street; off-hand, open sights, Massachusetts target, possible 72, range for rifles 50ft., Smith & Wesson revolvers 36ft:

	Rifle.	Revol'r.		Rifle.	Revol'r.
M Bolan	71	55	W Bishop	62	..
A Sorensen	68	66	E Mitchell	60	..
F Parker	68	62	L Gaivey	60	44
H Thurston	67	39	T Austin	55	46

TACOMA, W. T., Feb. 12.—At the annual meeting of the Tacoma R. R. and G. Club, held at headquarters, the following officers were elected: President, T. A. Bringham; Vice-President, H. Hoagland; Secretary-Treasurer, E. E. Ellis; Captain of Trap Team and Ground Master, R. S. Albright; Captain of Rifle Team and Range Master, W. E. Box; Directors—W. R. Dodge, R. B. Mullen, S. G. Lister, H. Hoagland, J. M. Bell. The annual tournament of the Sportsman's Association of the Northwest will be held here in June under the auspices of this club. A large number of sportsmen from the interior and coast cities are expected to be present, as all-cash purses and other prizes will be guaranteed.—E. E. ELLIS, Sec.-Treas.

BOSTON, Feb. 22.—The shooters at the Walnut Hill rifle range on Washington's Birthday were very numerous, and many very good scores were made, but the general shooting was not up to the usual standard of the crack shots that were present. There was a bad wind in the morning, which bothered the shooters not a little. Mr. Munroe won the gold medal in the 20-shot rest match, and Mr. Ellsworth won the champion gold medal. Following are the best scores finished:

20-Shot Rest Match.

WILMINGTON, Del., Feb. 19.—Owing to the rain of Monday the regular weekly shooting at Healdmoor Rifle Range was postponed until this afternoon. The high changable wind interfered greatly with the rest shooting, which took place early in the afternoon, but later it subsided and the conditions were much more favorable. The scores are as follows, standard American target:

Revolver Match—50yds.

E J Darlington	9	7	9	2	9	8	10	7	7	8—76

ST. LOUIS, Mo., Feb. 24.—The members of the St. Louis Pistol Club finally succeeded in breaking the spell of hard luck which seemed to haunt them during the previous two weeks' meetings. Two members passed the 80 mark. Summerfield and Fodde each made 81. On the shoot-off Summerfield won. Standard American target, 20yds., .22cal. Stevens pistol:

M Summerfield	7	10	7	9	9	7	9	7	8	8—81
F A Fodde	7	10	9	10	7	7	10	7	6	8—81
L V D Perret	7	6	9	6	10	9	7	10	6	10—80

UNSER FRITZ.

FRANKFORD, Pa., Feb. 21.—The usual attendance of members of the Hartranft Rifle Club was on the range to-day, and indulged in the weekly practice. The day was delightful, with a stiff breeze from the south. The scores made were about the usual average of the members present.

200yds. Off-Hand, Standard American Target.

E Travis	8	9	10	10	7	7	9	7	7	—82
L E Toboldt (mil)	9	6	6	6	8	8	9	7	7	6+4—75

Using .44-cal. Smith & Wesson, Russian model and factory ammunition, 50yds. off-hand, standard American target, 10 shots:

J J Mountjoy	5	7	6	10	10	8	9	6	10	10—81
E Travis	8	9	6	10	6	10	9	7	4	6—75

SAN FRANCISCO, Feb. 17.—Though the crack of rifle shots resounded through Shell Mound Park all to-day, the majority of the marksmen were only practicing, and few scores were kept. Company F, First Infantry, held its regular shoot, with the following results:

Corp Cobbledick	3555445554—45	Pvt Cobbledick	4343443343—35
Sergt Withern	5433443344—37	Pvt Craddock	4435344242—33
Pvt Brewer	3433443343—36		

The monthly medal shoot of the German Fusilier Guard was held with the following result: First class—William Schnoor 41, G. Pattberg 40, G. Schwane 38. Second class—O. Rhodes 35, H. Sohld 33, J. Beher 32, A. Klose 41. The target ranges at Harbor View were well attended. The principal event of the day was the yearly cash prize shoot of the Germania Schuetzen Club. Nearly every member of the club was on hand with rifles and ammunition, and the competition was stronger than ever between the rival marksmen. The cash prizes competed for amounted to $304, and it was long after sundown before they were distributed. The California Schuetzen Verein held their monthly medal shoot. Following are the winners: Championship class, A. Rahwyler, 424 rings. First class, F. Kuhnle, 426 rings. Second class, C. Meyer, 388 rings. Third class, William Glenderman, 372 rings. Fourth class, J. Straub, 379 ring. Cadet class—championship medal, A. Ehrenfort, 365 rings. First class, R. Stethin, 339 rings. Second class, William Glenderman, Jr., 297 rings.

NEWARK, N. J., Feb. 18.—A large number of riflemen, the better part of whom were old-timers, were present at the Essex range this evening, to sign the roll of the Essex Amateur Rifle Club and assist in the election of officers. The officers elected were as follows: Pres., Roger Marshall; Vice-Pres., A. E. Doll; Cor. Sec., John H. Huegel; Finan. Sec., John Dalton; Treas., Chas. Cooper; Sergeant-at-Arms, Samuel Shackleford; Capt., John Coppersmith; Rifle Insp., A. D. Weller; Scorer, Charles Schaffer; Shooting Com., George D. Weigman, Alfred Lake, Alex. C. Neumann, John H. Heugel, George Sloan. The club makes its new start under very favorable auspices, and, numbering as it does nearly all the members of its team of former days, besides some of the best men of the old Frelinghuysen's crack team, should be able to put a team of ten in the field that would be almost invincible.

AMHERST, Mass., Feb. 22.—Several local marksmen, including H. K. Cooley, R. C. Talbot, J. C. Gassner, F. N. Witheral and E. T. Stevens, went to Amherst yesterday and were handsomely entertained by the local rifle club at the Mountain View range. Milan W. Bull would have gone had not his duties as a representative of the city government kept him at home. Riflemen were here from Springfield, Northampton, Deerfield and Broad Brook. Lunch was served at the range, as it is supplied with a complete kitchen equipment. Before the Springfield boys left for home they presented the Amherst club with a costly solid gold badge, made by N. M. Shepard, of New York, as a token of friendship. On the clasp is the word "Champion," and on the pendant are the words "Amherst Rifle Club," and a miniature target. These scores were made:

H K Cooley	9	10	10	10	8	10	10	7	7	6—87
E T Stephens	9	7	7	10	9	7	9	9	10	9—86
J C Gassner	7	9	8	8	9	10	7	9	7	9—83
Z C Talbot	5	10	10	9	9	10	9	8	6	5—81
F N Witheral	9	9	8	7	10	10	7	4	9	7—77
A F Bardwell	10	8	9	7	7	7	6	9	7	7—77
J M Johnson	6	9	9	8	7	7	7	7	4	10—74
S J Derby	7	7	10	7	5	7	9	7	6	6—71
J S Thomas	8	7	6	9	4	5	6	8	6	10—69

HOLYOKE, Mass., Feb. 23.—The rifle range at Williamansett was opened for the first time since Thanksgiving Day, by the Holyoke Club. The occasion was a visit of marksmen from Melrose, Conn. The intense cold and strong wind prevented fine scoring. Messrs. Allen and Derby were well pleased with the range. The following scores were made at 200yds. off-hand, standard target:

Farrow	9	8	8	6	8	7	9	8	9	5—77
H J Derby	7	7	5	7	8	10	7	8	5	7—71
L Allen	8	5	6	8	8	7	4	10	8	7—71
Clough	7	7	7	10	4	6	10	4	6	5—65
Ferry	8	5	7	7	9	4	7	9	4	6—64
*Johnson	8	8	7	7	6	7	4	4	9	5—61

*Springfield military rifle, .45-cal.

BRADFORD, Feb. 21.—The Bradford Rifle Club visited Orillia to-day to shoot a match with the club of that town. The match was very exciting for a short time at the commencement of the 200yds. range, but Bradford won easily by 49 points. Great interest was taken in this match, as each club had won a match previously, and each seemed determined to win. The match was shot under the Ontario Small Bore Rifle Association rules; 100 and 200yds., standing, possible 50 at each range:

Bradford.				Orillia.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Omaha, Neb., Gun Club Tournament, April 16, 17 and 18.
Amateur Tournament, St. Louis, Mo., April 23, 24, 25 and 26. Fred A. Fodde, Manager.
June.—Annual Tournament Sportsmen's Association of the Northwest, Tacoma, Wash.

MIDDLESEX GUN CLUB.

THE Washington's Birthday shoot of the Middlesex Club at their grounds at Dunellen, N. J. was one of the most enjoyable affairs of the season. The attendance was good, the shooting lively and all arrangements in perfect order. A large number of visitors from other clubs were on hand to participate in the fun and some of them succeeding in getting something more substantial, a share of the moneys put up. The Mercer Gun Club of Trenton was represented by its President Ed. Updergrove, Vice-Pres. Ike Shreve, Secy. Burt Moore, M. Fox, Charlie Van Camp and Chas. Zwirlein. Among the other visitors, we noticed W. H. Pack and J. Buchanan, of the crack North End Gun Club, Phila. W. H. Rupell, of Milford, N. J.; Chas. Holt, of Wilburtha, N. J.; W. H. Skinner, of St. Paul, representing the new Baker gun; C. A. Beckwith, C. L. Gore and W. G. Paddock, of Albany, N. Y.; and Geo. Gaddis, of Bound Brook, N. J. The early morning air was cold and raw, but soon after noon Old Sol showed his friendliness and his rays soon altered the temperature. The inanimate matches were shot at Keystones, under Keystone rules, the referee and scorer, Sam Wilbur, allowing no loafing and the events were rattled off in short order. The changes from Keystone traps to live bird traps and back again was quickly done under the supervision of Neaf Apgar and no tedious waits occurred. The live birds were furnished by Ellis Campbell and were all good strong flyers. No report of a Middlesex shoot would be complete without a mention of Charlie Smith, "Dutchy," who was, as always, full of pranks, but was not shooting in his usual form, as he was using a strange gun, his "old reliable" being up for repairs. Geo. Bateman pulled the traps and showed neither fear nor favor. Ties divided unless otherwise reported.

Sweep No. 1, at 10 Keystones, entrance $1, three moneys:

SUBURBAN GROUNDS.

THE two days' tournament of the Suburban Shooting Grounds Association, on Feb. 22 and 23, was a success in every way. Although the weather was cold and raw, an abundant supply of shooters from various sections of the country were in attendance and the various events were well filled. Only inanimate targets were used, bluerocks and Keystones, one set of traps for the amateurs and another for the open sweeps. The large entry list in the amateur contests proves that the classification committee's work is satisfactory to them and they feel that they meet only their equals in skill. The programme each day consisted of eight regular events, some of which were unavoidably left out, and in addition to these a number of extra sweeps were shot. The management projected a team race of five men from any regularly organized club, which would have been very interesting, but the strict ruling of the committee to prevent the entry of teams composed of crack shots picked out from various clubs gave rise to dissatisfaction in some quarters and the race was abandoned. The action of the committee was commendable and the result more fatisfactory than if a composite team had been allowed to enter and walk off with the money. In addition to the money prizes a list of merchandise trophies were offered for competition by amateurs. In all sweepstakes the moneys were divided, 50, 30 and 20 per cent. when 12 entries or less, and when more than 12 into 40, 30, 20 and 10 per cent. Below are the scores:

First day, Feb. 22.—Event No. 1, at 10 single rises, entrance $1, four moneys:

Hunt	1111011111—9	Ellis	1110111111—9
Jay Bee	1101011100—6	C Richards	1100101111—8
Pumphrey	1111011111—9	J P Smith	1111101011—8
Gardner	1111111111—10	J T Richards	1110111101—8
Albee	1110101111—8	Tell	1111001110—7
Brientnall	1111110110—8	Thurman	1110111100—7

Gardner won first, $4.80; second, $3.60, div.; third shot off and $2.40 won by J. C. Smith; fourth div.

Event No. 2, same as No. 1, three moneys:

Brientnall	1110101111—8	Pumphrey	1111111111—10
Jay Bee	1110111011—8	J T Richards	1111101111—9
Hunt	1111111111—10	Ellis	0101111101—7
Gardner	0011110101—6	Thurman	1000101111—6
J P Smith	0111011111—8	Earnest	1110010001—5
Albee	1111111011—9	Fussell	1001000010—3

First, $6, div.; third, $2.40, div.; second shot off, and $3.60 won by Albee.

Event No. 3, at 15 single rises, $1.50 entrance, $25 guaranteed, four moneys:

Brientnall	111111010110111—12	J T Richards	111111111101111—12

OTTAWA, Feb. 16.—For the seventh round for the Thompson Cup the day was not one that the boys would have selected. Not over cold, but a raw east wind with a heavy damp air and dull gray sky. First sweep, 10 birds, 18yds. rise:

W J Johnson.....1111101111—9
P Trudeau.....1011001111—7
Geo White.....1110111100—7
Dr H Equus.....1111100111—7
Dr H Martin.....1111110101—8
A H Throop.....1110061110—6
R G Dalton.....0111011001—6

Wind blowing a gale, and the birds from one, four and five were puzzling.

For the Thompson cup, 20 birds, 18yds. rise:

Geo White.....11111111101111111111—19
W J Johnston.....11001111010111111101—16

TORONTO, Feb. 18.—The Goderich Gun Club held their annual meeting this evening, when the following officers were elected: President, James Nesbit; Vice-President, W. Rutson; Secretary, John Grant; Inspector, F. Pretty; Executive Committee, E. R. Watson, R. P. Wilkinson and Walter Shannon. The secretary's report showed the club to be in a flourishing condition.

TORONTO, Feb. 19.—The third shoot of the West Toronto Junction Gun Club, for the two gold medals, took place to-day. The cold weather made the attendance small and also accounts for the low scores, as follows. Twenty blackbirds each, 3 traps, 18yds. rise:

W Davidge (3)*.....18
W A Clarke.....15
W Blea (5)*.....14
D Walton (3)*.....14
C Hinton (2)*.....13
P Wakefield.....13
T Charlton (3)*.....12
H Jackson.....11
E Dollery.....11

*Allowance.

TORONTO, Feb. 20.—McDowall & Co.'s big live and artificial bird tournament, which opened this morning at the Woodbine, promises to be the most successful ever held in Toronto. Many entries from a distance have been secured and although the weather was very sharp the attendance, as the scores will show, was very large. The birds were an exceptionally fine lot and flew well, many dropped dead just outside of bounds. To-day's scores were as follows:

At 12 pigeons each, 26yds. rise, 100yds. boundary, use of both barrels allowed, purse $125, divided into 7 prizes, entry $3:

J Wayper.....10
R Black.....10
W G Sinclair.....10
D Blea.....10
G Davey.....10
Graham.....10
W Heatherington.....9
Peterson.....9
Rogers.....9
Mallet.....9
Phillips.....9
Dicks.....9
Chatterlock.....8
S Glover.....8
R Stroud.....8
J Singleton.....8
R Barrett.....8
C Ayre.....8
Ross.....8
H George.....7
C Wilmot.....7
Redman.....6
Cline.....6
Jones, retired.....5
Bampfield.....5
March, retired.....5
J A Varley.....5
E Mond.....5
White.....5

Wayper won shoot-off.

Feb. 21.—McDowall & Co.'s big shooting tournament, which closed to-day, was a great success. There were, in addition to the pigeon matches, continuous artificial blackbird sweepstakes. The shooting, notwithstanding the good class of birds, was very good, and the shoot all through was conducted in a thorough sportsmanlike manner and everything passed off to the entire satisfaction of all. The following clubs were represented: Montreal, Guelph, Hespeler, St. Catherines, Hamilton, Carleton Place and Niagara Falls. To-day's scores ran: Pigeon match, 7 birds each:

W Felstead.....7
S Glover.....7
C Perren.....7
R Black.....7
J Wayper.....7
J Winchell.....7
H George.....7
P Wakefield.....6
Quinn.....6
J Rice.....4
F Mallet.....4
McDowall.....4
Ross.....4

Felstead won shoot off. Eight blackbird sweepstakes followed.

TORONTO, Feb. 22.—A blackbird shoot took place at McDowall's grounds this afternoon. Several crack shots, who had remained over from the tournament, were present and took a hand in the matches.

First sweep, 25 birds, $5 entry, 3 prizes:

S Glover.....21
J W Heathington.....20
J Wayper.....20
J Winchell.....19
W McDowall.....17
W Felstead.....17
F Emond.....14
G Morley.....14

Second sweep, 15 birds, $2 entry, 3 prizes:

McDowall.....14
Wayper.....13
Glover.....13
Heathington.....12
Winchell.....8

Third sweep, 12 birds, $2 entry, 3 prizes:

Wayper.....12
Heathington.....11
Glover.....8
Winchell.....8
Phillips.....8
Emond.....8

TORONTO, Feb. 23.—Notwithstanding the cold weather of to-day, a number of the Stanley Gun Club's members assembled at McDowall & Co.'s grounds for their fourth medal shoot. The plucky manner in which they shot through the storm shows the keen interest taken by them. The scores are as follows:

Shoot at 20 Birds.

Heatherington.....16
Bennett.....15
Felstead.....14
Mundy.....10
R McCready.....10

Team Shoot—at Five Birds Each.

Felstead.....11111—5
Bennett.....10011—3
Mitchell.....11010—3
Sawden, Sr.....11010—3—14
Heatherington.....10111—4
F Morley.....11000—2
Sawden, Jr.....00101—2
McCready.....10000—1—9

Team Shoot—at Five Birds Each.

Felstead.....11111—5
Mitchell.....11111—5
Sawden, Jr.....11111—5
Bennett.....11011—4—14
R McCready.....11111—5
Heatherington.....11110—4
Sawden, Jr.....01101—3
F Morley.....01000—1—13

OWEN SOUND, Feb. 21.—The Owen Sound Gun Club will hold a two days' tournament on the 27th and 28th inst. Several prominent shots throughout the province have intimated their intention of being present. The members are busily engaged buying up pigeons for the two days' sport.

WOODSTOCK, Ont., Feb. 16.—Match trap and handle, Dominion rules, at 15 birds each for $50 a side:

Harwood..101111010101011—10
Thompson.1101011100100101— 8—18
Miller.....1100110011110111—10
Meadows..1110101011011110—20

CORRY, Pa., Feb. 14.—Corry Gun Club held their weekly club shoot, at 25 Keystone targets, Keystone rules. Dr. Mead won the gold medal, and H. M. Norton the leather medal. The following is the score in detail:

Newman.....0001110001000110110010000— 9
Berliner.....0011010000000110001000100— 7

S Schroder	0021101011—5—48	Jas Hanna	0100201231—6—60

The birds, about 300 in number, were as fine a lot as were ever trapped; they were as a rule low-flying straightaways or quarterers, with no duffers and very few incomers or towerers. Very early in the day they showed their ability to carry heavy charges of shot out of bounds, and even beyond the lines of outlying shooters (scouts). This match demonstrated again the unreliability of the reliable or cracks to get there, as from the start to finish they were the rattled ones, the medium shots doing the best shooting on both teams. A large gathering of shooters witnessed this match, and immediately after the last gun was fired a bountiful collation was partaken of in Burbank's Sea View Hotel adjoining the grounds. The vanquished team footed all bills on the occasion. A return match is talked of in the dim future.

BROOKLYN, Feb. 22.—The first shoot of the recently reorganized Fountain Gun Club was held to-day at Woodlawn Park. The largest gathering of wing shots and lovers of game shooting that has been assembled at the grounds for a long time were present. 400 birds were furnished for the club by C. Blattmacher, and the assortment proved to be all good flyers. The principal event decided was the sweepstakes for the Seddon's medal and extra prizes at 7 live birds each, C. W. Jones winning first prize with a score of 7 straight birds. In the members' shoot the winners of the ties that were shot off were Wingate, first prize, Selover second and Orr third. Ten birds were shot at in the ties.

C W Jones.....1111111—7
A Purdy.....1111111—7

Mr. Benscotten, of Huron, won the box of cigars for best average.—A. J. B., Sec'y.

NEWARK, Feb. 22.—Match shot at Erb's Park, Newark, N. J., between W. W. Lever and C. M. Hedden, for $150 a side, 50 birds each man, Hurlingham rules to govern. Judges, Messrs. O. Von Lengerke and W. Mulford; referee, Jacob Pentz.

J M Hedden.....0001112012121101110212221121120002220112020220011002—35
W W Lever.....0020111011111111011210023021100100000021111221111214—35

One of those unpleasant occurrences which always seem to happen in these matches for money came to the front on Hedden's eighth bird. The pigeon was slightly hit and flew to the far side of the grounds, alighting on the top rail of the fence inclosing them. At the beginning of the contest it was agreed between the principals that the affair should be conducted in a gentlemanly manner and that neither side wished to take any technical advantage of the other, only asking that it be shot strictly under the rules as they were modified. A dog was used to gather the birds. As the pigeon referred to was too high up on the fence for the dog to reach it, a trapper was delegated to gather. He reached the bird, placed his hand on it, when the pigeon struggled from under his fingers and flew out of boundaries, leaving but a few feathers behind him. Each side claimed it. One a miss, the other a kill. In Hurlingham rules if the dog has the bird once in his mouth it is a scored kill, even if the pigeon afterward escapes. The referee decided it a kill; reasoning by analogy. At once a storm arose. A copy of the rules they were shooting under was shoved under his nose, and according to these rules as printed he had to rescind his decision, for they read as follows: "Only one person to be allowed to pick up the bird (or a dog if the shooter will allow it). No instrument is to be used for this purpose. All birds must be gathered by the dog or trapper, and no member shall have the right to gather his own bird, or to touch it with his hand or gun."

Mr. Lever will shoot a match with Al Heritage on the Erb grounds at double birds, 25 pairs, for $100 a side. Said match to be shot at 25yds. rise, gun below elbow until the birds are on the wing, traps to be set 5yds. apart and one bird in each trap, two scts of traps to be used, and the set to be used to be decided by head or tail, and the next shooter to take the remaining set.

ATLANTIC CITY, Feb. 22.—The West Jersey Gun Club, of Camden, N. J., visited Atlantic City on Washington's Birthday, and had a friendly shoot with the Atlantic City Gun Club. Although beaten, the W. J. "boys" were not dismayed, and hope to do better at the return match. 20 shots per man were fired:

CHIPPEWA.

NEWARK, N. J., Feb. 21.—The Fifteenth Avenue Gun Club had live bird shooting to-day at the club grounds on Grove street. The first event was a match between L. Bishop and J. Gerat, at 13 birds each. Grant killed 6 and Bishop 5. This was followed by a sweep at 5 birds with the following result: Jacquin 5, Schnelling 5, Reiboldt 4, Bauer, Buob, Muesel and Weber 3 each. Then followed a clay bird match at 25yds., 10 birds each. The score was as follows:

Muesel.....8
Jaquin.....8
Weber.....6
Schelling.....8
Bauer.....7
Leisler.....5
Gerst.....3—45
W Drustel.....9
W Buob.....9
Reiboldt.....9
L Spahr.....3
Meyer.....5
H Weber.....9
F Heller.....1—42

CLEVELAND, Feb. 22.—The Rockports, West Ends, and Locksleys shot for the tri-club badge to-day. The teams were composed of ten men selected from each club, and shot at 25 standard targets, 18yds. rise, under standard rules. The small scores made are in a great measure due to the strong head wind and part of the time a heavy snow storm, which rendered the target nearly invisible. The Rockports still retain the badge, but by a very narrow margin. The totals were: Rockports, 157; West Ends, 156; Locksleys, 132.

NEW DORP, N. Y., Feb. 21.—A live bird match between teams of 10 men from the Emerald Gun Club, of New Dorp, and the Algonquin Gun Club, of this city, was shot to-day on the grounds of the former club, and resulted in a victory for the New York men. The score was 48 to 60. Experts said the birds were as fine a lot as ever left the traps, mostly "hard drivers and not a duffer among the whole lot." The day was fine, but some of the boys were not. Each team shot at 100 birds, Long Island rules, 25yds. rise, 80yds. bounds. Mr. R. Brenner officiated as referee for the Algonquins, with Thomas Cody in a like capacity for the Emeralds. Mr. C. D. Guyon, champion shot of the New Dorp Gun Club, filled the position of judge.

ELMSFORD, N. Y., Feb. 22.—Event 1, entrance 50 cents, 5 clays

Pardington	00000—0	W Ward	10110—3
Travers	01001—2	Strickland	00010—1
Lawton	10101—3	Rowley	01111—4

Ward second on shoot-off.

Event 2, entrance $1, 5 glass balls:

Pardington	00010—1	Lawton	01100—2
Travers	01111—4	Strickland	01110—3
W Ward	10101—3	Rowley	00111—3

Rawley second on shoot-off.

Event 3, same as above:

Pardington	11111—5	Lawton	01110—3
Travers	00010—1	Strickland	10110—3
W Ward	11111—5	Rowley	11011—4

Ward first on shoot-off.

Event 4, 5 clay birds, entrance $1:

O Bradley	11101—4	Strickland	11011—4
Travers	00001—1	Rowley	10011—3
W Ward	10111—4	Henwood	00001—1
Lawton	10101—3	G Bradley	10111—4

Ward first, Rowley second on shoot-off.

Event 5, same as above:

W Ward	11010—3	Strickland	11010—3
T Ward	12011—4	Carpenter	01101—3
Rowley	11111—5		

Event 6, 3 live birds, 25yds., 1 barrel, entrance $2:

Rowley	001—1	O Bradley	001—1
Strickland	011—2	T Ward	101—2
Acker	110—2	E Ward	000—0

Ward first, Rawley second on shoot-off.

Event 7, same as above:

Rowley	011—2	Carpenter	101—2
Strickland	110—2	W Ward	011—2
Acker	111—3	Munsey	001—1
O Bradley	101—2	E Ward	100—1
T Ward	101—2		

Rowley second with 5 straight on shoot-off.

T. Ward and Rowley shot 25 clay birds each, $5 a side:

Rowley ..... 1111111111101111011111—22
T Ward ..... 1111111111111111101111—23

NEWARK, N. J., Feb. 22.—The Roseville Gun Club had a big lot of shooters on its grounds, corner of South Orange avenue and Grove street to-day, the attraction being a team match between representatives of the Roseville and Lakeside gun clubs. The teams comprised 10 men, each man shooting at 15 inanimate targets. The teams were divided into squads of five each, the results being as follows:

Roseville—First Team.		Lakeside—First Team.	
Simms	8	Shepherd	10
Vanness	6	Lum	8
G Huff	6	Wells	3
J Davenport	4	Mullin	3
Wheaton	11—35	Earl	12—35
Second Team.		**Second Team.**	
Kitchell	10	Mahoney	6
Condit	7	Hughes	1
Badgeley	11	Sinpert	8
Wheaton	10	Hagel	5
W Davenport	7—45	S Castles	14—34

This gave the match to the Rosevilles by an aggregate of 80 breaks to the Lakeside's 70. A return match will be shot at an early date.

DAYTON, O., Feb. 23.—Sport on Washington's birthday anniversary in this vicinity centered in the 100 artificial bird race (50 bluerocks and 50 clay-birds) between F. C. Mustin, of Cincinnati, and Walter Keenan, of this city, $100 a side and the "boy champion" ship of Ohio. J. E. Maynard, of Cincinnati, referee; Henry Goodman, of Cincinnati, and Wm. Pratchett, of this city, judges.

Keenan.		Mustin.	
Bluerocks	1111100111	Bluerocks	1101110111
	1111111111		1101111111
	1111111111		1101101111
	1111110111		1111111111
	0111111111—46		1111111111—45
Clay-birds	1101011100	Clay-birds	0110111010
	1111011011		1101111100
	1111101011		1101111101
	1101010101		0110101011
	1111111011—37—83		1111110111—37—82

Keenan was declared the winner by one bird. Score, 83 to 82. They tied on clay-birds, and Keenan led one bird in bluerocks.

BROOKLYN, Feb. 22.—Regular monthly shoot of the Long Island Sporting Club, Clinton Park, Maspeth, L. I. Conditions: 20 bluerocks, 18yds., gold badge:

J Link	11111111111111111110—19	Mundt	00101001111011103101—11

BROOKLYN, Feb. 22.—The regular monthly shoot of the Active Gun Club of the Third Ward took place at Worth's Bay Ridge Park this afternoon before a large crowd. Following is the score:

Jos Ryan	1111111 7	Jos Schwanfest	1101000—3
Robert Lambert	1111110—6	Fred Bernart	1101110—5
Geo Cook	1011100—4	E W McGowen	1110110—5
C Handover	1111110—6	H Graham	0101100—3
R Warth	0110010—3	Pat Roche	1001101—4

NEW YORK, Feb. 20.—The regular monthly shoot of the Manhattan Gun Club, on the North Side Gun Club Grounds, Woodside, L. I., under M. G. Club's rules, 7 live birds each, sweepstakes:

Lamarech	0100110—3	Von Ramdohr	1101101—5
Lichtenberger	0000111—3	Maisenholder	1100010—3
F Coffman	0111110—5	Schmid	1100000—2
J W Bayer	0100101—3	Geunrich	1111000—4

LARCHMONT CLUB.—Members of the Larchmont Y. C. had a pigeon shoot Feb. 22 on their grounds near the club house. There were about 200 persons present. The club possesses a most fortunate location for its shooting grounds; in fact it would be hard to find its equal anywhere in the country. It has the advantage of being a high tableland of ample size, with a beautiful skirting of maple and beech looking off to the north and weston Long Island Sound. Its direction is such that the sun never strikes the face of the marksman to destroy his aim. Small red flags on 6ft. staffs made up the base or danger line, and 4ft. posts, painted green with white caps, formed the limit circle. The first event was a shoot for a club cup, 13 entries, $5 entrance fee. J. N. Winslow and H. Van Wyck tied for first place. On the shoot off Mr. Winslow won. In the second event, on the same terms, 26 entries, Mr. A. De Bary tied with Mr. C. De Ronge. On the shoot off the latter won. In the first sweepstakes there were 37 entries at $2 entrance fee. Mr. H. Durant and Mr. H. Chapman tied on 5 birds each and divided the stakes. In the second sweepstakes, $5 entrance fee, there were 14 entries, miss and out. Mr. H. L. Van Wyck and A. De Bary tied on 3 birds each, and on the shoot off Van Wyck won. In the third sweepstakes, at $2 entrance fee, there were 28 entries, miss and out. H. Willard and J. N. Winslow tied on 4 birds each, and on the shoot off H. Willard won. At 5 o'clock Senator Stephen Dorsey backed J. N. Winslow and Richard Murphy backed B. Van Wyck to shoot a match at 23yds. rise, 25 birds each, for $100 a side. Winslow killed 19 and missed 6, Van Wyck killed 14 and missed 11. A series of sweepstakes followed. In the first there were 5 entries, miss and out. Mr. Hook won. In a second sweepstakes, on the same terms, with 6 entries, 3 birds miss and out, H. Durant won. Alexander Taylor was referee and A. F. Camacho scorer. Messrs. Eugene Bushe and Frank Scott took turns at the traps. The committee on pigeon shooting consisted of the following gentlemen: C. H. Colt, Ernest Staples and Alexander Taylor. The rules of the Larchmont Y. C. are the same as those used by the Country Club. The weight of any gun could not exceed 7½lbs. Chilled shot and sawdust powder could only be used. The referee's decisions were final. The club feels the greatest pride in their new traps, which are not used anywhere else. They worked perfectly, and there was not a single miss. The mechanism consists of a spindle with fly-wheel connected with an arm, so arranged that it is not known what trap will be sprung.

JERSEY CITY, N. J., Feb. 22.—A clay-pigeon shooting match by teams of 5 men each from the Jersey Athletic Club and the Roselle Gun Club was held to-day at Bergen Point. Each man shot at 20 birds from 18yds. rise. The local team broke 66 birds and won the match. The Roselles broke 64.

RED BANK, N. J., Feb. 22.—The regular shoot of the Riverside Gun and Rifle Association took place to-day. The clay-pigeon contests were won by Edward M. Cooper, John Cooper and James Cooper, Jr., and Asa Wymer. Wm. T. Conover won first money in the live bird shoot. Good score were made in all of the matches, and much interest was manifested in the entire programme.

ATHOL, Mass., Feb. 16.—The Athol Rod and Gun Club have reorganized with the following officers: J. G. Albee, Pres.; C. L. Goddard, Vice-Pres.; C. M. Peirce Sec. and Treas.—C. M. PEIRCE, Sec.

WELLINGTON, Feb. 22.—Some 80 of the leading amateur sportsmen of the Brockton, Newburyport, Wellington and Massachusetts gun clubs met at the Wellington range to-day, and participated in more than 30 events, that used up nearly 6,000 birds. This freedom from the fear of an expert gathering in the first prizes made bold the amateurs, and many who have heretofore taken back places came to the front in grand shape with clean scores. The result of the day's work is herewith appended: 6 bluerocks, De Rochement, Schaeffer, Leon and Eldridge; 6 pigeons, Lee, Eldridge and Steele; 6 bluerocks, Wilbur; 6 Macombers, Sunborn; 6 bluerocks, Leon; 6 pigeons, Warren and Eldridge; 6 bluerocks, Nye; 6 pigeons, Leon; 6 Macombers, De Rochemont; 6 bluerocks, Moore, Warren and W. A. Sanborn; 6 bluerocks, Smith, Payson, Snow and Lee. 6 bluerocks, Lee; 6 Macombers, Moore; 6 pigeons, Moore; 6 bluerocks, Leon, Lee and Eldridge; 6 bluerocks, Moore, Leon, Snow and Payson; 6 pigeons, Lee, G. W. Libby, Bradstreet and Sanborn; 6 bluerocks, Lee and Schaeffer; 6 bluerocks, Snow; 3 pair pigeons, Snow and Moses; 6 bluerocks, Nye and W. A. Sanborn; 6 bluerocks, Bradstreet, Warren and De Rochement; 6 Macombers, De Rochemont; 6 bluerocks, Lee, Leon and Schaeffer; 6 bluerocks, Bradbury; 6 bluerocks, Snow and Winsor; 6 bluerocks, Snow; 3 pair pigeons, Moses, Bradbury and Snow; 6 bluerocks, Moore and Lee; 6 bluerocks, Bradbury; 6 bluerocks, Goldsmith; 6 pigeons, Burlingham and Moore.

WORCESTER, Mass., Feb. 22.—The Worcester Sportsmen's Club had an all-day tournament at Coal Mine Brook Range today. The attendance was good and the sport apparently enjoyed. The regular events were run as follows: 1. Six bluerocks, 24 entries: Gilman, Davis and Dickey first; Bowdish and Sampson second; Rugg, Dean, Swan and Holden third; Rodney and Hayden fourth. 2. Six clays, 24 entries: Smith first; Davis, Gilman and Rugg second; Johnson, Holden and Swan third; Dickey and Davis fourth. 3. Nine bluerocks, 16 entries: Bowdish, Dan and Smith first; Sampson and Jourdan second; Davis, Dean and Wheeler third; Perry fourth. 4. Nine clays, 17 entries: Gilman, Smith, Wheeler and Russell first; Dansereau and Sampson second; Johnson, Rugg and Davis third; Burbank and Nichols fourth. 5. Twenty clays, 21 entries: Gilman and Dickey first; Smith, Holden and Nichols second; Dean and Russell third, Rugg fourth. 6. Six bluerocks, 21 entries: Smith, Russell and Wheeler first; Davis and Dickey second; Sampson and Larkin third. Dansereau fourth. 7. Six clays, 25 entries: Smith, Swan, Larkin and Beaudry first; Rugg, Dan, Gilman and Russell second; Davis and Jourdan fourth. 8. Twenty-five clays. 17 entries: Russell first, Gilman second, Smith third, Wheeler and Dean fourth. 9. Six bluerocks, 16 entries: Davis and Russell first; Wheeler and Bowers second, Johnson third, Rice fourth. 10. Two-men team match, 20 entries, 5 clays per man: Dickey and Wheeler first, Sampson and Dan, Holden and Russell, second; Smith and Gilman, Bowdish and Swan, third; Jourdan and Franklin, Crompton and Burbank fourth. During the day there was a match between Elisha S. Knowles and A. B. T. Kenny, the stakes were two fox skins, the clays were 10 each, thrown from open trap. Knowles broke 9 and Kinny 8.

BALTIMORE, Feb. 22.—The interstate shooting match which was to have taken place at the Arlington Driving Park to-day was interfered with by the weather. The two teams from the Baltimore Gun Club went to the grounds early and anxiously awaited the coming of the teams from Wilmington, Washington and other points. As the visiting clubs failed to arrive the match was postponed, and the individual match between Mr. Heflein, of Baltimore county, and Mr. Baker, of Canton, was shot. The match was for $100 stakes, the conditions being that each was to use 10-gauge guns and to shoot at 25 Keystone targets and 10 live birds each. Heflein broke 21 Keystones, and Baker 12. Heflein killed 6 live birds, Baker 3. Several hundred live and clay birds were shot at during the day.

A successful shooting match took place to-day before a large gathering of spectators at Acton's Park, Anne Arundel county. A number of business houses donated the prizes, which were open to competition to all marksmen of the State. Ten traps were used and nearly 3,000 standard clay targets shot at. The first event was a Tucker handicap, entrance free, 30 standards in three divisions. First prize, won by J. A. Miller, Westminster; second, won by E. B. Coe, Baltimore; third, won by G. E. Baughman, Westminster. The second event was an entrance fee, Tucker trap, 30 standards in three divisions. First prize, won by Geo. Catterton, Baltimore; second, won by Chas. Herring, Westminster; third, won by J. W. Smith, Westminster; fourth, won by J. E. Scarf, Long Green; fifth, won by W. A. Schriver, Westminster. Special prize to highest score in this event, 100 loaded shells, won by Charles Herring, Westminster.

LONG BRANCH, Feb. 23.—The pigeon match between Annie Oakley, the "Little Sure Shot" of Buffalo Bill's Wild West Show, and Philip Daly, Jr., was shot at Elkwood Park, near Long Branch, this afternoon in spite of the cold weather and heavy wind which swept across the park. The attendance was large. The match was said to be for $500 a side, each contestant to shoot at 75 birds under Hurlingham rules, and 25yds. boundary. Miss Oakley shot at 25yds. and her opponent at 30. William D. Campbell and Japhia Vandyke of the West End Gun Club, Long Branch, were the referees. The birds were Delaware bluerocks, and all very strong and lively flyers. There were no in-drivers, all the birds flying straight away or quartering. The match was stopped when each contestant had shot at 70 birds. Both Miss Oakley and Mr. Daly made some extraordinarily fine shots. Miss Oakley killed 50 birds to Mr. Daly's 45, and was declared the winner of the match and purse. On Thanksgiving Day last Miss Oakley and Mr. Daly shot at 15 birds each. The latter won the match, but by only 1 bird. Philip Daly, Sr., offers to match his son against Miss Oakley in a third match, 50 birds each, same rules and boundary to govern, for $1,000 a side. Miss Oakley has accepted, and the match will be shot at Daly's new Elkwood Park in June.

READING, Mass., Feb. 22.—A large number of trap shooters assembled to-day at the grounds of the Reading Gun Club, and a number of interesting events were contested, among them a private match between C. A. Loring and J. Gardner Eames, at 25 Peorias, that was won by J. G. Eames on a score of 16 to 9. On account of a strong cross wind the scores were not up to a fair average. The following were the first prize winners in the various events: Five clays, Killam; 5 Peorias, Willis Brooks; 5 Peorias, Brooks and Killam; 5 clays, E. Eames; 5 Peorias, Killam; 5 clays, miss and out, Killam; 5 clays, Drake and Davies; 5 clays, Davies; 5 Peorias, Killam; 5 Peorias, Davies; 5 clays, G. Eames and Willis. Team match, 5 clays, Killam 3, G. Eames 2; E. Eames 3, Brooks 2; Willis 3, Drake 4; Drake and Willis won. Team match, 10 Peorias, Killam 5, G. Eames 2; Brooks 4, E. Eames 8; Willis 5, Drake 5; Brooks and Eames won. Team match, 10 clays, G. Eames 6, Killam 6; Willis 7, Drake 6; E. Eames 8, Brooks 6; Brooks and Eames won. Ten clays, Gould.

KANSAS CITY, Mo., Feb. 21.—Those who attended the Kansas City Gun Club medal shoot this afternoon expected to see a close contest, and were not surprised when they witnessed some of the finest scores that have ever been made in this city. Joe Underwood, who has won the new medal for the past month, was handicapped 2yds., but this was more than made up by shooting from a trap set in a mud puddle. On 10 straight he was beat by Jones. E. Riley, Denny Underwood, Jim Lee Moore, John Savage, George Schroeder, F. J. Smith and D. W. Williams. The real sport began when shooting off the ties. They killed 10 more straight and Schroeder dropped out on the 11th. D. Underwood and Williams missed their 16th tie birds; then everybody killed 10 more, when Frank Smith dropped out, having killed 36 straight. The excitement was intense when Riley dropped out on the 39th tie, leaving only McGee and Joe Underwood at the string. Each had killed 39 straight. 49 they made it, and still no signs of either winning. Finally, however, Underwood killed his 52d bird and the corresponding one of McGee's fell inside of the line and crawled out, dead, but lost to McGee. Underwood's friends were loud in their congratulations. Having won the medal at the last two shoots, he is now subject to challenge from any member of the club, whom he must beat, and also win at the next club score to finally earn the medal. The score of the club stood: J. Underwood 10, Ben Holmes 5, Riley 10, Halliwell 8, Youmans 9, D. Underwood 10, McGee 10, Savage 10, Bombeck 10, Schroeder 10, Smith 10, Bolen 9, Fairman 6, Cross 9, Williams 10, and C. Lockridge 7.

MINNEAPOLIS.—At the annual meeting of the Minneapolis (Minn.) Gun Club, held on Feb. 4, the following officers were elected to serve for the ensuing year: President, L. Harrison; Vice-President, W. H. Skinner; Secretary, James Pye; Treasurer, J. S. Cutter; Field Captain, F. C. Lawrence. Board Directors—L. F. Kennedy, H. J. Pyle, R. H. Leonard, A. F. Shuler, J. D. C. Knapp.

HARVARD SHOTS.—There was a large attendance at the meeting of the Harvard Shooting Club at Watertown, Feb. 22, twenty-five members being present. The match was the most successful of the season, though a troublesome wind interfered with good shooting. The graduate and undergraduate teams were made up of seven men each, and each man shot at 20 birds. The graduate team won by the following score: Graduate Team—Austin 14, Allen 14, Mead 12, Clyde 17, Holder 14, Slocum 19, Parker 7; total 97. Undergraduate Team—McKay 11, K. Post 8, Lamb 13, Bacon 10, Greene 18, Dodge 14, Quinlan 16; total 100. Last year the graduates won by a score of 65 to 64. Before and after this match a number of small matches were shot, in which some good scores were made.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Housfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS ..... } Peterborough, Can.
Secretary-Treasurer: GEO. W. HARTON }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..W. R. Huntington..E. W. Masten..... T. H. Stryker, Rome, N. Y.
Atlantic Div..W. P. Stephens.....L. B. Palmer..... F. L. Dunnell, 188 Jerolemon St., Brooklyn.
Eastern Div..H. E. Rice, M. D....Maxton Holmes..... H. D. Marsh, Springfield, Mass.

RACING RULES FOR THE COMING MEET.

Editor Forest and Stream:

The Regatta Committee of the A. C. A. for 1889 at the outset find themselves face to face with one or two questions which are attracting considerable attention. I was for a time disposed to consider that, as the Executive Committee had not chosen to deal with those questions, it was not necessary for the Regatta Committee to do so, and that for the sake of peace we could afford to let matters go on as they are, and work out the programme under the existing sailing regulations. My attention has however been called to the resolution passed at the last meeting of the Executive Committee referring these matters to the incoming Regatta Committee to consider and report upon them. I find that the individual views of all three members of the Regatta Committee agree that something should be done to prevent the undue development of the "racing machines."

It is further suggested that these views are shared by a large majority of the members of the Association, and that even some of these members who have gone the furthest in working out racing appliances would without regret see such legislation as would curtail for all alike the excess of the racing tendency. It is pointed out, too, that from the beginning it has been the wise policy of the Association to foster sensible, safe types of canoes which it could hold up to the would-be canoeist as models which he could safely adopt, and to cut off all excrescences which tend to make the canoe inconvenient to handle or which departed from the lines of general utility. The size of fixed keels and of centerboards was limited by what might be termed an arbitrary rule, and canoes of a narrower beam than 26in. were practically excluded from the races.

Dealing with the questions in detail, I should have little hesitation in saying that under the existing rules the sliding seat, so far as it projects beyond the gunwale, is so much added beam.

The standing sail that cannot be either raised or lowered or reefed while afloat, is in my view a departure from the conservative lines hitherto adopted by the Association, and should have as little place in a programme designed for the encouragement of healthy canoeing as a racing shell now has.

The place of a centerboard, whether in the center of a canoe or forward, is to me a matter of comparatively small importance. I don't use one myself, and I do not sleep in my canoe. A tent and the soft side of a rock are good enough for me. But I would not allow the board to come above the coaming, for very much the same reason that a drop of 18in. was fixed as the limit. You must draw the line somewhere. I am not clear as to the advisability of adopting the "one rig" idea. It is just as defensible, however, as the "one man one canoe" rule that was adopted some years ago, and at which no one now grumbles.

I offer no apology for thus airing my views. The Regatta Committee are prepared to make a definite recommendation to the executive as to the first two points at least. The only room for doubt in my mind was whether we should act now or leave these matters over for another year. Fortunately the decision will rest, not with us, but with the Executive Committee, and they have the advantage of representing all sections of the canoeing world. In the meantime the publication of the foregoing may lead to further discussion of the matter, and if the rule be adopted of "one man, one letter," and "limited area" at that, some good may come of it.

I ask the question: Will any harm come to the Association or to canoeing from the adoption of rules doing away with the sliding seat and standing sails? I would suggest that members write over their own names, that all personalities or "cutting up the other fellow" be avoided, and that the interests of the Association and of canoeing be chiefly considered.

E. B. EDWARDS, Chairman Reg. Com.

QUAKER CITY C. C.

Editor Forest and Stream:

It is with the modesty that distinguishes the Quakers from all other canoeists on the Delaware River that I push my quill to give you the result of our semi-annual election.

Although this event took place early in January, our Secy.-Treas. has been in such a comatose state since his election as keeper of records and wampum belt, that I have been deputed to write in his stead. The officers elected are: Com., J. A. Barten, Vice-Com., Wm. T. Roberts; Secy.-Treas., A. A. Jackson.

Messrs. E. A. Leopold, canoe Gracie; Geo. Ritter, canoe Sadie; and L. Palmer, canoe Starlight, of the Montgomery Sailing Club, of Norristown, were elected to membership. The committee appointed by the commodore to select a suitable site for a summer club house made a satisfactory report, and if there is no ill wind in the form of a purchaser, the club will take a lease on the house and still retain the one at Cooper's Point. The property in question is situated at Gloucester in close proximity to the Quaker City Y. C. house, and about five miles from the club's present abode. PUZZLE.

PHILADELPHIA, Feb. 22.

CORINTHIAN MOSQUITO FLEET.—The new Corinthian Mosquito Fleet will give a special prize for a sailing race of the leading canoes off Larchmont in June. Messrs. Vaux, Butler, Stevens and Whitlock have already promised to enter, and others are expected.

A. C. A. MEMBERSHIP.—Eastern Division: Chas. Billings Chapman, Charles H. Phelps, Norwich, Conn.

DELAWARE RIVER MEET.—The Delaware River meet will be held at Delanco, N. J., from May 27 to June 1.

Yachting.

FIXTURES.

A CRUISE IN A DORY.

CHIPS FROM THE MONA'S LOG.

[*Continued from page 99.*]

ROCK VILLAGE is a cluster of odd buildings set in queer places. It is the calmest and most self-possessed town I ever saw. Along the water's edge scrubs and snags predominate, rude cenotaphs of the departed sons of a once noble forest, bleached and picturesque. The river is spanned by an old-fashioned covered bridge, 900ft. long. What a Mecca this long, dimly-lighted inclosure must be for the highwayman, and what a wholesome dread the belated foot passenger has for its gruesome echoes. The structure was built in 1828, is supported by four piers, and boasts of a draw. As the tide hurried us along the left bank we were hailed by a party of tramps, and as our replies were not very nicely worded a volley of stones and abuse was showered upon us till we were far beyond the reach of both.

Merrimac port soon hove into sight, and getting under the lee of the old wharf we tied up and cooked a good meal. The east wind was chilly, and we were in no hurry to breast it. A catboat shot around the wharf, and before her headway could be stopped she carried away my rudder. The skipper of the stranger was profuse in his apologies, and insisted on paying for the damage. A blacksmith was handy and in a few minutes the fracture was repaired.

The tide had turned when we started out again, and with the heavy wind our progress was slow. In a few minutes we met a tug with several coal barges bound up the river, and a number of scows were ashore high and dry. As the afternoon waned we reached Amesbury, which seemed built upon the hills that guard the river. Farms and pastures stretch away from the water, and a number of sailing craft were moored at the wharves. Here we saw evidence of salt water in the thatch and weed on the muddy banks. The tide is very strong in this part of the river, and after a hard and difficult pull we crept under Deer Island bridge. This, the first bridge of the kind in the United States, was built in 1792, and is a chain structure, crossing to Deer Island, where is the summer residence of Harriet Prescott Spofford. Mr. Parton, the historian, and his wife, "Fanny Fern," live not far away; the castle of Sir Edward Thornton is in sight upon the hillside, while Ben. Perley Poore has a chateau a little further on. We landed upon Eagle Island just below Deer Island, and within full view of Newburyport and the spider-like railroad bridge. Being tired we got supper and then turned in, to be awakened by a tremendous splashing and roar in the river. It was only a steamboat of the stern-wheel type. We had got fairly composed again when we heard low voices and the sound of oars in the river close beside us. Visions of river thieves and a fight in the dark made me tremble, but the intruders turned out to be a couple of young people out for an evening row.

When morning dawned we were stirring, and the Mona went across the river and up a narrow creek to the Almshouse for some milk. The keeper's daughter, a fine-looking girl she was, milked the cow and would accept no money in payment. When I got back 15×30 was grumbling because I was gone an hour and a half. Time flies fast when one has good companions, and perhaps the belle at the Amesbury Almshouse can explain what detained me so long. After a hasty breakfast and a plunge into the river from the crumbling wharf in front of the dancing pavilion, we hoisted sails for a race down the river to Newburyport. A cool breeze from the west carcened us merrily along, and as usual the dory outsailed the canoe. I do not brag when I say that from experience I am certain a well-modelled sailing dory can whip a canoe of the same length of waterline and depth of draft, and it is vastly more comfortable sailing in a dory, too. Let me say right here that at Eagle Island I hauled the Mona at least 50ft. from the water over uneven ground and through bushes without assistance and with little exertion, and she is an 18-footer.

We ran under the bridges and made fast to a wharf under the stern of a condemned steamer of very ancient and peculiar model. Climbing the slimy ladder we made our way over tumble-down piers, and for the first time honored Newburyport with our presence. There is very little variety in the architecture, and the size of the old houses is amazing. Each one would do for a hotel. We saw the house once occupied by Lord Dexter, the man who wrote a book and placed the punctuation marks at the end to be distributed by the reader as he pleases. Years ago Newburyport was one of the most important of New England's seaports. In 1792 alone ninety vessels left its stocks. With natural pride the citizens claim that their grandfathers destroyed tea in Market Square before the Mohawks threw it into Boston Harbor. In 1807 the tonnage of the port was over 30,000. But now this ancient activity is hushed, the city is slow and its future a blank.

Again embarking we headed for Black Rocks, where the Merrimac enters the sea. The river lay like a wonderful painting before us; on either hand the green, level marshes, dotted with thousands of hay-stacks perched upon small piles, lifting them out of reach of high tides, reminding one of an encampment of Indians on a prairie, beyond the flatlands the blue, hazy hills, while across the sunlit waters rise the gray fantastic sandhills, and—

"Long and low, with dwarf trees crowned,
Plum Island lies, like a whale aground."

Against the silvery beaches, glimmering in the hot sunlight, flit the countless sails of pleasure and commerce, while upon the bars and spits the breakers rush with tumbling crests.

The tide was full, and we had for company a number of clammers who were bound for the flats. They reach the ground at half tide and anchor. When the flats are bare they dig till the incoming tide floats their boats.

Plum Island is at the mouth of the river, and is a desert of shifting sands blown into graceful curves by the heavy gales. It is a mere sandbar stretching nine miles parallel with the coast, with now and then a dwarf plum tree struggling out of the drifting sand. A range of hills about 20ft. high forms a sort of windbreak, and behind these were a number of tents owned by many campers. The island is a dreary Sahara on the ocean side, a waste of land and foaming surf.

We landed at Black Rocks, a summer resort opposite Plum Island, and patronized a shooting gallery till the most of our money had changed hands. One of 15×80's bullets struck his canoe, and there was no end of trouble until the riddled hull was plugged. A nice-looking girl sauntered along and was inspecting us from a distance when the gallant canoeist invited her to try a trip on the river. She accepted, and I saw no more of canoe or crew till dark. That night we slept in a tent kindly proffered by the owner of the shooting gallery. How the sand fleas did bite; and how glad I was when morning dawned. We had fresh cunners and clams for breakfast, and crossing the river entered a creek which winds through a level marsh between waving banks of thatch on one side and gray sandhills on the other. Reaching the bridge which connects Plum Island with the mainland we helped a sailboat skipper open the draw. From this point the river gradually widens, and with a free wind we soon sighted Parker River and then the Romley. At Grape Island we dined beneath an old willow; and as the sky looked threatening, crossed the river, here two miles wide and landed at Little Neck, Ipswich, opposite the famous Beach Bluffs. We hauled the boats into Joe Hoyt's front yard, if a strip of shingle can be called by such a name, and were soon welcomed by the old lobsterman with a gift of half a dozen lobsters and some clams. We had a jolly meal, and then went across the river in Joe's dory and spent the evening at the hotel. It was blowing hard when we returned, wind against sea, and was very rough, in fact the ripe and eddies reminded me of the bobble that such a condition causes in Vineyard Sound. The spray dashed over us and rowing was a hard task. A bright light in Jo 's house was our beacon, and after traversing three times the distance necessary because of the current, we got ashore. That night a thunder squall blew both dory and canoe over, and we sought shelter beneath the pig pen which forms the L of the fisherman's humble abode. Morning came at last, and in a heavy breaking sea and dense fog we rounded Big Neck into the Ipswich River, and crossing in the tideway found smooth water in Fox Creek. This stream is a canal, and was cut years ago through the marshes to the Essex River, several miles distant, to float ship timber and cold vessel freight and the open sea. The canal is higher than the creeks at its outlets, and is dry at third tide. Here we met with an accident. A low bridge crosses the canal, and I thought it was sufficiently high to admit the Mona in safety. When exactly beneath the narrow structure she stuck fast, and the rapidly rising tide rose inch by inch as the boat was held by the heavy planking above. There I was in a trap. The bow and stern were held by the heavy planking above, and I could not capsize the boat and free myself. I saw by the tide mark that the water would rise within six inches of the supporting beams, and that to remain where I was meant to drown. My companion grew frantic and rushed away for an axe, which luckily was soon found at a neighboring house. The planks were taken up and the dory liberated, but her deck and gunwales were badly hacked in the operation.

An hour brought us into the broad inlet behind Hog Island, the birth place of Rufus Choate. A mile further on is Cross Island, and at the mouth of Essex River the Sugar Loaf towers, between sky and ocean, and beyond to the right the rocky coast of Cape Ann bids defiance to the battering of the open ocean. Up the river valley lies the town of Essex, the dearest spot on earth to me. But three miles separated us from friends, and at noon tide the first stage of the Mona's wanderings were ended.

It was early morning when we left Essex. I say we, because my cousin had shipped as foremast hand. We launched the Mona off the slippery mud bank, which was the site, years ago, of a ship yard. But times have changed since pinkeys were built at Essex Landing, and so has the creek. Time was when an 80-ton schooner would float in its brackish water; now there are barely 4ft. of water at high tide. The channel is filled with rank thatch and hammocks, and the sluggish current is hardly sufficient to drain the long, narrow ditches in the neighboring marshes. We found it necessary to pole the dory as far as High Island, and then rowing to Essex Bridge found ourselves in a ship building district. Essex is noted the world over for her build of vessels, and to-day there are upward of five hundred fishermen and coasters with the word "Essex" carved in their main beams. Passing through the locks with the young ebb we left the ship yards behind and entered the river proper. Here a 900-ton schooner had been successfully launched, but I doubt if it could be done now, as the river is constantly filling up and narrowing its channel. A petition is in circulation asking for an appropriation to dredge the Essex River. Unless something is done the river will close and ruin the industry.

Clam Point was soon reached, and it is a veritable clam point, for the river bank and narrow streets are white with clam shells. Here the fishermen live in houses not much better than hen coops. We made sail on the Mona, and with the tide in our favor were fairly on our way "down river." Will started the oil stove, greased up the frying-pan with some thin slices of bacon. Coffee was brewed and smoothed with condensed milk, and breakfast was announced. We enjoyed it immensely, and did ample justice to our early morning meal.

Before leaving Essex I had purchased a $3.00 compass, a water keg, half a loaf of bread, some milk in bulk, coffee and oil. The dory's deck had been repaired where 15×30's axe had splintered it on Fox Creek, and we felt ourselves prepared for any reasonable emergency.

In twenty-five minutes we reached the narrows between Cross Island and Conomo Point. Here the stream is about 300yds. wide, and the swirls and eddies in the contracted space remind me of the boiling of a huge caldron. At flood tide mid-channel seems lifted above the river level, while along both banks are genuine whirlpools. It is impossible to row against the current, and mariners have to wait for a favorable tide to get through.

Clearing these salt rapids, we forged past South and North Spits, where countless seals bask at low water, and sandbirds are to be found in great abundance in their season. Sugar Loaf raised its mottled sandhills on the starboard now, and to port the long, low beach with its rusty, bullet-riddled beacon was awash with long lines of tumbling surf. We had reached the mouth of the river, and in a few minutes passed the breakers on the bar and were at sea. A bright blue sky was overhead, with a woolly cloud here and there. The sun flashed over the surface of the shining water, bathing the red rocks of Cape Ann in soft color, as with a hazy, smoky veil. There was not a breath of air to stir the heaving swells, and the boundless ocean stretched away in a broad surface of glossy satin without a ruffle to crease it. A fleet of sand dredgers lay at anchor behind the Loaf drying their sails in the warm air. The beautiful picture brought to mind the line:

"A painted ship upon a painted ocean."

A dory was coming out of the river laden with lobster pots. The slender oars moving leg-like on either side of the boat suggested a water-bug spitefully crawling over the sleeping water. When the fisherman was abreast us Will inquired of him how far it was to the Isle of Shoals. "Twenty miles nor'east," came back the reply, and the lone fisherman headed for the mouth of Squam River.

"Let's go to the Shoals," said Will, "the wind is coming and there will be plenty of it." "Let's wait till it gets here, and then see," said I. In a few minutes the shining surface was crinkled and broken into dancing wavelets, and we were bowling along with wind abeam, our course laid northeast into the dazzling sunglade. The wind freshened and the spray flew over our forward deck like a hatful of feathers tossed on the breeze. The horizon would take a slant toward the bows and then toward the stern, and the little Mona seemed to heartily enjoy the see-saw.

A half hour passed and I noticed Will was very quiet. The pitching of the boat grew worse and he was evidently sick. The deep courtesies of the dory seemed to acknowledge his copious tribute to Neptune. At 9 o'clock we sighted the Shoals. Away over the bows was the dim, bluish shadow of land, while astern the seething wake of the dory trailed away in a line of snow across the green ridges of water. We laid our course for the lighthouse on White Island, towering high up on the gray, broken cliffs. A fishing schooner bore down past us, sweeping along with a line of snowy froth along her glistening sides. She was leaning under the press of canvas, each sail as hard as a board and traced with the dark shadows of her shrouds and rigging. All hands crowded to the rail as she swarmed by, and in answer to their hail I shouted, "Mona, Essex for White Island," and in a moment her stern was in view settling into the boiling wake. She was the Sarah C. Wharf, Gloucester.

We ran in between the low ledges that make out between White and Star islands, past Londoners with its curious knobs, past Cedar Island, where the tide runs like a sluice and the submerged ledges are thick on every hand, and at 11 o'clock were in Haley's Cove, Smutty Nose, and went ashore. Some women were attending fish flakes and the babies at the same time, and both were getting a wholesome airing. A number of fishermen came in, and, after inspecting the Mona, advised us to haul her ashore if we intended to stop on the island, as the wind would haul before midnight. I then noticed that the smacks, 20 to 40 tons, were lying at their moorings, their mainsails slatting and shivering, in readiness to slip and run in case of a blow. We rambled over the island and were struck with its peculiar formation. At the tide level were immense masses of rockweed, then rising pasture land, from which eminence white and gray boulders cropped out of the sod in every direction. I could not help but think of them as gravestones for the mariners who have come to grief in the past 300 years upon the cruel ledges which surround the island.

When we returned to the cove we saw reason in the fishermen's warning. The water had assumed a dull, leaden hue; in the east there was a sullen bank, into which the soft, beautiful haze of the morning had thickened. "That bank means fog and wind," said Will, who had partially recovered from his indisposition (I put it indisposition because he is a bigger man than I). The schooners had dropped their moorings, and were standing for the New Hampshire coast for a more secure harbor. We put the roller under the Mona, and heavily loaded as she was easily moved her into the lee of a fish house, and made ready for the night. The tent was put up, the mast holes plugged, and finally the dory was lashed to the ground to prevent a possible upset. Will caught three cunners, and with the delicacies aboard we had a good, hearty supper. Lighting our pipes we talked for an hour with two old fishermen, and sought our comfortable cabin. It blew hard all night, but we slept through it all. GEO. S. HUDSON.

[TO BE CONCLUDED.]

CHANGES IN YACHT MEASUREMENT.

IN presenting the following report to the New York Y. C. at the annual meeting, the measurer of the club, Mr John Hyslop, has started fairly the movement for a thorough revision of the present rules of measurement whose defects we have lately commented on. Mr. Hyslop was mainly instrumental in securing the adoption of the present length and sail area rules in the Seawanhaka Corinthian Y. C. and from his thorough familiarity with the subject in both its practical and theoretic bearings, no one is better qualified than he to criticise the rule.

At the time when both rules were adopted, 1883, it was understood that they were but compromises, and by no means the most desirable; but as it was the New York Y. C. only adopted the rule after much opposition from the friends of the "bulk rule." The experience of six seasons has justified fully the wisdom of the changes, but at the same time has shown that the new rule was far from perfect, and it is evident that a further change is now imperative. The following report emphasizes the same points that we have already called attention to. It is gratifying to know that it was very well received by the club, and as a result a committee, consisting of Mr. Hyslop, Gen. Paine, Vice-Com. Latham A. Fish, and Messrs. A. Cary Smith and E. A. Willard was appointed to report on the revision of the present rule. After calling the attention of owners who wish their yachts measured to the importance of giving prompt notice and suitable opportunity to the measurer, Mr. Hyslop continued as follows:

"Another, and, as it appears to him, a more important matter, to which your measurer would respectfully invite your earnest consideration, is the present rules of measurement and time allowance, so far as these have already affected, or are in the future calculated to affect, the qualities and characteristics of vessels which may be produced under them, or the interests of owners of existing vessels.

"If the subject were canvassed among yachtsmen, there would probably be found (a common agreement of opinion among those who have given thought to the subject) that it is no proper function or purpose of a club to favor or foster any particular kind of vessel through its rules of measurement or otherwise. It certainly cannot be in the interests of its members, nor can it for any lengthened period conduce to the best prosperity of yacht racing, that the racing conditions should be such that vessels of most excellent model and otherwise well equipped and suitable to the average needs and desires of owners, should have their opportunities of winning prizes in races unduly lessened. Just as little can it for any lengthened period tend to the prosperity of yacht racing that the zealous yachtsman, in order to win races, should have to adopt, in most extreme degree, features otherwise undesirable, and be forced further away than necessary from the kind of vessel he would prefer, and which meets his ordinary requirements.

"While it cannot be a proper effect of club rules to needlessly direct what kind of vessel shall be encouraged by them, or to interfere in any avoidable degree with the owners and designers, perfect freedom of choice in respect to all particulars of dimension (excepting as these can be shown to have an intimate connection with advantages in speed), it would seem to be a perfectly legitimate and proper business of a yacht club to watch the effect of its rules, and to see that these do not put a premium upon the introduction and development of features, which, wholly or in a degree, are disadvantageous, or at variance with the common wants and interests of its members.

"When the rule of measurement at present in use was adopted, six years ago, lead keels and expanded sail plans were in the incipient stage, and the very light and practically only nominal tax then put upon the sail carried seems to-day to be utterly inadequate to measure the advantage (for speed merely) at its appreciated value, as this is regarded by owners and designers.

"With a rule of measurement in which sail was charged for at its true value, if this can be found, or at a value in agreement with the common estimate of its advantage for racing purposes, it a pears self-evident that a freedom of choice would be given as to the extent of sail to be carried, which is now wanting; and that while a large sail plan would not give an unbalanced advantage, a more moderate one would not destroy the chance of winning. As the matter stands at present in the club's rule of measurement, the factor representative of sail is given too small a value, and in th s way advantage lies too evidently in larger rigs to permit owners to build, who are not prepared to put upon their vessels (if to be raced) rigs of exaggerated proportions.

"If this is so, a result will soon be seen, and may, perhaps, even now be discerned, that owners will be disinclined to build large and expensive vessels with lessened fitness for safe and comfortable cruising, and will either keep out of racing, to its detriment, or build smaller and less expensive yachts specially for it. In the last season we have seen vessels whose models for speed were not discoverably susceptible of improvement, and which already had large rigs, fitted with still larger rigs, and with lead keels to keep them even in racing, but without any attempt being made to give them better form. We have also seen new yachts built and finished only in the early summer, and fitted with lead keels and large sail plans, which have not been allowed to go through one season without still further extension of these already exaggerated features. Another new and beautiful vessel, built in the spring, and fitted for racing, has had her spars reduced before undertaking a short cruise off shore.

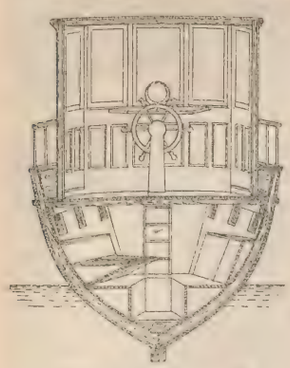
"As the matter stands now, no vessel, however good her model and well equipped, if not fitted with the heaviest kind of lead keel and the largest kind of spars that can be kept in her on a summer day, would appear to have any considerable chance of winning a race under usual racing conditions, as against the last named kind of vessel. Moreover, a vessel of the extreme kind built to-day appears likely to succumb to the more extreme one built in the early future.

"That which is true here appears to be true elsewhere. The rules of the Eastern Y. C., originally like our own, have been changed to tax more heavily the sail spread.

"The British rule, which taxes sail much more heavily than either, still appears to leave success with the largest rigged vessels, like Thistle, Yarana and Petronilla, all of which have rigs much enlarged over their former petites, and the first-named is exceeded only in size of rig, relative to length of load waterline, by one large single-masted vessel, our own Volunteer, and in this instance to only a quite moderate extent.

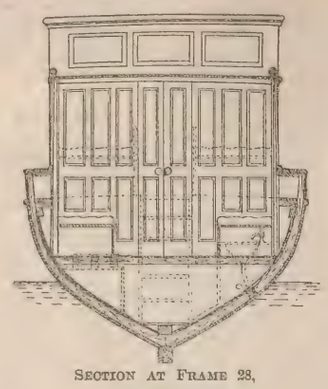
"To the careful observer, all rules of measurement may be seen to have some effect upon the yachts built under them, proportioned largely to the zeal of the yachting spirit.

"Short overhangs, low freeboards, narrow beams, wide beams, heavy displacements, light displacements, etc., are only so many familiar examples.



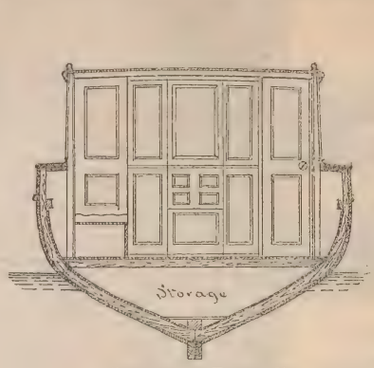
"Such tendencies in the present rule, and some others which might be alluded to, if your time permitted, require, in the opinion of your measurer, the careful study and action of a committee, and it is respectfully suggested and submitted that such a committee be appointed.

"It may be well to state that changes made in the present rule would not necessarily require a remeasurement of the yachts, and indeed, so far as your measurer can see, would not be likely to do so."



NOKOMIS.—The schooner yacht Nokomis has been sold by Mr. Royal Phelps Carroll to Messrs. Conly, Haveron and others, former owners of the pilot boat W. W. Story, wrecked in the blizzard of last March, and she will be used as a pilot boat in the future. The Nettie was built in 1863, at Northport, L.I., and after many changes she was owned in 1875 by the Rev. Geo. H. Hepworth, who made her known to fame by his book, "Starboard and Port," the log of a cruise to Labrador which he made in her. Later on she was owned by Mr. E. M. Paddelford, who sold her to the late W. A. W. Stewart, and he in turn sold her to Mr. Cornell. Originally a centerboard boat, she was converted to a keel before Mr. Hepworth owned her, and has since been a keel boat.

A CRUISE AROUND THE WORLD.—On Feb. 22, the composite s eam yacht Nyanza, with her owner Capt. J. Cumming Dewar on board, arrived at San Francisco from England, having sailed from Plymouth on July 22, 1887, touching at the Azores, Canary Islands, Cape Verde Islands, Trinidad, Brazil, Uruguay, the Falkland Islands, Patagonia, Juan Fernandez, Peru, Easter Island, Marquesas Islands, Samoan Islands and Sandwich Islands. She will proceed to Victoria and Alaska, thence home via Japan, China and the Cape of Good Hope. The Nyanza is about 105ft. l.w.l. and 21ft. 6in. beam, or shorter than Orienta, Oneida, Narwhal, Say When and other American yachts.



NEW YORK Y. C.—The committee on a club house at Newport, Messrs. Ogden Goelet, E. D. Morgan and Gouverneur Kortright, have awarded the contract for a two story house on Sawyer's Wharf, Newport.

INLAND CRUISING IN STEAM YACHTS.

AMERICANS are rapidly awakening to the value of the steam yacht as a means of comfortable travel and recreation with perfect freedom from the bustle and worry of railroads and hotels, and with opportunities for much needed rest which cannot be found at the popular summer or winter resorts. In a yacht of suitable design a man may find a comfortable summer home for himself and his family, giving both rest and change at a cost no greater than that of a seaside hotel; and many are availing themselves of this comparatively new means of travel. The inland waters of the United States, from Florida to the Great Lakes, offer an unlimited cruising ground for steam craft of all sizes from 100ft. length down to such small launches as have lately been described in our columns, and each year a marked improvement is seen in the boats. The yacht here illustrated, the Indienne, was specially designed for cruising on the canals that join the Lakes and the Hudson, for which purpose she has proved most successful. She was designed and built last season by Dr. C. D. Miller, of Poughkeepsie, New York, a gentleman who has devoted much time and study to the design and construction of this class of steam yacht, and who is favorably known in connection with the Dagmar, built in 1886, and the Tyra, built in 1887.

Her dimensions are: Length over all, 70ft.; l.w.l., 65ft.; beam, 11ft.; draft, 4ft. 2in. She has a triple expansion engine; cylinders, 6, 9½ and 15in. by 9in. The boiler is one of Roberts' coil pattern, 5x4ft. 6in. and 5ft. 6in. high. It has answered admirably, and Dr. Miller will put a similar one in a yacht now building. The wheel is 40in. in diameter and 60in. pitch.

Last season the Indienne was temporarily fitted up for an August cruise among the Thousand Islands, having ample accommodations for a party of six and a crew of four, and on August 9 she left Poughkeepsie, reaching Alexandria Bay on August 18, passing through the Erie canal from Troy to Syracuse and through the Oswego canal from Syracuse to Oswego. The run on Lake Ontario, from Oswego to Cape Vincent and then on to Alexandria Bay, a distance of 81 miles, was made in 6 hours, 15 minutes. After a stay of two weeks among the islands she returned to Oswego, going from there to Syracuse and on westward for two days to Rochester, on the Erie canal. From the latter place the return trip was begun on Sept. 4, arriving at Poughkeepsie on Sept. 12. On the cruise a most charming variety of scenery was met with on the Hudson, the picturesque valley of the Mohawk, and among the beautiful islands of the St. Lawrence. Dr. Miller gives to the construction of each of his yachts his personal attention, while in the design he endeavors to utilize the interior capacity to the best advantage, securing economy of space and weight for the engines and in particular in the matter of fuel. He is now building a yacht for Mr. W. B. Hayden, of Columbus, Ohio, for cruising on the Lakes. She is similar in many features to the Indienne, but 17ft. longer, thus giving a dining saloon between the galley and after cabin, together with better accommodation throughout. Her engines are of the same capacity as the Indienne's, and as before stated, she will be fitted with the Roberts' coil boiler.

SMALL LAUNCHES FOR CRUISING.

Editor Forest and Stream:

I mailed you a rambling letter a few days ago, intrusting it to my friend Autonia to post for me, and he has just now returned, bringing me the FOREST AND STREAM of Jan. 31. In looking over its interesting pages I observe a query, or rather a request, from W. P. A., of Providence, R. I., concerning my wanderings in steam launches. I am glad the boys are becoming interested in steam launch cruising, and can assure them that after one season spent in this manner they will cling to it in preference to all others—provided, of course, they secure the proper kind of boat.

About the 21ft. launch, how we cooked, slept, etc. I was a novice in steam launches when I purchased that one, and took it upon the assurance of the builder that she was amply large for my purposes. But if you refer to my article I think you will find that I said she was too small, hence I sole her. Before starting on our trip we purchased an oil stove, blankets, a small supply of canned goods, etc., intending to live on the boat. But when night came we were terribly cramped for room, and consequently slept but little in our curled up position. After that we tied up at night and slept at hotels. On our return trip we spent a day in Pittsburgh, laying in a stock of provisions, and also purchased a 7x9 wedge tent, for we intended camping out. This we used while on the Monongahela and Allegheny rivers. As stated in my last letter from this place, I never kept a note book, nor do I know what our expenses were. We lived plainly, but had plenty of good substantial food, wore old clothes, with one good suit in reserve, and I am satisfied that our expenses were less than would have been during the same time had we remained in the city. And then the freedom from all restraint; the pleasure derived from being your own housekeeper; the sense of satisfaction experienced upon retiring without a care on the mind, and the awakening in the bright morning with a robin perched on a tree just outside the tent, carolling a grand welcome. These things cannot be computed from a financial standpoint. Like the crisp, keen air of a wintry morning to the healthy boy who delights in outdoor sports, his blood is quickened, his spirits heightened, and his feelings overflow with good cheer and felicity. I look back with much pleasure over the past, and joyfully anticipate the future.

I would not advise any one to attempt an extended cruise, especially in open waterways, in a 21ft. launch. For river work, where you can tie up at night, they answer very well, but they are entirely too small for general cruising purposes. I am not a boat builder, but will try and give the dimensions of a launch in which it will be perfectly safe to cruise from New York to Chesapeake; and let me promise you that such a trip is one of the most delightful ones I have ever made. A night or two at "Old Comfort," tripping the light fantastic, take aboard a dozen beautiful maidens next day and spend the day visiting various places of interest on the bay, and then—well, I might continue for an hour. The cruise can be extended on to Annapolis and Baltimore, and on the return trip a very pleasant voyage can be made up the Potomac to Washington. I have spent many a jolly day on those waters. In fact, that is where I fell in love with the steam launch.

A fleet of Government vessels was undergoing inspection, and I went down from Philadelphia with an old commodore friend to see what I could see. I became infatuated with the launch before we reached the vessel on which we intended spending the day, and determined to have one. A launch say 27ft. long, 6½ft. beam, depth amidships 3ft. 9in., including a four-inch coaming; a canvas weather strip (removable) run around above the coaming for use in heavy weather; a light awning deck of pine, supported on oak stanchions, and side curtains to button to coaming, or a canvas awning may be used, which can be removed at will. Sleeping accommodations can be enlarged by having a false floor arranged to raise on a level with the seats. Life compartments, to float the boat in case she fills with water, are good things to have, but I have never had occasion to use them. Seat cushions make very good life preservers, and do not occupy valuable space as do air-tight life compartments. The planking of this boat should be of Southern cypress or selected white cedar coppered to water line, and all nails, screws, bolts, etc., coming in contact with water surface should be of copper or brass. Interior finish of ash and oak, cherry or mahogany, decks the same. The steering wheel may be placed forward in the cockpit or beside the engine, and should be connected to tiller with a solid link brass chain with spring catches. This boat will seat comfortably twelve persons, and should make ten miles an hour.

If you decide upon a coal burner, I would suggest a Herreshoff double coil boiler and compound engine, cylinders 6x3½ with 7 in. stroke; fresh water tank and keel condenser; but I would not have a coal burner, for various reasons. First, the difficulty in carrying sufficient coal to run more than one day; second, the best part of the boat is converted into coal bunkers; third, nobody wants to play stoker on a pleasure cruise: fourth, you will either have to tow a barge of coal along, or else get out and push the boat, in a great many parts of the country; fifth, you must carry a licensed engineer, or else "stand in" with the inspectors. No, I would not want a coal burner or an oil burner as long as the Gas Engine and Power Co., of New York, make naphtha launches. I have tried coal and kerosene carefully, and do not like either. With a naphtha launch the engine sets low in the stern, thus giving the navigator the very best part of the boat, and the one I have outlined can be run at an expense of about six cents per hour. With a coal burner the midship section is taken up by the engine, boiler and coal bunkers.

I am not personally acquainted with any of the members of the Gas Engine and Power Co., hence it is of no interest to me to speak favorably of their launches, and disparagingly of others. I have watched the working of several of their launches, and am highly pleased with them. I observed their advertisement in the FOREST AND STREAM, wrote for a catalogue, received it, studied it, and being satisfied that their launches were just what I wanted, I ordered one. I expect to start on a cruise about April 1st, and will devote a portion of my time to boring your readers with an occasional letter. PACIFIC.

RANCHO DE LOS PALMAS, Mexico, Feb. 15.

A MATCH ON THE LAKES.—An effort is now being made to arrange a match over a course of 15 miles to windward and return on Lake Erie between the Minnie M., of Chicago, the City of the Straits, of Detroit, and the White Wings, of Hamilton, for a purse of $8,000. Cleveland is favorably spoken of as the point for the race. If the negotiations are successfully carried out this will be the most important match ever sailed on the lakes.

SHAMROCK AND TITANIA.—The match between Shamrock and Titania will be sailed on May 30, off Larchmont, and not as previously stated in connection with the regatta of June 1, though both yachts will probably be in the latter race as well. Messrs. Wilson and Griffin are at work on a new mainsail for Titania considerably larger than the old one, and Pierpgrass will furnish a new hollow boom for her.

A MATCH RACE OF OPEN BOATS.—A series of three matches will be sailed between the open boats H. H. Holmes and Three Brothers, of the Providence Y. C., the former boat putting up $150 and the latter $100.

CLEVELAND Y. C.—This club will build a new house and breakwater in a convenient location on the city front.

SEAWANHAKA CORINTHIAN Y. C.

AS welcome as the flowers of spring is the racing programme which the Seawanhaka Corinthian Y. C. has just sent out to remind yachtsmen that the dreary winter season is drawing to a close, and that June with its regattas will soon be with us. This year the club will take two days for its racing, the dates of June 15 and 17 having been selected, and a very attractive programme has been arranged. The annual Corinthian race will be sailed as usual over the club course on the Saturday of Regatta week, with the usual class and individual prizes, while in addition a special prize will be given for the 70ft. class provided four yachts start. A special prize will also be given for the 40ft. class provided six yachts start, while a special prize of $100 has been offered by a member of the club for the 30ft. class, provided that three yachts start and that the start be made from one gun. The new Leland Challenge Cup is offered for the first time this season, the conditions being as follows:

"Contests for the possession of this cup are open only to members of the Seawanhaka Corinthian Yacht Club, and are confined to such classes as, under the rules of the club, are manned by amateurs only. It is to be held subject to challenge during the yachting season in the classes in which it is first won and the winner in each contest will be given a prize by the club. The winner of three successive races in the same season will be entitled to hold it, for the remainder of that season, not subject to challenge. The race committee will announce, at the beginning of each season, the class to which contests for the cup will be confined during that season, and the first contest for it in each season will be in the annual race in June."

By the above conditions the cup may be offered at the beginning of the season in any class which shall be deemed worthy of special encouragement, and in this way it may be of the greatest service in building up the fleet. This year it is very naturally assigned to the 40ft. class and should be productive of much sport therein.

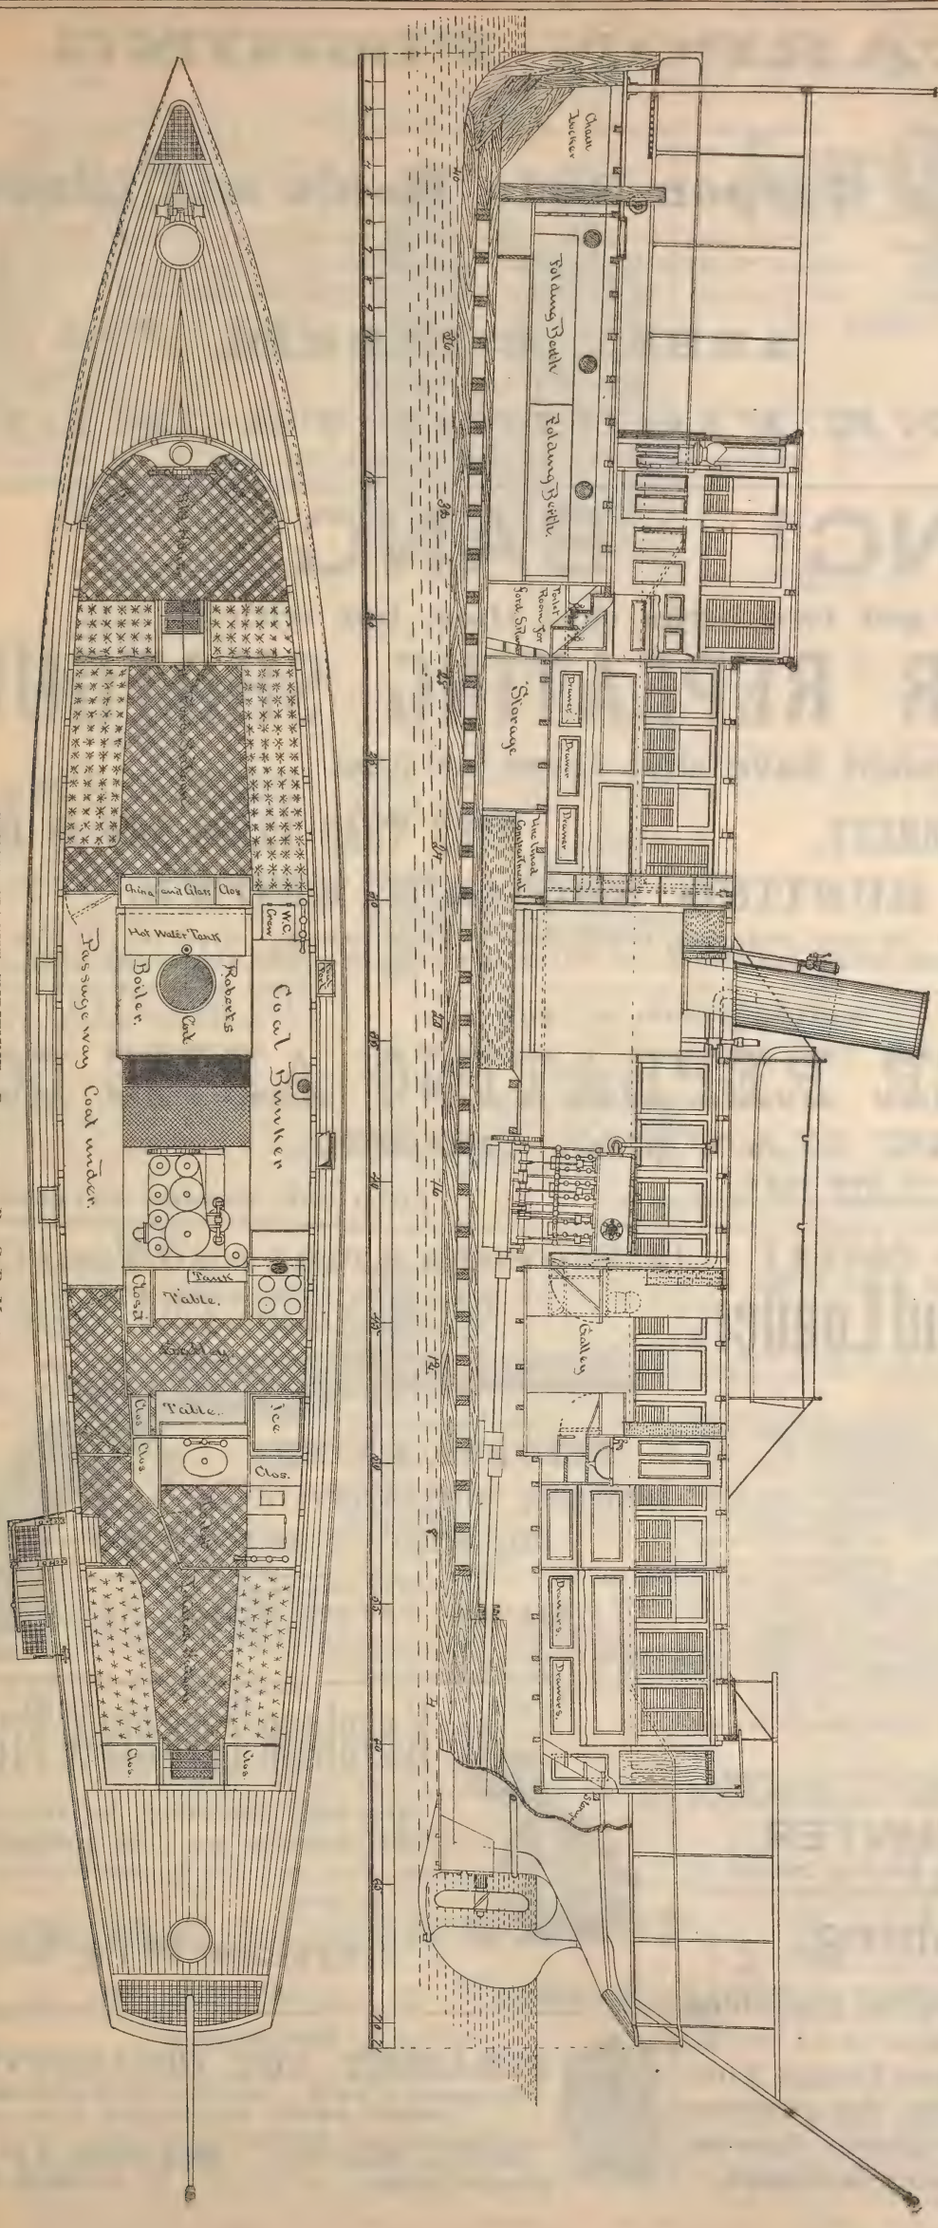
The whole experience of the Seawanhaka Corinthian Y. C. has shown the wisdom of its course in regard to amateur sailing, and the great strength of the club has always been in the deep interest in sailing that is held by all its members.

The annual race will be sailed under the usual Corinthian rules, but in deference to the general wish to see a thorough test of the speed of the new boats a special day's race has been arranged for Monday, in which professional crews and club topsails will be permitted.

This race will be open to the 46ft., 40ft., 35 and 30ft. classes, prizes being given in each class.

In the 40ft. class a special prize of $100 will also be given if five yachts start; to be increased to $150 for seven starters, and $200 for nine starters. This race is likely to bring out the entire fleet of forties, and to prove one of the important races of the season.

On Feb. 23, Lieut. Sidney A. Stanton, U. S. N., delivered an interesting lecture at the clubhouse, the subject being "Aids to Navigation." The latest addition to the club fleet is the steel schooner Iroquois, now owned by Rear Com. Ralph N. Ellis. The new 40 and 30 building at Ayres' yard will both fly the Seawanhaka colors.



BISCAYNE BAY Y. C.

THE winter yachting season is now at its height, and the anchorage of this most southerly of American yacht clubs, just off the new club house at Cocoanut Grove, presents as lively an appearance as that of many Northern clubs during the summer. Besides the schooners Presto, Nethia, Allapatta, Mischief, Nicketti, Egret and Amy, and the sloops Awixa, Rafaela and Scud, belonging to the club, it is occupied by I. F. Falls' new sloop Gypsy and a number of small boats, all flying club colors. The clubs represented by yachts are the Biscayne, New York, St. Augustine, and American; the American Canoe Association is represented by three members and three boats; the New York Canoe Club by two members and two boats; while the Larchmont and Corinthian (of Marblehead) yacht clubs are each represented by members.

At the annual meeting just held the old board of officers was re-elected for the ensuing year, viz.: Ralph Munroe, Com.; Edward A. Hine, Vice Com.; Kirk Munroe, Sec.; and Jean de Hedouville, Treas. Among the new members elected at this meeting were Thos. B. Asten, New York; Frank L. Anthony, Larchmont Y. C.; and Edward Prince, A. C. A. The Regatta Committee for this year is R. M. Munroe, Frank Anthony, and Thos. Hine.

The regular annual Pennant regatta of the club will be sailed next Friday, Feb. 22, with a start at 10 A. M. It is open to club yachts only. In the afternoon of the same day will be sailed a race open to all boats under the auspices of and for prizes offered by the Biscayne Bay Y. C. Several fast boats and a delegation of men interested in yachting are expected from Key West, and the occasion promises to be an eventful one for this part of the coast.

The Biscayne Bay Y. C. enjoys the distinction of being the only yacht club in the country occupying a club house 150 feet high. They gained this by leasing from the Government the old lighthouse tower on Cape Florida at the southern extremity of Key Biscayne. Their lease includes besides the tower a brick dwelling house formerly occupied by the keepers, and three acres of ground

STEAM YACHT INDIENNE.—DESIGNED BY DR. C. D. MILLER.

on which are cocoanut, banana and other fruit trees. The buildings are at present in a dilapidated condition and the grounds are overrun with a tropical tangle of undergrowth, but the club proposes to restore the place to its former orderly aspect, and to make it the most attractive yachting and fishing station on the South Atlantic coast. O. K. CHOBEE.

COCOANUT GROVE, Dade Co., Fla.

ICE YACHT RACING.

AFTER much patient waiting the ice yacht sailors of the Hudson River have been rewarded with several days of good ice and strong winds, on one of which the great race for the Challenge Pennant of America, held by the Icicle, of the Hudson River Ice Yacht Club, was successfully sailed. On Feb. 21 three races were sailed, the first, for second class yachts, being won by Bessie, in 17m. 30sec.; with Blizzard second and Snowball third. The course was eight miles. Two races for first class yachts were next sailed, Ariel winning the first in 14m. 7sec., beating Snowflake; and St. Nicholas winning the second in 13m. 9sec., beating Jack Frost. The ice was in fine condition by Saturday morning, the day set for the Pennant race, but neither of the challenging clubs, the New Hamburg or Carthage Landing, were represented, so the race was postponed until Monday, four other races being called. The course was ten miles, with a strong wind. The first race resulted as follows: Jack Frost, 20:00; Avalanche, 21:30; Northern Light, 22:00; St. Nicholas, 22:22.

Reindeer, sailed by Mr. Woodbury Kane, broke her runner plank at the turn, throwing Mr. Kane a distance on the ice, but without hurting him.

The second race, for second class yachts, brought out Great Scott, Bessie and Snowball, the former winning in 17m. 20sec. Only Polaris and Vixen started in the third class race, the former, sailed by Dr. J. B. Barron, winning in 18m. 15sec. The last race, for fourth class, was won by Ariel, Mr. Archibald Rogers, in 23m., beating Isis, Mr. George Beck. On the way home to Hyde Park the Bessie broke through the ice, her crew of two having a narrow escape. In the evening a reception was given by the Carthage Landing I. Y. C.

The great race was sailed on Monday over four rounds of a four-mile course, sixteen miles, the wind being but moderate. The starters were:

		Sail area sq. ft.
Icicle	J. A. Roosevelt	735
Great Scott	E. H. Sanford	499
Bessie	N. P. Rogers	485
Scud	Shrewsbury Boat	
Jack Frost	Archy Rogers	728
St. Nicholas	P. E. P. Rogers	
Avalanche	E. H. Sanford	679
Northern Light	Dr. J. C. Barron	825
Iris	Conrad Gindra	680
Polaris	Dr. J. C. Barron	281
Reindeer	Woodbury Kane	441
Vixen		731
Snow Ball	E. P. Rogers	
Blizzard	T. S. Newbold	493

The start was given by Com. Roosevelt at 12:12:30, Reindeer getting away first, with Scud second. Scud has been changed from the lateen to the sloop rig since she last raced on the Hudson, with an improvement in her speed. She held a good place during a greater part of the race, but finally lost it in making a turn. Icicle finally won, the full times being:

	Start.	Finish.	Elapsed Time.
Icicle	12 12 30	1 4 11	0 51 41
Reindeer	12 12 30	1 4 12	0 51 42
Northern Light	12 12 30	1 5 5	0 52 35
Scud	12 12 30	1 5 10	0 52 40
Avalanche	12 12 30	1 6 15	0 53 45
Jack Frost	12 12 30	1 6 40	0 54 10
Great Scott	12 12 30	1 7 00	0 54 30
Vixen	12 12 30	1 1 30	0 54 50
Bessie	12 12 30	1 8 00	0 55 30
St. Nicholas	12 12 30	1 12 00	0 59 30
Snow Ball	12 12 30	1 14 00	1 1 30
Iris	12 12 30	No time taken.	
Polaris	12 12 30	Disabled.	
Blizzard		Withdrawn.	

On Feb. 20 five races were sailed on Orange Lake over a six-mile course.

The first, for the Van Nostrand Cup, was won by Take Care. The race was immediately sailed again with the same result. Two races in succession were also sailed for the '88 Challenge Cup, Windward winning both. The Higginson Cup was then sailed for by Take Care and Helen, the former winning.

BUILDING AT BORDENTOWN, N. J.

MR. H. C. FORD, of this city, is building a steam launch for Mr R. K. Neff, Jr., of Philadelphia; the dimensions being, length 30ft., beam 7ft., depth 3ft., to be fitted with Edgerton's patent engine. This engine is something new; being a hot air motor, and is very small. This boat is being duplicated, with a cabin added, for Mr. J. H. Longstreet, of this city, owner of the celebrated catamaran Duplex. Mr. Longstreet will fit his boat with a Shipman automatic oil engine, four-horse power. Mr. Ford has also on the stocks a cutter for Mr. R. K. Neff, Jr., of Philadelphia, 31ft. 6in. over all, 26ft. 6in. on load water line, 10ft. beam, 4ft. draft, with 4,500lbs. of lead in keel, and to have as much more inside, with cutter rig. He has also a steam yacht for Mr. Tetlow, of Philadelphia, that will be 70ft. over all, 61ft. on waterline, with 14ft. 6in. beam and 7ft. depth of hull. This boat is to have compound engines. All these boats are from designs by Mr. H. C. Ford, the builder, who has also made quite extensive repairs on the sailing yacht Anita, of Trenton, putting a new cabin house on and a new deck, without a cockpit, which leaves a very roomy deck for cruising.

The celebrated catamaran Duplex has been at Bordentown since last spring, and during the summer astonished the natives by her great speed. When brought here in the spring Mr. J. H. Longstreet, her owner, had both centreboards taken out of the hulls, much to the crew's satisfaction, and the difference in her is imperceptible The boat has been to Philadelphia and Trenton a number of times on short trips. The last time she was in Trenton she made the trip home in seventeen minutes. L. W. W.

BORDENTOWN, N. J.

MEASUREMENT ON LAKE ERIE.—On Feb. 23 the winter meeting of the Inter-Lake Y. R. A. was held at Detroit. It was proposed to adopt the length measurement of the Atlantic Y. C., but no action will be taken until the May meeting. The Inter-Lake Y. R. A. has been backward enough thus far in regard to measurement rules; if it proposes to make any change it will do well to adopt some modern rule in general, rather use than one which must sooner or later be abandoned by the club in which it originated. The meet will begin on July 8, the length and location not being decided on.

Answers to Correspondents.

R. F. K., Baltimore.—The address is Cassayuna, N. Y.

C. V. B.—Denison Manufacturing Co., Broadway, New York.

E. T. K., N. Y.—Can a Stevens rifle chambered for the extra long .22 cartridge be altered to accommodate the Winchester .22-cal., 15-45 shell, center fire. Ans. Yes.

That a bid of 850 guineas should be made at public auction for a dog that is little more than a puppy must be pronounced one of those eccentricities of civilization concerning which philosophers might muse and moralize to advantage. More than twenty years ago Admiral Rous wrote, in one of his public letters, that "from £8,000 to £10,000 may be won upon the speed of a dog," meaning that the owner of a greyhound that won the Waterloo Cup at Liverpool might easily land as much as a lack of rupees if he backed his long-tailed champion heavily for the "Dog Derby." Already the days are gone when books on the Waterloo Cup were not less common than on the Epsom Derby, and yet the price of fleet animals, whether equine or canine, goes on increasing. Simultaneous with the report of the sale of Ormonde to an American for a fabulous sum, we have Colonel North, the "Nitrate King," giving nearly £1,000 for Fullerton, a greyhound, whose mother won the Waterloo Cup, and more than 500 guineas for Miss Glendyne, who won it herself in 1885, and divided it with Bit of Fashion, the mother of Fullerton, in 1885. At first sight these prices appear preposterously high, although they have occasionally been equalled and surpassed in bygone days. For Snowball, his owner refused 1,000 guineas when his pockets were not too well lined.—*London Telegraph.*

ABOUT GLOVES.

When you are buying **gloves**, kid or dogskin, for driving or street wear, remember that there is such a thing as a price that is too **cheap**. It is best to pay a fair price and get good gloves like **Hutchinson's.** They are made from selected stock in the **best** manner and are **warranted** to be the most serviceable made. If you want to know more about gloves in general and Hutchinson's gloves in particular, enclose stamp for the book **"ABOUT GLOVES."** No matter where you live or what you do it will interest you. It gives a history of gloves and illustrations of their use, prices of the different styles and qualities, directions for measurement and ordering, also testimonials from those who **know the value** of Hutchinson's gloves. **Established 1862.**

FOREST AND STREAM.

Among the series and papers which will appear in the FOREST AND STREAM in 1889 may be named these:

Sketches of Frontier Life,
Indian Folk Lore and Life,
North American Mammals,
Hunting in the Himalayas,
Hibernation of Reptiles and on Snakes' Weapons,
The Summer Hunt of the Pawnees,
Special Correspondence from the West,
Shooting on Mount Olympus,
Lost in the Forests of Acadia,
Five Days a Savage,
Domestication of Game.
The Sunset Club,
The White Goat,
The Forest and Stream Trap Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

Wild Fowl Shooting.

By W. B. LEFFINGWELL.

Containing Scientific and Practical Descriptions of Wild Fowl, their Resorts, Habits, Flights, and the most successful methods of hunting them.

CONTENTS.

FOREST AND STREAM PUBLISHING COMPANY, 318 Broadway, New York.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING Co., 318 Broadway.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

ANSWERS TO CORRESPONDENTS.

THE JEKYL ISLAND PHEASANTS.

WE have on several occasions referred to the Jekyl Island Club, situated near Brunswick, Ga., on the island of that name, and to its great success in the experiment of propagating the English pheasant.

From one of its members now there we learn that preparations are being made to hatch out not less than five thousand birds the coming spring. The club received from England last year seventy-eight birds out of the one hundred shipped, most of which arrived in New York in good order, and were shipped by steamer to Savannah; but owing to the rough handling on the rail between Savannah and Brunswick the principal loss was sustained.

From these seventy-eight birds one thousand young were hatched out by common barnyard hens, as the female pheasant is proverbially a careless and improvident mother, whereas the common hen devotes herself to the care of the young chicks with the same fidelity as if hatched from eggs of her own laying—and probably does not know the difference and does not trouble herself about it. The young pheasants were kept up until nearly full grown and then turned out to shift for themselves. A considerable acreage had, however, been cultivated with various kinds of grain and left unharvested for feed; but the pheasants seemed to prefer the wild food of the island, particularly the small acorns, of which there were an abundance, and they throve well and were healthy.

It was found that in the hatching a large percentage were cocks, to abate which excess of requirements members have been allowed to shoot a limited number to each gun this season. They have also shot some quail, which are rapidly multiplying from the four thousand placed on the island last season.

In order to keep up the successful breeding an additional one hundred hen pheasants have recently been ordered from England and are soon to arrive. These will be kept up for laying, and as many more of those turned out will be trapped and kept up for the same purpose. About forty hens last season gave a product of over twelve hundred eggs. At the same ratio the two hundred hens should this season furnish six thousand. It will thus be seen that with the present number the club will have a matter of six or seven thousand birds another year, a most remarkable and satisfactory result in two years, and thereafter the annual hatching in a wild state will doubtless furnish an ample supply, affording splendid shooting for the members who are so fortunate as to belong to this desirable club.

The club has the advantage of owning an island eleven miles long and from one to two miles wide, well wooded and affording splendid cover for the birds. It is a peculiarity of the pheasant that it never leaves its original home, its flights being short. Its flight is very swift and the cock being a large bird with a long tail, the sportsmen at the island find from experience they get more tail feathers than birds, invariably shooting behind the body and not allowing sufficiently for its swiftness of flight.

The experience of the Jekyl Island Club proves conclusively that this rare and splendid bird can be bred and become a new feature in the South, where the climate seems to be admirably adapted to their propagation, and as they are a hardy bird can probably be successfully raised in a higher latitude.

The credit of originating the experiment of introducing pheasants on Jekyl is due to its former superintendent, Capt. R. L. Ogden ("Podgers"), with the aid of Henry Hughes, an English game keeper, under whose care the successful hatching of the first brood was accomplished.

Mr. Pierre Lorillard, who has had considerable experience in raising pheasants at Tuxedo Park, a member of the Jekyl Club, after visiting the island gave it as his opinion that it was a most favorable spot for the raising of this rare bird, which results have justified as correct. In raising pheasants at Tuxedo Mr. Lorillard has had to contend with a severe climate and the pot-hunters who lurk in the vicinity of his grounds, and by baiting the birds outside of the limits manage to secure a good many. This is a vexation and annoyance the Jekyl Club does not have to contend with, owning as it does the whole island, upon which only members and their guests are allowed.

The cost of the birds with freight and other expenses is almost five dollars per pair, landed in New York.

We congratulate the club on its success and prospects of soon having the finest game preserve in the country, as aside from pheasants and quail it has also plenty of wild turkeys and deer, all of which are increasing rapidly.

LIBERTY TO CARRY HOME MAINE GAME.

THE chief concern in framing non-export game laws is to cut off the traffic in game shipped to market and at the same time to permit sportsman to take home with them the venison or trout they have legitimately killed. If it be found impracticable to cut off market-hunting without depriving the sportsman of his privilege, the case is one where the innocent must suffer, and the sportsman must endure his individual and personal deprivation for the good of the public.

Under the present Maine law, which permits one person to export only one moose, two caribou and three deer, sportsmen cannot take their game home, because the courts hold that a railroad or an express is subject to the restriction of the law and cannot carry more than the individual allowance. This is a hardship severely felt by sportsmen who visit the State; and it is one which all agree should be removed if it can be done without throwing open the markets.

In New York the deer hunter who kills his game in the North Woods is permitted to take it home under certain restrictions, which prescribe that the man who killed the venison must accompany it in person during transportation. A similar provision has been incorporated in the bill reported by the Committee on Fisheries and Game of the Maine Legislature. According to the terms of this bill any one person will be allowed to kill in a season one moose, two caribou and three deer, and having captured his game he may transport it, open to view and properly tagged with his name; and when so transported by a common carrier, being accompanied by the person who killed it, the game "shall be deemed to be in the possession of such person and not in the possession of such common carrier." This grants to those who resort to Maine for large game hunting everything they can reasonably ask. It gives the crown to a hunting trip, that gratification found in displaying to friends the proofs of achievement in the woods. In this concession to the wishes of sportsmen from abroad, we are bound to believe, the Maine game commissioners will find a new source of strength, for they will find many active in a hearty support of the law, who have been lukewarm because of the anti-transportation law.

At the same time the new privileges are so hedged about with prudent conditions that if they are enforced with reasonable vigilance the right conceded to sportsmen cannot become a license abused by market-hunters. The Maine Legislature will be acting the part of wisdom should it make every provision for the strict enforcement of the law.

The other provisions of the bill, briefly summarized, protect cow moose at all times, fix the season for moose (male), deer and caribou from Oct. 1 to Jan. 1, as at present; forbid the use of dogs for hunting this game; forbids possession in close season, but proof may be produced that the game was lawfully acquired in open season; restricts the number of animals killed by one person to one moose, two caribou and three deer; authorizes wardens (who must wear badges) to arrest without process; and gives one-half of fines recovered to the prosecutor. Woodcock and ruffed grouse may be transported from place to place only in possession of the owner.

These proposed amendments are wise and judicious; we trust that they will have the approval of the Legislature.

THE NATIONAL ZOOLOGICAL PARK.

THE bill providing for the establishment of a National Zoölogical Garden at Washington was passed by the Fiftieth Congress and has become a law. The sum appropriated was $200,000, which will be amply sufficient for putting the enterprise on a good basis for the start.

The country and the scientific world at large are to be congratulated upon this. The project of a national zoölogical collection originated long ago with Prof. Baird; and little by little it has grown, until now, under the able management of Prof. Langley and Mr. Goode, it has become an accomplished fact. Great credit is due to these two gentlemen, as well as to Mr. W. T. Hornaday, who has actively interested himself in properly presenting the merits of the project to Congress.

Too much cannot be said of the value and importance of a zoölogical park which shall be under Government patronage. We have already pointed out that there should be such a depository for the gathering in of specimens of our own indigenous North American mammals, now so rapidly approaching extermination. Add to this the specimens which may readily and will naturally come to us from our consuls in foreign countries, and there is here an opportunity to make a collection which shall even surpass the older gardens of European countries.

The site already selected for the garden in Washington is said to be the most beautiful for such a purpose in the world. Once established the Washington "Zoo" will be a subject of national pride.

This is an enterprise in which we have taken special interest; it is one to which in the future we shall expect to give substantial aid through the offices of FOREST AND STREAM readers who may contribute to the collection.

THAT NET DECISION.—Last year the Fish and Game Association of Southern Jefferson County, N. Y., called on Protector Steele to seize certain fishing nets unlawfully set. Steele did this. The net owners brought suit to recover the value of the nets, and judgment was rendered in their favor, on the ground that, although the law called for the summary destruction of the nets, the Legislature had exceeded its authority in making such a law, the law was unconstitutional, and was not a defense for the protector. The Association thereupon raised a fund to appeal from this decision, inasmuch as it struck at the heart of protective effort in this special field. They carried the case up, and a decision has just been given reversing that of the lower court, and upholding the law. This puts a new phase on the matter. The Association is deserving of highest credit for its victory. By it the problem of fish protection is simplified.

ORDER OUT OF CHAOS.—The game laws of the State of New York are in a chaotic condition. A bill, published in another column, has been drawn up, appointing a commission of three to codify the laws and put them into intelligible shape. This is the soundest and most sensible measure put in at Albany in a long time, and it will be for the good of game protection if it be passed.

The Sportsman Tourist.

"Sam Lovel's Camps." By R. E. Robinson. Price $1.

A MONTH IN THE ROCKY MOUNTAINS.

[*Continued from page 106.*]

THE cold air of these frosty mornings makes one loth to crawl out from under his blankets. We are astir, however, by daylight. The wind blows keenly, and sheets of thin ice project from the bank of the little stream near our camp. One of the hunters camped a few yards away brings us a generous piece of elk steak, and by way of returning the courtesy we gave him a share of our potatos. I start out with my rifle with the intention of hunting along the plateau north of us, and, bearing to the west, come round to the camp by night, expecting to explore as thoroughly as possible that part of the valley on the west of us observed from the bald knob the evening before. As the two hunters are going in my direction to bring in the elk, I walk along with them to the place where the elk were killed.

The great carcass of the bull elk hanging up to a tree looked as big as a full-grown beef. Both that and the cow were exceedingly fat. The head of the old bull with its immense antlers lay upon the ground. The bear had been kept away last night by a fire, but there were the tracks of the night before. The hunters pointed out to me the position of the elk when they first came upon them. They were walking carefully over the little rising ground, and first saw the old bull standing still. Judging that there must be others, the hunter crouched down, motioning to his companion to do likewise. They crawled carefully up to within 40yds., and one of them rose to his knee and fired at the standing elk, putting a bullet just behind the shoulders. The elk made one or two long leaps, and then commenced running around the others in a circle. He fell over, staggered up again, and fell over again dead. The hunter knowing the old bull to be fatally wounded, turned his attention to the others, that, instead of running off, stood in a dazed, stupid manner, as elk will do when suddenly fired into when not suspecting an enemy near. Elk are the easiest killed of all the large animals if the hunter can once get near enough to them without arousing their suspicions, either by scent or sight. One hunter told me, and I have no doubt of his truthfulness, that he once killed sixteen without moving from his position. He came upon them standing or lying close together, and shooting the outside animals, or leaders, whenever an attempt at a break was made, kept the whole band so bewildered that they seemed to lose their senses, and stood still or went staring round, seemingly unable to make their escape.

Leaving the hunters to take their meat to camp, I went on toward the base of the mountain. I saw plenty of elk tracks, some very large ones and apparently just made, but as there had been no rain recently it was impossible to tell whether the tracks were made last night or whether they were a week old. I walked slowly and carefully, peering through the thick growing pines, and creeping cautiously over every little rising ground. The forest consisted of a heavy growth of tall pines whose tops came together above so thickly as to shut out the sun. There was no underbrush and the walking was easy and quiet. The surroundings were gloomy, somber, almost melancholy, giving one a feeling of loneliness and isolation, but still of enjoyment. You feel that you are in the midst of primeval forests, occupied only by its native inhabitants, the beasts and birds. The air is scented with pine and balsam, and is delightful in its purity and freshness. One feels an inclination to expand his lungs, and take in as much of it as possible. There are numbers of little red squirrels always darting about and attracting your attention, and the provoking jays and magpies will scream out over your head with a voice that ought to belong to birds ten times their size.

My course, marked out last evening from the bald knob, now takes me to the left, and down off the plateau and unto the basin on the west. Seeing an opening in the pines, I go out in the direction and discover a small lake or rather pond. It covers perhaps ten acres. The mountain comes down abruptly against the upper end where the water is quite deep and clear, but below, or at the other end, the water is shallow and the banks muddy, and the margin thickly grown with grass and a variety of lily. I saw no ducks or other waterfowl and no evidence of their visiting this locality. I attempted to make a circuit of the upper end and got into a thick tangle of balsam and spruce trees coming up between fallen trees and big rocks that made it very difficult, almost impossible to get through. There were numerous tracks of elk and deer where they had come down to drink, and near the edge of the water I saw fresh signs of bear.

At the upper end of the lake I see a dark looking place in the rocky bluff above that appears to be a cave, and I climb up there feeling considerable expectancy in view of the fresh sign of bear close by. Where I expected to find a cave, however, is only a little depression in the bluff over which hangs a shelving rock. I found here signs of mountain sheep where they had probably used this place for a shelter, but not recently. Leaving this interesting locality I kept around the foot of a hill, following a well beaten game path, and come out into a more open forest of quaking aspen. In this path I came upon the fresh track of a cow elk. The imprint looks so recent that I instinctively look around to see if the animal is not still here. I follow the track for some distance and find where it changes its gait from a walk to a trot, as I know from the deeper impression, the hoof spreading apart at the points, the marks of the dewclaws and the scattered freshly-turned leaves; so I concluded that the elk has either seen or scented me, and placed a safe distance between us. The open woods here seem an ideal game country. There are little open parks with plenty of grass, affording an abundance of excellent feed. The country is well watered and the pine thickets afford secure shelter. I see an enormous mountain lion's track, and come upon the track of a deer so fresh looking that I am sure the animal has but just passed. I try to follow it, but it soon goes up the mountains among rocks and logs where it is impossible for me to follow it. It is now getting late in the afternoon and I turn in the direction of camp. On my way in, which was twice as far as I expected, I met Dan also returning. He had obtained a glimpse of a black-tailed deer near where I had seen the fresh track, but otherwise had no better luck than myself.

I suppose the most exuberant enthusiasm will dampen after three days of unsuccessful hunting. I confess mine did toward the end of the third day. For three days I had tramped, tramped, tramped, over mountains and dale; had hunted carefully, faithfully and persistently, and although signs of game were everywhere, to use a hunter's expression, I "did not see a hair."

Toward the end, however, as I had turned toward camp, my guide being with me, we came to where twelve to fifteen deer had crossed a little opening in our road. The sign was so recent that Dan insisted that the deer could not be very far away. We determined to try and find them, and so, separating to 40 or 50yds. apart, we crept cautiously into the thicket were the tracks led. The place was so thick with young pines that it was impossible to proceed quietly without going very slowly. Fallen trees lay crossing each other in every direction where they had lodged after a fire some years ago. The fallen timber was uniformly about the size of telegraph poles, and lay in all possible positions so that they were piled up to nearly or quite breast high in many places. Between these had grown up a thicket of young pines. There was now and then a little opening, but for the most part they stood so close together with their branches interlapping, that I had to force my way through them, and of course in such places it was impossible to see anything even a few yards ahead. I was making my way through this as best I could, but necessarily making some noise by the breaking of dry twigs and burned timber, when suddenly I heard a great rustling and breaking of dry branches in the thicket not more than 10yds. away. I could see the moving of the bushes and hear the breaking and crackling as the animals made off, but could see nothing of them. There seemed by the noise to be two, going in different directions. The noise would stop, then start up again as if the animals were in doubt which way to go. I would raise up on tiptoe and then stoop down and try to look under the brush, but was unable to see anything of the game. Finally I pushed through into a more open place where the trees were lower and I could see over toward toward the hill in front of me as it sloped up beyond. This must have started the game up again, for I could hear one making off on the right, while the other kept up the hill in front. I could see the line of waving bushes and hear a great clambering as if the animal found difficulty in getting through, as it undoubtedly did, for it turned square to the left, as I saw from the shaking bushes. It was making off at a great rate and I was just about concluding to fire at random into the moving mass of bushes and take my chances in that way, when I caught a glimpse of bright gray, and knew that the game was an elk. In a second it came out into fuller view, and I caught sight of the head, neck and shoulders of a cow elk. I took a quick aim at the largest part in sight and fired. The report woke up the rest of the herd, and on my right started up a great crackling of dead limbs and rushing through the bushes as if a whole caravan of elephants had suddenly been turned loose. Running quick as possible in that direction to a bit of higher ground, a five-pronged bull elk was seen loping off in full view fifty yards away. Suddenly he stopped to look in my direction and turned broad side in full view. Taking careful aim this time, the bullet struck fairly back of the shoulder. The animal made two or three plunges and fell flat on his side, lay for several minutes and then jumped up and ran off as if nothing had happened to him. Another bullet aimed wildly struck him in the flank. I was sure he could not get far away, although I could not find a particle of blood. Following in the direction he had taken about five hundred yards, my guide, who was along, discovered him crouched down among the branches of a dead tree. I crept up to within ten or twelve yards. He was still alive, his head and antlers swaying from side to side in a last effort to hold up his head, when I finished the noble animal's life by a bullet through the head. Going back to where I had fired at the first elk I could find no sign of having hit her, and supposed I over-shot.

The morning after the killing of the elk I started out early for the place to finish skinning, for we had only taken out the entrails the night before, while Dan was to come on later with the horses to bring it in. I carried my shotgun this time, intending if any bears had disturbed the elk meat during the night to set the gun for them—that is, fasten a string to the trigger and the other end to a piece of meat placed in such relation to the muzzle of the gun that the least disturbance of the meat will discharge the gun at the animal's head. I intended to annihilate with a load of buckshot any bear that came around after elk meat; but the bear did not come, and so saved himself such a disgraceful death. On my way to the elk I started up two deer. I was making considerable noise at the time forcing my way through some fallen timber, and on hearing a slight rustling, looked in the direction and saw two deer bounding up and down and apparently dodging behind the trees, their ears and tails appearing alternately above the little pine trees. They made two or three bounds and stopped, but each with its body behind a tree. All the time they were getting further away, and fearing I would lose a shot, took a careless aim at the head of one and "let go" the rifle barrel of my Baker. It was probably a clear miss, as I did not see anything more of the deer. The other bounded out to the right, and I fired at it with a load of buckshot without any effect that I could see more than to increase its speed into a regular blue streak. I don't think anything can outrun a black-tailed deer. It is astonishing how quickly they will get out of sight of a hunter. A few days after this I was going over the top of a little hill near camp, walking very slowly and looking out, as I thought, very closely; it was open woods, too—that is, there was very little underbrush, nothing but tall standing pines. All at once, and quicker than I can speak the words, the ears, head, neck and bodies of two deer rose up, seemingly out of the ground and from right under my eyes, and dodged behind the trees and were off and out of sight before I could get anything like a fair bead on them. They evidently had been watching me, and were prepared to go. Another time I was hurrying to get to camp just before dark, I heard a rustling to my right and caught a glimpse of some moving object at full speed, and following after was a little fawn, doing its best to keep up. It was too far away and too quick out of sight to make a shot worth while. A herd of deer when surprised will just make the slightest rustle and get out of sight, while an elk when suddenly started in thick brush will make a noise like a drove of cattle.

The bear still continued to make nightly visits to the place where our hunters had killed the elk, after the offal and pieces of meat that had been left. About this time we were visited by a couple of English sportsmen who were on their way north through the National Park to a point on the Northern Pacific Railroad, and they had in their outfit a large bear trap, weighing forty pounds. They set the trap in the vicinity, and the next morning had the bear, a two year old grizzly, or silver-tip.

The bear was two years old past and larger than any full grown black bear of the East. Its color was between a black and brown with the ends of the fur inclining to white on the back and flanks, but not enough white to change the general color from a dingy black. Some half a dozen experienced hunters who saw the animal differed in their judgment as to what species it belonged to, but the majority inclined to the opinion that it was the young of the grizzly. There are three varieties of bear known to the hunters in this region; the cinnamon or brown bear, the silver-tip, and the grizzly. By some the two last are regarded as the same, and I often heard them spoken of as the silver-tipped grizzly. It is quite probable that all these are the same variety of bear, but differ in color with age and individual characteristics. Certain it is that specimens are frequently killed that are so mixed with the resemblances of each that the oldest hunters and ranchmen, who have seen and killed all, cannot tell which it belongs to. They all attain an immense size, and according to the testimony of the coolest headed hunters, they are, when full grown, exceedingly ugly and dangerous customers to tackle.

Any one who has seen "Old Sampson" the huge grizzly that for a long time was with Barnum's menagerie in New York city, can form some idea what kind of "company" these monsters would be when found "at home." An Indian, it is said, never attacks an old grizzly bear single-handed, and the white hunter is careful about doing so unless the chances for hitting a vital spot the first time are rather in his favor. "I have seen too many men torn up by the brutes," said an old Rocky Mountain stage driver to me, "to make me anxious about taking any risks with them. "I don't mean these little black bears," he added contemptuously, "they are nothing." At one ranch house where I stopped two days there was a large family including two or three well grown boys. I tried several times to get them to go out with me with their dogs to a large thicket not far down the creek where a bear was said some time before to have made his home, but their invariable answer was, "We hant lost no bears."

Often when wandering alone a good many miles from camp through tangled jungles of willows, or in narrow rocky passages where the game paths were pretty well beaten and tracks were plenty, I have thought of my guide's friendly advice: "If you meet a grizzly and he gets up on you, keep cool and aim for his nose." It is just a little doubtful whether, in such circumstances, I would have followed the advice strictly in either particular. I never, however, got to the point of the young hunter who started out in the morning with great enthusiasm following a bear track, and "just spoiling for a fight," but about the middle of the afternoon quit the trail because, as he said, "the tracks were getting a little too fresh." Frequently, however, as I stopped to rest on the edge of a rocky cañon with a narrow stream separating me from the steep cliffs on the other side, or as I looked around while eating my lunch, sitting on a log near the margin of one of the little cold water lakes with which the region abounds, admiring the exquisite fringe of water lilies and balsam on the opposite bank, I have wished, if I ever were to meet a grizzly, he would come on now. At such times I was always willing to be interviewed by the oldest inhabitant—the father of all the grizzlies and silvertips, if he would only present himself on the other side.

The dangers, from bears, however, is not to be considered, as the chances even for seeing one are very small. The bear, of course, is a night animal, and although he may leave many tracks on your hunting ground, it is very seldom that he is seen there. He retires toward morning to the inaccessible thickets and rocky cliffs and goes to sleep, where it is only by the merest accident that he is discovered. If the grizzly is surprised in such places he will rise up slowly on his haunches, uttering a low angry growl, and stand half erect, his body bent forward with forelegs drooping and nose sniffing the air in the direction of the intruder. At such a moment, if the hunter wishes to take no risks, he must lodge his bullet in the brain, for in any other part, although it may prove fatal in the end, the animal will live long enough to give the hunter a close call for his life. My guide, who had spent twenty years in the vicinity, mining and hunting, had never seen but three, and these all at one time, an old bear and her two cubs. He killed the old one and one of her cubs at long range, the other getting away. Another hunter with whom I was associated several days in camp, an experienced woodsman, and an excellent man by the way—Mr. Hiram Scott, of Miner's Delight—had never but once been in a "tight place." That time he came unexpectedly upon a big grizzly and her cubs. Before being aware of the presence of the interesting trio he was within 20ft. of them. Up came the rifle to his shoulder and his aim was deadly, but the faithless cartridge refused to respond. In Mr. Scott's own words, "The blamed thing snapped." Throwing down his gun he made for the most convenient tree and drew himself up out of reach just as the animal's foreclaws grazed his boot legs. My jolly friend, Mr. Frank Coffey, has lived forty years on the frontier and among the Indians, and has never had but one real adventure with a grizzly bear. He was in company with a number of cowboys and they caught sight of a bear out on the open plain. They spurred up their ponies and gave chase, the bear running for dear life. Coffey was ahead and urging his pony at the top of its speed. He managed to get up within a few yards of the bear when the pony stumbled and fell, and horse, man and bear tumbled in a heap. "It was hard to tell," said the genial Frenchman, "which was worse scared, myself, the pony or the bear, for we all ran in opposite directions as fast as we could."

Natural History.

MID-WINTER BIRD NOTES.

I DID think that the birds could be trusted. Farm lore teaches that the first northern flight of geese is proof positive that the severity of winter is past, and that genial spring is almost here. But for once the birds have been deceived.

The late autumn and mild winter caused a gradual disappearance of songsters and game birds. There were no vast migratory waves. Indeed, the southward flight was so gradual that it was impossible to say that on such a date a certain species had departed. Many birds remained through January. The first or northern channel of the Platte has not been entirely frozen over, and here mallards have disported themselves throughout the entire season. Both species of waxwings have been frequently seen, and so has the western meadowlark. The last southward flight of geese that I observed was at 10 o'clock on the night of Dec. 23. Both geese and ducks cross the Platte on their autumn flight far west of their spring crossing point. On this account fall shooting is not first-rate about Kearney. Their annual circuit forms an immense triangle. Their autumnal flight is due south. In winter they drift easterly, down the rivers of Indian Territory and Texas, and in spring they take a northwesterly direction to their breeding ground. This is especially true of mallards, teal, redheads and of all the natatores that breed in northern Nebraska and about the lakes of Dakota. I am aware that this contradicts a most noted duck hunter, whose weekly letters entertain all readers of FOREST AND STREAM, but if he will leave the lakes and marshes of Illinois and Indiana and spend a season in central Nebraska, he will find that *Anas* and kindred genera have a certain western waywardness and refuse to conform to the migratory laws that hamper their more civilized eastern brethren.

The first animals from the south were on the afternoon of Feb. 6—a large body of Hutchin's geese. Two days later these were joined by a few Canadian geese, but up to date no brant have put in an appearance. For three days the geese remained close to the river. On the 10th inst. they flew northward to their feeding grounds, and after satisfying their hunger returned to the Platte. From the 10th to the 15th, they made the morning and evening trip, as is their custom during the migratory season. During this time the temperature ranged from 20° at midnight to about 50° at noon. The 16th, 17th and 18th were cold, cloudy days and the birds stayed near the river all the time. They resumed their trips to the feeding grounds on the 19th. The morning of the 22d was warm and clear, but the geese did not fly. They appeared very restless and the ducks in the north channel were also worried about something. At noon the thermometer stood at 60°. Suddenly there came a blast from the north. At sundown the temperature was 5° above zero and the next morning it was 15° below. Not a goose or duck was to be found. Some time during the night they had left for warmer climes, and the poor farmers who were getting ready to do their plowing now say that a goose knows less about the weather than does the traditional ground hog, who this year saw his shadow on Candlemas day and knew enough to crawl back into his hole without trying to rush the season. SHOSHONE.

KEARNEY, Neb., Feb. 25.

WOODPECKERS SIGNALING.—New York, March 5—Last spring while at Willewemoc Lake for about a week I was awakened regularly every morning soon after the sun rose, by a woodpecker pecking at the tin leader on the club house. This would be frequently repeated during the day, and always at the same spot. Now as a comparatively new tin leader offers but slight inducements to a hungry bird I was rather puzzled to find a cause for this frequent rapping, so resolved to watch closely to see if I could not discover some reason for it. I soon got the desired opportunity and found that after each tattoo he (it was invariably a male bird) would cock his head to one side and listen attentively for the reply, which was sure to be heard very soon after. He would fly off at once in the direction from which the answer came, returning shortly to a tree about 50ft. from the leader. As it was the mating season I take this to have been a sort of challenge to "the other fellow," so it is pretty certain from this that the woodpecker pecks for other reasons than a search of food. I never saw his mate join him on any of these occasions, possibly because he had not yet quite succeeded in getting one to his liking, as it were. Perhaps my experience may be of service to C. W. Chamberlain who seeks the opinion of others on this question, in your issue of Feb. 28.—BIG REEL.

HUMMING BIRD ON THE GROUND.—Williamsport, Pa.—All writers on the subject of ornithology whom I have consulted agree that the humming bird never alights on the ground. I beg leave to differ from them. Near my home is a field that in the summer time is used by a florist for the cultivation of flowers. I have frequently repaired there in the evening when the humming birds were making their meal, and with opera glass in hand seated myself quietly among the bushes. The ruby throats would come quite close, seemingly unaware of my presence, and dart here and there after their dainty food, or pause to sip a drop of nectar from some opening flower, ever and anon stopping for a short rest upon a stem or upon the ground. When they alight upon the ground they spread the tail to its full extent, the end against the ground, the wings slightly drooped, resting on the tail apparently for the purpose of steadying themselves. I have seen them playfully chasing each other, starting from the ground, and after several sallies or playful banters returning to the ground, sitting quite close to each other. When thus seated they fluff out their feathers and appear plump (sparrow like), quite the contrary to their appearance when perched upon a twig. —CHAS. H. ELDON.

WOODCOCK PAINTED FROM LIFE.—New York.—I notice in the FOREST AND STREAM the account of painting a woodcock from life. Some fifteen years ago I wing-tipped a woodcock one fine October day, and after much difficulty captured him without further injury and took him home. At first the bird would not feed, but after a few days would hunt for worms in a box full of earth. I kept him some six weeks, making several studies during that time. Unfortunately one day he fell from a high table while I was painting him, and being unable to fly hurt himself so badly that he died.—W. HOLBERTON

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—One courlan (Aramus giganteus), two white-backed piping crows (Gymnorhina leuconata), one snow bunting (Plectrophanes nivalis), one green woodpecker (Gecinus viridis), one ground rattlesnake (Crotalophorus miliarius), two red-tailed buzzards (Buteo borealis), and one alligator (Alligator mississippiensis).

Game Bag and Gun.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

SHOOTING CLUBS OF CHICAGO.

IX.—THE SWAN LAKE CLUB.

AS has been stated, the river clubs of Chicago may be divided into those of the Kankakee River in Indiana and those of the Illinois River in Illinois. To the latter class belongs the Swan Lake Club, whose grounds, though a considerable distance from the city and a trifle hard to get at, are commonly a full reward for all the trouble undergone in reaching them.

The main body of our wildfowl follows the Mississippi system in its migration, up or down. Naturally large portions of the main flight will break away and follow such permanent tributary water courses as offer them abundance of food and access to the haunts natural to them. The Illinois River, trending between the Mississippi and the Fox Lake system, and thence to the lakes of Wisconsin and so on north, offers a broad and easy waterway for the wildfowl. There are wide marshes along its shores, and winding lakes and bayous, stocked with food; the oaks and willows along the main river offer certain dainties dear to the mallard palate, and above all the vast overflowed cornfields afford that provender for which, rather than for almost anything else, the mallard duck will sell his birthright—corn on the ear, and half submerged. There is no better mallard country out of doors than that along the Illinois River, and the Swan Lake Club has got right in the middle of the very best of it. It is doubtful if a Swan Lake man would exchange his stock share for share with a member of any other Chicago club. This, in spite of the fact that there was hardly one good bag of birds made on Swan Lake marsh in this season of alarming scarcity. When there are ducks anywhere else, you will see ducks at Swan Lake.

The Kankakee River empties into the Illinois River, and stretches off from that stream with its vast and tempting line of marshes. It is probable, however, that many of the upper Kankakee birds do not follow up that stream from the Illinois, but come directly across from the waters of lower Indiana. The Kankakee country is different from the Illinois country. Its waters are marshier and shallower, and there are few open bodies or wide streams. Upon the other hand, the Illinois River at Hennepin borders close upon a quarter of a mile in width, and is held by the Government as a navigable stream. It wanders out into great lakes, whose body of water is permanent, so that fish of great size are taken in them, miles from the main stream; and whose appearance, although their shores are densely covered with wild rice and "cane," is rather that of open water than of marsh. Naturally the methods of the shooters in these different sections would differ to some little extent, and this is found to be the case.

The path to Swan Lake club house is via the Chicago & Rock Island road, whose night train leaves at about 11 o'clock. There is a chair car attached to this train, intended for through passengers, but I imagine a good many Swan Lakers slip into the chair car, and give the porter a quarter to call them at Bureau Junction. I slipped in and gave the porter a quarter; and if I hadn't waked up myself when we arrived at Bureau, he would have let me sleep till we got to Kansas City. I infer it takes about fifty cents to wake him up. At Bureau Junction you can go to a pretty fair depot hotel and sleep a while longer, and take a morning train over to Henry, and from Henry a sharp drive of perhaps twenty minutes will bring you to Swan Lake club house, and you will never want to go away from there.

This house of the Swan Lake Club is by far the most picturesque of any of those owned by the Chicago clubs, and the house and grounds, taken in conjunction with the keepers' houses, form a most pleasing and striking view. Singularly enough there is not extant any considerable picture showing a front view of the main building, and such views as show the entire front of the grounds must of necessity dwarf the club house, which is of itself a very symmetrical and pleasing building. The main structure is 48×60ft. in size, two stories and a lofty attic, and is surmounted by an observatory, from which all parts of the 5,000 or 6,000 acres of the club marsh can be seen. The house is built around a great open court which runs from top to bottom, and which, while it economizes neither time nor money, certainly adds an indescribable air of largeness and comfort. It wasn't economy the Swan Lake men were after when they put up their $8,000 club house, but they got what they were after. Unless one except the Mineola club house, which is rather a summer resort than a sportsman's club, the Swan Lake club house is the largest, most comfortable and luxurious, and the most sightly shooting box in this part of the country. There are only fourteen sleeping rooms, all on the second floor, arranged about the open court, and fronting out with a general aspect of sweetness and light. Each room is large and is furnished with a strong leaning toward luxury in its brass bedsteads, the tasty stands and carpeting. One thing I saw worth comment, each room had a large, good hanging lamp, and the lamps throughout the house were of large, strong burners. Evidently these lamps mark the dawn of the modern day of sportsmanship. They replace the flaring pine-knot, the candle, the lantern of our ruder and simpler camps. They are not close to nature; but they mark the modern day.

A two-story veranda of great width extends about the four sides of the house, affording a notable good place to loaf of a warm day. A big shed at the rear affords storage for the game, for the blackbird traps, and all the miscellaneous odds and ends of the camp; here most of the loading and cleaning is done. The gun room and drying room, well heated and well provided with neat lockers, are situated upon the right of the reception room, the larger being, I should think, about 16×24ft. in size. The main room of the house, the general parlor and reception room, is 28×36ft. in size, and is fairly a dream of luxury and beauty. The furniture is excellent, the center table well supplied with books and periodicals, and the walls decorated with refined works of art. Notable among the treasures of the Swan Lake Club is a collection of artotyyes of the paintings of sporting scenes by Mr. L. C. Earle, the Chicago artist whose work has elsewhere been mentioned in these columns as showing such sympathetic treatment of field scenes. The collection was presented by the artist, I believe, and is therefore all the more valued.

A deep gully bisects the steep bluff to the right of the club house, and this is spanned by a long foot-bridge, known as the Lover's Walk. It might so be known from the many lovers of a good dinner who have crossed it; for it leads over to the house of Frank Wood, one of the keepers, where is situated the club dining room, solidly furnished in oak, the board of which is again resplendent with silver, crystal and fine linen. I ate one meal here in solitary grandeur, for I was alone at the club house, and after that begged to eat with the family.

Upon the left of the club house, and also connected therewith by a long sidewalk, is Tim Wood's house. His barn sits right on the edge of the bluff. The barnyard is full of fowls of all sorts, and there are the usual numbers of wild ducks, making the air resonant with musical notes of mallard manufacture. Tim tunes his duck call to them. As I have previously stated, the call most favored on Swan Lake marsh is the wooden one known as the "Illinois River call." It has a good tone, but must be watched lest it change by reason of swelling or shrinking.

Frank and Tim Wood are reformed market-hunters. Their father leased marsh lands to the club, and the boys had sense enough to see that the day of the market-hunter was over, and that there would be far more money in getting in with the club. They make good keepers, and are not to be surpassed upon the marsh. They know every inch of the ground, and their knowledge of the habits of wildfowl is perfect. There are hardly two men in the State who have killed and shipped more game. The club still by special provision allows them to shoot to some extent, and they further content themselves by leasing their reserved fishing privileges and setting a few nets for themselves. The local country is the natural home of the market fishers and hunters, and probably no section has been more thoroughly worked by them than the Illinois River, Senachwine Lake and the bigger waters of the Swan Lake system. Senachwine Lake lies above the holdings of this club. It has been wonderfully prolific of fish, especially of large bass. It has a record of an 11½lb. black bass. Tim Wood also mentions one haul of a seine whose result netted $276.43, the actual price obtained for the fish. Thus it may be seen that there are fish in these waters, or once were. There is said to be good fishing for bass and croppies along the creek which connects Mud Lake with the river, and there might be good sport all through that country if the fish had a chance. As it is, the river fairly bristles with nets; even in late November when I was down at the grounds Mud Lake was full of nets, and a fishing boat was regularly working the circuit. The fish may get along all right, but luck's agin 'em.

The main beauty of Swan Lake Club house is its location. From the top of the big bluff the whole marsh can be seen; and if any marauding gun is heard out on the marsh the lookout in the observatory, armed with a strong field glass, can at once locate the shooter, and at once thereupon a boat or so slips out and corrals him. The view from the observatory is not only utilitarian but beautiful. The winding procession of forest trees lies upon the right, shutting off the club marshes upon the other side of the big river. The river itself throws out broad curving gleams as it stretches beyond the big lakes. The main outlet of the marsh runs directly at the foot of the bluff, and the streak of the tumbling "cut off" leading into it can be seen running back into the marsh up toward the Big Hole, Tim's Hole, First and Second Holes, and all the river side of the marsh. Mud Lake lies close into the bluff on the left, its arms reaching out into the marsh. The wide sheet of Swan Lake stretches yet further on, and beyond that, outlined at its lower end by a blue line of bluff and trees, runs Senachwine Lake. The bulk of the visible marsh and willow and timber points belongs to the Swan Lake Club, and it is indeed a goodly domain. Mallard shooting in the timber, pass shooting at mixed ducks on the flyway over the timbered tongue of land between the river and the marsh, woodduck shooting along the creek, snipe and rail shooting in season, blind and decoy shooting in the rice holes, deep-water duck shooting on the feed beds, teal shooting *quantum suff.*, goose shooting sometimes—the Swan Lake people have pretty nearly all the natural furniture for their wide domain. Here are a few scores of the marsh, mostly since the organization of the club, which was effected Feb. 16, 1885:

On Nov. 20, 1886, Mr. Samuel Chase and Tim Wood, at the Big Hole, bagged 85 ducks and 1 goose; the same day on the river, Mr. Kimball, Mr. J. M. Oliver and Frank Wood bagged 97 ducks. On the next day, Mr. G. K. Schonberg and Tim Wood got 100 ducks on Swan Lake; Mr. Kimball and Frank Wood got 180 at the Big Hole. On the next day Mr. Kimball and Frank Wood got 308 at the Big Hole; Horace Wood and Tim Wood got 135 at the Calamus Bed. On the next day Mr. Kimball and Frank Wood got 89 by noon and froze out; Mr. John Allis and Tim Wood got 109 and froze out at noon. The next day, Mr. G. A. Schwartz and Frank Wood got 100; Mr. E. A. Lancaster and Tim Wood got 98 at the Big Hole. On the next day the marsh was pretty much all frozen up. On the day following that, the boats went out on the ice. Everything was frozen up, Big Hole, Teal Hole, Tim's Hole and the Calamus Bed; Mr. Marsh, Mr. Kimball and the Wood boys killed 444. On the day following that, Horace and Tim Wood killed 83 and 3 geese; and Mr. Kimball and Frank Wood killed 90 odd. Has any club a record of consecutive days like this? If so I have not found it. And that was only two years ago. In 1884, on Nov. 25, from 10:30 A. M. to 2:30 P. M., Frank and Tim Wood bagged 225 ducks; on the next day they got 350, and on that day J. L. Long, another market

THE SWAN LAKE CLUB HOUSE.

shooter, bagged 117. On the 27th of that month the Wood boys bagged 166, and on the 28th 189. Six years ago Long and Tim Wood killed 390 ducks in one day. On one day of 1882 seven boats brought in 580 ducks in the evening. Such has been the slaughter. It would be easy to add stories of a similar sort. Tim Wood one day bagged 116 ducks out of 160 shots, counting shots fired at cripples. J. R. Long bagged 68 ducks with 51 shells, all shots flying. Frand Wood bagged 72 teal in 36 shots. These are only a few scores, of only a few shooters. They will serve to give some notion of the quality of the shooting on these grounds, and the wisdom of the Swan Lake Club in getting control of them.

The above scores were all made in the fall, and the Wood boys tell me that the fall shooting is always the best on Swan Lake marsh.

At the foot of the big bluff stands the club boat house, 24×50ft. in size, and stocked full to overflowing with sportman's material. I counted 34 boats in place in the boat house. These are of widely different models, but alike in that they are all large, high and heavy, compared to the boats of the Kankakee country, and there is a strong tendency toward the wide iron boat. Such of the boats as are not built of iron are heavily sheathed with it. This is rendered necessary by the large amount of ice encountered in the best shooting season. The ice would soon cut through a wooden boot. A boat made wholly of iron is lighter than a wooden boat covered with iron. The marsh men, like Tim Wood, say they wouldn't have any kind of a boat but an iron boat, and claim that it doesn't leak so easily as one with a double skin. They may have them if they like. For my part nobody could give me an iron boat. I have had an extensive experience in getting spilled out of boats, and I have discovered that an iron boat upside down in the water, will leak faster, and more of it, than anything else on earth. Of course, a boat looks better right side up, but when it comes to using one bottom side up, a wooden bottom looks far more cheerful than an iron one. An iron boat can be built with compartments, so it will not sink, but that makes it heavy. I presume, however, each club selects the boat which seems best fitted to its needs.

The great size of the Swan Lake boats is rendered necessary by the fact that they are not used solely upon a grassy marsh, but must often go on a journey of four or five miles over wild and angry river, whose currents, running every way out of the banks, go swirling down through the trees with tremendous force, all the more dangerous for heavy floating ice, and yet worse if a heavy wind has got a sea upon the wide reaches, which may in high waters be two or three miles across. The Illinois River is a big stream, and its volume of water in high stages is more than quadrupled. A light, low and fragile boat would at times be extremely dangerous for the hunter to use. Naturally, the boats are mostly intended for rowing, and are paddled or pushed only upon the marsh proper.

Mr. Oliver has a marsh boat known as the Monitor model. It sits low on the water, and is decked over, kayak fashion, clear up to the cockpit, which is arranged with a sort of buggy-top extension sides, so that it can be put down or up, and with a little arrangement be fashioned into a blind. The total is a very heavy, flat, low-lying boat, which naturally suggests its name.

It was at Swan Lake, too, that I saw for the first time one of the so-called "rat house" boats said to be invented by Fred Taylor, although it was in use before he invented it. This is more like a sink box than a boat. It is a flat, Monitor-built box, arranged with a well, into which the shooter puts his legs. Over his head, or sticking up above the boat about as high as a rat house, is a frame made of rods and wires, and covered with rushes. This frame, which is round on top, runs on little wheels, which play on a little railroad which runs out behind the "house," on top of the boat. The shooter sits covered up by his rat house until his birds get into the right shape over his decoys, then with a shove of his elbows he sends his rat house rolling back behind him on its railroad track, and discloses himself to the startled gaze of the ducks. This contrivance is towed out to the stand intended to be occupied by the shooter, and the towing boat then puts out the decoys. A plug is pulled out of the rat house boat, and it sinks. The water rises up over the hull, and the shooter's legs are below the water, in the protecting well. Only the artificial rat house shows over the water. In this sits the shooter, while his companion goes off and leaves him. If the companion forgets to come back, or if the water happens to rise during the day, or if the well springs a leak, the abandoned shooter can't do anything much but think, or may be talk. As to moving the rat boat, it must first be emptied of the water which has sunk it. I don't know how they do this, unless they bore a hole in the top of it, or wait till the water falls. This device, ingenious as it is, is practically of little account.

Most of the decoys used by the Swan Lake men are made by Ellison, of Lake Senachwine, and they are good. The rest of the club house furniture is also strictly businesslike. The boats are run down to the bank of the creek by means of an elevated railway of some length.

The following, posted conspicuously, are the

HOUSE RULES.

1. There shall be no shooting on the grounds of the club on Sunday, and no shooting on the marsh after sunset.
This rule includes trap shooting.
2. No persons except members of the club or guests will be allowed to shoot on the marsh. This excludes all pushers, except the Wood Brothers, who will refrain from shooting if requested.
3. Rifle shooting on the marsh is prohibited.
4. Pushers and places shall be drawn for by lot each evening for the next day's shooting. None but members of the club shall participate in such drawing, and it shall not be obligatory after drawing the number to chose a pusher, but members may push for themselves.
Members who expect to arrive on the morning trains may participate in the drawing, provided the superintendents receive notice before 9 P. M. the day previous.
Any person for whom a pusher is chosen in his absence must pay his wages for all of the succeeding day, unless other employment is obtained for him. Pushers chosen must be paid for the day, unless otherwise agreed.
The choice of each member must be announced before 9 o'clock P. M., but by unanimous consent the choice of places may be deferred until the next morning.
5. Decoys must not be left out in open water over night.
6. Dogs will not be allowed in the club house.
7. No loose ammunition shall be taken into the club house. Shells must be loaded elsewhere.
8. Any person who takes a loaded gun into the club house will be fined five dollars for each offense.
If any shall be guilty of this offense, he is requested to report the same to the treasurer and send him the amount of the fine.
The superintendents are required to report to the treasurer all violations of rules.
9. No person shall use any of the property of other members except on presentation to the superintendents of a written order from the owner.
10. Members are liable for any damage to the property of the club that may be occasioned by themselves or their guests.
11. Rooms in the club house will be assigned by the superintendent in charge.
12. INVITED GUESTS.—Members may invite their personal friends to the club house at any time, provided such invitation shall be extended to only one person in each season (spring or fall) and that the visit of such person shall not be of longer duration than one week, and provided, also, that the member extending the invitation shall, in all cases, accompany his guest and be responsible for all obligations incurred.
The wives and children of members may be entertained as guests at any time when it shall not interfere with the convenience of members, but this privilege shall not be construed as conferring upon the sons of members the rights of a shareholder.
The directors are authorized to issue invitations without limit to guests from May 1 to Aug. 14 of each year. (Members may obtain invitations for their friends upon application to the secretary.)

Following is the list of names of Swan Lake Club. It will be observed that there are several members resident outside of Chicago. Mr. L. C. Smith, the well-known gun maker, is one of the members. He gave Tim Wood a gun which he uses and prizes very highly:

President, John Milton Oliver; Vice-President, G. A. Schwartz; Secretary and Treasurer, S. R. Jewett; Directors, S. B. Chase; E. W. Bangs, J. M. Oliver, G. A. Schwartz and S. R. Jewett. Members, O. F. Aldis, J. F. Allis, Geo. C. Ball, E. W. Bangs, S. B. Chase, J. W. Cotton, H. Elwood, I. L. Elwood, of DeKalb, Ill.; J. J. Flanders, G. J. Gibson, of Peoria, Ill.; John D. Gray, of Syracuse, N. Y.; C. L. Griebenow, N. S. Jones, F. J. Kennett, Geo. Karsten, E. A. Kimball, Dr. J. K. King, of Clifton Springs, N. Y.; E. A. Lancaster, E. J. Lehman, W. R. Linn, Chas. B. McDonald, D. S. Marsh, of New London, Conn.; Edward Norton, J. M. Oliver, Herman Petersen, A. M. Schillo, Geo. K. Schonberger, G. A. Schwartz, Joseph Schuster, Morris Sellers, L. C. Smith, of Syracuse, N. Y.; R. W. Cox, Wirt D. Walker, George Smith, P. E. Stanley, John L. Stockton, H. R. Syounds, H. C. Hayte, A. Montgomery Ward, W. H. Warner, of Syracuse, N. Y.; L. D. Webster, Frank and Tim Wood, of Henry, Ill., E. S. Worthington, A. N. Young, Sam R. Jewett, W. B. Chatfield.

The club intended for mention next week is the Hennepin Club, a very live and interesting little body which is a near neighbor to the Swan Lakers. E. HOUGH.

NO. 175 MONROE STREET.

A COMBINED SHOTGUN AND RIFLE has been devised by Prof. Wm. B. Hall, of Lancaster, Pa. The rifle barrel, which is above the shot barrel, is a .45-60, the shot barrel is 12-bore, and the weight is 8lbs. We hope to have an opportunity to see the new arm.

CHICAGO AND THE WEST.

CHICAGO, Ill., Feb. 28.—Mr. E. E. Flint, one of the best known "all-arounds" of this city, is absent on an extended southern trip, which will include Louisiana and Arkansas, and add to his already rich sporting experiences.

Messrs. W. P. Mussey, T. Benton Leiter, and a son of L. Z. Leiter, W. H. Haskell and another one or two Chicago sportsmen, will probably start next June on a trip which promises to be of interest, and which is expected to be some two or three months in length. John G. Worth, of Cheyenne, Wyoming, said to be a cattleman and mountain man of experience, is to be their guide and outfitter, and will conduct them where they please through the northern mountain country. The intention is to rendezvous somewhere in Wyoming, then join a cattle round-up and work north, seeing cattle life; then to visit the Indian reservations and see Indian life; then to visit the Yellowstone Park, and from there to work back. Hunting and fishing will be pursued all along the line. If preferred, the home camp will be laid in the Big Horn Mountains. It is expected to meet bear, elk, deer, furred game and feathers, to take any quantity of trout, and see some of the noblest scenery of the continent. The trip will be made horseback (for about three days), and will be the means of gaining an intimate acquaintance with the Wild West and its customs. I don't know anything about Worth, but I know the Chicago boys are all right. They wanted to know if any New York folks wanted to come in. The company is not yet so large as they wished.

Mr. A. Montgomery Ward was, a week or two ago, planning just about such a trip as the one outlined, and which also was to last two or three months. He was bewailing the fact that he couldn't get any one to join him on so long a trip.

Mr. John L. Stockton, as enthusiastic a sportsman as ever trod shoe leather and as good a one, is planning for a Washington Territory and Alaska trip this summer, instead of going into northern Wisconsin, which is his usual summer ground. In these trips he is always joined by Mrs. Stockton, nearly as enthusiastic as himself in love for the outdoor air.

Mr. Ruthven Deane, of this city, to-day received a letter from his friend Mr. Wm. Brewster, of Cambridge, Mass., who with Mr. Chas. B. Cory, of Boston, is now on Enterprise River, Florida, which states that the bag to the two guns runs thirty to forty snipe, with small exertion at the shooting. On one Mr. Cozzens, of New York, joined the party, and the three bagged ninety-one snipe and twenty quail. Ducks are reported in swarms, and the writer states he never saw anything like the number of bluebill, widgeon, pintail and gadwall.

Mr. Brewster is the collector and owner of probably the finest ornithological collection in the United States, the result of untold labor and large outlay of money. Mr. Cory is one of the officers of the Ornithological Union. Mr. Deane himself has what is doubtless the best ornithological collection of this portion of the country. He has some 1,500 skins of birds, and among his mounted collection there is a singularly large number of albino specimens, for which he has always been on the look-out. He has been one of those who have shot at the Fox Lake albino redhead, but failed to get it. Mr. Deane tells me his friends are being fortunate in their collection of specimens of Florida birds. Mr. Brewster has secured some fifty skins. E. HOUGH.

ADIRONDACK DEER.

Editor Forest and Stream:

We hear something sometimes to the effect that in the Adirondacks deer are on the increase. There may be some who believe this, but the credulity does not compliment their judgment. Think you it possible for game to increase in the Adirondacks in the face of the fact that new railroads have entered the wilderness from the west, the north, and the east sides within three years, making access to the heart of the wilderness by these routes easy and rapid? Wagon roads have also been opened in every direction; trails have been cut out, so that the woods are in many locations more like private parks than the primitive forest. Hotels have multiplied; there is hardly a lake of any size in the woods which does not have its summer hotel, with its proprietor anxious for patronage, booming the merits of his particular place in all possible ways, inviting to his table by the promise of "the best hunting and fishing to be found in the entire forest." The woods have been advertised and popularized. Ten years ago not one person took his outing in the Adirondacks where now twenty spend from one to six weeks there. What do these people expect to find: health? Yes, some go for that. But the motive of most is to gratify the sporting instinct. Again, club houses have sprung up, expensive permanent camps have been built at large cost by wealthy men who can afford the luxury. What of this as to the game? Much every way. The man who goes to the woods and does not kill a deer is disappointed. The legitimate sportsman in open season kills some, the trout fisher in May and June very often has "hedgehog" for meat, the small farmers on the border kill deer at all seasons, the lumbermen have no scruples in the matter if deer get in their way. The accursed dogger gets more than his share every time, legitimately or illegitimately, in season and out of season; if he wants a deer he gets him, does are killed heavy with young, fawns are killed in the spotted coat, deer are shot, trapped, crusted, drowned, allured to salt licks and then shot. If the people who hunt would stop when they have killed enough for present needs something would be gained. It is a marvel that any remain. But they are going, and that rapidly. Not one deer can be jumped now in the Oswagatchie region where there were five years ago. What is to be done? One of two things I advise: Either do away with all law and the infinitesimal observance thereof, and let's surround the woods and kill the last of the race, or else wake up and pass some laws that are laws. Laws that will protect the deer and not protect some particular set of fellows in their peculiar method of killing deer. The present laws are not enforced better because of two reasons. (1) The lack of a proper sentiment demanding their enforcement on the part of the people. (2) The lack of an adequate number of game constables to cover the territory, and well enough paid to get good men who can afford to do their work thoroughly. Whatever laws

are passed, an anti-dogging law should be; there is not, never was, and never can be an argument in favor of dogging deer in the Adirondacks on the score of deer preservation. NITRAM.

MISSOURI GAME WARDENS.

ST. LOUIS, March 2.—*Editor Forest and Stream:* Interest in the various measures which are pending in the General Assembly for the protection of game in this State is considerable to say the least. Sportsmen in this city are more interested in the bill which provides for the appointment of game wardens in each county; and it is their wish that it may become a law. There are half a dozen bills before the Assembly relating to the preservation of game and fish. The most important of all of these is the one proposed by the committee appointed by the Missouri Game and Fish Protective Association and introduced by Representative Young, of St. Joe. The bill is framed on the hypothesis that the present game laws are sufficiently stringent if they were only enforced, and therefore it contemplates principally in the way of new legislation the appointment of a game warden for each county by the Governor, whose duty it shall be to see that the present game and fish laws are not violated in any way.

Mr. Young has received several hundred petitions from all sections of this State, containing thousands of names, praying for the passage of the bill, which is now in the hands of the committee on criminal jurisprudence. The committee, it is said, will amend the bill slightly and then report it favorably. The bill as it now reads provides that in all cases of prosecutions the informer or game warden shall receive one-half of the money collected from the party fined. That section of the bill will be stricken out and a new one inserted which will give county courts in certain counties authority to employ a game warden at a fixed salary and to issue a warrant on the State Treasurer for one-half of his salary. Many counties in this State do not need the services of game wardens, because there is no game to speak of to protect. It is thought by many of the friends of the bill that the change will make it more acceptable to many of the members of the General Assembly, and will insure its passage without fail.

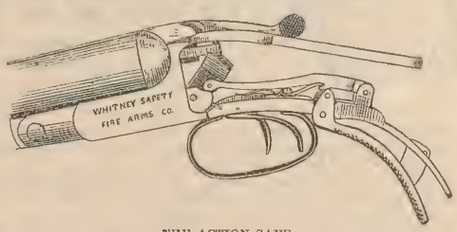
Mr. Elvis Harrison, of Centreville, Reynolds county, passed through the city a few days ago bound for Jefferson City. He is an enthusiastic sportsman, and his visit to the capitol is in the interest of the people of this county, who are anxious to have a good game law. Mr. Harrison, in conversation with your correspondent, said that under the existing laws it would take only about two years longer to kill off all the deer and turkeys in Reynolds county. Hunters go from all parts of the country, hunt and kill the game, and ship it to market, the greater portion of it being shipped to Chicago and New York. Mr. Harrison is in favor of a law to prohibit the shipment of game out of the State. He wants the game preserved for Missouri sportsmen to hunt for their own amusement and consumption. UNSER FRITZ.

A HUNT IN INDIA.

ONE day in Northern India I found myself stranded, having to wait until night for a train. I had seen all the sights and was wondering what I could do next, when an Englishman at the station, who had scraped an acquaintance with me, said "Do you ever shoot? Let us go out and try for wild boar."

When I started on my trip around the world I did not take either gun or shooting clothes and I missed a great deal, as very often I would have had a few hours of excellent sport had I been equipped for it. He got a couple of guns and some ammunition and off we started, with a couple of natives a piece to carry our things. Nobody thinks of carrying anything himself, labor is so cheap. I had a servant with me for a long time, an excellent man, capable, honest and willing, to whom I paid $6 per month, he boarding himself, and people found fault with me for paying too much, as it raised the price.

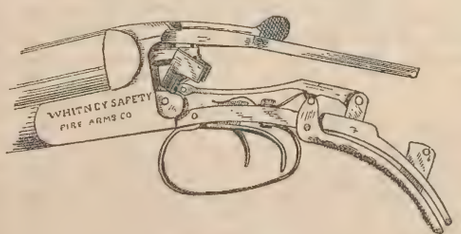
We walked through the fields and practiced on paroquets, of which there were hundreds. They are exceedingly swift flyers, beating a teal duck and in fact almost anything, and are not an easy mark. We managed, however, to kill a few, and had good sport killing pigeons, of which there are many kinds and great numbers. In the States of India under native rule they are a sacred bird, and in some of them it is three months imprisonment to kill one. The consequence is that they are in flocks that almost darken the air. Here it was different and we killed all we could, also a couple of adjutant cranes. They are very large and are often tamed by the natives, and stalk around the houses like soldiers, but woe to the luckless cat, small dog, or other small animal that comes in their way! One gulp and he is gone.



As we reached the jungle, which was more grassy than bushy at this place, and were going cautiously along looking for cobras as well as game, right near us suddenly shot up twelve or fourteen wild peafowl, with a whirr like thunder. My heart was in my mouth. The immense birds startled me so that I fired both barrels without touching a feather. Later on I was more lucky and bagged an old cock with an immense tail. Peafowl are very plenty in the jungle and are strong, swift flyers. One is apt to shoot behind them and it is usually only the tail that suffers. We shot an Argus pheasant, a few copper ones, and several jungle fowl, getting quite an amount of game before we got to where we expected to get the boars. They stay in the almost inpenetrable parts of the jungle and come out just about dark to feed in the fields, and do a great deal of damage rooting up the crops and tramping down the tender plants. They are very sly, and the only way to get them is to sit in a kind of blind at the edge of the field they are expected to enter, and shoot them as they come out. One must be ready as they will notice the slightest movement and rush back, not coming out again at the place that night. It is not the most comfortable waiting in the world, as there are myriads of ants, some of them terrible biters, besides mosquitoes, centipedes, etc., to say nothing of an occasional cobra. We sat there perhaps half an hour when an old sow with three pigs showed themselves, but my companion had laid his gun down while he fought the insects and they saw the motion he made to pick it up and disappeared. We waited some time but seeing nothing he concluded to go three or four hundred yards further on. About fifteen minutes after he left I heard a slight rustle and saw the head and tusks of an enormous bear looking out of the thick brush. He was watching the rest of the party and did not notice me. I kept still as death, letting anything bite me that wanted to, and in a minute or two he came out, looked around, and commenced sniffing around for food. I did not dare to shoot him in the head for fear of not killing him, so I waited for a broadside. In a little while he turned and I aimed just behind his shoulder, fired and had the satisfaction of seeing him jump and fall dead. He was a very old and large one, weighing probably three hundred pounds, with very large tusks which I took off and brought home as a trophy.

There were plenty of monkeys all about, but the guides did not like to have us kill them, as they considered them sacred, so we did not. Our pile of game made a beautiful effect, the brilliant plumage of the parrots, peafowl, pheasants, etc., showing well. India is the paradise of hunters. The natives never kill anything, it being against their religion to take life in any way. Thousands of them starved to death in the famine years rather than kill anything to eat. The consequence is that game is very abundant—antelope, buffalo, tigers, leopards, wild dogs, jackals, wild boars, ducks, water fowl, pheasants, peafowl, jungle fowl, many kinds of pigeons, in fact you can go nowhere without seeing plenty of game to shoot. I do not know of any place where a hunter can pass as pleasant a winter or have as good sport as he can in India. W.

CHICAGO, Ill.



THE WHITNEY SAFETY HAMMERLESS.

THE new arm made by the Whitney Safety Firearms Co., of Northampton, Mass., is, as will be seen in the cuts here given, a very strong, simple and absolutely safe arm. The opening or closing of the gun has nothing whatever to do with the cocking of the gun. The hammers are always at cock except while the lever is pressed home immediately after firing; the instant the lever is released the hammers return to cock. This is not accomplished in the usual way by a rebound, but the mainspring being swiveled to the hammer below the center as the mainspring returns to its normal position after firing. The mainsprings have no tension on them whatever, except as the tension lever is pressed home, when the shooter desires to fire. In case he does not fire all he has to do is to release the lever, when the mainsprings are at once passive. It is impossible not to know when the gun is ready to fire, for the lever is under the pistol grip, as will be seen, and must be pressed home before the gun can be fired. There is no slide on the upper tang, so that the excuse so often heard, "I forgot to move the slide," is entirely obviated. The parts are few, there being but 44 in the entire gun, including screws, stocks, barrels, etc. Eleven parts constitute the locks. Each part is very strong and simple to make. There are no springs to get out of order, everything being made with the idea of getting rid of the numerous small springs that are used in the construction of most all hammerless guns.

THE ACTION SAFE.

The standard gun will be a plain gun, pistol grip, no checking or engraving, with rubber butt plate, English twist barrels. The workmanship and materials will be of the best. Steel forgings will be used in all the parts. Guns will be made at prices varying according to the wish of the party ordering as to how much extras he is willing to pay for. As fine a gun will be made as any gun in the world, prices being equal, but the standard gun as described above will be made the popular gun for the masses, and the price will also be popular. The price list will be $35 and upward, according to finish. The

READY FOR FIRING.

business will be rushed so as to have guns on the market for the fall trade. The gun has been submitted to the trade in New York city, and has met with its hearty approval. The advantages claimed for the gun are its strength, simplicity, easiness of working and absolute safety. The style of the gun is identical with that of the hammerless gun of most first-class makers, being of the bar lock style. The stock is as strong as the strongest, and is stronger than nine out of ten hammerless stocks, as there is less wood cut away, and the wood that fits against the frame is held very securely without the aid of screws.

IOWA.—Manson, March 1.—The first Canadian geese arrived Feb. 28, and flocks of 15 to 25 have been seen daily since. A farmer shot a large one north of town yesterday, and another was hanging in front of a store at Rockwell, 10 miles south of here. The ducks have not arrived yet. Prairie chickens wintered well and if the breeding season is favorable the shooting here next fall will be superb.—H. A. K.

GROUSE SNARING forms the subject of two communications which will be published next week.

A RED TAPE SYSTEM.—*Editor Forest and Stream:* I would make every person wishing to hunt apply to the city or town clerk and take out a license, paying say twenty-five or fifty cents, this license to give him the privilege of killing say twenty-five or fifty each of partridge, quail and woodcock; for every bird he kills over that number he must pay $1 per head. When he obtains his license the clerk gives him a small book or card on which he is to keep his record. At the end of the season, say before Jan. 10, he is to return this record to the clerk, who shall duly swear him that the statement is true to his best knowledge and belief. I presume some will say this is too much red tape and won't amount to anything. But I think it will. A man is very low down in the scale who will deliberately take a false oath. The large majority of gunners would be well pleased, it would disturb the market-hunter and the gunner who kills simply to brag. It is neither fair nor right that I who love to hunt as well as any man living, but who cannot afford to lose more than a short afternoon five or six times in the open season should be deprived of my share of the birds because they are all killed off by men who can spend day after day killing off the birds simply to be called a "crack shot," and to brag that "I got ten partridges and eight woodcock yesterday," or "I killed 492 birds last year." Who are the market-hunters? I know several, and not one of them can make more money at the business they follow in the close season than they can killing birds. They follow gunning because they like it better than work on the farm or in the shop. It is a rare exception to find one of these men who is known as a thrifty, honest citizen. They are very apt to be of the Rip Van Winkle stripe. My method, if adopted, would raise the price of game birds in the market. All I have to say in reply is poor people do not buy them now at present prices.—R. (Russelville, Mass.).

"JACOBSTAFF" AND "JACOB STAFF."—Readers of your valuable paper, as well as other sporting papers, may have noticed that there are two Jacobstaffs in the field. From time to time I have received letters from my friends of forest and field and stream, calling attention to the fact and intimating that some one writing under my name was surreptitiously trying to steal my thunder. Now I write this to you to state that I have been having a very friendly correspondence with that other Dromio, *i. e.*, "Jacob Staff," and that he is a brick, a gold brick from Texas and away back. From our letters I find that he used the *nom de plume* "Jacob Staff" as long ago as 1869, though not in connection with sporting matters until 1882. My first articles under the name of "Jacobstaff" appeared in FOREST AND STREAM in 1873. We both rather want to keep the name, as it seems to constitute a certain capital, and an introduction as it were among our shooting friends. We have agreed to continue to vent our garrulousness under our old names; our friends can pay their money and take their choice, "Jacob Staff" of Texas or, yours truly, JACOBSTAFF of New Jersey.

SUSQUEHANNA COUNTY, PA.—Springville, Pa.—*Editor Forest and Stream:* In a recent issue an article from Susquehanna county by "Bon Ami" reads: "The last quail disappeared from this section several years ago," and "woodcock were conspicuous by their absence." It is true that for the past three years quail have been scarce in this section of Pennsylvania, but each winter, not excepting the present, I could have shown "Bon Ami" sufficient evidence that from three to ten bevies of these gamy little birds tried to brave the rigors of our Northern winters; and as to woodcock I bagged thirty odd birds over young setters the past season in short tramps, and that with scarcely any time away from business. Had I taken advantage of the weather and been possessed of old dogs I am confident I could have tripled my score.—NOM DE PLUME.

NEW YORK LEGISLATURE.

A BILL introduced by Assemblyman A. H. Baker, of Erie, appropriates $10,000 so that the Superintendent of Public Works may construct in dams across Cattaraugus Creek (in such a manner as not to injure the dams) fishways so that fish can migrate to Lime Lake, Fisk Lake, Skim Lake, Beaver Lake and Java Lake. The fishways are to be built on plans approved by the State Commissioners of Fisheries.

Assemblyman Fitts has introduced a bill prohibiting the taking of fish except by hook and line in Owasco and Cayuga lakes, their outlets and in the Seneca River.

The Governor has signed the bill adding Oneida county to the Forest Preserve.

A CODIFICATION COMMISSION.

An Act to provide for the revision and codification of the laws for the protection and preservation of fish and shell fish, and of game birds and quadrupeds.

The people of the State of New York represented in Senate and Assembly do enact as follows:

SEC. 1. A Commission to revise and codify the laws of this State for the protection and preservation of fish and shell fish, and of birds and quadrupeds, is hereby established as follows;

The Attorney-General shall select from any of his assistant attorneys-general, one member; the Commissioners of Fisheries shall select from among their number, one; and the New York Association for the Protection of Game shall select from their membership one; and the three persons so selected shall constitute the Commission. Certificates of these appointments, respectively, shall be filed in the office of the Secretary of State and of the Comptroller.

The members of the said Commission shall meet at the Capitol in the city of Albany at such time as shall be appointed by the Attorney-General, and shall organize by the appointment of one of their number as chairman and another as secretary, and shall proceed to revise and codify the laws of this State for the protection and preservation of fish and shell fish and of birds and quadrupeds, and report such codification to the Legislature on or before the fifteenth day of January, one thousand eight hundred and ninety.

Sec. 2. The said Commission may grant hearings and take testimony at such times and places as they shall appoint, with reference to the subject committed to them, and shall have authority to administer oaths to witnesses and to supply such clerical and stenographic assistance as they shall actually need in the prosecution and completion of their work.

Sec. 3. Each member of the said Commission who does not receive a salary from the State for official services, shall be entitled to compensation at the rate of five dollars for each day's actual and necessary services, and all the members of such Commission shall be allowed their actual expenses of travel and subsistence while engaged in such service. The Commission shall also be allowed its actual and necessary incidental expenses; and all accounts rendered by the Commission or by its individual members shall be subject to the audit of the Comptroller.

Sec. 4. The sum of five thousand dollars or so much thereof as shall be necessary, is hereby appropriated out of any money in the Treasury, not otherwise appropriated, for the purposes of this act.

Sec. 5. This act shall take effect immediately.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Camp-Fire Flickerings.

"That reminds me."

261.

IT was almost sundown in the month of June. The sheep were quietly feeding down the creek toward the camping ground on a little stream in northern Montana. The herder was walking slowly behind his flock smiling at the antics of a few hundred lambs, which were kicking up their heels and running along the bank of the stream. I was at the camp, a few hundred yards below, preparing the evening meal, and was in the act of dipping up a cup of water, when I heard a distant shout. On my going to the door of the tent the herder called to me, "Look at the ducks." And at that instant two large mallards in full flight swept past me some 30ft. away. It was my only chance, and swift as thought, the little round tin cup sped on its way. The cup went up, the duck came down; not on my head, but on the ground; and there he lay so stunned and still; he did not even move his bill. The greedy cook pounces on his prey, and roast duck and brown gravy were a most acceptable addition to our bill of fare. W.

Craig, Montana.

262.

A boy going home through the woods with his skates, saw two partridges probably mates. He threw one of his skates and laid one of them low. 'Twas out of season but they let the boy go. U. C. Brevity.

Portland, Maine.

Sea and River Fishing.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

TUCKERTON WATERS.

II.—BAIT.

MOST people who fish in the Jersey bays, secure the services of boatmen who supply bait and tackle, as well as local knowledge of fishing grounds. Some, however, from choice or necessity, wait on themselves. For the benefit of those the following suggestions are offered:

In choosing a fishing ground either obtain explicit directions from some one familiar with the place, or, what is better, go where others are fishing and take a position near a boat which is catching something. If the fish are supposed to be moving, get in the same line of travel as the other boat. A difference of a few feet may lose all the luck. The writer has had some most provoking failures to catch anything while his neighbors were taking large numbers. Move as he might, he could not strike the right spot. Again, on one occasion, he joined several boats that were fishing for porgies off Main Point, near Manahawken. He was a stranger to the place, and dropped anchor at a respectful distance from the others. But they were taking nothing, while he was soon drawing them up in a lively manner. In five minutes every other boat had drawn close up and was having a fair share of the luck.

A proper supply of bait is essential to success in fishing. Clams must be bought. They should cost a few cents a dozen. Where clams and crabs are to be handled an oyster knife is a useful adjunct. For weakfish use a whole or half a clam. Make a large, juicy bait, for the fish has a capacious mouth. For barb and sea bass take a half-inch cube. For porgies, spots, flounders and blackfish take half the size. Always prepare plenty of bait before beginning, so as not to lose time when the biting is lively.

Mussels are a rather choicer bait than clams, but it takes a great many of them, as one mussel makes only one bait. They can, however, generally be found by the fisherman himself by looking along the edges of the salt meadows. They grow in bunches among the grass within a few feet of the water, and are usually covered at high tide.

Crabs, hard and soft, are perhaps the bait most used. They can be bought for about a cent apiece when they are for sale, and may be easily caught around wharves and on the flats when the water is four or five feet deep. In most places more crabs will be pulled to the surface in the course of fishing than are needed for use. Such as are wanted can be landed with a net. If a fish be tied to a string and sunk to the bottom it will draw them better than the smaller baits. In preparing a crab, first break his claws and pull them off, leaving the first short joint attached to the body. With a little persuasion he will part the limb of his own volition. I have seen a crab that was held over the water by one claw make his escape by casting off the member. Next break off in like manner all his legs and flippers. In picking up the crab in the first place, grasp him firmly by the base of one hind flipper. He cannot work his claws around to that point. After he has been dismembered, take the body in the left hand and pry off the back shell by pressing up at one of its sharp corners. If this operation is difficult, break the back down the middle with the oyster knife and it will come off readily. Then cut the body in two from front to back down the crack in the under part. Next cut each half at right angles to this, passing the knife between the stumps of its legs. If large baits are wanted, leave two eyes to each piece. The white muscles of the crab will be found to be fastened to the short first joint of the legs. This joint must not be broken. Now take off as much as possible of the body shell, and the bait is ready. The piece which comes from the base of the back flipper is much the best, and in certain kinds of fishing is the only one worth using. In putting the pieces on the hook, pass the point of the hook down through the eye of the joint and out through the mass of flesh below. As soon as much of the soft flesh gets washed or bitten off renew the bait.

When a crab has grown so much that his shell is too small to hold him with comfort, he seeks a shallow, muddy place, frequently above low water, and, burying himself slightly, sheds his old shell, expands to nearly twice his former bulk, and quietly and helplessly waits till the new soft skin hardens into a shell. In this changing state he is a "soft crab," and constitutes the choicest bait known in Jersey waters. Every fish will bite eagerly at any bait of it. The serious objections to them are that they cost from 50c. to a $1 a dozen, and even then are seldom found for sale. If one wants them he must usually engage a boy or man to get them especially for him. Their scarcity results from their steady demand as a delicacy for the table, and from their liability to die if handled and their certainty of becoming hard in a few days if they live. Often one must hunt for them himself. When the native wants them he rolls up his pants and wades in the shallow water, or along mud flats, at low tide. This I have never done. If, however, one goes carefully along the bank and scoops up every crab he finds hugging the shore, one in ten or so will be found to be a "shedder." Now a shedder is a crab which is just ready to shed his shell. If a corner of his covering be broken off a new, soft, tough skin will be found inclosing his entire body. In this condition all the old shell can be easily broken off, and the claws and legs can be pulled out of their coverings. The test of a shedder is to break off one of the points on the side of his upper shell. If it comes off leaving the flesh inside covered with the above mentioned skin, it indicates the right condition. The natives distinguish several stages in the process of change of shell. First it is a "shedder." Then when the old shell is cracked all around, but still adheres, it is a "buster." When the shell is all cast it is a "soft crab," and when the shell is a little hardened, but still impressible to the touch, it is a "paper crab." Every part, from claw to flipper, of a crab in any of these conditions, is to be utilized.

During the summer, shrimp are often used. These are small, translucent creatures, like miniature lobsters. They are caught in a landing net of small mesh. They frequent the grassy edges of banks, and the seaweed which grows in shallow water. They may be found in certain places, but not in others of equal apparent likelihood. Dip around till some are caught and then scoop up that place thoroughly. Handle the net by pushing it along near the bottom, hoop foremost, as nearly horizontal as possible, the net hanging under the hoop. When the shrimp are disturbed by the hoop's striking the grass they dart downward and go right into the net. But few will be taken if the hoop be held vertically, and still less if the net be swooped down from above. Put two or three shrimp on the hook, which should be as small as will do for the particular fish desired.

For sea bass and weakfish pieces of fish called fish bait are often used. Let these be as white as possible, and for weakfish the piece may be an inch or two long and narrow like a minnow. The finest fishing I ever had in salt water was done partly with long strips of whitefish belly. The way four-pound striped bass took them is stirring to the heart even now. I was fishing from Barnegat pier on a stormy day in late autumn. I began with sand eels, continued with minnows and finished on strips of fish, and all were eagerly taken. At another time I used with success a long section of big sea clam. All of these baits were trolled along near the top of the water, and were much more successful than was the soft crab used in the traditional way near the bottom.

During one of these times I had a curious experience. I had hooked a large fish, and was playing him when I observed that the bait had slipped up the leader some three feet. At the same time I saw another fish eagerly pursuing the bait, and biting and pulling at it. This was kept up for a minute or two, until the upper fish had loosed the other. I immediately readjusted the bait and threw out and had a fish on again in a few seconds. On striking him my line parted. Surprised and disappointed I hurried to attach a new leader when I observed that the end of the line was ragged, and that a few inches above the break it was half cut through. Then I understood the whole thing. The bait had slipped up on the line, and the second fish had bitten and pulled at it till he had nearly cut the line.

Under many circumstances minnows make good bait. They may be easily caught in ditches and sluices, and weakfish, sea bass, bluefish and striped bass will all take them. Penn.

MAINE PICKEREL.

PICKEREL fishing is the order of sport at the present time; or rather it was before the recent very cold weather cut it short. A Boston military fishing party has been the latest, or rather the members of the Harmony Club have been down to their camp on Harmony Lake, in Maine. The party has considerable of military distinction. It was made up of eighteen, among whom were Gen. Samuel Dalton, Col. H. T. Rockwell, Maj. Gen. Geo. S. Merrill, Capt. G. A. Keeler, Quarter-Master S. D. Newton, Lieut. S. F. Hedges, and others. The invited guests were F. H. Mudge, of Alfred Mudge & Son, printers, and Henry Dennison, of the Dennison Tag Manufacturing firm. The party reached the fishing grounds at the upper end of the lake on Friday. They had good fishing that day, taking some eighty pickerel. But the next day and the next the wind blew a gale and the mercury fell to 20 and even as low as 28 below zero. All fishing had to be stopped, even by members of the party who had the courage to brave the cold, for the drifting snow filled the holes in the ice faster than it could be cleared away. The party started for Boston Sunday with the satisfaction of having had some good fishing and of having found the mercury nearly 30 below zero.

Another pickerel party has also been down in Maine, though it was rather of a mercantile or manufacturing character, than military. It was made up of Mr. Foster, of the firm of Foster & Weeks, a son of Mr. Weeks of the same firm, with Mr. Emerson, both Brockton shoe manufacturers, and Mr. A. G. Pierce, a Boston leather merchant. This party was formed to visit Umbagog, the lower lake of the Androscoggin system, and a lake celebrated for its pickerel fishing, though it was one of the best trout lakes of the whole system before some misguided individual put pickerel into it some thirty years ago. It may be added, in passing, that it is a common remark that the putting of pickerel into that lake has been a great loss to the people on its borders, from the fact that the other lakes of the chain bring in a handsome revenue from trout fishermen, while this one brings in only a very small one from pickerel. Again, this lake, and the fact that there is pickerel fishing near, is made the scapegoat of a good deal of illegal trout fishing, as well as in the other lakes and ponds near. Once on the Umbagog, it is not a hard matter to slip up to the other lakes and fish for trout. Again, the trout law is foolishly framed to permit of the inhabitants of the State fishing for trout for their own use after the 1st day of February; and this is the cause of many a visitor from out of the State fishing through the ice for trout. I am not prepared to state that the party I have named did such fishing, but inhabitants of the State went up to B Pond, which is just over the mountain from the foot of Richardson Lake, and they caught some "very handsome strings of trout." Some of the trout caught weighed as high as 3¾lbs. They had to go from Umbagog, or rather, from a logging road from the upper end of the lake, some three miles, on snowshoes. Indeed, they had to use snowshoes on the pond as they visited their hooks. They had to dig through two feet and a half of snow on the ice, and six inches of the snow full of water; then to cut through nearly two feet of ice. But the trout bit voraciously. Indeed, the difficulty seemed to be to get hooks to hold the trout, one large one being caught at last with three broken hooks in his jaw.

Another party is reported to have gone up the carry on snowshoes to an old camp not far from the Oxford Club, near the pond in the river, where they stayed over night, and the next morning went on snowshoes to the Middle Dam and on to the Narrows. They also caught some very large trout. They were all inhabitants of the State of Maine—that is, the law requires that they shall be, and if the State is ready to make such a law, why, if an inhabitant of Massachusetts happens to be in the party, he is presumed not to fish. We stay-at-homes all the year, except a very short vacation in the summer, when we pay a very heavy price for the privilege of trying for a few small trout in Maine waters, are not pleased with a form of statute that permits the waters to be stripped by winter fishing or fishing through the ice after the first day of February. The value of the law is either square protection or it is nothing but injustice. The party mentioned above did not attempt to bring any trout from the State contrary to law, but at the same time the chances are that some of those trout will find their way to Boston. A non-export law is not half as effectual as the presence of a warden to prevent illegal fishing, and the form of a statute that treats all sportsmen alike, whether inhabitants of Maine or Massachusetts, is what justice calls for.

Special.

DESTRUCTION OF ILLEGAL NETS.

AMONG the decisions handed down by the General Term, at Utica, N. Y., March 2, was that in the case of Protector Steele, and is one that every angler will approve and applaud. William N. Steele is fish and game protector on the St. Lawrence River. In the spring of 1887 he seized a number of nets in Black River Bay and destroyed them. The owners of the nets, George W. Lawton and Frank C. Mullen, brought suit to recover the value of the nets against Wm. N. Steele, Dr. Edward L. Sargent, president of the Jefferson County Sportsmen's Club, and Fish Commissioner R. U. Sherman, of New Hartford. The last two were sued on the ground that they had advised or directed the seizure. The case was tried before Judge Williams and a jury. Plaintiffs were non-suited as to defendants Sargent and Sherman. A verdict for the value of the nets was rendered against the defendant Steele, Judge Williams holding that the law authorizing the destruction of the nets was unconstitutional. An appeal was determined on, since the State might as well be without game protectors as not to give them power to enforce the law. An appeal fund was raised, the case was argued in General Term. Following is a memorandum of the decision:

George W. Lawton and another, respondents, vs. William N. Steele, appellant—Argued September, 1888; decided February, 1889. E. C. Emerson, Eton Brown for appellant.

Per Curiam—We concur in the opinion given at special term as to the questions involved in this case, except the constitutionality of Chapter 591, Laws of 1880, as amended by Laws of 1883, Chapter 317. At special term it was held that that statute was unconstitutional. We think the statute in question is not violative of the provision of the Constitution which declares that no person shall be deprived of life, liberty or property without due process of law. We are of the opinion that the Legislature, by virtue of the police power of the State with which it is vested, was authorized to pass the statute under consideration, and that it is valid and should be upheld. Smith vs. Levinus, 8 N. Y., 472; Smith vs. Maryland, 18 How., U. S., 72; Phelps vs. Racey, 60 N. Y., 10; State vs. Snever, 42 N. J. L., 341; Williams vs. Blackwell, 2 Hurl. & Colt, 33; Glazier vs. Miller, 10 Hun., 435; Hinckley vs. Emerson, 4 Cow., 351; Brown vs. Hoburger, 52 Barb., 25; People vs. Cipperly, 87 Hun., 325, affirmed on dissenting opinion of Learned, J., 101 Y., 634.

The judgment recovered was for $216 damages, being for the value of sixteen fish nets destroyed by the defendant. Twelve of these nets were found set in the waters of Black River Bay, in violation of the statute for the preservation of the fish therein. The other four were not set in the water, but were found on Perch River bridge, and were worth $36. The defendant had no right to destroy the four nets which were not in illegal use. This was conceded. Hence we conclude that, while the plaintiffs were entitled to a judgment against the defendant for $36 damages, they were not entitled to the judgment awarded, and that the judgment and order appealed from should be reversed, and a new trial granted with costs to abide the event.

Red Snapper Fishing.—The red snapper fishing of the Gulf of Mexico is controlled principally by several firms in Pensacola, Fla., who send the fresh fish North and West. An attempt is being made now to sell the fish in New York at wholesale from refrigerator cars. Small snappers bring a higher price than large ones, and the fishery for them is receding further and further off shore. New fishing grounds have recently been discovered, but there is still plenty of room for exploration. Four hundred and thirty-eight thousand pounds were shipped from Pensacola during the month ending Feb. 18, a smaller amount than usual.

The Fly-Fishers' Club, of London, has erected in Winchester Cathedral a tablet in memory of the late Francis Francis.

FLORIDA FISHING.

IN our columns of Feb. 14 we quoted from a letter of Hon. A. M. Spangler an interesting description of winter sports in Florida. We are now able to give extracts from the entire series written by Mr. Spangler for his paper, the *Evening Star* of Philadephia. They will be found to contain much valuable information conveyed in a charming style. It is gratifying to learn that the same author will shorly take up the theme of fresh and salt-water fishing near Philadelphia. We trust that he will trace the progress of the introduced species of food and game fishes:

"The surroundings of Enterprise are of a highly attractive order. Immediately in front is Lake Monroe, so called, though really an enlargement of the St. John's River, as Lake George further down is. It is about four miles wide and twice as long, * * * abounding in fish. Mr. Stone, proprietor of the Brock House, keeps on his counter a record of the fish taken from the lake and its tributaries by different anglers, and some of them are so surprising that I will copy two of the larger daily and season catches: In 1887 the record of T. Kiernan, of New York, beginning on the 23d of December, 1886, and ending April 2, 1887, 7,278lbs. of black bass; daily average, 80¼lbs. This was exclusive of many other fish that were not considered as legitimately belonging to the record. Incredible as this may seem it will cease to cause surprise when, from the record referred to, in which hundreds of names and weights are entered, it is rare to find a bass marked for less than 4lbs., running from that up to 13½lbs., the largest. It was taken by an old gentleman named Benson, who has been a daily angler here during the winter for thirty winters past. Mr. Benson has an insatiable passion for fishing, coming here early in the season and remaining until April. He has been doing that for thirty years, and although 75 years of age, fishes every day but Sunday, or when the weather renders his favorite pastime next to impossible. He is almost uniformly successful, his catches when the season is good being fully equal to the table demands of the house. Last year he took between 5,000 and 6,000lbs. of black bass, the largest one weighing 13½lbs.

This morning at Rock Ledge a beautiful gray squirrel hopped about in front of us as we walked along the river side, not appearing to be the least alarmed by our proximity. A cottage stood within fifty feet of where he was enjoying himself. The country is literally alive with birds. Partridges are plentiful and deer so abundant in some places as to render it needful to keep dogs on the watch to prevent them from injuring the oranges, of which fruit they are said to be very fond. Bass fishing on the lakes in the vicinity is said to be unsurpassed. Boats and boatmen can be had at moderate rates, and those who are disposed to try salt-water fish have only to take the steamer that passes daily and visit Jupiter Inlet, about 100 miles toward the tropics.

Indian River has long enjoyed an enviable reputation for the excellence of its fishing, and it will no doubt be news to many who read this screed that if you would enjoy that fishing you must go further south than Rock Ledge. Fifteen miles below, at a place called Tropic, directly opposite the mouth of the Banana River, which flows parallel with the Indian, and between it and the ocean, fishing is said to be very good, and duck shooting unsurpassed.

One of the drawbacks experienced by anglers here is the difficulty of procuring bait. There are neither clams nor crabs here. Mullet bait is the stand-by, and that is difficult of procurement, as I have ascertained by my own experience. Most of the fishing in Lake Poinsett is done with "spinners," "bobs" or "flies." Sometimes a strip of fat bacon is used as a lure by the trollers, but generally speaking the gaudy "spinner" is used. In the Indian River, which is broad and shallow, there is an abundance of mullets, which are the principal table fish, but never take the bait. At certain seasons the cavalla become plentiful and occasionally sea bass of a very large size are taken in it. Catfish with heads as hard as though made of cast iron are always around. I caught a few good-sized ones yesterday and had them for supper. They seemed as toothsome as our Delaware River "white catties," but are not much esteemed here.

To-day I have been spending an hour or two on the steamboat wharf, catching big catfish, the only species of the finny tribe that does not appear to be affected by the high water. As soon as the steamer arrives the ugly things gather around the wharf to partake of the offal from the cook's galley. A handful of bread thrown on the water brings them to the surface, where they contend vigorously with each other for the choice morsels. Procuring a piece of raw beef I baited a hook with it, and in less than five minutes had a tug at my line which fairly startled me I had hooked a big fellow, and for five or ten minutes had real good sport with him. I at length exhausted him and brought him helpless to the steamer's side, when one of the negroes attempting to lift him on to the boat found him too heavy for my tackle. The snood parted and I had the poor satisfaction of seeing him sink out of sight. I am sure he would have weighed 20lbs. He was as black as the inside of a stove, as were several other large ones which were secured, though not nearly the size of the first.

[This is the great catfish, Mississippi cat, or flannel-mouthed cat of recent authors, *Amiurus nigricans*, and is said to reach 100lbs. in weight.]

The proximity of New Smyrna to the fishing grounds is a strong argument in its favor, with anglers at least. The landing is within 50yds. of the hotel, boats and boatmen are abundant, and fishing good enough to meet the wishes of the most exacting. The neighboring forests abound in quail and deer, with an occasional snake of the harmless kinds, the rattlers having been pretty well cleaned out by the long, slender blacksnakes, which are their deadliest and most implacable foes. Cormorants, pelicans, sand cranes, and other large birds that find their subsistence in the water are very abundant and add very largely to the general picturesqueness. At certain seasons ducks are very abundant and are shot in great numbers. Excellent oysters are found in the Hillsborough River near the town, and, in their season, crabs are reasonably abundant. Clams are scarce, readily commanding a penny apiece. Those that are native to the waters have to be dug out from their hiding places in the sand at low tide. The principal supply is obtained from St. Augustine. Many of the oyster shells found in the mounds and in smaller collections along the river indicate that either the oysters taken there in the time of the mound builders were much larger than those at present found in the river; of that the latter have materially deteriorated, though still of good size and excellent quality. Beds of "coon oysters" abound along the shore, as in many other of the estuaries along the Florida sea coast. There are millions of them, the flavor of which is very fine, but their diminutive size prevents them from being profitably utilized."

THE MENHADEN MEN.

Editor Forest and Stream:

Allow me through your columns to correct a statement which was made in your valuable paper dated Jan. 4, and appears upon the tenth page under the caption "The Menhaden Question Again" over the initials G. E. N., who strikes out by expressing his surprise at some well known anglers upholding the policy of the menhaden pirates. This is the first time to my knowledge that this disreputable title has been applied to the enterprising menhaden fishermen of our coast, and it is unjust to our citizens to use it as it has been used in this article referred to. He carries the impression that they are called pirates away down East, which is totally untrue, for they prosecute their business under a license granted by the United States, and I am not aware that it is customary for this Government to license pirates. He further states that he is satisfied if the anglers to whom he refers would investigate the menhaden business their opinion would be changed. I will call his attention to the fact that the menhaden fishermen have always invited investigation and have materially assisted every one who has called upon them for information. The universal result of investigation has been to satisfy investigators that their position was a correct one and is indorsed by the best scientific ability of this and other countries; that the narrow-gauge opinions put out by such men as G. E. N. will soon explode, and it is evident that the law makers in this State are convinced that they have been misled by a gang of men of which G. E. N. is the foremost representative. As to his statement of the menhaden men skinning their noble river of all food fish is too ridiculous to answer; that they did enter the river this past season for the capture of menhaden is totally untrue. They caught all the fish they needed along the beaches from Small Point to Griffles Head, where they have a lawful right to fish unrestricted as to distance. Notwithstanding the statement that appears in that article that they have been fishing in defiance of the law and that they were going for them and they would probably pay the penalty, we would respectfully suggest to the gentlemen the perusal of the Statutes of Maine as amended that he may amend his statement in accordance with the law as it now exists.

As to the personal allusion to me, I pass it by as not of sufficient importance to waste any time upon. Regarding the law which he says I am to assist in its repeal is mere speculation on his part. I am fully convinced that such a bill could be effected at this session of the Legislature with very little effort, and that the people of this State are becoming satisfied that it should be repealed as well as all other fish laws relating to salt water fisheries, but up to the present I have not taken an active part in any fish legislation, having other matters to look after which occupy my entire time. LUTHER MADDOCKS.

BOOTHBAY, Me., Feb. 16.

SUSQUEHANNAH WALL-EYED PIKE.—Mr. W. L. Powell, of the Pennsylvania Fish Commission, gives the following interesting information about the wall-eyed pike, or "salmon" of the Susquehannah (*Stizostedion vitreum*): "I do a great deal of fishing for the salmon in question. I watch the catches as reported from the different parts of the river above Columbia dam. When the water was in condition about as many have been caught during the last year as usual, particularly about Millersburg on the Susquehannah and on the Juniata. At Mud Island, below Columbia dam, the catch was very large; at Fite's Eddy more were caught with hook and line, but all about one pound in weight; no larger ones were taken. The river seemed to be full of small fish. Two years ago the writer could catch at this point from 20 to 30 a day of fish that would run from one to five pounds. Last year they were all small. In my opinion, on account of the high water last year, and my close watching of the spring seiners, very little fishing was done, and we will have better fishing here than for a long time. I think that the stocking of our streams with this valuable fish is one of the most important moves of the U. S. Fish Commission, as it is one of the most desirable as a food fish, and at the same time a fine fish for angling."

NATASHGUAN SALMON CLUB.—Montreal, March 1.—Charles Henry Butler, of the New York law firm of Holt & Butler, has been in Montreal and Quebec for several days making the final arrangements for the organization of the Natashguan Salmon Club, which has obtained a lease of the famous Grande Natashguan River, one of the largest and probably the finest of the salmon rivers on the north shore coast. Among the members of the club are Senator Edmunds, of Vermont; Senator McPherson, of New Jersey; Gen. W. Y. W. Ripley, of Rutland, Vt.; Judge C. Aime Dugas, of Montreal; Wm. H. Parker, of Montreal; I. S. Morrison, of Norwalk, Conn.; and Francis O. French, John J. Waterbury, Walton Ferguson, Julien T. Davies, Col. Finlay Anderson, Geo. C. Holt, Charles Henry Butler, Edmund F. Holbrook, Thos. Stokes, Henry P. Wells, and Wm. D. Baldwin, of New York. Salmon are very plentiful in the Natashguan, and there is ample room for a large number of rods. The fish can be handled from the shores and islands.

MR. ERNEST VLIET has been appointed Acting General Passenger Agent of the Milwaukee, Lake Shore & Western Railway, in place of Mr. Geo. S. Marsh, who lately resigned. This road reaches some very choice shooting and fishing grounds, and we presume Mr. Vliet will pursue the same generous policy toward sportsmen as did his predecessor.

PICKEREL FISHING NEAR NATICK.—A party of three fishing with live bait in Morse's Pond, near Natick, Mass., on Feb. 22, caught twenty-three good-sized pickerel, five of them very large. On the following day the same party took fifteen pickerel, four large ones among the number. They hooked a few yellow perch both days.

SAGADAHOC FISH AND GAME ASSOCIATION.—Bath, Me.—The annual meeting of the Sagadahoc Association for the Protection of Fish and Game was held at the office of Dr. Packard, Bath, Me. It was voted to expend fifty dollars in additionally stocking with bass Nequasset Lake in Woolwich. The following were elected officers for the ensuing year: President, Dr. C. A. Packard; Vice-Presidents, James Purington, William E. Hogan; Secretary and Treasurer, Geo. E. Newman; Executive Committee, Geo. H. Nichols, S. W. Carr, Augustus Hatch, F. H. Patten, Chas. H. Greenleaf. The following resolutions were presented and adopted, and by vote of the Association a copy will be forwarded to the Legislature and to the United States Fish Commission: Resolved, That the Sagadahoc Association for the Protection of Fish and Game fully recognize the vigilant and vigorous efforts of James Bailey, fish and game warden, resulting in the detection and prosecution of violators of our fish and game laws, and desire to place upon record this testimony of their appreciation of his valuable service. Whereas, the seining of mackerel, menhaden, shad, etc., on our coast and within our rivers and bays, not only tends to the depletion of our migratory food fishes, but their eventual extermination, as is evidenced by the fact that not more than 20 per cent. of the mackerel caught by seining are of suitable size for commerce, the remaining 80 per cent. being destroyed, as testified to by disinterested and eminently truthful citizens who have been in the business; therefore Resolved, that it is plainly the duty of all citizens to protest against this wanton disregard of the material welfare of the present generation and those who come after them. Resolved, that it is plainly the duty of the Legislature of our coast-lying States, and of Congress to prohibit under severe penalties the use of seines in any manner within three miles of the coast and within the bays thereof. Resolved, that we view with extreme solicitude and distrust the employment of persons in the Fishery Commission of the United States who are not only employed in the menhaden and mackerel seining, but who are personally interested in the repeal of such laws as we already have restricting the desolating and ruinous practice.

THE FLY-CASTING TOURNAMENT.—New York, March 5.—*Editor Forest and Stream:* A meeting of this association will be held on Saturday, March 16, at 3 P. M. at the laboratory of Mr. E. G. Blackford, Fulton Market, to make arrangements for the coming tournament. Former rules will be reconsidered and members are requested to suggest what changes they may deem advisable.—H. P. WELLS, Pres., 140 Nassau street; G. POEY, Sec., 114 Wall street, New York.

BARON MUNCHAUSEN was among the names registered at a St. Augustine hotel recently, and we hear that the gentleman who bears that name is now on a fishing excursion on the west coast of Florida. Despite his name the Baron is said to be a very modest-speeched man and never exaggerates the size of a fish caught.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Fisheulture.

MICHIGAN FISH COMMISSION.

THE eighth bi-ennial report for 1887 and 1888 of the State Board of Fish Commissioners of Michigan is an exceedingly interesting and instructive document of sixty-six pages, besides an appendix devoted to an historical sketch of fish commissions and various other papers. For convenience and despatch the supervision of the stations and departments of work was divided among the Commissioners, Dr. Parker becoming responsible for the stations at Glenwood and Petoskey, Mr. Bissell assuming charge of trout breeding and the Paris station, while the Detroit station and the grayling experiments were assigned to Mr. Whitaker. Mr. A. J. Kellogg having resigned the office of secretary in March, 1888, Mr. Geo. D. Mussey, of Detroit, was appointed to fill the vacancy. Early in the report the Commissioners urge the necessity of protection of black bass and muskallunge by preventing the killing of the young of these fishes. The results of fishculture in the State are found to be very gratifying and are beginning to be generally appreciated. Brook trout culture has received a marked degree of attention in accordance with an unmistakable popular demand; 1,639,000 of these fish were planted in 244 streams, located in 46 counties. This is what the Commissioners say of it:

"The planting of brook trout has been the most popular work carried on by this board. It has been so successful in palpable results, results so easy of demonstration, in which so many people are interested, in so many widely separate localities, and the benefits to individuals and the community are so direct, that a permanent and decided impression has been made upon the public opinion throughout the State favorable to the continued culture of these fish. This public opinion is justified by the satisfactory condition of very many trout streams, which have been made so by our artificial methods; and it will be much increased and intensified when the work of 1887 and 1888 begins to be realized."

The report of the secretary on his investigations into the condition of the fisheries and fish, with especial reference to the whitefish, is creditable for its thoroughness and gratifying for the universal testimony of fishermen and dealers to the success of artificial propagation. He was instructed to pursue his inquiry on the shores of Lakes Huron and Michigan, and gives the following analysis of his notes of interviews with the different fishermen:

"At Tawas, Alabaster, Au Sable and Gravelly Point the catch of whitefish in 1887 and 1888 exceeded the amount caught in any year for the past ten years; the gain has been steady and is the result of artificial propagation. At Thunder Bay, Alpena, and up to Presque Isle, while whitefish are decreasing in number, the present supply is believed to be due to planting, and the fishermen believe in artificial propagation, without which they think there would be no whitefish at all. At Cheboygan and Hammond's Bay the whitefish catch has been steadily increasing since 1885, and the season of 1888 is the best since 1885, and the increase is due to planting. At Mackinaw City, Mackinac Island and St. Ignace there has been a noticeable gain, and more whitefish are caught now than for a number of previous years. A great number of small whitefish are seen there, and those engaged in the business believe these to be the result of planting. At the Chenneaux Islands large numbers of very small whitefish are taken, salted and sold for from one to one and one-fourth cents per pound, and ultimately reach the consumer as herring. At Bois Blanc Island the white-

fish catch is poor, two-thirds of those taken in the last three years having been very small, and salted and sold as herring or thrown away. The fishermen at these places believe in artificial propagation and that the small fish caught so abundantly are planted fish. In Lake Michigan above Point Au Chene, fifty miles above St. Ignace, there has been a steady increase for two or three years, and the catch of whitefish in 1888 is unusually good, and that artificial propagation is the cause of the increased supply. At Mille Coquin Bay there is a marked increase over former years and whitefishing in 1887 and 1888 was good, and artificial propagation is considered a success. From Mackinaw City to Freedom and Cross Village there is a decided gain due wholly to planting. At Skillagallee, Little Traverse, Grand Traverse Bay and the Beaver Islands there has been a gradual improvement since 1885; fishermen noticed the increase and attributed it to the planting of whitefish fry. At Frankfort an increase is also noticed. At Manistee, Ludington, Muskegon, Grand Haven, Pentwater and Montague, while whitefish are scarce in consequence of the depositing of refuse from sawmills, yet the fishermen believe in artificial propagation and that planting would be a success if the water was free from refuse. At Free Soil whitefishing is good and the supply is due to planting. On Lake Michigan, from Saugatuck to St. Joseph and Michigan City, whitefish were scarce for some years, but since July, 1888, a great increase has been noticed in the number taken of good marketable size. The presence of immense numbers of small whitefish in the lake has also been noticed by all the fishermen, who consider it undeniable evidence of the success of artificial propagation. And, finally, that the complete restoration of whitefish to the waters of the southern shore of Lake Erie is proof, positive and unquestioned, of the wonderful success attending the planting of whitefish fry in fairly adequate numbers.

"A comparison of the statements made at all points visited, with the records of this office, shows that where no planting has been done no whitefish are found, or are found in such small quantities that fishing for them is unprofitable, and where comparatively little planting has been done whitefish are found in paying quantities, while in Lake Erie, where large numbers of whitefish fry have been put, they are caught in great abundance and a lost industry restored and made of great profit to those engaged in the business and of great benefit to the consumer by reason of the decreased price of the fish."

In view of the fact that it is practicable by artificial propagation to restore wasted fishing grounds, the Commissioners favor the system of licensing the fishing industry, a measure which will greatly facilitate the adoption of rational methods of taking fish. It is estimated that the amount of money annually brought into the State from the sale of whitefish is about $1,000,000. By the devices now in use for handling eggs, the stations, with the work of two men, can take care of 100,000,000 eggs during the hatching season. The wall-eyed pike (*Stizostedion*) has received a large share of attention, and we take occasion to express our admiration of the plain and concise language in which its spawning habits and the nature and treatment of its eggs are described. The same praiseworthy methods are employed for all the species discussed and the value of the report to practical people is thereby greatly increased. The number of eggs of wall-eyed pike is 2,197 to the cubic inch, 152,292 to the quart, these figures obtained by actual count. The spawning season is in May and June; the time necessary for incubation varies from 17 to 24 days. Almost immediately after hatching the young begin to devour one another and early planting becomes necessary to prevent large losses in this way. The number of fry planted in 1887 was 3,280,000; in 1888 the plant was 11,492,000. The percentage of loss in hatching is large because of the extremely adhesive nature of the eggs, causing them to form masses.

The demand for carp has increased, but the value of its introduction for food of man is held for future solution. It is suggested that it may prove very useful as food for the black bass and other important fishes.

Out of 154 lakes examined about 20 were found to contain small-mouthed black bass and about 130 had no bass, although well adapted to the habits of this species. The distribution of the small-mouthed form in waters of the State is urged by the people and recommended by the Commissioners.

The results with grayling have been entirely unsatisfactory, but about 150 breeders have been secured for the Paris station. 9,000 Loch Leven trout were placed in Torch Lake May 24, 1888. On May 19, 1887, 23,389 landlocked salmon were liberated, principally in Torch Lake and its tributaries, while on May 24, 1888, an additional deposit of 73,424 was made, mainly in Torch Lake, wherein planting has been continued for the past five years. California rainbow trout (*Salmo irideus*) have spawned naturally in Cheney Creek May 14, 1887, and quite a number of fish of this species have been caught with hook and line in Muskegon River. 20,000 fry were planted in tributaries of the Muskegon, near Paris, May 17, 1887. A good supply of saibling is now in the ponds at Paris.

The rapidly increasing work of the Commission necessitated the construction of a railroad car for the transportation of the young trout and whitefish hatched yearly. In August, 1888, therefore, a car was obtained from the Litchfield Car Company for the sum of $3,550, and it has given perfect satisfaction to the Commissioners and enabled them to accomplish vastly greater results.

The examination of inland lakes to ascertain what fish are found in them and determine what additional species may advantageously be introduced is a work of very great importance, and we heartily commend it to the attention of Commissioners of other States. In 1887 eighty lakes were investigated and reported on; in 1888, with the co-operation of the U. S. Fish Commission, eighteen were systematically studied, Mr. Charles H. Bollman acting as naturalist. The aid of the State colleges will probably be enlisted in the further prosecution of this important exploration. Owners of ponds and lakes will be interested in these reports because they give information as to the kinds of fishes that will harmonize and thrive in them. These examinations cover the following items: The location, size and depth of the lake, the character of its shores, nature of the bottom, number of inlets and outlets, date of the inquiry, state of the weather, temperature at surface and bottom, condition of the water, kinds and conditions of the fish, with notes on mode of capture and stomach contents. As an illustration of the method employed the following example will serve:

SWEET'S LAKE, FARM RIVER TOWNSHIP:

Length—¾ mile; width ½ mile; greatest depth 23ft.
Shores—High banks and timbered on north and south sides; east flat banks and west low banks.
Bottom—Soft, grassy, and one sand bar.
Inlets—None; outlet, Fawn River.
Date of Examination—July 22.
Weather—Clear.
Temperature—Surface, 80°; bottom, 76°.
Water—Clear.
Fish—Large-mouth bass, bluegills, perch, suckers, shiners, bullheads and dogfish. Bass were in good condition; bluegills were poor and small; suckers were in good condition.

When applications are received or inquiries are made in behalf of any particuler lake, the Commissioners can readily answer the questions and advise persons as to what species will probably be found suitable for introduction.

FISH HATCHING AT SANDUSKY.—Mr. Henry Douglass, superintendent of the Sandusky hatchery, reports that the whitefish eggs are in good condition, but he does not think they will begin to hatch before the middle of March because of the extreme cold. On Feb. 23 and 24 the temperature was three degrees below zero. The region from Kelly's to Put-in-Bay is a natural spawning ground for the whitefish. The work with the "pickerel," or wall-eyed pike, will depend on the time of the ice going out in the spring. Mr. Douglass does not expect to get any eggs before the middle of April, unless the spring opens early, in which event the fish may spawn a few days sooner. All the eggs desired can be secured in a week or ten days, on account of the abundance of spawners, and the vast number of their eggs.

COMMISSIONER MILLS OF NEVADA.—In appointing Mr. G. T. Mills (Paymaster of the V. & T. and C. & C. R.R.) as Fish Commissioner of Nevada, Governor Stevenson has displayed good judgment and greatly pleased the disciples of Izaak Walton hereabouts. Mr. Mills is an enthusiast on fishing matters, and well posted on all species of fish and their propagation. He has appointed Mr. Ernest Harris, one equally as well posted and as enthusiastic on fisheulture, as his deputy, so good results may be expected from the new management.—*Carson Appeal.*

The Kennel.

FIXTURES.

DOG SHOWS.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.
March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club Utica, N. Y. James W. Dunlop, President.
March 26 to 29, 1889.—First Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.
April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.
April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.
April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. George H. Hill, Superintendent, 31 Monroe street, Chicago, Ill.
April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.
May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.
Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

TROY DOG SHOW.

OUR prediction that Troy would give the best provincial show of the circuit will almost surely be verified. The only show that has a chance of getting a better and larger entry is Worcester. If any dog show in the country is worthy of the hearty and generous support of independent and well-meaning exhibitors it is Troy. This club, unlike one or two others we could mention, is a club in something besides name; it is a club composed of live members; men who care not a snap of the finger for cliques and rings; men who have too much self-respect to allow themselves to be dictated to by any set of hungry schemers; men whose one and only object in holding a dog show is to contribute a share to the improvement which dog shows when properly conducted are a means of bringing about; in fact, the Rensselaer Kennel Club is one of the strongest and most respected organizations of the kind in this country. Its main strength lies in the integrity and clear-headedness of its officers, and in its honesty of purpose. No one can say of this club what has been said and is still being said of some others, viz., that it is a puppet, subservient to a ring. The breeders and exhibitors of dogs know this, and when the Troy premium list was issued they responded with a splendid entry of 413 dogs, which for quality has seldom been equalled. The club has had difficulties to contend with. Those who would have liked to control the show gave it but very lukewarm support as soon as they found that the management was composed of brainy fellows who think and act for themselves. They turned their attention to Albany and Utica, and made Herculean efforts to secure entries for these shows, just to "teach Troy a lesson." "History repeats itself." Boycotted Buffalo, with its "unofficial" judges, had over 500 entries. Syracuse, with "official" judges, followed with about 300. Troy, with "unofficial" judges, had 413 entries; and notwithstanding the peculiar methods resorted to in order to secure entries for Albany, and the inducements offered in the way of valuable specialty club prizes, such as the Apollo Stakes, the entries will be about a hundred short of what they might have been.

The club supplied their own benching, which was exceedingly comfortable. While the wire partitions give a better appearance to a show, the pens are not nearly so warm and free from draughts; and for shows held at this time of year warmth and comfort are alike necessary for dogs as men. Challenge Dog Food, popular as ever, was fed to all the exhibits, and clean, fresh water was supplied twice a day.

The entries last year, when Mr. Mason judged all classes, were 449, but the quality was not up to this show, which will go on record as the best that has been given with the exception of Boston and New York. Buffalo was a splendid show, but the quality here, as will be seen from the list of awards, was of a much higher order.

Miss Whitney judged St. Bernards, Newfoundlands and pugs; Mr. Davidson setters, pointers and fox-terriers; Dr. Nichols beagles, and Mr. Mason all other classes.

The attendance from the opening of the show to the close was very large. Last year the profits were handed over to the Monument Fund; and Trojans did not forget the club's generous efforts in so good a cause; they came and showered their money into the ticket office, and the rosiest expectations of the management were realized. Thus encouraged Troy will hold a show on an even larger scale next year, and an honorable and independent course will be pursued in the future, as it has been in the past. To Dr. C. E. Nichols, Mr. Henry B. Thomas, Mr. Chas. S. Francis, Mr. Alba M. Ide, Mr. Marshall and many others we extend sincere thanks for the countless courtesies that were showered upon us during a most pleasant visit to Troy.

MASTIFFS—(MR. MASON).

Wacouta Nap was absent from the challenge class for dogs, leaving the great Minting to score a bloodless victory. In the open class for dogs Alonzo, fully described in our New York report, was first, with Sears' Monarch, who was third at New York, second and Nero third. The last named lacks in skull and muzzle, is light in body and bone, not correct in markings, light in eyes and his face is not well wrinkled. In bitches the New York winner was well ahead of her kennel companion The Lady Beatrice. Boss Lady Clare, another well known winner, was third, with Mollie Stark, shallow in head, pointed in muzzle, light in eyes, too leggy and light in bone, and lacking in massiveness throughout, was he. Two puppies were entered, but as the judge did not consider them up to show form the prizes were withheld. Countess of Dunsmore was absent. The prize for the best kennel of four was easily won by Mr. Moore, with Minting, Alonzo, The Lady Coleus and The Lady Beatrice; and Minting towered over his competitors for the special prize for the best mastiff in the show.

ST. BERNARDS—(MISS WHITNEY).

There were three entries in the challenge class for rough-coated dogs and bitches—Otho, Gemma I. and Miranda, Otho being absent, Mr. Hopf pinned his faith to Gemma I., who was placed over Miranda. We cannot indorse the decision. Gemma I. has the best of it in muzzle and is a trifle better in skull, but in all other points the Melrose representative seemed to have a clear lead, and she was shown in superb condition; whereas Gemma I. was not looking at all well. In the open class for dogs Ben Lomond, first at New York, and Plinlimmon, Jr., third at New York, were given first and second, with Mount Sion III. third. Mrs. Nicholson's dog is beaten in head, size, markings and hindquarters by the first prize winner, and Plinlimmon, Jr., beats him everywhere except in head. They were rightly placed. Alpine Chief and Roland, from the Hospice Kennels, were absent. In the bitch class Saffron, winner at New York, and Recluse, another well-known winner, were first and second, and Queen came next. She might be better in muzzle, but is good in skull; eyes too light; rather light in bone; fairly good in legs and feet; not quite right in hocks; a bit off in coat, and minus dewclaws. Fannie, reserve, was removed from the show and her owner forgot to bring her back. Lady Aveline, vhc., was fully described in the New York report. Meg Merrilies, vhc., is too full in cheeks and mastiff-like in muzzle; ears fairly good; not straight in front; feet turning outward; too short in coat; face markings not quite right; an undersized but massive specimen, that deserved the card. In the class for rough-coated puppies The Lady Aveline was a very easy winner. We only saw the second prize winner from the ringside, and, therefore, will not attempt to describe her. Third prize was given to Wanda; short from ears to eyes; fairly good in body; too straight behind; muzzle defective; a specimen whose body is the only strong point. Othello, vhc., is collie-like in head and curly in coat; he has good body and bone. Rigi, Daphne and Hector were the entries in the challenge class for smooth-coated dogs. Hector, who was on the sick list, was absent, and his kennel companion was beaten by Rigi. The bitch has the best of it in size, roominess and massiveness of frame; whereas Rigi is better in color and markings, truer to type and shows more character. The open class for dogs found the New York winner to the front, with Victor Leo second. The last-named is a brother of Victor Joseph, whom he strongly resembles, being about the same in markings, possessing the same type of head and showing too much coat for the smooth class. Appolona, well known, was first in the corresponding class for bitches, with Lola, the Pittsburgh winner, second, and Katrina, first at Utica and Troy last year, third. Lola is a brindle and white, having a very wide blaze, which somewhat detracts from the appearance of a fairly good head; coat rather long; tail curled, fairly good body, legs and feet. Katrina is an orange and white showing some quality; skull and muzzle should show more volume, and the latter should be deeper and squarer; eyes rather full, but not having a bad expression; carriage of ears not correct; light in bone; bad tail; coat too long and woolly for a smooth; an undersized specimen, good in body and hindquarters, also in legs and feet. The first prize puppy is plain in head, but well developed and promising in body and limbs.

NEWFOUNDLANDS—(MISS WHITNEY).

Meadowthorpe Prince George won well from Frank and Carlo. He held the same position at New York. Frank, second prize: Plain in head; color of eyes too light; nice small ears; light in bone; wrong in tail; coat of good quality, but too short; not a specimen that could win over a good one. Carlo, vhc., is very defective in coat and head.

GREAT DANES—(MR. MASON).

Here there was only one entry, Lady Bess, who was first at this show last year. She is not right before the eyes and lacks in bone, but is decidedly better than the majority of winners in this country. Her color, a beautiful brindle, is very catchy.

DEERHOUNDS—(MR. MASON).

Ramona and Highland Laddie took the challenge prizes, and in the open class for dogs and bitches Mr. Thayer was again first and second with Pride of the Heather and Duncan. All these dogs are well known. Bruce, third prize, is coarse in head, wrong in shoulders, not right in set of legs, crooked in front and too soft in coat. Novel was absent. Malcom was first in the puppy class; is somewhat plain in head, but promises well in other respects.

GREYHOUNDS—(MR. MASON).

In the challenge class for dogs and bitches Balkis held the same position as at New York, and Highland Chief, who was third in the open class at the same show, was given first in the open class here. Meadowthorpe Douglas Fleming, a New York winner, was quickly turned out of the ring. In our opinion he never ought to have been allowed to enter the show. Second and third prizes were withheld. Tom, a competitor in this class, has been a winner under the same judge when shown in poor company. He was here shown much too thin and soft to bear comparison with the winner, and the wide margin between their forms caused the judge to withhold the prize. There was only one entry in the puppy class; a very promising sapling by Balkis out of Cassandra. He is not just right before the eyes, and lack of condition gives his loin the appearance of being somewhat light, but he is a very truly-formed youngster and every inch a greyhound.

FOXHOUNDS—(MR. MASON).

The winner in the class for dogs, Roseville Rover, is a good specimen as foxhounds go in this country. His head is not quite typical and he is thicker through the shoulders than we like. In back, loin, quarters, legs and feet he is very nearly perfect, and if his owner will give him the chance he will do a lot more winning. Major Warlock, second prize, is also an English hound, and was bred by Lord Fitz William. He is a trifle undershot, not very well sprung in the ribs, too light in quarters and not correct in carriage of brush. He stands on good legs and feet, and is decidedly better than the average as shown in this country. Clonmel Rakish, first in bitches, is an imported specimen with rather plain head, wide chest and lacking in liberty. Rosebud, second prize, is a puppy with rather plain head, but good legs and feet. Bloudy, unnoticed, is a weedy specimen of the American type.

POINTERS—(MR. DAVIDSON).

Bang Bang, Lad of Bow, Naso of Kippen and Graphic were the entries in the challenge class for large-sized pointer dogs. The Westminster Kennel Club's dogs were not exhibited, so Graphic had a walkover. In bitches Mealy was unopposed. In the open class for heavy-weight dogs Duke of Vernon and Pontiac, first and second at New York, were here placed in the same order, and Brake, who was fourth at New York, was raised a peg and took third. Here we think Mr. Davidson made a mistake. Pontiac beats Brake in hindquarters, but in other points Mr. Pentz's dog is well ahead and was clearly entitled to second. Sachem, as usual, was vhc. Pedro, c., was first at Troy and second at Albany, 1888. First in bitches was easily won by Bloomo, that was fully described in the New York report; and Lott, good in head, but throaty, wide in front and not right in set of legs, was rightly placed second. Fannie, third in this class, is not a show bitch. Nostrils narrow and pinched, cheeks full, eyes yellow, ears of good quality, but set high, a very bad head, chest wide and round, shoulders heavy and

legs badly set, not straight in front, low behind the shoulders, flat in loin, straight behind, bad hocks, light in bone, tail well formed, which is her only good point. Hannah, vhc., who was second at Albany and vhc. at Buffalo, while by no means a good specimen, is decidedly better than Fannie. In the class for light-weight dogs King of Kent and Fashion, the New York winners, were first and second, with Forest King, a new one, third. He is a white and lemon dog and has the following defects: Skull too wide, forehead rather too prominent, muzzle not clean below the eyes, carriage of ears not quite correct, neck not quite clean, ribs not sufficiently sprung, loin flat and a trifle light, hocks not very well bent, tail should be more tapered. Frank, hc., throaty, not clean below the eyes, stop not quite right, light in bone, loin not very strong, a trifle leggy, not in good condition. Ray T., c., fairly good head, light behind, bad in tail, good neck, stands on average legs and feet. In the corresponding class for bitches Lady Norrish and Sally Brass II., winners at New York, were first and second. Lady Norrish moves badly behind, and Sally is weak before the eyes and too leggy. Both show good breeding. Third was given to the white and lemon Beauty, a rather soft looking bitch with black nose and dark eyes, in fact of wrong type. Belle II., hc., is wrong in pasterns, weak in knees and light in front. She shows some character in head and has a good body. Clytie, that was suckling a litter, did not compete. She is a winner at Troy, Boston, New Haven and Albany. 1888. Puppies were a large class, but we failed to find a good one. The winner is a butterfly-nosed and dark-eyed son of Bang Bang and Mag M. In addition to these defects he is wrong in ears, very throaty and light below the knees. Tyke, second prize, is a bit snipy, light in bone and plain throughout. Helen of Troy, third prize, was removed before we had a chance to see her. Jess, vhc., is defective in head, but fairly good in body. Rocco, hc., has too bad a head for the show bench. The rest may be useful, but they never will be handsome.

SETTERS—(MR. DAVIDSON).

Rockingham, Cora of Wetheral, Count Howard and Princess Beatrice II., winners in the challenge and open classes at New York, made a clean sweep of the prizes; they were all shown in faultless condition. Lindo, who was fourth in the open class for dogs at New York, was here placed second, and Brownie of Troy was third. The last named, although an old dog, is a new one to us. He is one of the old-fashioned sort, and is too heavy in head and wide in front to fill the requirements of the present day. Count Henrick, vhc., is another well-known one. Buckellew was not for competition. Bounce, hc., was second here last year. There is no need to describe these dogs over again. Zona, who was placed second to Princess Beatrice II., is a very useful-looking bitch. She is a trifle wide in skull, shows some jowl, does not carry her tail well and is light in second thighs. In all other points she is good enough to meet the best of them. Carrie Belton, third prize, is plain in head and too straight behind; she has a long, ropy tail, and her coat behind the hips is decidedly curly; her eyes, too, might be better, and she would be improved by volume of chest and strength of limbs. In other points she will do. Marchioness, vhc., is rather strong in head for a bitch, straight behind, a bit light in thighs and a trifle throaty. She has a good body. The others in the class are workmanlike-looking specimens. First in puppies was won by Carrie Belton, that was third in the open bitch class. Buckellew's Boy, rather plain in head, but good in legs and promising in body, was second, with Gloster C., a coarse and long-tailed specimen, third.

The winners in the challenge classes for Irish setters were the well-known champions Elcho, Jr., Tim, Laura B. and Nellie. Desmond II., first in the open class for dogs, and Ned, second prize, are both well known to our readers. Glencho's Shamrock was third; skull rather wide and should be higher and cleaner, muzzle not clearly cut, ears of good quality and well set, eyes a shade too light in color, neck decidedly heavy, shows slackness behind the shoulders, chest should be deeper for length of legs, loin flat. In other respects he is a good dog and a very useful looking one. Rory, vhc., is well known. Patsy, Kenmore and Trojan Rory O'More did not compete. Dr. Nichol's Pat was also not for competition. In bitches, Bessie Glencho, who was badly used at New York, was about the best, and won; and Daisy, the field trial bitch that is too wide in head, undersized, not clean in neck and straight behind, was second, with Eiley O'Connor, that is straight behind, not good in tail and defective before the eyes, third. Lady Fawn, who was unnoticed, was one of the best in the class. She was heavy in whelp, but we do not think that this should have put her back. Ruby Glenmore, vhc., need not be described. Bonny, hc., is flat-sided, not very good in color, rather straight behind and does not carry her stern well. Fannie, c., is course in head, light in eyes and lacking in feather. Mollie, with a very handsome puppy by Elcho, Jr., was not for competition. In puppies we thought the third prize winner decidedly ahead of the second prize winner in head, limbs and general symmetry. Blarney, unnoticed, while too straight behind, was one of the best in the class. The first prize winner, Mardo, will, we fear, be too small and weedy.

The challenge class for Gordons brought out Little Boy, Rose, Royal Duke, Don and Roxie. Rose, Royal Duke and Roxie did not compete, and Little Boy only just won from Don; they are both a long way removed from high class form, but as Gordons go in this country may be called fairly good ones. The first and second prize winners in the open class for dogs were winners at New York, and described in our report. Kent IV., who was third, is not good in head, he might be better in set of forelegs and in shoulders, is too straight behind, does not move very well and is short in coat. The other entries were useful-looking, although not up to show form. Bitches found the beautiful Belmont an easy winner over the equally well known Becky Sharp. Belle, third prize, was second at Troy last year. Defects: snipy, light in eyes, short in ears, too round in skull, light in bone, not first-class in stern, over a bit at the knees, too round in barrel, not very good in color and too light in build. Meadowthorpe Blossom, the first prize puppy, is defective in head.

SPANIELS—(MR. MASON).

Spaniels were a splendid lot, and the great Mamaroneck Kennel sustained its reputation by winning a large majority of the prizes. In the class for black field dog Glencairn and Newton Abbot Lord fairly outclassed Beppo, and third prize was withheld. The winners held the same position at New York. In bitches, Bridford Gladys, better in head than Lady Abbot, but not nearly so good in legs, won. Messrs. Oldham and Willey's bitch was far from being in her best form; whereas Bridford Gladys was at her best. Newton Abbot Lady II. was absent. It was rather a close shave between Newton Abbot Laddie and Bridford Ruby in the class for field spaniels for any other color than black. The dog had all the best of it in condition, and was we think rightly placed. Romeo had no chance of winning in this company. The challenge class for cockers contained Doc, Miss Obo II. and Chloe W. Messrs. Oldham and Willey's beautiful bitch appeared to win very easily, but the judge was unable to separate Doc and Chloe W., or thought both deserving of a second prize, so two seconds were awarded. Jersey and Giffee, first and second in the open dog class, are well known. Max, third prize, is rather plain in head, too leggy, light in bone, and has a very bad temper. In bitches Sensation, the New York winner, and Beatrice W., that took the reserve card at the same show, were first and second. So nearly equal in point of merit did the judge consider them that the issue was in doubt for nearly a half hour. Sensation's victory at New York did not seem to carry a grain of weight with the judge, and it is safe to say that if Beatrice W. had been in the same faultless condition as Sensation the decision would have been reversed. Dolly Obo, that was overrated at New York, was placed third, with Hornet, winner in the puppy class at New York, vhc., and Zella II., that was first at Albany last year, was also given vhc. This was a good class. In puppies Hornet and Little Dan occupied the same position last year.

COLLIES—(MR. MASON).

The New York winners were again out in great form. Scotilla, in better condition than we have ever seen him shown, was first in the challenge class, with Bonny Brae second, and in the open class for dogs the order was Clipper, Meadowthorpe Jura and Meadowthorpe Reality, all well known to readers of this paper. Queechy, a new one, was given equal third. This is a big, romping sable dog, with great bone, excellent back and loin and a beautiful coat. He does not carry his ears well, shows plainness in head and will not, we fear, ever be a better dog than he is to-day. He is the largest collie of his age that we have ever seen. His sire is the undersized Clipper. Roslyn Sensation, Roslyn and Nullamore were all given vhc. cards. Roslyn, very nearly the best dog in the class, was shown too light in flesh and carried his ears very badly when under judgment. Roslyn Sensation, too, was not in good condition. This was a very even class and the judge took great pains to arrive at correct decisions. In bitches, Collie Belle, first in the novice class at Buffalo, was just about the best, although closely pressed by Metchley Surprise, a plain-headed one, and by Spoiled Miss, that was in wretchedly bad condition. Puppies were not a strong class. Queechy, already described, was an easy winner over the soft-coated Roslyn Belle, and the plain-headed and bad-limbed Meadowthorpe Gip.

POODLES—(MR. MASON).

Fritz, who was first here last year, was again a winner. He is neither long enough in coat nor good enough in body to have a chance of winning if placed in competition with the cracks. Spiro and Burke, the other entries in the class, while pretty dogs, are not show dogs, so the prizes were withheld.

BASSET HOUNDS—(MR. MASON).

Babette, described in the New York report, was the only entry. She was not higher than third at New York, where the first prize was withheld, but here the judge considered her decidedly better than average and placed her first.

BEAGLES—(DR. NICHOLS).

The judge who officiated for the first time took great pains to arrive at correct decisions and his awards were well received. The challenge class had two entries, Rattler III. and Fitz Hugh Lee. There is very little to choose between these dogs; both have many friends. They are different type, possess several defects and are good dogs withal. Rattler III. won. In the open class Tony Weller, an old face, was first, with Racket II., plain in head and low in body, second. Dora and Beauty, owned by the judge, were not for competition.

BULLDOGS—(MR. MASON).

All of the winners in these classes are well-known. Britomartis and Robinson Crusoe took the challenge prizes, and in the open class for dogs and bitches Rabagas and Portswood Tiger, that were first and second at New York, were first and second here; whereas Soudan, that was first in the bitch class at New York, was placed third. Joan of Arc and Tug Wilson were each given hc.; they were outclassed in head, body and limbs. Quasimodo was absent. Harlequin, third in the puppy class at New York, was given third in the same class here, first and second prizes being withheld.

FOX-TERRIERS—(MR DAVIDSON).

Belgrave Primrose, Richmond Olive, Lucifer and New Forest Ethel were the exhibits in the challenge class. Belgrave Primrose and Richmond Olive being absent, left the prizes at the mercy of Mr. Belmont's cracks. Lucifer won. This sterling little dog is developing coarseness in skull, but he stands as true on his legs as he ever did, was in superb condition and can still beat any dog in America. The open class for dogs brought out eleven very useful looking dogs. Reckoner, well known, was rightly placed first, with Blemton Volunteer, not very good in head and body and scanty in coat, second. He stands on the best of legs and feet, and notwithstanding his several defects is a terrier. Blemton Braggart, third prize, is not one of our sort, and we preferred the well known Luke, that was vhc., for the place. Raby Jack, an old stager, was hc. Blemton Consequence, a beautiful bitch back of the head, scored a clear and easy win in the next class, and Princess, that was second at New York, came next, with Media, long-cast, oversized, not quite right in front and large in ears, third. Witch, vhc., is light in bone, cheeky, wrong in coat and weedy. Beverwick Dusky, second in the puppy class, is a very poor specimen. He is long-cast, bad in head, oversized and has bull-terrier muscle. We preferred Dictator, third prize, and Zigzag, hc., for the place. But if we had been the judge the prize would in all probability have been withheld.

OTHER TERRIERS—(MR. MASON).

Jubilee, that won in the challenge class for bull-terriers, had no competitors. He was in fine shape. The open class for dogs and bitches brought out a good one in Starlight. This bitch, when a mere puppy, was placed first at New Haven under the same judge. A Chicago paper ridiculed the decision and even went so far as to insinuate that the bitch was not a straight bred one. The FOREST AND STREAM praised the bitch and said she was a most promising youngster and that she won well. The bitch at the time had not thrown off her puppy coat, and her ears had not been cut; she was a raw one, and the inexperienced reporter who was entirely ignorant of the breed mistook her for a mongrel. She is a beautiful bitch, and will shortly be sent to England to meet the cracks over there. We do not think there is a bitch in England that can beat her. Marguerite, second prize, while a good bitch, is no match for the winner. She is faulty before the eyes, too low on the legs and a trifle long cast, Judy, third prize, won first and special at Albany last year. Her head is not first-class, and she has several other defects.

Meadowthorpe Glen Ettle, first in Scotch terriers, is a good specimen behind the head, which is too short. The other entry in the class was absent.

Meadowthorpe Coila and Kirkella, first and second in the Skye class, are well known good ones. The Lexington representative won easily, but when Kirkella gets a new coat it will be a close thing between them. The third prize winner is rather short in coat and decidedly short in body.

All the winners in the Irish terrier class are well-known and have been described several times in these columns. They are all good ones.

Lever, Wallace and Tot, winners in the class for black and tans are all defective in head; second-class dogs when compared with good ones.

Among the Yorkshires, Bradford Harry was many points ahead of Starlight, that is not his equal in any one point. Silver, unnoticed, is a poor silver specimen with short coat.

First and second in the class for Dandie Dinmonts were given to beautiful specimens. There are no other dogs of the breed in this country that can approach them in good looks. We thought the bitch a bit off in coat and therefore preferred the dog for first.

PUGS—(MISS WHITNEY).

Dr. Cryer, as usual, took nearly all the prizes with Bessie, Othello, Bob Ivy and Vic. Rustic Queen, second in the open class for bitches, was noticed in our New York report. Daisy, third in the class for bitches with litter, is very defective in head properties; in fact, she is not up to show form in other points.

TOY SPANIELS—(MR. MASON).

The winners in this class are old faces whose good or bad points are known to all fanciers of the breeds. Roscius is in better condition than he was last year, and it is not probable that he will take anything short of first for some time to come.

ITALIAN GREYHOUNDS—(MR. MASON).

Here there was only one entry, Miss Edith M. Van Buren's Cupid, that was second at New York. He is probably the best male specimen in the country, but is not quite first-class.

MISCELLANEOUS—(MR. MASON).

Sir Lucifer, the well-known bobtail, and Meadowthorpe Diamond, an English retriever, with plain head, bad tail, moderate limbs and fair coat, were given equal first. Ladybird, a smooth-coated sheepdog, owned by the Chestnut Hill Kennels, was withdrawn. Her condition was so bad that the judge would surely have refused to notice her. Punch, winner of second prize in the light-weight class, is a very ordinary Bedlington. First prize in this class was withheld. Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—1st, E. H. Moore's Minting.—OPEN—*Dogs:* 1st, E. H. Moore's Alonzo; 2d, E. B. Sears's Sears' Monarch; 3d, A. Quandt's Nero. *Bitches:* 1st and 2d, E. H. Moore's The Lady Coleus and The Lady Beatrice; 3d, C. Porter, Jr.'s Boss Lady Clare. High com., S. Van Santvoord's Molly Stark. *Puppies:* Withheld. Kennel prize, E. H. Moore; best, Minting.

ST. BERNARDS.—ROUGH—CHALLENGE—1st, Hospice Kennels' Gemma I.; 2d, E. H. Moore's Miranda.—OPEN—*Dogs:* 1st, E. H. Moore's Ben Lomond; 2d, E. B. Sears's Plinlimmon, Jr.; 3d, Mrs. J. M. Nicholson's Mount Sion III. *Bitches:* 1st and 2d, E. H. Moore's Saffron and Recluse; 3d, J. & A. Marshall's Queen. Reserve, J. Meade's Fannie. Very high com., Halfway Brook Kennels' Queen Valentine, E. B. Sears's Lady Aveline and E. Murphy, Jr.'s Meg Merrilies. *Puppies:* 1st, E. B. Sears's Lady Aveline; 2d, J. Barrett's Ben; 3d, C. J. Tappen's Wanda. Reserve, C. C. Davis's Bernaline II. Very high com., Mrs. J. M. Nicholson's Othello. High com., D. Gen's Rex and Mrs. J. M. Nicholson's Duke of Albany. Kennel prize, E. H. Moore; best, Saffron; puppy, Lady Aveline.—SMOOTH—CHALLENGE—1st, J. W. Dunlop's Higa; 2d, Hospice Kennels' Daphne.—OPEN—*Dogs:* 1st, Teague & Tilton's Beauchamp; 2d, C. H. Evans's Victor Leo. *Bitches:* 1st, J. Kevan's Apollonia; 2d, Keystone Kennels' Lola; 3d, C. P. Cluett's Katrina. *Puppies:* 1st, J. H. Draper's unnamed.

NEWFOUNDLANDS.—1st and special, J. & A. Marshall's Meadowthorpe Prince George; 2d, D. Morey's Frank. Very high com., W. W. Collins's Carlo.

GREAT DANES.—1st, F. W. Fonda's Lady Bess.

DEERHOUNDS.—CHALLENGE—1st and 2d, J. E. Thayer's Ramona and Highland Laddie—OPEN—1st and 2d, J. E. Thayer's Pride of the Heather and Duncan; 3d, A. H. Renshaw's Bruce.—*Puppies:* 1st, M. R. Swift's Malcolm. Kennel prize, J. E. Thayer.

GREYHOUNDS.—CHALLENGE—1st, H. W. Huntington's Balkis.—OPEN—1st, H. W. Huntington's Highland Chief; 2d and 3d withheld. *Puppies:* 1st, A. M. Ide's The Bard.

FOXHOUNDS.—*Dogs:* 1st and 2d, J. J. Dwyer's Roseville Rover and Major Warlock. *Bitches:* 1st and 2d, J. J. Dwyer's Clonmel Rakish and Rosebud. Kennel prize, J. J. Dwyer.

POINTERS.—CHALLENGE—*Dogs:* 1st and special, C. Heath's Graphic. *Bitches:* 1st, C. Heath's Mealy.—OPEN—LARGE—*Dogs:* 1st, L. Gardner's Duke of Vernon; 2d, E. Dexter's Pontiac; 3d, S. W. Pentz's Brake. Very high com., Chestnut Hill Kennels' Sachem. High com., J. Pickering's Dandy. Com., R. P. Bainbridge's Pedro. *Bitches:* 1st, C. Heath's Bloomo; 2d, D. C. Conig's Lott; 3d, J. Pickering's Fanny. Very high com., Warner & Hamilton's Hannah.—SMALL—*Dogs:* 1st, E. Dexter's King of Kent; 2d, J. Pentz's Fashion; 3d and special, J. & A. Marshall's Forest King. High com., C. W. Campbell's Frank. Com., C. J. Tappen's Ray T. *Bitches:* 1st and 2d, C. Heath's Lady Norrish and Sally Brass II.; 3d, I. W. Brierley's Beauty. High com., J. Pickering's Belle II. *Puppies:* 1st and special, W. A. Thacher's Cris; 2d, E. R. Potter's Tyke; 3d, C. E. Betts's Helen of Troy. Very high com., S. Paul's Jess. High com., J. Pickering's Rocco. Kennel prize, C. Heath.

ENGLISH SETTERS.—CHALLENGE—*Dogs:* 1st, F. Windholz's Rockingham. *Bitches:* 1st, F. Windholz's Cora of Wetheral.—OPEN—*Dogs:* 1st, F. Windholz's Count Howard; 2d, Mt. Washington Kennels' Lindo; 3d and special, W. A. Gilbert's Brownie of Troy. Very high com., J. J. Snellenberg's Count Henricks. High com., Barna Van Deckar's Bounce. *Bitches:* 1st, F. Windholz's Princess Beatrice II.; 2d, Mt. Washington Kennels' Zona; 3d, W. F. Lester's Carrie Belton. Very high com., W. A. Gilbert's Judy of Troy and Buckellew Kennels' Marchioness. High com., Dr. J. H. Meyer's Beulah. *Puppies:* 1st and local special, W. F. Lester's Carrie Belton; 2d, J. Marshall's Buckellew's Boy; 3d, D. Chadwick's Gloster C. Kennel prize, F. Windholz.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st and special Dr. W. Jarvis's Elcho, Jr.; 2d and reserve, Max Wenzel's Tim and Chief. *Bitches:* 1st, Kildare Kennels' Laura B.; 2d, C. T. Thompson's Nellie.—OPEN—*Dogs:* 1st, C. T. Thompson's Desmond II.; 2d and local special, J. F. Wolf, Jr.'s Ned; 3d, W. K. Chase's Glencho's Shamrock. Very high com., E. Hannan's Rory. High com., Miss Bessie Chamberlain's Shaughraun. Com., A. W. Harrington, Jr.'s Ben. *Bitches:* 1st, St. Cloud Kennels' Bessie Glencho; 2d, F. L. Cheney's Daisy; 3d, J. J. Miller's Eiley O'Connor. Very high com., Kildare Kennels' Ruby Glenmore. High com., Max Wenzel's Bonney. Com., W. C. Hudson's Fannie. *Puppies:* 1st, and special, E. R. Stepheus's Mardo; 2d and 3d, J. F. Wolf, Jr.'s Lexie and Effie. Very high com. and high com., J. J. Miller's Ben H. and Sylvia. Com., E. D. Green's Ben. Kennel prize, Max Wenzel.

BLACK AND TAN SETTERS.—CHALLENGE—1st and special, S. S. Dixon's Little Boy; 2d, W. E. Rothermel's Don.—OPEN—*Dogs:* 1st and 2d, Meadowthorpe Kennels' Meadowthorpe Heather Harold and Meadowthorpe Heather Roy; 3d, Dr. F. L. Classen's Kent IV. Very high com., A. W. Harrington, Jr.'s Trott. High com., W. S. Hammett's Royal Duke, Jr. Com., A. H. Loeole's Duke. *Bitches:* 1st, Meadowthorpe Kennels' Meadowthorpe Belmont; 2d, J. L. Campbell's Becky Sharp; 3d, J. Kemp's Belle. *Puppies:* 1st and special, Meadowthorpe Kennels' Meadowthorpe Blossom. Kennel prize, Meadowthorpe Kennels.

FIELD SPANIELS.—BLACK—1st and special and second, Oldham & Willey's Glencairn and Newton Abbot Lord. *Bitches:* 1st, Woodstock Spaniel Kennels' Bridford Gladys; 2d, Oldham & Willey's Lady Abbot.—OTHER THAN BLACK—1st, Oldham & Willey's Newton Abbot Laddie; 2d, Bridford Kennels' Bridford Ruby. Best pair, Glencairn and Lady Abbot.

COCKER SPANIELS.—CHALLENGE—*Dogs:* 1st, Oldham & Willey's Miss Obo II.; equal 2d, Oldham & Willey's Chloe W. and American Cocker Kennels' Doc.—OPEN—*Dogs:* 1st, Oldham & Willey's Jerry; 2d, Woodstock Spaniel Kennels' Giffee; 3d, M. Spellissy's Max. *Bitches:* 1st, G. Bell's Sensation; 2d and 3d, Oldham & Willey's Beatrice W. and Dolly Obo. Very high com., American Cocker Kennels' Hornet and M. Spellissy's Zella (also special). Best pair, Jerry and Miss Obo II. *Puppies:* 1st, American Cocker Kennels' Hornet; 2d, Oldham & Willey's Little Dan.

COLLIES.—CHALLENGE—1st Chestnut Hill Kennels' Scotilla; 2d, W. D. Hughs's Bonnie Brae.—OPEN—*Dogs:* 1st and Collie Club special, J. Watson's Clipper; 2d and equal 3d, Meadowthorpe Kennels' Meadowthorpe Jura and Meadowthorpe Reality; equal 3d, Warner & Hamilton's Queechy. Very high com., Chestnut Hill Kennels' Roslyn and Roslyn Sensation and W. D. Hughs's Nullamore. *Bitches:* 1st, Dr. H. S. Quinn's Collie Belle; 2d and 3d, Chestnut Hill Kennels' Metchley Surprise and Spoiled Miss. High com., A. T. Dwyer's Collie Nichols. *Puppies:* 1st, Warner & Hamilton's Queechy; 2d, Chestnut Hill Kennels' Roslyn Belle; 3d, Meadowthorpe Kennels' Meadowthorpe Gip. Kennel prize, Chestnut Hill Kennels.

POODLES.—1st, M. W. Reid's Fritz; 2d and 3d, withheld.

BASSET HOUNDS.—1st, C. Porter, Jr.'s, Babette.

DACHSHUNDE.—Not for competition.

BEAGLES.—CHALLENGE—1st, G. Laick's Rattler III.; 2d, Clark & Rutter's Fitzhugh Lee.—OPEN—1st, W. B. Child's Tony Weller; 2d and special, J. Lewis's Racket II.; 3d, withheld.

BULLDOGS.—CHALLENGE—1st and special and 2d, J. E. Thayer's Britomartis and Robinson Crusoe.—OPEN—1st, G. Raper's Rabagas; 2d and 3d, R. B. Sawyer's Portswood Tiger and Soudan. High com., J. & A. Marshall's Joan of Arc and J. W. Griswold's Tug Wilson. *Puppies:* 1st and 2d withheld; 3d, R. B. Sawyer's Harlequin. Best pair, Robinson Crusoe and Britomartis.

BULL-TERRIERS.—CHALLENGE—1st, H. Harris's Jubilee.—OPEN—1st, F. F. Dole's Starlight; 2d, H. A. Harris's Marguerite; 3d and local special, C. Donovan's Judy. Very high com., A. T. Dwyer's Amaland.—ROUND-HEADED (bull and terrier)—1st, withheld; 2d, C. Donovan's Witch Hazel.

FOX-TERRIERS.—CHALLENGE—1st and special and 2d, Blemton Kennels' Lucifer and New Forest Ethel.—OPEN—*Dogs:* 1st, J. E. Thayer's Reckoner; 2d and 3d, Blemton Kennels' Blemton Volunteer and Blemton Braggart. Very high com. and high com., J. E. Thayer's Luke and Raby Jack. Com., H. P. Thompson's Zig Zag. *Bitches:* 1st, Blemton Kennels' Blemton Consequence; 2d, J. E. Thayer's Princess; 3d, W. D. Holsaple's Media. Very high com., P. B. McCoy's Witch. *Puppies:* 1st, Blemton Kennels' Blemton Braggart; 2d, C. Rathbone's Beverwyck Dusky; 3d, C. C. Jones's Dictator. High com., H. P. Thompson's Zig Zag. Kennel prize, Blemton Kennels.

SCOTCH TERRIERS.—1st, Meadowthorpe Kennels' Meadowthorpe Glen Ettie.

SKYE TERRIERS.—1st and special, Meadowthorpe Kennels' Meadowthorpe Coila; 2d, Oldham & Willey's Kirkella; 3d, L. Timpson's Donald.

IRISH TERRIERS.—1st and 2d, Chestnut Hill Kennels' Breda Tiney and Breda Jim; 3d, J. F. McFadden's Dennis.

BLACK AND TAN TERRIERS.—1st, C. A. Shinn's Lever; 2d, R. Stucky's Wallace; 3d, J. Hyams's Tot.

YORKSHIRE TERRIERS.—1st, P. H. Coombs's Bradford Harry; 2d and 3d withheld. High com., J. J. Hooley's Starlight.

PUGS.—CHALLENGE—1st, Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st and 2d, Dr. M. H. Cryer's Othello and Bob Ivy. *Bitches:* 1st, Dr. M. H. Cryer's Vic; 2d, G. Bell's Rustic Queen; 3d, J. Belleau's Daisy. Very high com., J. J. Hooley's Gypsey. *Puppies:* 1st, Dr. M. H. Cryer's Bob Ivy. Kennel prize, Dr. M. H. Cryer.

TOY SPANIELS.—1st and 2d, W. Phillips's Roscius and King Pippin.

DANDY DINMONT TERRIERS.—1st and 2d, Meadowthorpe Kennels' Meadowthorpe Reiver and Meadowthorpe Wonder.

CLYDESDALE TERRIERS.—1st and 2d, C. A. Shinn's Clydesdale Lady and Clydesdale Loris.

ITALIAN GREYHOUNDS.—1st, Miss Edith Van Buren's Cupid.

MISCELLANEOUS.—LARGE—Equal 1st and special, C. Rosser's Sir Lucifer and Meadowthorpe Kennels' Meadowthorpe Diamond.—SMALL—1st, withheld; 2d, C. Porter, Jr.'s Punch; 3d, J. H. Sage's Topsey.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the February number of the *American Kennel Register:*

BEAGLES.

6924. Betsy, G. N. Caleb.
6925. Tramp, G. N. Caleb.

COLLIES.

6926. Beach, F. D. Polk.
6927. Buttercup II., Warner & Hamilton.
6928. Carlo III., R. McHaffie.
6929. Cloud's Galen, Dr. T. A. Cloud.
6930. Dora E., T. H. Davis.
6931. Gypsy Bess, W. E. Braddock.
6932. Helen McGregor, Warner & Hamilton.
6933. Mack III., J. H. Davis.
6934. Rob Roy VII., H. R. Polk.
6935. Shep of R., A. J. Root.

GREYHOUNDS.

6936. Hector, M. H. Ranlett.

MASTIFFS.

6937. Allie, V. B. Van Valkenburgh.
6938. Beech, B. B. Gill.
6939. Boss Rex, H. J. Lothrop.
6940. Culp's Victor, G. F. Culp.
6941. Daisy W., F. H. Osgood.
6942. Dud, R. N. Sims, Jr.
6943. Guard II., J. Reed.
6944. Harner's Paul, A. Byers.
6945. Judge III., E. N. Brown.
6946. Juno IX., H. Morgan.
6947. Leo, Jr., J. E. Craddock.
6948. Prairie Queen, G. Agniel.
6949. Richland Beau, W. W. Bradley.
6950. Roy, H. Haile.
6951. Springfield Boss, F. H. Osgood.
6952. Sultan, G. W. Freeman.
6953. Topsy F., S. A. Fogg.

POINTERS.

6954. Don VII., G. W. Shultis.
6955. Frisk, W. S. Bidwell.
6956. Glenroy, A. W. Perego.
6957. Lady Helen, A. W. Perego.
6958. Monaco, A. W. Perego.
6959. Sid, D. C. Tryon.

PUGS.

6960. Crazy Jane, H. J. Warner.
6961. Tina, A. P. Cassin.

ST. BERNARDS—ROUGH-COATED.

6962. Boniface II., H. F. Osborn.
6963. Bridget, W. H. Sheedon.
6964. Chequasset Maud, G. Dow.
6965. Donald II., C. Thompson.
6966. Ino, D. H. Clark.
6967. Kent Bernard, E. Burger.
6968. Mount Sion's Othello, Mrs. J. M. Nicholson.
6969. Phyllis, C. W. Shaw.
6970. Wanda II., H. G. Velsey.

SMOOTH-COATED.

6971. Don, C. D. Bernheimer.
6972. Myrtle, R. Willman.

SETTERS—ENGLISH SETTERS.

6973. Bang III., H. B. Carpenter.
6974. Bess Bobbett, T. D. Pech.
6975. Bob III., F. J. Murphy.
6976. Flake III., W. B. Patterson.
6977. Flo II., C. H. Corbett.
6978. Glenburnie, C. H. Corbett.
6979. Jess, S. Parker.
6980. Nugget, C. E. Willis.
6981. Roybel IV., W. Patterson.
6982. Starlight, W. B. Patterson.

GORDON SETTERS.

6983. Bess III., J. E. M. Lordly.
6984. Stubble, J. D. Sperry.

IRISH SETTERS.

6985. Adaline, Dana Rhodes.
6986. Barney II., Mrs. Wm. Wise.
6987. Chieftain, C. R. Hull.
6988. Chipeta, Henry G. Bryant.
6989. Clidie, C. D. Jolliffe.
6990. Dinah, C. R. Hull.
6991. Ding, B. S. Balistier.
6992. Elmo, C. Quinlan.
6993. Myra, Henry C. Bryant.
6994. Rex III., G. N. Caleb.
6995. Rola, Ch. P. de Allencar Cintra.

SHEEPDOGS.—BOB-TAILED.

6996. Fred, Glencoe Collie Kennels.

SPANIELS.—FIELD AND COCKER SPANIELS.

6997. Black Rose II., N. J. Ritter
6998. Carrie H., J. P. Thomas.
6999. Daisy Dean II., E. S. Grass.
7000. Dinah II., H. E. Billau.
7001. Gypsey, G. C. Howell.
7002. Juno D., J. J. Devereaux.

TERRIERS.—BULL-TERRIERS.

7003. Lucky, Wm. F. Hayes.

FOX-TERRIERS.

7004. Chester Valley, Sam J. Parker.
7005. D., Dr. J. O'Neill.
7006. Tiny, W. Howes Smith.

IRISH TERRIERS.

7007. Mike, John A. Denison.

SKYE TERRIERS.

7008. Lovet, Cornelius Stevenson.

YORKSHIRE TERRIERS.

7009. Nadjy, John W. Merriam.

SPANIEL CLUB SWEEPSTAKES.

Editor Forest and Stream:

Sweepstakes for field spaniels whelped in 1888 will be decided at the bench show of the New England Kennel Club. Entry fee, $3 each. To be divided as follows: forty per cent to winner; thirty per cent to breeder of winner; twenty per cent to second; ten per cent to third. Open to members only. Entries close on March 11.

Sweepstakes for cocker spaniels whelped in 1888 will be decided at the bench show of the Philadelphia Kennel Club. Entry fee, $3 each. To be divided as follows: forty per cent to winner; thirty per cent to breeder of winner; twenty per cent to second; ten per cent to third. Open to members only. Entries close on April 6.

A special prize of $10 will be offered at the Boston show for the best field spaniel. Open to members only.

A special prize of $10 will be offered at the Philadelphia show for the best cocker spaniel. Open to members only.

All entries to above sweepstakes to be also entered in their regular classes at each show. Entries to be made with the undersigned at No. 152 Broadway, N. Y., by dates above mentioned.

A. CLINTON WILMERDING, Sec'y.

NOT A FIT OFFICER FOR THE POINTER CLUB.

THE selection of B. F. Seitner, of Dayton, O., as a vice-president of the newly formed Pointer Club was unfortunate. Mr. Seitner's conduct in connection with dog shows is not altogether such as to commend him to the respect of the dog world, and no club can afford to put forward as an officer one whose record is not blameless.

Seitner's pointer bitch Carrie was by him entered in the puppy class (No. 38) at the Philadelphia show of May, 1885, when her owner knew that she was over age and that her entry there was accordingly a piece of fraud. She won vhc. in this puppy class. Mr. Seitner's record is, therefore, of having won an award at a bench show with a fraudulent entry. The Pointer Club cannot afford to retain him as one of its officers. We publish a *facsimile* of the document in the case. The letter speaks for itself:

[FAC-SIMILE.]

Dayton O May 14/85

Mr B F Lewis

Dear Sir

enclosed entry money for my dogs also entry blank fill out Correct. Now I wish to say confidentially As soon as the show opens, look over class 36, and if "Carrie" entered in class 38 stands a show to win in 36 have her transfered she being over age. I enclose draft for $15.00, for entry money, and $10.00 for you on account. Wire me (night message) when the dogs have been judged, and what we red. Sell both bitches if possible. let Carrie go at $10.00 if you can do no better and Lulu at $50.00. over

Are you going to the Chicago show? let me know this, as I may want you to take charge of my dogs. Hoping all is Well with you I am yours Very Truly B F Seitner

P.S. Please send me a Catalogue of the show as soon as you can get one also special prize list.

CANADIAN KENNEL CLUB DOG SHOW RULES.

1. The word dog where used in these rules includes both sexes.

2. Every dog entered at any show held under these rules must be the *bona fide* property of the person making such entry on the day of closing the entries. The entry must clearly identify the dog to be exhibited by name and, if known, its date of birth, name of its sire and dam and the name of its breeder. Should any of these particulars be unknown to the exhibitor it must be so stated on the entry blank and inserted in the catalogue.

SECTION I. Prize winners at any show held under the rules of the Canadian Kennel Club must be entered in the *Canadian Register* before prize will be given (American dogs excepted).

2. Every dog entered at any show held under these rules and owned in the United States must be registered with the American Kennel Club before being allowed to compete.

3. If the name of a dog which has won a prize has been changed, the old name must be given on the entry blank and inserted in the catalogue, together with a list of all prizes won by the dog until such time as it wins a prize under its new name.

4. If a dog has been entered without being clearly identified as directed in Rules 2 and 3, it shall be disqualified and forfeit any prize which may have been awarded to it.

5. The breeder of a dog is the person owning or leasing the bitch at the time of her being bred.

6. A puppy is eligible for competition in either the puppy or open class or both unless prohibited by the special rules of any show, but a separate entry must be made for each class.

7. The authorities of any show may reserve to themselves the right of declining any entries they may see fit, or of removing any dog on account of disease, vice, or other cause.

8. A castrated dog or spayed bitch shall be disqualified and forfeit any prizes which may have been awarded it.

9. Total blindness, deafness or lameness shall absolutely disqualify. If the judge or veterinary surgeon is satisfied that the deafness or lameness is temporary the dog shall be allowed to compete.

10. A dog suffering from mange or any contagious disease shall be disqualified and forfeit any prizes which may have been awarded to it, and shall at once be removed from the show build-

ing. The regularly appointed veterinary surgeon shall alone decide as to mange or contagious disease, and his decision must be given in writing.

11. A judge may disqualify a dog which in his opinion has been improperly tampered with, subject to the decision of the veterinary surgeon. Should the judge's disqualification not be sustained, the class must be immediately rejudged.

12. Full discretionary power is given to the judge of each class to withhold any or all prizes for want of merit. The judge's decision will be final in all cases affecting the merits of the dogs, and appeals can only be entertained where misrepresentation or breach of the rules is discovered.

13. Should an appointed judge be unable to fulfill his engagement the committee shall have the right to fill the vacancy in such manner as they see fit; all the separate classes of any one breed of dogs must, however, be adjudicated upon by the same judge or judges acting in conjunction.

14. In any class where there is a limit of weight, the person in charge of dogs entered in such a class may claim of the show committee the right at any time before the judging to have his dog weighed, and the weight of the dog shall be registered and hold good at the time of judging.

15. A dog to compete in a champion class must have won four first prizes, exclusive of puppy classes and classes not confined to one breed, at shows approved by the Canadian Kennel Club, a list of which, together with these rules, must be published in the premium list and catalogue of each show.

16. In estimating the number of prizes a dog has won with reference to whether it should compete in a champion class or not, the number of prizes won shall be calculated up to 12 P. M. of the day preceding the closing of the entries of the show.

17. In entering a dog in a champion class it is necessary to specify on the entry blank a sufficient number of first prize winnings to entitle him to compete in such a class, and this record must be given in the catalogue.

18. No dog eligible for special prizes can be withdrawn from competition unless it has been stated on the entry blank, "Not to compete for special prizes."

19. No special prizes can be accepted or offered by a show committee after the show is opened.

20. The age of a dog shall be calculated up to and inclusive of the day preceding the show. A dog whelped April 30 shall not be eligible on May 1 of the following year to compete in a class for dogs under 12 months of age.

21. An objection to a dog may be made by any person but must be in writing and be lodged with the secretary of the show within ten days of the last day of the show. The objection must (unless in the case of an objection made in the name of the Canadian Kennel Club or by the committee of the show in which case a deposit shall not be necessary) be accompanied by a deposit of five dollars, and if the objection is decided to be frivolous the deposit shall be forfeited to the committee of the show. From the decision of the show committee appeal may at once be made to such members of the executive committee of the Canadian Kennel Club as may be present, and if the show committee decision is sustained by them the five dollars deposited is thereby fofeited to the show committee. From any such decision or decisions appeal may be taken to the full executive committee of the Canadian Kennel Club, but such appeal must be forwarded to the secretary within seven days of the decision being rendered, together with a deposit of $10. If the decision appealed from is sustained the $10 deposit shall be forfeited to the Canadian Kennel Club, but if the decision is reversed then all deposits must be returned to the appellant.

22. Any person who has been guilty of misconduct of any kind in connection with dogs, dog shows or field trials, may be suspended by the committee of any show. Notice of such suspension, together with all testimony in the case, must be forwarded within twenty-four hours to the secretary of the Canadian Kennel Club. The secretary shall thereupon notify the president, or in his absence the vice-president, who may upon investigation of the case suspend the penalty until the next meeting of the executive committee. At such meeting the penalty must either be removed or the person suspended be disqualified for such a period as the executive committee may decide. The disqualification of an owner shall apply to all dogs connected with the perpetration of a fraudulent act, but the executive committee of the Canadian Kennel Club may use such discretion in the enforcement of this penalty as shall protect innocent persons.

23. No person under suspension or sentence of disqualification can exhibit or take a prize at any show held under these rules.

24. Entries made in the name of a kennel must be accompanied by the name of the actual proprietor or proprietors, but not necessarily for publication. The partners in the kennel will be deemed equally culpable in the case of fraud perpetrated in the kennel name.

25. The premium list of each show must contain the names of officials under whose management the show is given, each of which, except paid employees, shall be held personally responsible for the payment of all prizes within 60 days from the last day of the show. The secretary of the Canadian Kennel Club shall, upon evidence being produced that any such prize or prizes remain unpaid, issue notice of suspension of each and every official, and otherwise proceed as provided for in Rule 22.

26. The person presenting the identification ticket shall be recognized as the agent of the owner in the latter's absence, and his receipt for prize money shall be binding on the owner unless notice to the contrary is indorsed on the identification ticket.

27. All prizes offered by the club or committee in charge of a show must be paid in accordance with description given of them in the premium list. Medals of silver or gold must be of the purity of Canadian coin.

28. The show committee may adopt such regulations as they see fit, provided they do not conflict with the foregoing rules.

29. A recognized veterinary surgeon must be appointed at each show held under these rules.

DOG TALK.

THIS is the new king of the English St. Bernard world as he appeared to the reporter of the *Stock-Keeper:* "Sir Bedivere was resting when we first came across him, but his owner's brother came up in a few minutes and kindly led the new sensation into the ring. Having read and listened to so much, in fact, eulogiums that sounded fanciful, we were prepared for a feeling of disappointment; we are, therefore, paying the namesake of King Arthur's Knight a great compliment in owning that such a feeling never approached our opinion of Sir Bedivere on Tuesday. He is the grandest specimen of his breed our eyes have ever feasted upon. His proportions are colossal, in fact, we heard a lady murmur, as the giant marched past her, "Can that be a dog!" and his qualities in keeping with his size. If ever he should meet Plinlimmon, it is odds on the son of Nero III. and Bena."

Regarding the report that Mr. Hopkins was asked to judge fox-terriers at New York, he writes as follows: "*Editor Forest and Stream:* My attention has been called to your publishing in your issue of the 21st inst., that I had been invited to judge fox-terriers at New York by the Westminster Kennel Club, but that I had declined in favor of Mr. Belmont. Allow me to say that I was not invited to judge, and that your informant, whoever he may be, manufactured the statement in which there is not one single word of truth.—GERMAN HOPKINS."

The judges at the coming Philadelphia show so far as they have been appointed are: R. Exley, mastiffs; P. C. Ohl, setters; J. H. Phelan, pointers; S. R. Hemingway, spaniels; C. Stevenson, basset-hounds and dachshunde; J. P. Sanderson, Scotch, Skye, Dandie Dinmont terriers and toy spaniels; J. Deville, black and tan and bull-terriers, and C. T. Thompson, Irish terriers. The premium list will be ready in a few days. The address of the secretary is Francis S. Brown, Philadelphia, Pa.

In describing the pointer bitches Bloomo and Lady Norrish in our report of the New York show, we said that the former was "throaty." The comment should have read, too much jowl, as she is not throaty; neither is Lady Norrish "leggy" according to our notes.

All who are interested in greyhounds and coursing should not forget that a meeting of the Eastern Coursing Club will be held at the Hoffman House, New York, on Saturday, March 9, at 7 o'clock P. M.

We have pointed out that to unite the offices of dog show superintendent and judge in the person of one individual is a mistake. The two offices do not go well together, as human nature is at present constituted. The Albany bench show managers, having selected Mr. William Tallman as superintendent, further made him one of the judges. As superintendent, Mr. Tallman had all he could do and do well. One part of his duty was to drum up all the entries he could. As superintendent to drum for entries by personal solicitation was the right thing. The moment he became judge it was improper for him to personally solicit owners to send their dogs to Albany. When, therefore, he thus solicited entries at Troy last week we were not surprised to learn there was much hostile criticism of the action. Doubtless Mr. Tallman realized that he was in a delicate position, and when a sense of duty as the show superintendent conflicted with the propriety of conduct as a judge-to-be, the sense of duty to his employers triumphed and he knowingly incurred hostile criticism, by asking exhibitors to show under him at Albany. But the principle of the thing is all wrong; no bench show committee should be guilty of another blunder of this kind, and no individual is likely again to be trapped into a position where as superintendent he will have to solicit entries to come before himself as judge.

We are informed that an exceptionally fine team of pointers is now on the way to this country from England, and that they will put in an appearance at some of the coming shows.

The Irish Terrier Club of England, at a meeting held during the Liverpool dog show, adopted a resolution in favor of a rule that all Irish terriers, whelped after July 1, 1889, should be shown with natural ears.

The Canadian Kennel Club are circulating a petition to be presented to the Government to have the duty on dogs that are brought into the Dominion abolished.

The annual meeting of the American Spaniel Club will be held at Philadelphia, Pa., April 16, during the first day of the dog show. Business of importance will come before the meeting and a full attendance is desired.

We are told of an exhibitor at a recent dog show who changed his unnoticed puppy to the stall of one that won he., and sold him. Unfortunately we could not learn his name.

There will be a meeting of the board of governors of the Eastern Field Trials Club at 44 Broadway, New York, room 19, at 3:30 P. M., March 12. A full attendance is requested.

We understand that the managers of the Philadelphia dog show have secured the Armory, at the corner of Chestnut and Broad streets, for the show.

Boston reports: "Entries are coming in very lively and from present indications we are going to have a rattling show." The entries close Monday, March 11.

Mr. Geo. L. Fish has removed from New Bedford, Mass., to Portland, Me. His address as well as that of the Rockdale Kennel is Box 1875.

The Brunswick Fur Club, of Brunswick, Me., will send to the Boston show several of their foxhounds for competition.

Several communications on coursing have been crowded out until next week.

TO AMERICAN POINTER BREEDERS.

THE undersigned were elected president, and secretary and treasurer of the Pointer Club of America at a meeting held at Madison Square Garden, Feb. 20.

The club is now fully organized, and it is the desire of its members to make it, as it should be, a representative organization, embracing a membership in all sections of the Union.

With that in view, it was unanimously resolved that all pointer breeders and sportsmen generally interested in the subject of breeding pointers should be given the opportunity of joining this club upon the same terms as the original charter members until April 1, 1889; that is to say, any gentleman desiring to join this club may do so upon application to the secretary and treasurer, stating his name and post office address and accompanying the application with $5. This insures membership for the current year.

After April 1 the by-laws will go into full effect under which the formalities for joining are greater as well as the initiation fee.

We hope for a generous response from American sportsmen under the above notice, and all communications on the subject may be addressed either to the president, or secretary and treasurer as below, John S. Wise, President, 21 East Seventy-sixth street, New York city.

GEO. W. LA RUE, Sec'y and Treas.

239 BROADWAY, New York City.

THE ALBANY DOG SHOW.

ALBANY, March 6.—*Editor Forest and Stream:* The second annual dog show of the Albany Kennel Club opened this morning in the Academy of Music. There was a ball in the building last night, and the managers of the dog show did not obtain possession until four o'clock this morning. The superintendent is deserving of much credit for having succeeded in fitting up the benches in good time. The number of entries is something over 300. The judging began at 2 o'clock, good time considering the large amount of work that had to be done. Some of the judging is not at all satisfactory, especially in the mastiff and fox-terrier classes. So far Mr. Tallman has done the best work and given the most satisfaction. The attendance to-day has been light, but the management hope for better support during the remaining days.

THE EASTERN FIELD TRIALS CLUB has issued the following card for the guidance of handlers who intend running dogs at the trials this year: "In issuing the revised running rules for 1889, the governors of the Eastern Field Trials Club hereby call attention of all owners and trainers to the following considerations and requirements: Experience has shown that a dog to exhibit his natural qualities to the best advantage, must be well broken, and in order to relieve the judges from all possible responsibility in awarding a heat between a dog of great ability insufficiently broken, and an inferior dog well broken, the club will insist upon all dogs being thoroughly trained. They will instruct their judges to insist upon perfect backing, steadiness to shot and wing, obedience and retrieving, and to penalize disobedience, unsteadiness, false pointing, or any other quality impairing the usefulness of a dog for every day shooting, to the fullest extent of which the rules admit."

CHICAGO DOG SHOW.—Chicago, Feb. 26.—*Editor Forest and Stream:* I am requested by our bench show committee to call attention to an unintentional error in our premium list. The specials offered by the St. Bernard Club are four silver cups each valued at $25, one for best smooth-coated dog or bitch, one for best rough-coated dog or bitch, one for best American-bred smooth-coated dog or bitch, and one for best American-bred rough-coated dog or bitch.—JOHN L. LINCOLN, JR., Secretary.

BLACK AND TAN TERRIERS AT NEW YORK.—Philadelphia, Feb. 25.—*Editor Forest and Stream:* Being a new exhibitor of black and tan terriers, I would like to be informed why the judge at the New York show, (Mr. Baillie) gave first prize in the bitch class to Meersbrook Maiden, who has a white spot on her breast fully two inches long, which the standard says is a disqualifying point. I exhibited, as I am informed by competent judges, a fair specimen in Queen Bess, which was passed without a notice. If judges are to award prizes to dogs with white breasts, how will breeders know what standard to breed to? I am informed by breeders of black and tans, that any puppies appearing with white breasts are generally consigned to the bucket. I would like to know from Mr. Baillie or some of the other judges of black and tan terriers why my bitch was passed without a notice.—FRANK HOPE.

RABBIT DOGGING.—Mr. W. Wade writes: In a letter just received from W. C. Kennerly, Esq., ("Old Dominion") he says, "I have no objection in the world that the FOREST AND STREAM should have my opinion of this rabbit baiting business, it is pronounced and decided." I therefore inclose Mr. Kennerly's opinion. I am no sportsman, but I do not think it will be disputed that he is. He says, "I consider a regular rat killing, such as is indulged in by the plugs and roughs around our cities, a far more reputable and sportsmanlike proceeding than the murdering in cold blood of rabbits; and as to the sport in it, if that is to be considered sport, then we might as well all shoot our bird dogs and foxhounds and break our guns and let sport go to the devil."

LYNN DOG SHOW.—The managers of the Lynn dog show will add open classes for spaniels other than black for each sex, with prizes the same as in other classes. There will be a special of $25 for the best pointer. The Beagle Club offer a cup for the best beagle owned by a member. The Collie Club offer $10 for the best collie bred in the United States or Canada, and the Club silver medal for the best collie puppy. Entries close March 11. The address of the secretary is D. A. Williams, Lynn, Mass.

ST. BERNARD CLUB MEETING.—The monthly meeting of the board of governors will be held March 11, 8 P. M., at the Hoffman House, New York city. A number of applicants, and the position taken by the New England Kennel Club at their coming show regarding rough and smooth-coated classes will come up for discussion. A full attendance is requested.—LORENZO DANIELS, Sec'y. (New York, March 1.)

BEAUCHAMP.—South Framingham, Mass., March 4.—*Editor Forest and Stream:* To correct a misunderstanding, which I am told has arisen, I wish to say that I bought out Miss Anna H. Whitney's interest in the imported St. Bernard dog Beauchamp, and became his sole owner before the New Bedford show, Jan. 16. Since then I have sold an interest in him to W. F. Tilton, of Natick, Mass.—J. R. TEAGUE.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

DEATHS.

Maizeland Lively. White and tan fox-terrier bitch, whelped April 2, 1887 (Venetian—Lurette), owned by L. Timpson, Red Hook, N. Y.

Bugle II. Black, white and tan beagle dog, whelped March 15, 1887 (A.K.R. 6668), owned by E. W. Whitcomb, Farmington, Me.; shot by an unknown fiend.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. R. B., New York.—What causes some dogs to have such awful breath, and what can be done to cure it? Ans. Something is in trouble in stomach or lungs. Mix powdered charcoal with the food. Give 10 drops tinct. nux vomica night and morning.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE AMERICAN MILITARY TEAM.

THE Boston papers give full particulars to date of the proposed visit of a military team of Massachusetts Guardsmen to England. The Boston *Herald* of March 3 says:

"Matters have progressed so well that there is no longer any reasonable doubt that the proposed visit of the crack shots of the Massachusetts volunteer militia to England this summer will be carried out. Maj. Frost, who conceived the idea, looked the ground over very carefully and decided that the trip was a feasible one and could be undertaken with very good chances for success, and without further ado he set about it. After obtaining permission to open correspondence, he did so, and received assurance of a cordial welcome from the English volunteers, and a promise that matches would be arranged as suggested in his letter. He then obtained an official indorsement to his communication to the adjutant-general, that permission would be granted for the team to leave Massachusetts with arms and uniforms and then proceedod with the details.

"In brief, the trip will be as follows: The team, which will probably consist of 15 officers and men, will leave Boston on the afternoon of Tuesday, June 18, and sail from New York at 10 A. M. the next day on the City of Chicago, of the Inman line for Liverpool. On the way to London they may stop over at Birmingham to compete with the crack English team at that place, and will reach London about June 29. During the succeeding week they will meet in competition three of the strongest teams that the English volunteers can put against them. From July 8 to 20 the Massachusetts men will be in camp at the 'New Wimbledon,' participating in nearly all the individual matches, and shooting two or more team competitions with the great county organizations of the British volunteers. Only 10 days will be devoted to sightseeing, those from July 20 to 30, and the team will sail for New York on the same steamer July 31, arriving in Boston about Aug. 9. Ten of the 13 shooting men have already been selected and notified of that fact, with the proviso that they must be in absolute shooting trim, and that any man who neglects his practice is liable to be dropped at the last moment and his place filled by another. These men were all members of the State teams of 1887 and 1888, and rumors that any others have been selected are entirely unfounded. Maj. Frost will probably hold a series of competitions early in April to decide upon the remaining three men, which will be open to all members of the militia in the service March 1.

"The expense of the trip is estimated at $6,500, and will be raised entirely by private subscription. Blanks will be ready early this week, and may be had on application to Adjt.-Gen. Dalton, Mr. Asa P. Potter, president of the Maverick National Bank, treasurer of the fund, and Maj. Frost, captain of the team. As an illustration of the interest taken in the project by business men, it may be said that one person on Friday secured $1,100 from nine gentlemen. While subscriptions are to be acknowledged in the papers throughout the State, it is understood that there will be no direct appeal to the public. There is no doubt that all the money necessary will be offered from private sources when the record of the Massachusests team is remembered, and the fact that it has won both the inter-State and military and naval championships of America for the past three years, and at present holds both the trophies. The trip will be a military one from first to last, both officers and men leaving Boston in uniform, and remaining so until their return. The discipline, while strict, will not be unwelcome, as every member of the team stakes his individual reputation to maintain abroad the prestige already won at home."

RIFLE CHAMPIONSHIP CHALLENGE.

Editor Forest and Stream:

I hereby challenge any shooter of Chicago or of America, not barring Dr. Carver or any other shooter, to shoot a rifle match in Chicago, within sixty or ninety days, at 100 or 500 glass or wooden balls thrown into the air at a distance of 20 or 25ft. If desired, will add to the match 100 shots at any swinging target. Terms of the match to be $250 a side, winner to take gate receipts also.

GEO. PEAVEY,
Champion All-Around Rifle Shot of Illinois.

CHICAGO, Ill., Feb. 28.

BOSTON, March 2.—All the regular rifle and pistol matches were open to-day and a good number of shooters were on hand. The wind was light from 5 to 9 o'clock, and some fine scores were made. Mr. Monroe won the gold medal in the 20-shot rest match, and Mr. Charles won the championship gold medal. Following are the best scores finished to-day:

Twenty-shot Rest Match.

J R Monroe	10	10	11	12	9	9	11	11	11	11

F D Hart	6	8	10	10	10	7	8	8	7	5— 79

ST. LOUIS, Mo., March 2.—With the single exception of Mr. Perret, all the leaders in the general average took a tumble at the last shoot of the Pistol Club, and what is more he came to the rescue of the club last Wednesday and saved its reputation by making 84, which also proved high for the meeting, in consequence of which he will hold possession of the medal until the next shoot. The handicap men still hold a good lead for the prizes, and it is almost impossible for the scratch men to head them off. The attendance at the last shoot was only fair. 20yds. standard American target, Stevens .22 pistol:

L V D Perret	8	9	6	6	10	10	6	9	10	10—84
E Mohrstadt	5	9	8	10	7	9	8	6	10	7—79
M Summerfield	7	9	6	10	9	9	8	7	5	9—79

W C Mackwitz	5	5	7	8	4	6	9	6	5	5—60

UNSER FRITZ.

SMASHING PLATES.—Syracuse, Feb. 28.—The following are the scores of the members of the Onondaga Rifle Club at their plate shoot yesterday:

	Shots.	Plates.		Shots.	Plates.
W S Barnum	84	15	H S Leighton	25	3
D Eggleston	77	15	T J Kendrick	26	1
C J Dalley	53	11	A A Stillman	23	2
C H Remer	5	0	M B Fairchild	30	9
J N Knapp	11	0	Mr Bort	8	1
W A Koehler	31	6	J T Grossman	15	1
H S Seely	42	16			

The plates are common tea plates 7in. in diameter set in a bank of earth at 260yds., all shooting off-hand.—SECRETARY.

SCORES AND SLANDER.—At the shooting festival of the Independent German Schuetzen Corps at Lion Park, on June 27, 1887, Frederick Eisele made a score of 52 and claimed the gold medal prize. Bernhard Walther disputed the correctness of the score and called Mr. Eisele a "thief" and a "swindler" and was sued by the latter gentleman in the City Court before Judge Browne. The jury brought in a verdict in Mr. Eisele's favor, and Mr. Walther made an appeal to the General Term. Judges McAdam and McGown yesterday decided that Walther simply used the words in reference to the score and not to Eisele himself, and that although the terms were strong and vulgar ones, they were not actionable unless specific damages were alleged. These specific charges were not set forth in Mr. Eisele's complaint, and the judgment was reversed and a new trial ordered, with costs to the appellant.—*New York Times.*

HOLYOKE, Mass.—At an enthusiastic meeting of the Holyoke Rifle Club the following were elected: President, W. Milton Farrow; Vice-President, W. B. Miles; Secretary and Treasurer, C. T. Howes; Captain, J. A. Clough; Executive Committee, J. G. Mattice, Howard Whitney, C. S. Axtell; Adj. Com., Thos. Hibbard, F. F. Whitcomb, C. S. Axtell. The newly elected president is a member of the Massachusetts rifle team, and with the new board of officers there will be an effort made to increase the interest in the health-giving sport of rifle shooting.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Omaha, Neb., Gun Club Tournament, April 16, 17 and 18.

Amateur Tournament, St. Louis, Mo., April 23, 24, 25 and 26. Fred A. Fodde, Manager.

May 21 to 23.—Minneapolis Gun Club Tournament, Minneapolis, Minn. James Pye, Secretary.

June.—Annual Tournament Sportsmen's Association of the Northwest, Tacoma, Wash.

June 3 to 7.—New York State Association for the Protection of Fish and Game. Convention and Tournament, Albany, N. Y.

A MISS-AND-OUT COMPLICATION.

CHICAGO, Ill. Feb. 27.—*Editor Forest and Stream:* For the benefit of many of your readers in this city and at Crown Point, Ind., please decide the following problem:

In a shoot held at Crown Point, recently, A, B, C, D and E shot a miss-and-out sweepstake, $1 entrance. On the first round, all killed but C, who offered an extra dollar for the privilege of re-entering. This was granted and on the second round, all killed but E, who desired C's privilege of re-entry. This was also acceded to, but the rule was then made that no shooter should re-enter more than once. On the third round B missed and re-entered and on the fourth round D missed and came in again. All had then missed and re-entered except A. On the next round, C missed for his second time and was out. On the sixth round, A, B, D and E all killed, and on the seventh all missed. A, who had until then a clean score, then claimed the right to step to the score, kill his next bird, and take the money without letting B, D and E shoot. In this claim he is upheld by a paper to which the affair was referred, and which holds that under the special rule made, the others were out on their second miss, not regarding the fact that A had also missed on that round and that therefore he round was a dead one, precisely the same as the sixth, in which all killed.

Such prominent shooters and undoubted authorities as R. B. Organ, John J. Kleinman, John Watson, Abner Price, Ed. Price, W. G. Payson, and many other Chicago sportsmen, all decide that the other shooters must have an equal chance with A on the eighth round, as all stood at the end of the seventh in precisely the same relations as at the end of the sixth. When A missed in the seventh he had in reserve his right of re-entry which no one else possessed, but when all missed on that round he was restored to all his previous rights without the necessity or privilege of putting up his extra dollar. The failure of one of the other shooters to kill left A in the same position as though the round had not been shot. However, had one of them killed, A could have put up his extra money and forced the other shooter to contest another round. This being unnecessary by the failure of all to kill, A was restored his full right of re-entry, which he could exercise on some succeeding round when he missed and some one else killed. He has but one dollar in the pot against the others' two each, and it is an absurd proposition that when he has missed a bird he can take all the money merely because the others also missed. The special rule made does not apply in the case of the seventh round as A, by missing, forfeited his present interest in the pot, and it was only restored to him by the others failing to kill.

The unanimous opinion of all the Chicago sportsmen, who may be properly regarded authorities by virtue of long experience, is as outlined above, and I have endeavored at such length to place the point properly before you. The following diagram explains the rounds as each were shot:

	1	2	3	4	5	6	7	8
A	1	1	1	1	1	1	0	1
B	1	1	0	1	1	1	1	0
C	0	1	1	1	0			
D	1	1	1	0	1	1	0	
E	1	0	1	1	1	1	1	0

Will you kindly give your opinion in your next issue, and much oblige myself and many others. W. P. MUSSEY.

[The decision given by the paper was correct. If this had been a simple miss-and-out match, it would be true that the seventh round should be considered a dead one, and A would then be on an equality with the rest. But the agreement to allow one re-entry apiece made this in effect a two-misses-and-out match. In a plain, straight miss-and-out, when a shooter misses once he is out for good and all, unless the heat be a dead one by all the contestants missing. In the same way in this two-misses-and-out match when a contestant misses twice he is out for good and all, unless the round be a dead one, because in it all the contestants miss their second time. The seventh round in this case was not a dead one; in it B, D and E missed for the second time each and were out; A missed only for the first time; was not on a level with the rest who had missed twice, and has the right to put up his dollar and go into the next round all alone. In other words, the match was one of successive stages, each man had the right to go on to another stage until barred out by two failures. C exhausted his privileges in the fifth stage; B, D and E theirs in the seventh stage; A not until he missed in the seventh or a subsequent one.]

CHICAGO.

CHICAGO, Feb. 25.—The Mak-saw-ba Club had a shoot at Davis, Ind., Feb. 23, for the Wilcox handicap medal, 15 singles, scoring thus:

W Shepard	(29)121112012002111—12	H Sloan	(30).. 122201122120222—13
R B Organ	(30).012010101011101— 9	J A Sharp	(28).021010002101001— 7
G Randall	(30).211202211101112—13	J Kinney	(25)..102011011010121—10
J Watson	(30)..122222112210211—14	H Buechner	(28)211202001101011—10
W Haskell	(30).211110011002010— 9		

John Watson having won this medal three times in succession, it is now his property. Dr. Baxter will contribute another medal for competition. A team shoot followed:

J Watson	(30)...0202101112— 7	R B Organ	(30)..1211202122— 9
H Sloan	(30).....0211201211— 8	W Haskell	(30).1220110212— 8
G Randall	(30)...1120021211— 8	H Buechner	(28)1190202110— 6
W Shepard	(29).1101220101— 7	J A Sharp	(27)..0020020110— 4
J Kinney	(25)...1211122111—10—40	W Nicholson	(29)0111012122— 8—35

Leiter handicap medal:

R B Organ (25yds.)	1101101000011001010—10
J A Sharp (15)	0010111111110000111—12

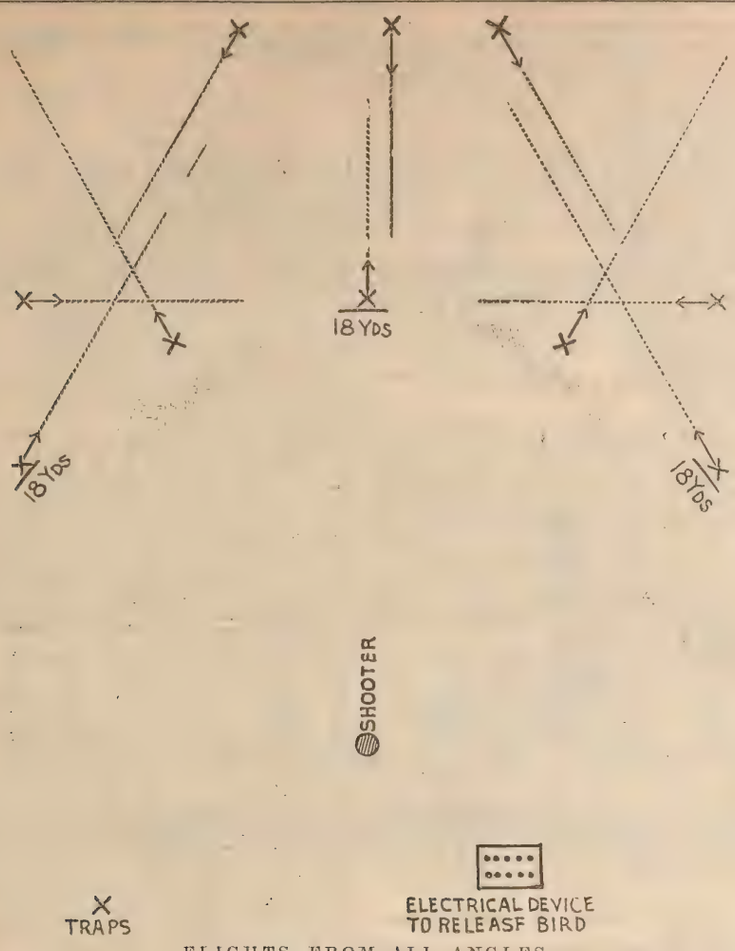
H Sloan (18)	0111110010010011010—10



M. C. Nicholson not shooting for medal.

A match at 50 live birds, $50 a side will be shot at Grand Crossing on March 12 between Mr. Wm. P. Mussey and Mr. J. E. Price, under Illinois State rules. John J. Kleinman has been chosen stakeholder. E. H.

WELLINGTON, Mass., March 2.—The pleasant weather to-day attracted a large number of gunners to the grounds of the Wellington Club. In the contest for the silver pitcher Lee and Chase tied with a clean score of 15 each, and in the shoot off Lee won. The scores in the merchandise match were as follows: Leon 10, Lang 13, Bennett 12, Allerton 11, Choate 15, Wheeler 11, Payson 12, Conant 8, Perry 12, Moses 8, Bowker 8, Bradbury 8, Chase 12, Gale 12, Baxter 12, Stanton 11, Swift 13, Schaefer 12, Warren 10, Short 8, Bond 13, Bradstreet 11, Field 13, North 11. Snow 13, Lee 12.

SPRINGFIELD, N. J.—The Union Gun Club, of Springfield, will on March 18 put out a scrub team to shoot the first team of the Bergen Gun Club, of Cherry Hill. The match will take place at Springfield, the teams to comprise ten men each and each man to shoot at 25 artificial birds.

BUDD AND STICE.—*Special to Forest and Stream.*—Jacksonville, Ill., March 5.—The Budd-Stice match to-day was a tie, score, 37 each. Birds very fast, and a strong wind in their favor

FLIGHTS FROM ALL ANGLES.

FLIGHTS FROM ALL ANGLES.

INDIANAPOLIS, Ind., Feb. 20.—*Editor Forest and Stream:* Much has been written in reference to the small attendance at trap shoots, a remedy to increase the same, and a return of rivalry and enthusiasm that prevailed a year or so ago. Man soon tires of too much sameness, and new kinks and features must be added from time to time to keep the old shots in line and attract new blood. My idea for years has been that to make the present inanimate target a success the traps should be so arranged that we get a flight from all angles, and put it on a par with field shooting, as it is very uncertain which flight the shooter will receive. The inclosed diagram fully explains my scheme, which, operated in conjunction with the electrical device, which, by the way, is simply perfection in releasing the bird, adds a charm to trap-shooting. The traps as arranged can be worked successfully with two cells of battery. Gentlemen, study it and let's hear from you; any angle desired can be secured and the traps placed in a trench out of sight of the shooter. KINK.

TRAP CHAT.

MR. W. L. COLVILLE, the "Dick Swiveller" of sportsman's literature, has severed his connection with the Meacham Arms Co. of St. Louis and has accepted the position of traveling representative of the new Baker gun, now made at Batavia, N.Y., where the company has erected a large plant. "Dick" called on us last week and says he will be around among the boys this year with his Baker. He will be more of a swiveller now than ever, revolving from the Atlantic to the Pacific. He starts for the coast soon, and will thus enlarge an already extensive acquaintance with sportsmen.

Mr. J. E. Miller, who so ably represented the Peters Cartridge Co. last year, has accepted a position with the Western Arms and Cartridge Co. of Chicago, to take charge of their gun department. This seems to us like a good move for the Arms Co., as "Jabe" has hosts of friends among the shooting fraternity, many of whom will no doubt be glad to throw trade in his way.

Fred Quimby, writing from St. Louis, tells us that the Westerners have been treating him in royal good fashion, as a representative Eastern shooter, and we presume this sort of medicine will be given him to the end of his trip, as Fred makes friends wherever he goes. He corroborates the rumor of the many challenges sent him by the Cincinnatians, and says that to accept them all would keep him shooting every day till some time in August. He will come home with a new title, "the champion shot of the Blue Island (N. J.) Gun Club," the exact significance of which we are in doubt of.

The Advisory Board of the American Shooting Association met in Cincinnati almost two weeks ago and adopted a set of rules for live bird and inanimate target shooting, subject to the approval of the directors. They have been accepted by them and will shortly appear in print.

The Association has directed the manager to arrange for two tournaments, one in Cincinnati and one in Boston, the dates for which have not yet been fixed. This will test the pulse of the shooting world, and other tournaments will probably follow. We look for great results from the work of this Association. They have in view schemes which, if carried out, will astonish the public and achieve their ultimanate aim, viz., to increase the number of shooters and the consumption of shooting paraphernalia.

Charles Smith, of Plainfield, N. J., "Dutchy," and Gus Maintz, of Orange, N. J., are matched for a race at 50 live birds, Hurlingham rules, 30yds. rise, for $50 a side, loser to pay for the birds. The match is to come off at Erb's Park, Newark, N. J., Thursday, March 21, at 2 P. M. There is much friendly rivalry between them, and as they are very evenly matched the race should be an interesting one. At their last contest Manitz won by one bird, with a score of 42 to 41.

Uncle Billy Sigler says that up to the date of his match with Wm. Lever, he had never shot at more than a dozen pairs of live birds in his life. This seems strange when it is remembered how long he has been shooting at the trap, but he certainly proved his ability in a race of this kind on Thursday last.

At the conclusion of the Sigler-Lever match last Thursday considerable "shooting talk" ensued, and some matches may be the result. "Old South Paw" was so jubilant over Sigler's victory that he offered to match him against Leander Campbell, of Little Silver, N. J., for $100 or $250 at any race or conditions with the single exception that Campbell should not be allowed to put the birds in the trap, but as that seemed to be the vital point with Leander, no agreement was arrived at.

Commenting on the two Tucker systems a correspondent writes: "The first one is no good, as any three men who are expert shots can beat it out every time. The second is even worse. A man might better take his money and shake dice to commence with than to adopt this, as he would would win oftener, having more chances, and money would last longer. When you come to making one's skill (after all his good shooting) end up as a matter of mere chance, then it is time some other plan was adopted. I proposed to classify the shooters in New York State shoot and a howl came from the experts (and these howls are what we amateurs want), said it could not be done, etc. But we did do it and it worked to a charm at Auburn last year. 'Mac' has got the test system out and it works to a charm where there are more than twenty entries."

SIGLER AGAINST LEVER.

ON Thursday, Feb. 23, a match at double rises, live birds, was shot at Erb's Park, Newark, between Wm. Sigler, of Montclair, N. J., and Wm. Lever, of Elizabeth, N. J. This match was the outcome of a little bluff talk on the part of Mr. Lever, on the occasion of his match with C. M. Hedden a week or two ago, when it is said he expressed himself as confident of his ability to defeat any member of the Jersey Heights Gun Club at any race. This was an imputation on the prowess of his fellow members which "Old South Paw," Al. Heritage, could not brook, and he immediately called Mr. Lever down, offering to name a man against him, Lever to make the race and conditions. Accordingly it was agreed to shoot for $100 a side, at 25 pairs live birds, double rises, at 25yds. rise, gun below the elbow until one bird is on the wing; traps to be set 5yds. apart and only one bird in each trap; two sets of traps to be used, and the set to be used to be decided by head or tail, and the next shooter to take the remaining set; $25 each was posted as forfeit with Dan Terry, and Heritage named Wm. Sigler as the man to whom he pinned his faith. Two o'clock was the hour set, and long before that time the crowd began to gather, until when the race was called about two hundred noted Jersey shooters were present. Among them were noticed such old-timers as Hugh Leddy, Charlie Smith, Milt. Lindsley, W. M. Force, Al. Heritage, Leander Campbell of Little Silver, Frank Class of Pine Brook, Dan Terry, John Riggott of Rockaway, Wm. Van Siclen of Metuchen, E D. Miller of Springfield, J. R. Burnett of Newark, Cornelius Voorhees, Sam Castle, the brothers Peck of Haverstraw, N. Y., Charles Drake and August Peck, of Fanwood Gun Club, Scotch Plain; Henry Sigler, a brother of "Uncle Billy," H. Quad, Gus Freche, Gus Manitz, John Robinson, C. M. Hedden, O. Von Lengerke, Mose Williams and a host of others.

Enoch Miller was chosen judge for Sigler, and Mose Williams for Lever. Referee, Dan Terry. "Uncle Billy" won the toss and went to the score first, taking traps Nos. 1 and 2, grassing, or snowing (as the ground was covered with snow), his birds in good style. Lever answered with two kills, but lost both of his next pair. This, the crowd thought, gave Sigler an advantage, but he immediately followed with two misses, whereat a great laugh went up. Lever again missed on his first bird of fifth pair, and from that time Sigler gradually increased his lead, finishing six birds to the good. Lever was not shooting in his usual form for some reason or other, as he is capable of a great deal better score than 30. He was the favorite in the start, and some onlookers were offering $10 to $6 on his winning; but "Uncle Billy" is not an easy man to beat, although not accustomed to double bird shooting. The birds were a fairly good lot, some of them clippers which succeeded in getting over the fence, and beyond the reach of the usual army of scouters. Johnny Erb's setters, Lem and Sank, did the retrieving, and seemed to enjoy the work thoroughly. Below are the scores made:

Wm Sigler	....11 11 00 11 11 10 11 11 10 11 00 01 11	
	11 11 10 10 11 10 01 10 10 10 11 11—36	
Wm Lever	....11 00 11 11 01 00 10 11 10 01 11 10 11	
	11 00 10 10 01 10 00 11 01 01 01 11—30	

After the match was settled a sweep at 4 live birds was started at 30yds. rise, $2 entrance, three moneys. The ties were numerous, and were shot miss and out. It took all the birds to decide the winners, who were J. Harrison and Williams first, A. Hedden and Manitz second, and Winans, with his crooked gun, third alone.

Sweep at 4 live birds, $2 entrance, 30yds. rise, three moneys, 50, 30 and 20 per cent.:

HUTCHINSON GUN CLUB.—Hutchinson, Kan., Feb. 14.—The shooting yesterday was the best ever done on the grounds. A strong south wind prevailed, but this did not seem to bother the shooters. The day was warm and the boys enjoyed the sport. The shooting of Young and Chamberlain was exceptionally good. The score—15 singles and 5 pairs bluerocks:

Chamberlain	1101111111111111	11 11 11 10 11—23
Young	1111111111111011	10 11 11 10 11—22
Taylor	1110111111111110	11 11 00 11 10—20
Burslem	1110111111101101	11 11 00 11 11—20
Allen	0010011001000000	Withdrew.

Twenty-five single bluerocks:

Young	1111111111111111111111111—25
Chamberlain	1010111111111111111111111—23
Allen	1111111111110111111010101—22
Burslem	0011111001101111111111111—20
George	1111111011111110w.

Nine singles and 3 pairs:

Burslem	111111111	11 11 11—15
Young	111111111	11 10 11—14
Chamberlain	101111111	11 10 11—13
George	111111111	10 10 11—13
Allen	100111111	01 10 11—11
Keyes	110111100	10 01 00— 8

Feb. 23.—Yesterday eight members of the club met to contest for the handsome silver cup, the shooting being at 50 single bluerocks. The norther which was predicted by the weather service was on hand and made it very uncomfortable for the boys. The match would have been postponed to a time when the weather was more comfortable had it not been that one or two of the members could not tell when they could attend another shoot. However, they built a rousing fire in the club house, and managed to get along very comfortably, considering the fact that the mercury was dodging about the zero notch. Good scores were an impossibility in the high wind, but the shooting was very good considering the disadvantages encountered. The shooting of Chamberlain was excellent, as was that also of Allen and Young. The latter gentlemen are great finishers, each getting 19 out of the last 20 shot at. Chamberlain used a Lefevre gun, 3½drs. of Laflin & Rand's trap powder, and 1¼oz. of No. 8 soft shot. The Hutchinson Gun Club stands very close to first place among the clubs in the State. The score: First match, 7 live birds, under modified Hurlingham rules:

Chamberlain	1111111—7	Holly	1010111—5
George	1001111—5	Burslem	0100111—4
Young	1101110—5	Jones	1101001—4

Second match, 50 single bluerocks:

Wm Chamberlain	40	S W Forsha	33
Will Allen	39	Fred Burslem	31
E H Young	38	E B Holly	26
Miles Taylor	38	P C Jones	15
J S George	37		

SHADY.

TORONTO, Feb. 27.—The last shoot for the gold medals presented to this club for competition came off at McDowall & Co.'s grounds this afternoon. Besides the participants in the shoot there were also present a number of spectators, who took an active interest in the sport. There were, in addition to the medals, money prizes for first and second class. Each contestant shot at 20 birds. The following are the full scores:

First Class.			Second Class.	
W Felstead	14 19 17 14 18—82	F Morley	10 13 14 13 13—63	
T Bennett	17 18 12 15 15—77	S McClure	14 14 13 13 8—62	
W McDowall	13 15 15 12 16—76	Sawden, Jr.	10 13 12 12 13—60	
Heatherington	11 11 16 15 17—69	Sawden, Sr.	10 8 14 13 13—58	
G Morley	19 13 15 10 10—67	Mitchell	9 9 15 13 9—55	

MINNEAPOLIS, Minn.—The annual tournament of the Minneapolis Gun Club will take place May 21, 22 and 23. Open to Wisconsin, Iowa and Dakota; professionals barred. Address all communications to JAMES PYE, Sec'y.

CORRY, Pa., March 1.—The Corry Gun Club held their weekly shoot at the club grounds yesterday afternoon at Keystone targets, Keystone rules. Blydenburg won the gold medal and Parker the leather medal. Following is the score in detail:

Berliner	10111101011011110101100—17
Newsman	10001001101010010010111—11
Waggoner	10010010100100000010101—8
H Arnold	01111011111010101111110—20
Blydenburg	10111101011111111111111—22
Ellis	10010010110011010111000—13
Lawrie	01111011111111101110110—20
Norton	11000001000001101000100—8
Austin	00001011100010010000110—9

Wilson	00000011101110111101101101—16

WOLVERINE CLUB.—Benton Harbor, Mich., Feb. 25.—About twenty sportsmen met at Dr. Rockwell's office last evening to form a gun club for the purpose of promoting the practice of field sports. It was decided to call it the Wolverine Gun Club of Benton Harbor. The following officers were elected for one year: President, H. C. Rockwell; First Vice-President, O. B. Hipp; Second Vice-President, J. P. Nicholas; Secretary and Treasurer, Geo. B. Thayer. The president appointed a field committee of three to serve three months, as follows: W. A. Boswell, J. Hamilton and Geo. Lake. After deciding to hold weekly shoots on each Tuesday afternoon, the club adjourned to meet on the evening of the third Thursday in March.

SEVILLE, O., March 2.—Only six members of the club faced the traps to-day. A mist and fog hung over the grounds, making the targets look rather indistinct. 25 standards, 3 traps, Chamberlin rules:

Matteson	11111110101111101010010—19
DeWitt	01111110111100011111101—16
Leland	11111101101111101000110—18
High	10001100111011111110101—16
Egbert	11101111010111011111010—20
Day	10100100100110000001111111—12

CHIPPEWA.

LAFAYETTE, Ind., Aug. 21, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Dear Sir—I am pleased to be able to give you a most satisfactory account of the paper shells you sent me. I have used Schultze powder altogether for the last seven years, with Eley's shells, and yours are the first perfect substitute I have found, and I shall take care to recommend their use. (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS.....
Secretary-Treasurer: GEO. W. HATTON } Peterborough, Can.

	Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	W. R. Huntington	E. W. Masten	T. H. Stryker, Rome, N. Y.
Atlantic Div.	W. P. Stephens	L. B. Palmer	F. L. Dunnell, 186 Jerolemon St., Brooklyn.
Eastern Div.	H. E. Rice, M. D.	Maxton Holmes	H. D. Marsh, Springfield, Mass.
N'thern Div.	Robert Tyson	S. S. Robinson	Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

FIXTURES.

MAY.

May 27 to June 1. Delaware River Meet, Delanco.

JUNE.

8. Ianthe, Spring, Newark.

AUGUST.

—. Pequot Meet, Thimble Islands.
16-30. A. C. A. Meet, Sugar Island, St. Lawrence River.

SEPTEMBER.

14. Ianthe, Annual, Newark.

SLIDING SEATS FOR PADDLING.

Editor Forest and Stream:

I was glad to see "Narka's" letter on sliding seats for canoes in the FOREST AND STREAM of Dec. 13, 1888, for though his is only a qualified approval of the sliding seat, he says enough to induce others to try it, those who paddle merely for pleasure and exercise, and do not race, the great majority of paddling canoeists after all.

The unsatisfactory thing about canoe paddling, as heretofore practiced, is undoubtedly the want of exercise for the legs, which get very unwholesomely cramped in a long day's paddle. If the prevention of this only can be attained by the use of the sliding seat, it will be very much; but I think more is to be got out of the idea.

To slide, with the heels about level with the seat, is undoubtedly hard work, therefore I propose to try, as soon as I can get the opportunity (I am just now far from my canoe and any canoeing water) a slightly raised seat, and with the after end of the slide somewhat higher (say ¾in.) than the forward end of it. It is the getting forward on the slide that is trying, and the higher seat, as well as the slope downward to the front of the sliding apparatus, will, I think, make this much easier, as will also foot straps that come well over the foot, and not only over the toes.

"Narka's" account of how he found sliding four or five inches, on a "seat made with a smooth surface," "very useful," is highly suggestive. This is precisely the experience with rowboats, that led up to the slide now in common use, and the earlier "slides" were nothing like so long as they are now made. My idea, and my instructions to the builder of my canoe, were to have a slide only some six inches long, but he put in a much longer slide. I was going to shorten this, but as I found after trial that it worked well enough, I left it alone. I will now for experiment try a shorter slide. The alteration of the length of a slide, as well as the fitting of a slide to any canoe, is, as all boating men will understand, a very simple matter. Whether it was the printer's devil or my writing that was to blame I know not, but my last letter did not come out in type just as I wrote it. I hope I have given the devil no handle this time. C. A. G.

INDIA, Jan. 21.

NEW YORK C. C.

AMONG those fortunate members of the New York C. C. who are able to enjoy the sport in winter as well as summer, are Messrs. C. L. Norton, now in Florida with Mr. and Mrs. Munroe; Mr. Nadal, who writes us as below from Bermuda, where he is in company with another old member of the club, Mr. Sutherland Smith, while Mr. Bigelow has just returned from a trip among the Caribees with his canoe.

Col. Norton went from Jacksonville by rail and steamer to Jupiter Inlet, taking his canoe Kittiwake, then fell in with the coast survey schooner Spy, going on her to Fowey Rock Light, abreast of Cocoanut Grove and some 15 miles distant, and sailing across the Bay, reaching Cocoanut Grove at 8 P. M. on Feb. 2 while the annual meeting of the Biscayne Bay Y. C. was in progress at the house of Secretary Munroe. Since then he and Mr. Munroe, in the latter's yacht Allapatta, have cruised about the Bay and into the Everglades.

On Feb. 15 a party of Indians, bound south on a hunting expedition, camped for the night beside a large spring in front of Mr. Munroe's house, and one was persuaded to sell a race in his big cypress canoe against the Kittiwake. The latter was successful on all points of sailing, to her owner's great delight. Kittiwake was entered in the dinghy class in the open regatta of the B. Y. C. on Feb. 22, and next day her owner was to leave, going part of the way to Lake Worth on the Allapatta and then making his way alone by canoe to Jupiter.

Mr. Nadal, who lately sailed for Bermuda with his canoe, writes as follows from Hamilton under date of Feb. 20:

Editor Forest and Stream:

The FOREST AND STREAM has no doubt frequently heard of Bermuda, but perhaps not as a place suitable for canoeing. The writer received many warnings as to the danger and uselessness of bringing a sailing canoe to Bermuda, the squalls were represented to be heavy and sudden; but my experience while here is that the wind, while constant and frequently stiff, is much steadier than in any place where I have sailed, and with much less sea to contend with. Twice I've had the wind. Lake Champlain and Lake George can certainly give Bermuda long odds as to squalls. The temperature is certainly delightful. Even during a three-days' gale the softness of the air was extremely pleasant. Mr. Sutherland Smith, who is a well-known and enthusiastic paddling canoeist, fortunately for me, accompanies me here. Being well known in Bermuda and having been over many portions of the island, he is a complete guide, philosopher and friend to a novice. Hamilton harbor is an ideal piece of water for canoe sailing, containing every variety of sheltered and open water. With its many islands, it more resembles a lake than a harbor.

The beauty of Harrington Sound, Castle Harbor and St. George's Harbor are too well known to need more than a mere mention. Harrington Sound is an immense sheet of water of, I believe, unknown depth, surrounded by high hills, and connected with an inlet of the ocean by a sluice way, say 25ft. in width, through which the tide rushes at a great rate. One of Mr. Smith's amusements is running this reversible rapid in his 20lbs. canoe. A good sailor should bring his whole rig, storm and racing. He may have stormy weather, or he may have a succession of the most lovely days, which quite repay him for the bad weather. As to temperature, the gardens are full of flowers, and you sit with all the windows open and listen to the chirping of the birds. There is a little landlocked harbor at the back of the Princess Hotel where my canoe is moored with absolute security. The Princess is perfectly kept, and the only hotel where a canoeist has this accommodation. I may be too enthusiastic, and certainly represent an experience of only two weeks as to weather, but of the beauty of the island and its waters I can speak without reserve.

B. H. NADAL.

"MAC" AND THE REGATTA COMMITTEE.

Editor Forest and Stream:

As my friend Mr. Vaux wishes to retire from the little controversy in which we have been engaged, on account of the field being "too large," I wish to correct some of his mis-statements before seeing him lay up for the winter.

Mr. Vaux, in the FOREST AND STREAM of Feb. 7, with reference to some of my previous letters, says:

1. Mr. MacKendrick made specific charges of lack of courage and woeful neglect on the part of the Regatta Committee of the A. C. A.

2. I do not wish to debate with so prolific a writer as Mr. Mac; life is too short and his field too large.

3. When I write that I would not oppose certain changes in the rules it seems to me an unwarranted deduction to infer that I would favor such changes.

With regard to his assertion No. 1, the specific charges of woeful neglect must exist in a diseased imagination, as I find on referring to my letter that I did not so much as even mention the '89 regatta committe of which he was chairman, and for whom I presume he is speaking.

With regard to article No. 3, Mr. Vaux says in the FOREST AND STREAM of Jan. 3 with reference to the hiker seat: "Yet I would not oppose its being ruled out if it extended beyond the side of the canoe; likewise I would not oppose a rule forbidding the centerboard coming above the deck."

As a usual thing canoeists are made of the stuff that does not care to dangle with one leg on each side of the fence, and I took Mr. Vaux for a thorough canoeist, who was either "wid us" or "agin us;" but that is where I made my mistake, and I beg to apologize for presuming that he was "wid us," though by his own words he said he was not "agin us."

With regard to No. 2. In starting this discussion I named three evils that I thought the incoming regatta committee should try to curb as much as possible. They were the hiker seat, the centerboard above the coaming, and the standing sail question.

In answering, Mr. Vaux said he would not oppose the first two, and the only point then remaining that I had debated was the standing rig. In my last I went in for the standing rig question, and now instead of endeavoring to controvert the arguments brought forward, Mr. Vaux complains that my field is too large and that I am too prolific a writer.

However, being an accommodating sort of fellow, I will narrow myself down to a question to suit his capacity, and discuss any one or all of these questions that I have brought forward, either in the columns of FOREST AND STREAM or privately by letter, and see if we cannot come nearer one another's ideas by a little quiet discussion. W. G. MACKENDRICK.

TORONTO, Feb. 14.

[The discussion has reached a point where it ceases to be of interest to canoeists, or of benefit to canoeing, and while desirous of giving fair play to both parties, we cannot afford space for any lengthy continuance of it. The letter from the chairman of the new regatta committee in our last issue defines the real points at issue very clearly, and we will give as much space as is possible to their discussion, only calling attention to the necessity for limiting the area of letters.]

CHANGES IN THE A. C. A. RULES.

THE following letter is the only one thus far received in answer to Mr. Edwards's suggestion of last week. We would be glad to have similar expressions of opinion, especially from the racing men, as it is only by this means that the Regatta Committee can arrive at any conclusion as to what is really desirable. Now is the time to speak out, and not later when the rules for the season have been settled.

Editor Forest and Stream:

Acting on the suggestion given by Commodore Edwards in your last issue, I would like to state briefly my individual opinion. It is very desirable for the Regatta Committee to make any necessary suggestions in time for this year's Executive Committee to act upon. I cannot see that anything would be gained by delay. Personally, I have used the standing rig, but judging from the results of many contests, notably with Mr. Butler's Fly, which is fitted with a lowering rig, I am convinced that the latter is, when well made, equally good for windward work, and is in every way more desirable. I believe the question of centerboards projecting above the deck will settle itself. I consider my boat as good for pure windward work as any, and in my case I have succeeded in placing it where I have sleeping room, and where it does not project above the deck. The question, also, of sliding seats is one that I do not consider as important as many seem to. I can hold my own boat up, carrying 98ft. of sail, in any weather in which I could carry the sail at all, without the aid of such extra appliances. If others wish to use it, thinking that they thereby gain an advantage, as far as I am concerned, they are welcome to. It is certainly a drier seat than the side of the boat, and as such is to be commended. Finally, I think it would be well if other individuals would express themselves in response to Commodore Edwards' call, and if they act on his suggestion to be brief, the FOREST AND STREAM will no doubt be glad to publish the views of men from all parts of the country. A final suggestion, and I have done. Cannot the Association follow the lead of the Atlantic Division in proposing one important race for boats combining the all-round essentials? I think it would then be soon demonstrated that the fastest possible type need not necessarily be different from the boat suitable for cruising and all-round work.

NEW YORK, March 4. WM. WHITLOCK, Guenn.

A CRUISE IN A DORY.

CHIPS FROM THE MONA'S LOG.

[*Concluded from page 123.*]

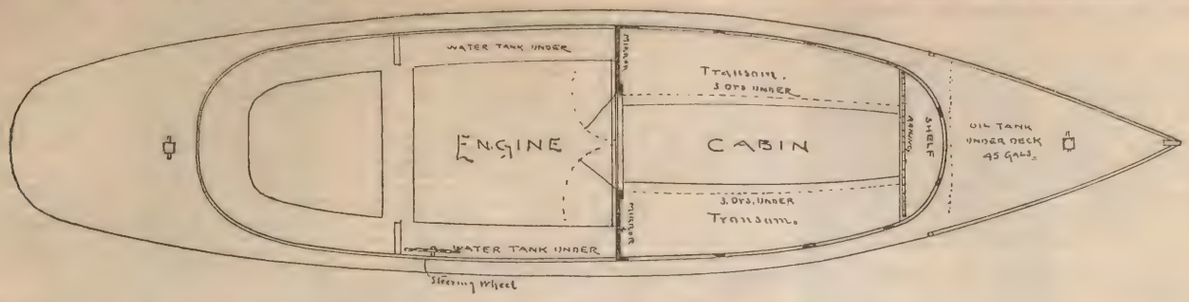
IT was a gray, chilly morning when we awoke. Over the cove hung an obscuring fold of mist, and from the chimneys of the little village the smoke dropped lower and lower in its ambition to make a veil for Smutty Nose. We lit the oil stove for warmth, and cooked breakfast, and while in the warm cabin heard a boat grate upon the pebbly beach. The fishermen were getting ready for their day's work, and said it would lighten in an hour. If that case we must return to the mainland, as our vacation was nearly ended. A cup of hot strong coffee, that, panacea for the exposed, quieted our shivering bodies, and we made the necessary preparations. An "old sea," a relic of last night's storm, was running outside, and the rocks were awash with towering breakers. But we must cross Ipswich Bay and get south of Eastern Point before night, so we had no alternative. The ballast bags were filled with 200lbs of gravel, and two large flat stones weighing at least 100lbs. each were lashed to the floor of the boat. The wind had dispelled the mist while we were stowing ballast, and the unmistakable signs of heavy weather warned us to leave no chance for shifting ballast. The rudder was lashed so it could not jump from its fastenings, and as a precaution a steering oar was lashed to the washboard.

When we were ready to start the wind had freshened and was blowing steadily from the northeast, and a heavy swell came rolling in from somewhere out in the Atlantic. Before we knew it we were rushing along headed southeast for Thatcher's, or where it ought to be according to compass. The dory pitched into the seas, now and then smothering a broad space of water should her as she plunged into the sea with a tremendous swash. We got into our oil jackets in short order, for it promised to be a "wet day." A fleet of fishermen and two timber laden coasters were working to windward on our port quarter, crowding the trembling mass of foam under their ponderous bows. A few gulls were balancing themselves against the streaming wind as they snatched their breakfasts from the curling wave crests. Right ahead was a small yacht wallowing through the seas under reefed mainsail and staysail, with a couple of fellows in oilers seated to windward and a third crouched at the long curved tiller. She was the Athlon, Boston.

We bowled along for two hours and then had to reef. Filling away again, the Mona was pitching and flinging the green seas in showers over the forward deck. The lee rail was awash, and we were deliberating whether to put in another reef when the wind began to abate. The bold coast line of Cape Ann was on our starboard bow, and sheeting in the mainsail we rushed along, both of us hanging out to windward, easing her to meet the heavy puffs. The staunch little Mona mounted swiftly upward with a steady heave upon the brow of a curling sea and then descending into the green valley beyond showered us with spray. Will was laid out in anguish away up forward, moaning for a bit of land to stand upon. The spray trickled upon his prostrate body and soaked him through and through, and he was supremely miserable. In a short time we were up with Thatcher's and fell into smoother water between it and Milk Island. Then Gloucester Harbor was entered, and with booms wide out we raced before wind and sea up the reach. Many vessels were coming and going, towboats puffed about in quest of a job, a bark, scarred with signs of a storm and hurling seas was smothering up the harbor, evidently from some salt port the other side of the world, and a passenger steamer was just making her dock. We rowed into the inner harbor, and just as we were entering a dock we had no end of trouble with a tugboat doing its best to back out. Her rapidly revolving screw filled the narrow space with boiling waves, which set our oars to nourishing like a pair of knitting needles in the hands of an expert and nearly dislocated our necks. Making fast we visited Higgins & Gifford's boat shop, where the famous dories Centennial, Nautilus and Dark Secret were conceived and put into shape. Then we climbed into the sanctum of the Daily *Breeze*, were reported and had a chat with Manager Haskell. We never let the chance go by to visit a newspaper office, for we are both newsmongers by trade.

The wind moderated after dinner and we ran out of the harbor, passed the Cut and in an hour were off Magnolia, and in a short time dropped anchor in front of the Masconomo House, Manchester. Here we spent the night, and next morning set sail for Salem Harbor. At 9 we were up with Baker's Island, and sped by the Misery, and five miles more run out astern found the Mona under the Beverly bridges bound under oars up the North River to Danversport to visit a canoeist friend. Then dropping down the muddy stream we crossed Beverly Harbor and landed at Juniper Point, and did some flirting with the best portion of a picnic—the girls.

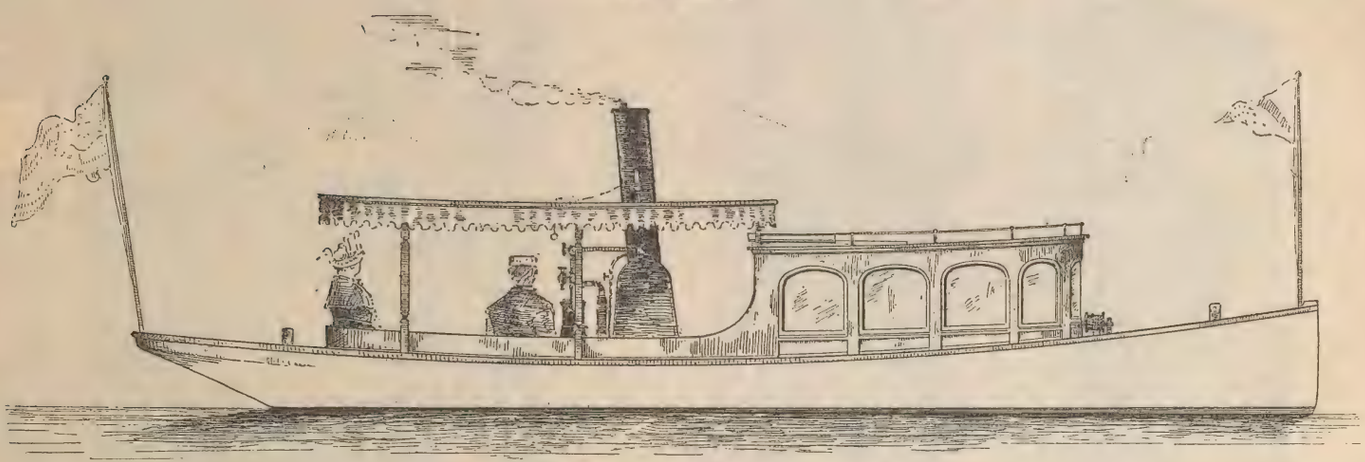
Again under sail, Marblehead Harbor was reached after passing Bass River, Naugus Head and Lowell Island, five miles seaward, and we anchored for the night. A large fleet of yachts were in the harbor, most of them cruising. A storm was brewing, and we rowed into the southern end of the harbor, close to the beach, and anchored the Mona bow and stern, not caring to have our slumber disturbed by the promenaders on the beach. There was no rain, but when evening came it was black as pitch. The riding lights on the yachts seemed like flickering sparks, and the numerous light towers in sight sent their strong rays far out across the water. About 10 o'clock the wind began to rise, and then the myriad of anchor lights were reeling and staggering with a sweeping movement further down the harbor where the waves rolled in around the Neck. We could hear the tide swash against the sides of our snug quarters, but there was no motion, we were so completely sheltered from the wind, which shrieked over us with gust after gust. We were lulled to sleep by the sobbing of the ripples and an occasional jar of our swinging rudder.



We were away early next day in company with a dozen small craft bound to Boston. It was a beautiful morning with just enough wind for comfortable sailing. Will was as chipper as a lark, his penchant toward sea sickness having left him with the run across Ipswich Bay in the northeaster. It was a perpetual regatta, and I will say that the Mona was in the thickest of the bunch. Egg Rock and Nahant were left astern and an hour was put in at Revere Beach. Then we headed for Boston with plenty of small craft all around us. We had a chat with a canoeist from Lynn, and he informed me there was nothing that could whip a dory running off the wind, but to windward they were no good. That nettled me, and shooting into the wind I asked him to prove it. We beat him badly, so badly that he left us to bear off the palm while he hunted up his club house. Lynn yachtsmen, I mean Corinthians, own several of these sailing dories. They are sloop-rigged, and one at least is a flyer, for we saw her coming up the harbor past Nahant at a great rate. But the bowsprit, boom and gaff are unfit for a cruiser like the Mona. They are always in the way when not wanted, more especially in portages, and when it is desirable to put up the tent for a night afloat.

Going into Boston Harbor we met a number of the Brewster family, and a numerous, dangerous family they are in a thick night, when sleet and rain obscure Boston Light, and the bowling gale drowns the hoarse note of the warning horn. We were out of our direct course, but it mattered little as there was plenty of daylight left. Will seized our fog horn, blew and puffed out his cheeks like two red balloons that threatened to sail away with him, doing his prettiest to salute an excursion steamer; but the reed in the horn had rusted, and wouldn't work, and the merry passengers had a good laugh at our expense. Boston Harbor has been so often pictured in ink that I won't force my feeble descriptive powers. We sailed through the maze of ferry boats, ocean steamers and schooners, passed under the railroad bridges into the Mystic, which we followed till dark, and then turned into our cabin, and slept, not "as the tired canoeist only can", but uneasily, till dawn. A cup of coffee braced us up for the row and carries which brought us to Winchester about noon. An express wagon, greased with a $2 bill, landed the Mona in the pond in front of my house, and the cruise in a dory was a memory of things that were. GEO. S. HUDSON.

ADDRESSES OF CORRESPONDENTS.—We have constant inquiry for the addresses of our correspondents from readers who wish to write to them. We do not give such addresses without express permission, but in all cases we will forward letters addressed to our care.



IANTHE C. C.—The first annual dinner of the Ianthe C. C. was held on March 2, at Morretti's restaurant, New York, about 30 members and guests being present. The evening was passed very pleasantly with songs and stories after the dinner, several very good poems being read.

A. C. A. MEMBERSHIP.—Atlantic Division: Chas. Le Sassier, Jr., New Orleans, La. Eastern Division: Paul B. Morgan, Worcester.

ELECTRA—A CRUISING STEAM LAUNCH.

Editor Forest and Stream:

A few weeks ago you published a letter from "Pacific," giving an account of his experience in steam launch cruising, and I think some of your readers would be interested with a brief sketch of one of my numerous exploits in the Electra, an oil-burning launch of 25ft. length over all., 5ft. 6in. beam and drawing 2ft. 6in. of water.

After two years experience with the Electra as an open boat I conceived the idea of a cabin that differs from the usual type from the fact that it is forward of the engine and boiler and incloses the most exposed part of the boat when the water is rough or choppy. As will be seen from the inclosed drawings the cabin is 7ft. long and but 2ft. 4in. above the deck, and has nine windows. The three forward sash are glazed with curved glass and the other six are arranged to drop in a pocket, making the cabin airy and comfortable on the hottest day. The interior has two transoms with hair cushions, affording good sleeping accommodations for two persons and a dry and cosy berth in the hardest rain storm.

A common mistake with most launches is in having an open cockpit forward of the cabin or house, as it soon fills with water when they enter a choppy sea. The cabin was put in the Electra last winter, and has been a decided success, enabling me to travel over water that would have swamped me the year before and without even getting a wet jacket. The Electra can make six and a half knots and keep it up all day. The fuel tanks hold 45 gallons and a run of 200 miles can be made without taking water or fuel.

Last August, in company with my friend the Doctor, I started from Marblehead Harbor for a short cruise to the eastward. As we were obliged to be back in five or six days we thought that if we got as far as Portsmouth, N. H., we would be satisfied. On the morning of Aug. 4, we turned out at 7 o'clock, had breakfast, cleared away, and after getting a supply of ice and stores we were steaming briskly out past Marblehead Light at 9 A. M. The wind was light from the S.E., and it was raining before we passed Barker's Island, but we were prepared for any kind of weather and went along comfortably, although the water was quite lumpy as we neared Gloucester. I had never been through the canal from Gloucester Harbor to Annisquam, and we decided to take advantage of the tide and opportunity and go through, consequently our trip was a short one and we were quietly at anchor in the Annisquam River at 11:30 A. M. The Doctor had some friends spending the summer there, so we passed the rest of the day with them. In the evening we enjoyed the cosy, well lighted cabin, when smoking was in order.

Sunday, Aug. 5, opened clear and warm with hardly a breath of wind, a fact, however, that does not disturb the mind of a steam yachtsman.

It was just about 10:30 A. M. as we passed out by Annisquam Light, intending to make Old York our next harbor if possible, and use up the rest of our time in dodging the storms (which were unusually frequent here last season) in getting back to Marblehead. We had the sea smooth as a pond and very light wind the entire distance, and at 3 P. M. had passed Whaleback Light off Portsmouth harbor, and at 4 o'clock were anchored in the charming little harbor of York, having made 35 nautical miles without a stop. Our trim little craft attracted the attention of the numerous pleasure boats used by the various guests of the hotels, and our preparations for dinner and subsequent banquet seemed to amuse them very much. Our portable table is soon set up in the cabin and the Doctor prepares a dinner of broiled steak and sweet potatoes, etc., which he declares cannot be equalled at the best hotel ashore. After mailing several letters that were a surprise to our friends of the day before, as we afterward learned, they not dreaming of our being further on our cruise than Rockport, we remained aboard the rest of the day and night.

During the evening there were indications of foul weather, and the next morning Aug. 6 we turned out to find the wind fresh from the northeast with plenty of fog and rain and a poor show for a run around Portsmouth. At noon the rain held up and we thought best to take a look outside. We had steam in ten minutes, and at 2:10 P. M. started out of the harbor with a strong ebb tide running out against the heavy sea that kicked up a fearful chop that caused the Electra to stand first on one end then on the other, but by slowing up the engine we went through all right and after getting clear of the harbor had nothing but a big swell to contend with, so I gave her all steam and we scooted for Portsmouth Light about five miles away, which we were anxious to reach before the fog came in again. It was nip and tuck however, for we were soon convinced that the fog was after us and gaining rapidly, so that just as we made Whale's Back Light at 3 P. M. it was as thick as mud. We had passed the numerous ledges that line the shore between York and this light and were consequently happy, for it was an easy matter to run up the river; and at 3:30 P. M. we had finished our trip for that day and were fast and safe alongside the wharf foot of State street, Portsmouth. We got more showers the rest of the day and evening but our cabin was dry and comfortable and we felt that our little adventure with the fog and northeast storm was as enjoyable as any trip we had made.

Tuesday, Aug. 7—Wind N.E. and showery. We made steam at 10 A. M. and ran up the river to Dover Point, and in the afternoon ran down to Kittery Point and anchored in a delightful little cove that seemed to please the Doctor very much.

Wednesday, Aug. 8, opened cloudy, with a light east wind but indications of clearing weather. We left our anchorage at 6:40 A. M., Portsmouth Light at 6:50 and steered south for Cape Ann. The run across to Rockport was made without any trouble, at 11:15 we passed Straitsmouth Island Light and made Eastern Point at 12:30 P. M. As we had another day left to get back to Marblehead and had made a run of 37 miles, we concluded to remain over night at Gloucester, and after getting a fish at the market we came to anchor and a first-class fish chowder was quickly tucked away under our jackets.

Thursday, Aug. 9—Another foggy morning. It cleared at noon and we got steam for our final run to Marblehead, which we reached at 2 P. M. Our trip had been so enjoyable, notwithstanding the bad weather, that we would gladly have prolonged it, and could have gone as far as Mt. Desert very comfortably if we had had two weeks more time.

I think but few yachtsmen are aware of the comfort and pleasure one can have in a small steam yacht properly equipped, and the distance that can be made during the summer months is on an average as great as that made by the largest sailing yacht. The days that a sailing yacht can make a run of 50 or 60 miles are rare.

I made the run from Marblehead Light to Portsmouth alone on Aug. 29 in seven hours, and returning Sept. 9 from Portsmouth Light to City Point, Boston, between the hours of 6 A. M. and 6 P. M., stopping two hours at Marblehead.

A. C. F.

NEW ROCHELLE Y. C.—The annual meeting of the New Rochelle Y. C. was held at the Hotel Brunswick on March 4. Clinton H. Seeley, sloop Psyche, was elected commodore by 15 votes to Charles Pryor's 13. The other officers elected were: Vice-Com., Z. Edwards Lewis; Rear Com., William F. Abbett; Sec., R. C. Eddy; Treas., Eugene Lambden; Meas., George C. Foster. Trustees, C. S. Odell, John Hardman, Charles Pryor. House Committee, W. H. Wilmarth, J. W. Rough, Joseph W. Gibson. Committee on Admission, H. S. Prati, H. Thompson, Charles E. Bateson. Law Committee, Walter Large and Charles H. Noxon. The club decided not to join the New York Yacht Racing Association.

INTERNATIONAL YACHTING.

THOUGH there is nothing known in yachting circles that would indicate a challenge for the America's Cup this year, the daily papers of New York and Boston are busily at work over all manner of stories. Every Saturday the cables bring a batch of alleged news, which is displayed at length in the Sunday papers. Last week was no exception, and we read of the sale of Thistle, her alteration to a centerboard boat, and a positive challenge from her, also of challenges from Lord Dunraven, possibly from Mr. Sidney Watson, owner of the new yawl, and also from an Australian yacht. One enterprising daily has lately put its British murder expert, a gentleman who has done some excellent detective work in connection with several famous murders, on the track of possible challengers, but thus far with no great success. This correspondent has put his employers to the expense of a trip from London to Southampton and also for nearly a column cable dispatch, merely to impart a very badly garbled story of Mr. Walter Reeks and a possible Australian challenge, telling nothing that has not been known in New York or Boston for three months. Among other valuable information gathered about Southampton is the news that Lord Dunraven's new cutter is to be 65ft. on waterline and 100ft. over all.

As to facts, it is very certain that Thistle was not sold up to a very short time. Last fall the idea of buying her and making some alterations with a view to a challenge was entertained by a British yachtsman, hence the letter to the New York Y. C., but this idea has been abandoned. It is very probable that Thistle will be sold at the first opportunity, as she could not be used by the syndicate which built and still owns her, nearly every member of which owns one or more yachts himself, and also there are the business details, which can only be settled by her sale. Even if she has been sold within the last few weeks, as reported, there is not the least reason to expect that she will be used for other than home racing or cruising. A statement cabled last week, that she is to be rigged as a yawl, indicates the latter object. When she was in this country Mr. Watson had the plans for her interior fitting completed, and brought them over with him, so that it would take but little time and money to convert her into a very comfortable cruiser.

As to a challenge from Lord Dunraven, it is no secret that he has been for some time anxious to challenge for the Cup, but so far as is known here he is not likely to come out this season with a new and untried boat, especially as the story now runs that she is to be built with a centerboard trunk, the slot being filled with lead, in which condition she will be tried against Yarana in the early races, afterward being fitted with a centerboard and tried again. Though her dimensions are not known as yet she will probably be about Yarana's length, 66ft. l.w.l., and thus will come in the class with Katrina, Shamrock and Titania. As matters stand, now that the new deed of "keeps" has been temporarily laid aside in hopes of courting a challenge this year, it is possible that one may be received prior to the middle of April, or possibly that even the six months notice itself may be waived in favor of a challenge in the summer, but at the same time there seems now little likelihood of a race this year. The last issue of the *Field* contains an advertisement of Thistle, for sale.

CYTHERA AS A RACER.—The fate of Cythera recalls to mind some stirring times of big cutter racing, and particularly of her visit to the Solent in 1874, and her fine set-to there with the Kriemhilda and Arrow to windward in a hard wind. Kriemhilda eventually came in first and won, but Cythera was by no means disgraced by the part she played as second fiddle in the match. The trio were in close company all through the match, Kriemhilda leading, the duration of the memorable race over the fifty miles course being:

Kriemhilda	5 01 40	Arrow	5 05 31
Cythera	5 02 30	Neva	5 15 03

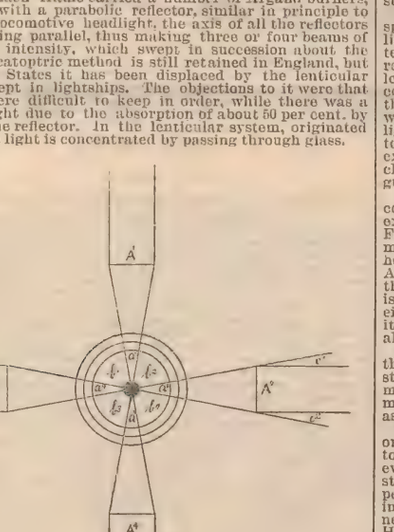
After this Cythera sailed two matches at Ryde in a wild wind, and won prizes, Kriemhilda was not among the competitors. Her owner, Mr. David Richardson, raced her for four seasons, and was undeniably successful, as she proved a large prize winner. Out of her 25 prizes no fewer than 3 were Queen's cups, and oddly enough each of these were won in Dublin Bay—two in the regattas of the Royal St. George's Yacht Club, and one in the regatta of the Royal Irish. Her record is as follows:

Year.	No. of Starts.	No. of Prizes.	Value.
1874	13	9	£625
1875	11	8	515
1877	8	4	190
1878	9	4	345
Total	41	25	£1,675

—*Field.*

CRUISING.—Alva, Mr. W. K. Vanderbilt, sailed from Bermuda on Feb. 9, and reaching Nice on Feb. 27, touching at Madeira and Algiers.... Sagamore, steam yacht, Mr. J. W. Slater, arrived at Jacksonville from Nassau on Feb. 28. Coronet, R. T. Bush, arrived at Malta on March 3.

SEAWANHAKA CORINTHIAN Y. C.—The second regular meeting will be held on March 9, at 8:30 P. M. Several important amendments to the rules will be considered.



NEW YORK Y. R. A.—The meeting of delegates to the New York Y. R. A. will be held at the Gilsey House on March 8, at 8 P. M.

LIGHTS, BUOYS AND OTHER AIDS TO NAVIGATION.

THE following is as complete an abstract as our space allows of the lecture delivered on Feb. 9 before the Seawanhaka Corinthian Y. C. by Lieut. Sidney A. Staunton, U. S. N. The lecturer first called attention to the conditions which maintained among the early mariners, an ignorance of astronomy in its application to navigation, and also of the compass; so that they were entirely dependent on lights and landmarks, the latter being purely natural, such as headlands, hills, high trees and isolated rocks. As far back as the days of the Phœnicians an effort was made to supply the deficiencies of nature in this respect by artificial means, such as fires by night and columns of smoke by day in conspicuous locations, and later by towers of wood or stone, serving, as now, the double purpose of a mark by day and a suitable elevation for the fire by night. Of these were probably unknown and local knowledge only was depended on, the first cruising ground of the early navigators, the Mediterranean, being comparatively free from shoals and reefs.

After a brief description of the celebrated Pharos of Alexandria, the lecturer called attention to the stone watch towers of the Romans, first along the Mediterranean and then carried along the coasts of Gaul and Britain, remains of which are still in existence. From the time of the Romans down to the eighteenth century no progress in the art of lighthouse illumination is discoverable, and up to the beginning of the present century the English and American sailor had no better guides than the Roman or Phœnician, coal fires on a stone tower being used as late as 1816, while in 1809 the famous Eddystone Light was equipped only with a chandelier of tallow candles, inferior to coal; the latter being difficult to transport to such an inaccessible locality. The first improvement on the open fire, obscured by smoke and with most of the rays wasted, was a covered lantern with lamps or candles, but the earliest of these were even inferior to the open fire. It is to France that mariners are indebted for the three great improvements which have made the art of coast lighting what it now is—the Argand burner, the parabolic reflector, and the Fresnel lens. By these are secured the two conditions on which efficient and economical lighting depend: First, that the light shall be clear, bright and free from smoke; second, that the rays proceeding from it shall be controlled and utilized. The first end is secured by the use of the Argand lamp in its later and improved form, with such illuminants as sperm and colza oil at first, replaced later on by lard and the higher grades of mineral oil, the latter being exclusively used in the United States.

After dwelling on the principles on which the diffusion and concentration of light depend, and the loss with the ordinary open lamp, the lecturer described the parabolic reflector, by which all the rays of light are concentrated in a single beam of great intensity. The catoptric method of lighting, formerly largely employed for revolving lights, consisted of three or four frames arranged about a vertical axis and revolved by a suitable mechanism. Each frame carried a number of Argand burners, each supplied with a parabolic reflector, similar in principle to the familiar locomotive headlight, the axis of all the reflectors in a frame being parallel, thus making three or four beams of light of great intensity, which swept in succession about the horizon. The catoptric method is still retained in England, but in the United States it has been displaced by the lenticular apparatus, except in lightships. The objections to it were that the mirrors were difficult to keep in order, while there was a great loss of light due to the absorption of about 50 per cent. by the metal of the reflector. In the lenticular system, originated by Fresnel, the light is concentrated by passing through glass.

The lecturer described the action of the ordinary plano-spherical lens in concentrating the rays into a beam, all being parallel to the axis, showing the difference between the spherical lens, the segment of a sphere, concentrating all rays into a cylindrical beam of light; and the cylindrical lens, a segment of a cylinder, concentrating the light in the direction of planes perpendicular to the axis of the cylinder, both of which methods are employed in lighthouse illumination. He then described the practical difficulties attending the large spherical lenses, and the manner in which they had been overcome by Fresnel, by making each lens of a number of pieces. The construction of the perfected Fresnel lens was described in detail; the central plano-convex lens of manageable dimensions, in the form of a belt or ring, surrounded above and below by other rings, each a portion of a lens, cast and ground to such a shape as to reflect those certain rays which fall on it in a direction parallel to the main axis. In addition to this system of lenses, prisms are employed above and below to refract the rays that would otherwise be wasted. The first arrangement for this end employed a system of lenses which refracted the more nearly vertical rays into pencils of light, which in turn were reflected by metallic mirrors into a direction parallel with the rays from the main system of lenses, but about 1843 these auxiliary lenses and mirrors were replaced by prisms, the loss due to the absorption by the mirrors being thus avoided.

The lighting of a coast has been compared to the lines of a fortified place; there are the outer lights on prominent headlands and outlying dangers, the great ocean or landfall lights, as they are sometimes called, usually of the first and second orders. These are the first seen when making land, and they are the lights by which positions are checked and courses laid in coasting navigation. They should be placed on a well-lighted coast that their circles of illumination cut each other, and no two lights within a distance of 60 to 80 miles of each other should have the same characteristics. The navigator doubtful of his position should be able to determine it at once by the characteristics of the first ocean light sighted. To this end the lights are both white and colored, while the duration of the light, either fixed or flashing, is varied in a number of ways.

The classification of lights in the United States is as follows:

Fixed white. Fixed red. Flashing white. Flashing red. Fixed white, varied by white flashes. Fixed white, varied by red flashes. Fixed white, varied by red and white flashes. Flashing red and white. Double lights.

These various combinations are effected through the use of the two classes of lenses—the spherical, which concentrates light in all directions and gives out a solid beam, and the cylindrical, which concentrates light only on the vertical lenses and gives out an equatorial belt of illumination. These lenses may be fixed or revolving with different intervals between the flashes, or a combination of fixed light and flashes; while the distinction may be still further varied by the introduction of color, through the interposition of colored glass between the flame and the light, red being employed for high-order lights. The effect of a spherical lens may be produced by placing outside of a horizontal cylindrical lens, which concentrates light only on vertical lines, a vertical cylindrical lens, which concentrates light only on horizontal lines. The first lens concentrates the rays which fall upon it into a band, and the second lens reduces a portion of this band to a beam of light; this method being much employed for flashing lights. The figure represents in plan a Fresnel apparatus provided with external panels of vertical cylindrical lenses, A^1 A^2 A^3 A^4, set in frame and revolved by clockwork about the principal lens. All the light of the angular spaces a^1 a^2 a^3 a^4 falls upon these vertical lenses, and is projected in brilliant beams, which sweep past the observer as flashes. The light of the angles, b^1 b^2 b^3 b^4, not subtended by the panels, retains its characteristics, and is observed as a fixed light less brilliant than the flashes. These panels of vertical lenses may be of greater or less height; if they are made only of the height of the principal lens of the Fresnel apparatus, the light transmitted from the reflecting rings above and below will pass above and below the revolving panels, and will appear as a fixed light of diminished intensity. An observer in the angles c^1 c^2 etc. will then see a faint fixed light, preceding and following the brilliant flash, and separating it by an appreciable interval from the steady and strong fixed light of the angles b^1 b^2 b^3 b^4. If red shades be interposed in the angles a^1 a^2 a^3 a^4 the flashes will be red; if the red shades be applied to a^1 a^3 only the flashes will be alternately red and white. If three panels be omitted the light would be fixed, with a long interval varied by a flash; if two be omitted and the other two be placed close together the light would be fixed, buried by two successive flashes. Thus there is ample opportunity for all necessary variations and distinctions.

The most magnificent chain of first order lights in the world is that extending from St. Augustine to Key West, guarding the low coast of Florida and the dangerous keys; 10 lights, placed at heights of 110 to 165ft. above the sea, and visible from 16¾ to 19 miles. Inside of the great landfall lights is a second line marking less prominent capes, interior dangers, and the mouths of harbors and estuaries. Lastly there are the harbor lights proper, small lights on piers and mole heads, and dangerous points within the anchorage grounds.

The lecturer next dwelt on the peculiar nature of the structures required for the lights, placed of necessity in exposed and outlying situations, often on rocks and reefs barely above the level of low water, and where not only was the work of construction difficult and dangerous, but the highest degree of engineering skill was needed to insure safety for the structure from the violence of the sea. As an instance the work on the celebrated light at Minot's Ledge was quoted, the first building, a skeleton structure of iron erected in 1848, being carried away by a great storm three years later. The work of replacing it with a more substantial structure was rendered extremely difficult from the fact that the rock was but 42in. above low water at the highest point, and in many places actually below. The new lighthouse was begun in 1855, under the direction of Gen. Alexander, but 190 hours work being possible in that year; 157 in 1856; 120 in 1857; 206 in 1858; 377 in 1859; and the balance in 1860. The outlying sand shoals are marked by structures founded on screw piles, with broad flanged screws deeply grounded in the sand, the upper portions being strongly braced. The magnificent skeleton towers of the Florida reefs rest upon massive iron piles, set deeply into the coral formation, and receiving additional support from heavy iron bearing plates resting on the coral; the piles passing through these plates and resting their shoulders, cast or forged on the pile, upon them. The towers themselves are distinguished by various markings, being painted in horizontal, vertical or spiral stripes, or in squares like a chess board.

Light vessels, placed on outlying shoals and the ends of sand spits, are more expensive to maintain than lighthouses, and are liable to be misplaced. Fixed lights only, on the catoptric system, are employed, the variations being five; fixed white, fixed red, fixed white and red, two fixed white, and two fixed red. The lecturer next considered the loss of light due to the use of colored glass, and the objections from this score, also the fact that under some conditions red and white lights, side by side, were undistinguishable; as is sometimes seen in a fixed white light in which also a panel of red glass on each side is arranged to cut off all but a certain angle within which some danger exists. In some cases where red and white are used in such close connection it has been found at times impossible to distinguish the two.

The question of the best illuminant for lighthouse uses was next considered in the light of the very full and complete report of the experiments made in 1884-5 by the British authorities, at the South Foreland; in which oil, gas and electricity were tested, the former being pronounced the best for the general purposes of lighthouse illumination, power, convenience and cost being considered. At the same time the electric light was favorably mentioned for the most important landfall lights, from its great intensity. This is due to the fact that the arc light itself is much smaller than either gas or oil, both of which require a number of burners, and it thus conforms more nearly to theoretic requirements, nearly all the rays falling on the refracting lenses.

While a beacon may be lighted, the general understanding of the term is an unlighted landmark, usually a tower of wood or stone, but sometimes merely an iron post set in a rock and surmounted by a ball or cage. Range beacons, placed on shore to mark the direction of narrow channels, are made as conspicuous as possible.

Taking up next the subject of buoys, the lecturer described the ordinary spar buoys, placed with the red ones, or even numbers, to starboard in entering a river or harbor, and the black, or uneven numbers, to port, with the striped buoys which mark obstructions or mid-channel; also the various iron buoys, can, nun, perch and ball, and whistling buoys. The latter, an American invention, was described in detail, as were the bell buoys. The new electric buoys now used in Gedney's Channel, New York Harbor, were next described, spar buoys surmounted by strong iron cages, so that they could withstand the blows of ice or wreckage if carried under water. Within the cage is a lantern with an incandescent lamp of 100 candle power, connected by a submarine cable with a dynamo station on Sandy Hook. The cable is carefully protected where it runs along the spar, being let into a deep groove and covered with a batten. The area covered by these buoys and cables is protected by a red sector, as previously described, on the East Beacon, warning vessels against anchoring where they might foul the cables. Since these buoys were first lighted, Nov. 7, 1888, it has been possible for large vessels to enter the harbor at night, which they could not do before.

A very interesting part of the lecture was that devoted to the apparatus for giving warning of danger by means of sound, through fog bells, fog horns, steam whistles and sirens. The steam locomotive whistle of 6 to 18in. diameter, with 50 to 100lbs. of steam, is used successfully in the United States and Canada, though not in favor in Europe; it may be heard upward of 20 miles, according to size, and stands next in the order of usefulness to the siren. The fog horn of large size, driven by compressed air, which acts by causing a huge reed to vibrate, is sometimes used in the United States, but is open to objections, not being entirely reliable, and said to deteriorate with age and use. In the siren the trumpet is used also, but the reed is replaced by two metal discs in the throat of the trumpet, each with 12 radial slits. One disc is stationary, while the other can be revolved by machinery 2,400 times per minute, and as 12 jets of air or steam escape at each revolution some 30,000 vibrations of the air in the trumpet may be produced. Not only can the sound be heard at a great distance, but the peculiar pitch and quality makes it dominant over the ordinary noises on board ship. Like the lights, all the sound signals may be varied in such a way as to be readily distinguishable from each other where two or more are in close proximity.

The lecturer then gave some statistics of the present U. S. Lighthouse Service, paying a well-deserved compliment to its completeness and efficiency. The concluding portion of the lecture was devoted to a consideration or the reliability of the various aids described, and to the degree of dependence that may safely be placed in them. No sense of security could be felt by any sailor if it were a matter of doubt whether or not a light was burning or a buoy had held its position. With the perfected appliances and the excellent discipline of our Lighthouse Service it may be assumed that lights which have the constant attendance of keepers can always be depended upon; but there is a source of unreliability of lights, which is beyond the reach of discipline or care. This arises from the selective absorption of the atmosphere, and its preference for the rays at the violet end of the spectrum; so that under certain conditions a white light may appear to be red, and may be undistinguishable from a red light located beside it. The powerful light at Cape Charles is surrounded by low, marshy flats, from which mists and vapors arise; while the Cape Henry light, 15 miles distant, is on a dry, sandy point. The former light has frequently been reported as showing red, while no complaint has ever been made of the latter. The Nobska Point Light, in Vineyard Sound, has a red sector, and when the wind is S.E. and the weather hazy this sector cannot be distinguished, at a distance of 8 miles, from the white light on either side of it; but the moment that the wind goes to the north with clearing weather, the red and white lights are distinct. Buoys sometimes drift from their positions, or the bottom itself changes, but in this country at least the danger from such errors is minimized by a very thorough system of inspection and verification of all such marks.

Sound signals are the most unreliable of all aids to navigation, and what adds to the danger is the fact that the causes of their unreliability are not clearly understood. Curious instances of inaudible spaces within short range of a siren or whistle have been experimentally determined. In some instances the sound is lost, then heard in its full volume, and then lost again, quite within the ordinary range of its audibility. Generally speaking, the sound travels well with the wind and badly against it, and has its ordinary effective calm weather range at right angles to the wind; but in northeast snowstorms on the New England coast the sound is best heard dead to windward, and fog signals have been heard 17 or 18 miles in the teeth of a violent gale. That condition of the atmosphere which best transmits sound has no relations whatever to its capacity for the transmission of light. Neither fog, mist nor falling snow seems in itself to affect unfavorably the intensity of sounds, and a northeast storm appears to be of the greatest advantage, while bright sunny weather, under certain circumstances, presents the most startling phenomena of inaudibility.

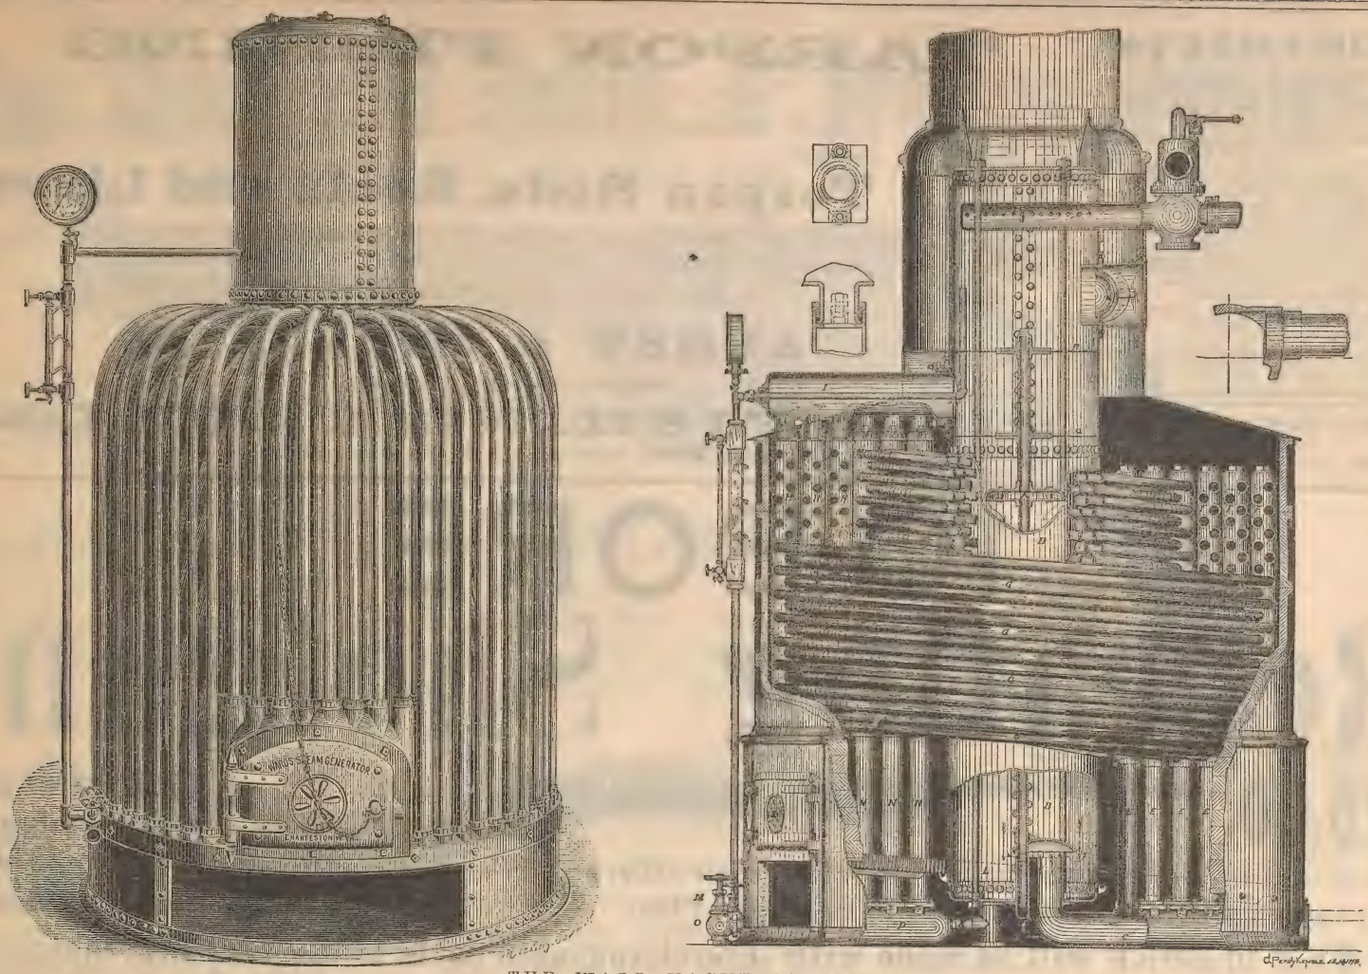
The lecturer then described the curious phenomena noted about the Beavertail and Little Gull stations, where over certain areas very close to the source of sound, neither whistle, fog horn no siren were audible. These phenomena were carefully noted at various times by the Lighthouse Service, but no satisfactory explanation was reached of the fact that sounds heard distinctly in one position were totally inaudible but 200yds. distant. The subject was well illustrated by charts of the localities, showing by black bands of varying breadths the area of greatest and least sound.

The lecture concluded with the following cautions: These remarkable exceptions to the trustworthiness of an important class of aids to navigation constitutes an element of danger which should not be neglected. If on a clear night a light is not seen when expected, it is a fair proof that the calculations are incorrect and the ship's position in error; but the same assertion cannot be made in the event of failure to hear a fog signal; and a negative reliance in dangerous navigation must not be placed upon them. It may be laid down as a general rule with regard to all classes of aids that a careful navigator should lose no opportunity of verifying by independent methods the position of his ship, whenever his knowledge upon that important subject falls in the slightest degree short of absolute certainty. In the lead he has an instrument which is always available, and if should be freely used when a knowledge of the depth of water is a check upon the ship's position.

BUILDING NEWS.

AT Salem, Mr. Frisbie has the 40 nearly decked and planked, and will timber out the 30 next week....At Newburyport, Mr. W. B. Bowen is building a centerboard sloop, 23ft. 4in. over all, 19ft. 10in l.w.l., 9ft. 6in. beam, and 2ft. 6in. draft, to be named Vesper....At Beverly, Rock Bros. are building a centerboard sloop, to be named Dude. She is 30ft. over all, 24ft. 10in. l.w.l., 10ft. beam and 4ft. draft....At South Boston, Lawley has planked the Forbes schooner and Mr. Beebe's Verena, and has begun to plank Mr. Belmont's Mariquita....At Cambridge, John Blakey is building a keel yawl from his own designs, to be 28ft. 6 in. over all, 22ft. 9in. l.w.l., 9ft. beam and 4f. 9in. draft. The iron keel will weigh 3,500lbs....At Wheeler's Point, near Gloucester, Mr. Geo. Wheeler is building a steam launch for Rev. W. H. Rider, of the latter place. She will be 32ft. 6in. over all, about 28ft. l.w.l. and 6ft. 6in. baam. The boat is very well built, and of handsome model, the design of her owner. Forward of the engine will be a small cabin, while the standing room, aft, will be covered by an awning....The new 40 for Providence will be 15ft. 3in. wide with 6ft. draft. Her owners are Pres. Sayer Hasbrouck, Rhode Island Y. C., Geo. H. Slade, A. E. Austin and A. D. Ross....At Marblehead, Mr. Wm. Eddy has built a 16ft. boat for Mr. R. C. Bridge, to race in the Pleon Y. C....At City Island the work is hurrying on, the yawl is nearly completed, while good progress has been made on the other yachts. Of these Mr. Morgan's schooner will be named the Constellation, and his 40 will be Tomahawk, while the Grinnell schooner will be named Acushnet. The new 40 that, Lawley is building for Mr. Foster will be named Lotawana....The yacht building in Baltimore is for Mr. Albert Nickel, of that city; she will be cutter rigged....At Bay Ridge Mr. Ayres is very busy, the Whitlock 30 being now partly decked, the planking complete and the inside work under way. The keel is out for the 40, but the lead has not been cast yet. Mr. Ayres is putting good timber into both craft. At Lumm's yard the Chispa is practically completed, save painting and rigging. Both mast and bowsprit are in place. The latter is fitted with two fid holes for housing, but it is not likely that the job will be attempted, save when in harbor. The 30ft. boat is well advanced, the cabin house being completed and the joiners at work inside. The joiners are still busy with the Sachem's cabin, some very handsome joiner work has been added in place of the light pine, and from the weight of the former it does not look as though much racing was in contemplation. At the Atlantic Basin, Comet, schr., has had her foremast lifted out and reversed, the fore side being placed aft, and a new mainmast will be fitted.

A NEW YACHT RACING ASSOCIATION.



THE yachtsmen of the Delaware River have not been slow to follow the hint given by those of New York, and a movement is now on foot to organize an association which shall include all clubs between New York and vicinity on the north and Baltimore on the south, including the latter city. On Feb. 26 a meeting was held at the office of Com. Middleton, Quaker City Y. C., in Philadelphia, at which were present, beside the Commodore, Rear-Com. Pratt, ex-Com. Bancroft and Sec. Hoffman, Q. C. Y. C.; R. K. Neff, Jr., Riverton Y. C.; Com. Baker and Vice-Com. Anderson, Shackamaxon Y. C.; G. W. Bateman and C. A. Long, Camden Ducker Club; Pres. C. S. Austin and Sec. A. S. Butterworth, Keystone B. C.; Hiram Hathaway and T. S. Weed, Alpha Y. A., of Chester; Com. S. A. Kirkpatrick and Wm. S. Grant, Philadelphia C. C.; Com. J. A. Barten and E. A. Barten, Quaker City C. C., and Vice-Com. H. M. Kreamer, Sandford Northrup, D. M. Bond, Alexander Arnois and Sec. Fred Noyes, Red Dragon C. C. Com. Middleton was president and Mr. Bancroft acted as secretary.

The question of a permanent organization was generally discussed, but no definite action will be taken before the next meeting, to be held on March 21. It is proposed to include all sailing clubs, ducker and canoe clubs, as well as those of larger craft, in an organization similar to the New England Y. R. A. The name will probably be the Central Y. R. A. The object is to regulate and encourage racing among all kinds of sailing craft, and to secure one good system of measurement and classification. The many small craft—duckers, canoes, etc.—on the Delaware will probably lead to the admission of their clubs into the association; and while they are not strictly yachts, their interests are so closely allied to the larger craft that the union is perfectly proper. Such an organization cannot fail to have a most beneficial effect on yachting and boat sailing on the Delaware, Chesapeake and adjoining waters. The fleet of pleasure craft is increasing each year, and the need of some intelligent and active body which shall look after its welfare is apparent.

CRUISING STEAM LAUNCHES.—*Editor Forest and Stream:* I notice in the FOREST AND STREAM of Feb. 28 a discussion about steam launches for cruising purposes. The following is a description of one I am having built for cruising only. She is 25ft. over all, 5ft. 4in. beam, has a 5 H. P. Sheldt boiler and engine, with auxiliary wheel, and a speed of eight miles per hour is expected. She is also schooner rigged with two head sails. I have arranged to cover her all over in rainy weather in this manner: I have an awning, high enough to staud under in front, so that in steering you are perfectly comfortable, and aft I have the awning high enough to sit under; both have side curtains to fasten down. She has plenty of locker room, her tanks hold enough for fifty hours' running. She has an 8in. keel, very much rockered, and carries 200ft. sail. She steers with a wheel or by a bar near engine. The masts are 18ft. high from keel to truck, fitted to stow in boat, and foremast is 9ft. from bow, mainmast 17ft., engine and boiler between the two. I hope to make the trip to the A. C. A. meet in her next year, up the Hudson to Troy and through the D. & H. Canal to Champlain, up Champlain to Richelieu, and so to St. Lawrence, and would be greatly pleased for any information I can get from those who have been over it.—SKIPPER.

NEW BRITISH YACHTS.—The first yacht launched this season is the 2½-rater built by J. Stevens of Southampton for Mr. Bennett, a centerboard craft. She made a trial trip on Feb. 16....Fay has laid the keel of Mr. Sidney Watson's yawl, while Black & Co. are planking the 40-rater for Mr. Mottage....Alfred Payne & Son are planking Capt. J. W. Hughes' 2½-rater Humming Bird, and laying the keel for a 10-rater for Mr. St. Julien Arabin, while they have an order for another 10 for which Mr. Arthur E. Payne has made a design....There will be a new 20 in the field from Mr. C. P. Clayton's design, to be built for Messrs. Reginald Cox and Sidney Campbell by Mr. White & Son of West Cowes....Messrs. Hansen of Cowes will build a composite schooner of 150 tons from Mr. Richardson's designs.

RHODE ISLAND Y. C.—The following officers have been elected: Com., William H. Low, Jr.; Vice-Com., F. P. Sands, of Newport; Rear-Com., Charles F. Handy; Prest., Dr. Sayer Hasbrouck; Sec., George H. Slade; Treas., Robert L. Greene.

THE WARD YACHT BOILER.

THE WARD YACHT BOILER.

THE two forms of boiler shown in the accompanying cuts, the invention of Mr. Chas. Ward, of Charleston, W. Va., are rapidly coming into favor with yachtsmen, a number of them having been put in within the last two or three years to replace other makes, the results being most satisfactory. While from their compact form, light weight, durable construction and quick steaming both styles are well adapted to sea-going use, the smaller is specially designed for a launch boiler, for either natural or forced draft. The larger variety is intended for all uses, either on shore or afloat. The base of the launch boiler is a hollow ring surrounding the grate, the upper side of this ring being provided with projections, into which the vertical tubes shown in the cut are screwed. There are two concentric rows of these tubes, the inner ones shorter than the outer; the upper ends of each being curved inward and screwed into the lower part of the vertical cylinder which forms the central portion of the boiler. The joints between the castings and each end of the tubes are made by means of a nipple with an internal left-hand thread and an external right-hand thread, making a joint that may be screwed up perfectly tight. This nipple is shown in detail to the right of the larger cut. The bottom of the central cylinder is slightly conical, and cast with two rows of lugs, each bored and threaded. A number of tubes, in two circles, project from the bottom down into the fire, being screwed into these lugs. Each tube is closed on the lower end with a cap, and inside it is provided with a small brass tube so arranged as to secure a free circulation of water at all times. The boiler is surrounded by a double casing of sheet iron with a small air space between. This form of boiler was subjected to some very elaborate and exhaustive tests at the Brooklyn Navy Yard some time since, by the Bureau of Steam Engineering, a very favorable report being made.

The larger boiler is constructed in a different manner, as shown in the cut. The main features are a central vertical cylinder, around the base of which is the circular grate. On each side of the boiler is a system of vertical tubes, or manifolds, as they are called, at *HHH*, *FFF*. The generating tubes *GGG* are bent to a semi-circular shape, there being two sets of them, one on each side of the vertical tubes, into which latter their ends are screwed, as shown. The vertical tubes are connected at their upper ends with the manifold *I* and at their lower ends with similar manifolds *P*. This system of horizontal and vertical flues, in connection with the many small generating tubes and the central cylinder, the lower portion of which receives the feed and water and the upper formed the steam chamber, secures a thorough circulation. The feed water, entering through the rose *A*, deposits its impurities in the bottom of the central cylinder, then passes through the small tubes *G* and the vertical manifolds into the upper horizontal manifolds *I*, into the central cylinder, passing also from the bottom of the cylinder through the lower manifolds *P* and *C* and up again through *N* and *E*. It is claimed that the muddiest river water may be used with safety. A perforated plate at *R* serves to prevent the water passing to the steam pipe *J*. Every part is so arranged as to allow fully for expansion, and the boiler is very strongly constructed, while the various parts are easily accessible for repairs. These boilers are now in use on board the steam yachts Radha, Fra Diavolo, Orienta, Fedalma and Narod, and one is now being set up on the Oneida.

CHEASPEAKE BAY Y. C.—Officers 1889: Com., F. C. Goldsborough; Vice-Com., E. Lloyd; Treas., J. H. Johnson; Sec., J. G. Morris. Board of Governors, F. C. Goldsborough, E. Lloyd, F. H. Johnson, F. Barry, J. H. Wheeler, J. G. Morris. Regatta Com., Messrs. Wheeler, Barry and Morris.

CAPT. BARR.—Mrs. Ann Barr, mother of Capt. John Barr of Thistle and Clara, and of Capt. Charles Barr of Shona and Minerva, died on Feb. 15 at Gourock, Scotland. Her husband died only two months previously.

BOOKS RECEIVED.

THE PRESIDENTS OF THE UNITED STATES, from Washington to Cleveland, comprising their personal and political history. By John Frost, LL.D. Brought down to the present time by Harry W. French. Boston: Lee & Shepard.

ANDERSONVILLE VIOLETS. A story of Northern and Southern life. By Herbert W. Collingwood. Boston: Lee & Shepard.

A START IN LIFE. A Story of the Genessee Country. By J. T. Trowbridge. Boston: Lee & Shepard, price $1.

FROM LADY WASHINGTON TO MRS. CLEVELAND. By Lydia L. Gordon. Boston: Lee & Shepard.

OUR GLORIFIED. Poems and Passages of Consolation, especially for those Bereaved by the loss of Children. Edited by Elizabeth Howard Foxcroft. Boston: Lee & Shepard.

NEW YORK CHARITIES DIRECTORY. A descriptive catalogue, and alphabetical analysis, of the charitable and beneficent societies and institutions of the city. Published by the Charity Organization Society of the City of New York.

THE YEAR'S BEST DAYS. For boys and girls. By Rose Hartwick Thorpe, author of "Curfew must not Ring To-night." Boston: Lee & Shepard.

EATING FOR STRENGTH; or food and diet in their relation to health and work, together with several hundred recipes for wholesome foods and drinks. By M. L. Holbrook, M.D., Professor of Hygiene in the New York Medical College and Hospital for Women, editor of the *Herald of Health*, etc. New York: M. L. Holbrook & Co. 236pp., 12mo.

Messrs. Rand, McNally & Co., of Chicago, have in press a book by the well known author and magazine writer, Mr. G. O. Shields, ("Coquina"), entitled "Cruisings in the Cascades." It is a record of an extended hunting tour made by the author in the Cascade Mountains in Oregon, Washington Territory and British Columbia, and contains many thrilling descriptions of adventures and incidents of travel encountered by the author in his explorations. He carried with him a detective camera, and the work is handsomely illustrated from instantaneous photographs and drawings. The book contains also special chapters on hunting the buffalo, elk, grizzly bear, Rocky Mountain goat, antelope and deer, and will no doubt prove intensely interesting to general readers as well as to sportsmen.

THE BIBLE AND LAND. By James B. Converse. Rev. James. B. Converse publisher, Morristown, Tenn. 16mo. pp. 251. Price $1. This little work demands that all taxation be levied on land, and while in this respect it is in accord with Henry George's "Progress and Poverty," it was nevertheless written in refutation of that popular brochure with which it has very little in common. Henry George's fundamental axiom is that every man has an inalienable right to land, that private property is incompatible with the exercise of that right, and that the only means for securing all in the enjoyment of their rights is to vest the land in the State to be taxed to its full rental value for the benefit of the community. Henry George's argument is based on expediency, the merits of his method rest upon the adequacy of the means advocated to the end suggested, the prevention of the grievous inequality of social conditions, which is more and more pronounced in the ratio of material progress. "The Bible and Land" does not hesitate to combat these views directly, but its author executes a flank movement and asserts that the question at issue is to be decided by authority and not by reason, that man did not make land and can have no natural right of property in it, that it is God's property, that by express contract he gave it to the children of men, whose right of property under the gift is not absolute, but subject to the general condition that the occupant or owner utilize it to support population in circumstances favorable to piety. These conditions being violated the right of ownership ceases. The position of the author appears to be that the world is under direct theocratic government.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

J. H., Black Rock.—The weakness of the ferrets is doubtless due to bad condition of the mother, which is in need of exercise.

E. M. C., Thomaston, Conn.—Which is quicker, flue or coarse-grained powder? Gunpowder or black blasting powder? Ans. 1. Fine. 2. Gunpowder.

R. H. C.—Will you kindly inform me on what dates the black bass season opens in Maine and New Hampshire? Ans. In Maine, May 1; in New Hampshire, May 1.

H. B. D., Albany, N. Y.—Will Mr. Hough's splendid articles on the shooting clubs of Chicago be published in pamphlet form? Ans. No, though they deserve to be.

G. M. K., Minneapolis.—Kindly inform me if a ball rises or falls at the exact instant it leaves the muzzle of the rifle if the barrel is held on a dead level? Ans. It falls at instant of leaving muzzle.

B., Wilmington, Del.—I send you a pencil drawing of what is a strange fish to me. I caught it with bait in Roach River, a tributary of Moosehead Lake, about seven miles from the lake. I have been familiar with fish that live in many of the lakes, both of New Hampshire and Maine, for fifty years, but I have never seen a fish like it anywhere. It was examined by persons that were staying at the place. One man from Boston, who had spent his vacation in the vicinity for the past thirteen years, said he never saw a fish like it anywhere. Ans. The sketch represents the round whitefish, shad waiter, Menomonee whitefish, pilot fish or chivey (*Coregonus quadrilateralis*, Richardson). This handsome and valuable little whitefish is the most widely distributed of American species of *Coregonus*; it extends southward to lakes of New Hampshire, in some of which it is called the clear fish, northward to the Arctic regions and across the breadth of the continent. On the island of Kodiak it survives, along with the pike and the long-nosed sucker, as a remnant of a mainland fauna now shut off by an ocean barrier. The fish shown by the very good drawing was 10½in. long. The species is found commonly enough, but does not take the hook, and is, therefore, seldom seen by anglers.

J. N. B., Pine Iron Works.—We had a match for club badge Saturday. Two of us tied for it. Weather was stormy and we agreed to shoot it off the first fair day. We did shoot it off, having two judges and referee. The club claim that this shoot-off was not right, as the club had not consented to it. Ans. If there is no specific rule governing the case you did right.

R. E. R., Ferrisburgh, Vt.—As I was walking along the Slang yesterday with my little children, I saw a small bird whose flight was something like a swallow's, and said to the little folks: "There's one swallow that has not gone yet." Presently the bird flew past us, uttering a low short note, and I saw that it was no swallow. The wings had the peculiar curve of a gull's, the predominating color was white on wings and body, I should say, marked with brown. A few rods above us it alighted on the channel and swam a few feet, then took wing and flew out of sight up stream. It looked but little longer than a swallow. Can you guess what it was? Ans. The bird was probably a least tern (*Sterna antillarum*), though the length of the least, 9in., would call for a larger bird than the description points to.

A. W. J., Center Brook, Conn.—Kindly inform me what are the most killing flies for Connecticut waters, and also the method of attaching flies to leaders. Ans. Leaders are frequently made with loops for attaching flies, in which case you have simply to put the loop of the snell over the loop of the leader, push the fly through the loop of the leader and draw tight. If the leader is without loops, but has the gut-lengths tied by slip knots, slip a knot of the leader about 3ft. from the tail-fly apart, make a round knot in the snell of the dropper, then pass the end of the snell through the opened knot of the leader and draw the slip knot tight again. In the absence of slip knots on the gut-lengths, attach the snell of the dropper by a half hitch above and near a knot of the leader at the proper distance from the tail-fly, first making a round knot at the end of the snell to prevent the half hitch from slipping loose. Do not forget to soak the end of the gut lengths and snells in water until they are thoroughly pliable before making knots or tying loops. The kinds of flies to be used in Connecticut will depend upon the object of your angling. If fishing for brook trout use dark-colored flies for bright days and *vice versa*, for the twilight or early dawn the coachman is much used. Gray-miller, black-gnat and stone are favorites. For black bass the highly-colored hackles are preferred to winged flies by some persons. A great variety of winged flies have been successfully used, among them the following: Abbey, captain, ibis, gold-spinner, Seth-Green, professor, queen-of-the-water, grizzly-king and soldier. For moonlight evenings millers or white-moths are in great favor. For yellow perch use small, highly-colored flies, with a very light rod. A little experience with flies will enable you to make a proper selection for various occasions and different kinds of fish.

TUSCALOOSA, Ala., Sept. 15, 1888.—*United States Cartridge Co., Lowell, Mass.:* Gentlemen—The two hundred Climax shells sent me have been tried with Schultze and Black powder. I am very much pleased with same. Could not get good results with Schultze in any other shell. Will use no other shell so long as you keep this at its present standard. You are at liberty to use this or any other recommendation I can give you. Most respectfully, (Signed) W. C. CROSS.—*Adv.*

"Sam Lovell's Camp" is a companion piece to "Uncle Lisha's Shop," and just as full of real Vermont Yankee yarns about hunting and fishing, camping, jaunting and downright home life. It is only once in a lifetime that you fall in with so charming a dialect writer as Mr. Robinson. Every camp and fishing ground he brings you to and every friend he introduces are sure to make you glad that you are around. Take home a copy, and sit down with Sam, Antwine and Pelatier—not forgetting Sam's sweetheart, Huldy, and you will not put out the light till after twelve.—*Davenport (Iowa) Democrat Gazette.*

HUNTER'S PATENT Safe & Rapid Loader.

Pat. April 17, 1888. Pat. April 17, 1888. Pat. May 29, 1888.

The Collins Gun Company, of Omaha, Nebraska (the oldest and largest gun house in the West), writes: "We will be only too pleased to allow you to use our name as reference, and would say that we have tried every loader that has been placed on the market, and without any hesitation pronounce your machine the only machine yet that we have ever seen that is worth anything for our use, to wit, loading wood, Schultze or black powder for trap or game shooting."

Mr Curtis Wright, a well-known club man of Connersville, Ind, says: "The loader is at hand, and more than meets my expectations. It is a beautiful piece of mechanism, and perfect in every way; it is made for both strength and convenience, and cannot fail to take the lead in the market, as no one could ask anything better. The shooting fraternity owe you a vote of thanks for getting out so complete an article."

A number of other references on application.

The CRIMPER is also sold separate. Will crimp at least three shells to any other crimping one. Also clips shells any length—caps and decaps. Prices and full description address,

GEO. D. HUNTER,

78 Exchange Building, Chicago, Ill.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY NEW YORK.
DAVIES & CO., London, England.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.

FOREST AND STREAM.

Among the series and papers which will appear in the FOREST AND STREAM in 1889 may be named these:

Sketches of Frontier Life,
Indian Folk Lore and Life,
North American Mammals,
Hunting in the Himalayas,
Hibernation of Reptiles and on Snakes' Weapons,
The Summer Hunt of the Pawnees,
Special Correspondence from the West,
Shooting on Mount Olympus,
Lost in the Forests of Acadia,
Five Days a Savage,
Domestication of Game.
The Sunset Club,
The White Goat,
The Forest and Stream Trap Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MARCH 14, 1889.

VOL. XXXII.—No. 8. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

PRACTICAL FOREST RESTORATION.—II.

WE have already discussed the problem of how best to treat a forest which has had all its choice timber cut out, leaving nothing mature or growing, of any considerable present value, but which at the same time preserves the general characteristics of forest land; that is to say, which has a floor rich in humus, the product of the decomposition of fallen leaves, decayed timber, and the droppings and remains of insects which have preyed on them, along with a sufficiency of standing timber to shade the ground from the direct rays of the sun.

But this is by no means the invariable condition of the forest after the lumberman has made his cutting by selection. The forest floor, strewed with dry leaves, branches, chips and rejected timber, and more or less opened up to the direct rays of the sun, is rendered so inflammable that a spark is sufficient to ignite it; and very frequently it happens that fire follows the lumberman and destroys all that he has spared.

Fire running through standing timber destroys, but does not ordinarily consume it, neither does it consume the forest floor, sheltered by standing timber. When the fire has run its course the scarred and blackened trunks of the green timber remain standing, and although the dead and fallen timber and light surface stuff may have been consumed, along with the seedlings and buried seed, the soil has lost nothing of its fertility; on the contrary, it is enriched by the ashes of the stuff burnt on the surface.

At this stage it is very desirable to restock it without delay, and this is especially the case in mountain regions where the permanent loss of forest character, by considerable areas, may amount to a national calamity. A forest floor covered with dead timber, with nothing to shade it from the rays of the sun, very soon parts with its moisture, and becomes so combustible that if a fire once get hold of it, and be allowed to run its course, unchecked, the whole bed of humus will be burned off, leaving nothing on the subsoil but a thin stratum of ashes, which may be washed away by the first rainfall, and work of ages undone.

Even if fire be guarded against; a forest floor exposed to the rays of the sun in hill country, the surface matter instead of forming humus dries to powder, layer after layer, and is drifted about by the winds, rain courses cut channels into the soil, and in a few years it is all washed away.

Any green thing that grows, not only trees but grass, brambles, ferns, weeds, will all serve to protect the floor from liability to destruction by fire or water, provided the whole surface be covered with it, but as all these things die down in the fall of the year, they are no sufficient safeguard. The area should be restocked with timber trees as soon as possible.

But as we have already pointed out, pine seedlings have very small chance of development in a soil exposed to the rays of the sun; they might possibly survive an exceptionally showery summer, but even in this case they would not survive exposure to the extreme cold of winter; and what is true of pine seedlings is to a greater extent true of most tree seedlings. The standing forest is the proper nursery for forest trees, and economic forest culture requires that seedlings generally be raised in the forest, or under artificial conditions favorable to their development as in nurseries.

But in almost every climate, or at least to so general an extent as to be of very considerable economic importance, nature provides some tree or subarboreous form, which is a prolific seed bearer and capable of thriving on denuded forest areas in complete indifference to sun or frost. In Pennsylvania and the Middle States it is the wild cherry, in the Adirondacks it is the aspen or poplar, in northern Michigan the pitch pine. These trees, of but little economic value for their timber, are of great economic importance from their tendency to take possession of denuded forest areas, following in the wake of fires, springing up and preserving the forest character of the floor, and in time forming a nursery favorable to the first stages of growth of such pine or other timber seedling as may chance to spring up in its shade.

Left to natural conditions, the aspen, cherry or other suitable nursery may exist for generations before any considerable number of pine or other valuable trees make their appearance, but it is hardly possible to go through a poplar grove in this region without finding a sprinkling of young pine or other coniferous trees of one or two feet high, making but little growth, but capable of holding their own in the light shade of the aspen, until, with the decay of the first generation, it gets a chance to raise its head and acquire predominance. Twenty or thirty years later these isolated trees will begin to shed their seed around, the young seedlings will pass through the same stages as the parent tree, and, perhaps, in a century or two the poplar will be crowded out and the pine forest restored.

The conditions are somewhat different in the pin cherry woods of Pennsylvania. This subarboreous wild cherry tree grows in thickets, affording too dense a shade for anything else to thrive under it; but in fifteen or twenty years tree after tree dies down, making gaps in which any imported seed has a chance of germinating, and the seedling of competing with the seedling cherry on equal terms. Both the cherry and the aspen in their several localities maintain the forest character of the soil. Taking possession by their hardihood and fecundity as seed bearers, they enrich the soil with their annual carpet of leaves, and although themselves of little economic value, they create conditions favorable to the growth of more valuable trees, which will inevitably sooner or later eradicate and supplant them, provided there are forests of such other trees in the neighborhood.

We come then to the conclusion, firstly, that if a forest tract in the mountains be laid bare by fire or the axe, the consequent exposure of the forest floor to the influence of sun and frost is unfavorable to the production of a fresh crop of pine or other valuable timber, and may result in the destruction of the soil, but that if the soil be taken hold of by poplar, pin cherry or tree of like character, conditions will be created favorable to the germination and developement of trees whose capacity for enduring light shade, combined with their greater longevity, will insure their final dominance in the struggle, if they once secure a footing.

The condition of the timber trade in this country is so anomalous that the finest tract of pine timber in the country could hardly be cleared at a profit sufficient to cover the mere cost of planting up with nursery-raised stock. Under these circumstances there can, of course, be no inducement to restock denuded areas by systematic planting, and the inexperienced in forestry seeing the ground occupied by poplar or pin cherry would see in that circumstance only a still further obstacle to restocking with valuable timber. The object of this paper has been to dispel that illusion, and to show that the occupation of the ground by these trees preserves the forest floor from destruction, and is the first stage in the process of natural restoration of the more valuable forest trees.

And when our observation is directed to the first processes of natural reafforesting by these trees, when we see a bare tract of several thousand acres of extent dotted with a few aspen seedlings, which increase in number from year to year, until at the end of ten years it is covered with a compact growth, and we then find on investigation that all the seed was wafted from one tree, until the first sown young trees began to scatter their own seed around them, we begin to realize that a very little labor spent in distributing this seed may serve for the restoration of large tracts of thousands of acres at a cost below that of preparing the ground for a nursery half an acre in extent. For such seed no preparation of the ground is necessary. All that is required is to collect the seed and scatter it over the surface.

Systematic planting on a national scale must wait, and will be sure to wait, until the little remnant of our forests shall be administered economically, and at such a profit on costs of exportation as will justify the outlay required to cover costs of replanting, but meantime millions of acres of denuded forest land may be preserved from the destruction of its soil by fire, or its erosion by water, for the trifling cost of collecting and scattering the seed over their surface. The winds and the birds annually redeem thousands of acres in this way, and we need only open our eyes to the importance of their labors, to realize how much may be done in the same way by systematic, intelligent effort.

SNAP SHOTS.

MOST of the daily papers of last Monday suffered from a bad attack of paroxysmal silliness and gave accounts of an Indian butchery of five French tourists in the Yellowstone Park. The entire story was of course a canard without any semblance whatever of authenticity, yet the yarn was given an important place with startling headlines. The daily press of this country shows itself more than willing to foist wholesale sensational lies on the public, but when it comes to any intelligent appreciation of the National Park as a valuable possession of the people or to any wise discussion of adequately protecting the Park and maintaining its integrity for the present and the future, the average daily journal knows nothing and cares less.

The doubtful points with respect to the application of the fish laws are one by one set at rest. Last week we recorded the decision that the statute providing for summary seizure and destruction of fishing nets unlawfully employed was constitutional. That principle is a step ahead in fish protection. To-day we publish another decision which bears on the application to waters which are private of the close fishing season, as prescribed by statute. Referee Northup's decision should be read with care; it makes clear certain principles concerning which there appears to be much popular misapprehension.

Mr. Henry Bergh has been succeeded as President of the Society for the Prevention of Cruelty to Animals by Mr. James M. Brown, of Brown Brothers & Co. This removes from the advocates of fox-terrier hare coursing as a sport one of their stock arguments, which has been personal abuse of Mr. Bergh. This will clear the atmosphere, and any discussion of the Hempstead coursing on its merits will be more advantageous than the style hitherto indulged in of defending the practice by ridiculing Mr. Bergh.

The proposed amendments of the Maine game law, designed to permit the sportsmen who visited that State to carry home their game, have been defeated in the House, and the Maine game law remains as it was before. We regard the concessions proposed in the amendments as judicious, and the House has made a mistake in rejecting them.

Tarpon fishing has been growing in popularity, and a number of anglers from across the water have come over to test the game qualities of the Florida silver king.

In this latitude April has invaded March; the balmy weather and open waters suggest rod and fly, and the angler's fancy lightly turns to thoughts of trout.

The Sportsman Tourist.

"Sam Lovel's Camps." By R. E. Robinson. Price $1.

A MONTH IN THE ROCKY MOUNTAINS.

[*Concluded from page 130.*]

OUR camp was well situated as regards comfort and convenience of wood and water. We were in a narrow, well-woodod valley, well protected from the wind, and it seemed to be as good hunting near camp as anywhere, and the most of the game killed was within three miles. One morning an elk track was discovered within two hundred yards. There were plenty of trout in the Little Sandy and in another stream a mile west of us, the name of which we did not know. We always had trout whenever we wanted them or would take the trouble to catch them. We were, moreover, always supplied with venison and elk, the latter the finest meat in the world in my opinion. Camp life in this cold climate gives one an enormous appetite and great endurance. I became as tough as an Indian and nearly the same color from exposure to the sun and wind. I always did my share of the camp work, cooking, getting wood, etc., and although coming in very tired at night after an all day's tramp I would feel no effects of it the next morning. We had as yet found no necessity for putting up our tent, preferring to sleep in the open air, but coming in early one afternoon, and a storm threatening, I made a temporary shelter by hanging our tent canvas over a pole supported by forked stakes, held out at the bottom by poles leaned against the center one. This answered a good enough purpose as protection against one or two little showers. Our bed under this was a pile of pine boughs covered with a buffalo robe.

The two hunters whom we had found here on our arrival remained with us during our stay on Sandy River. Our camps were only a few rods apart, and in the evening we would build a rousing fire at one of the camps and relate our adventures and discoveries during the day. There was considerable diplomacy manifested in these camp-fire meetings, and I imagined I noticed slight indications of jealousy between my guide and the rival hunters. I observed that when they would discover any new indications promising good chances for the next day's hunt, they would say nothing about it until the succeeding evening after they had been there and scared up the game, and that when I, in my innocence and enthusiasm, reported a locality abounding in fresh signs, they would generally manage to go around in that vicinity early the next morning. They had better luck than we, killing two or three deer and one elk during our stay besides the three elk on the day before our arrival. My guide had the singular fortune to kill two deer at one shot—a doe and her fawn. His good luck was purely accidental. Seeing the doe about fifty yards away, he fired, intending to strike her just back of the shoulder. Going to the spot he found instead of the doe a little fawn shot through the head. Knowing that he had aimed at a full grown deer, he searched a few yards further and found the doe, lying dead. The fawn was standing on the other side of its mother and the bullet went through both.

One of our hunters was a man of great experience, and thorough knowledge of the habits of game. He seemed to know just about what a deer or elk would do under any circumstances. He lived on a ranch some sixty or seventy miles south, and for years had supplied his own family and neighbors with meat killed in this vicinity. He would make periodical visits of a week or more; and usually carried off a wagon load of venison, elk and bear meat. I drew a good deal of information from him, but many of his stories of adventure I regarded as gross exaggerations. There is one rather comical experience which this man related as having occurred to one of his neighbors. I have a faint recollection of having read a similar account somewhere, but this one is vouched for by credible people as having occurred in this vicinity, and names might be given if necessary.

A hunter was in pursuit of a flock of bighorns. He discovered the animals standing near the top of a steep mountain, and in order to make sure of them he resolved to go around and approach them from the opposite side. It was in winter, a fearfully cold day, and the snow was deep, so that he was compelled to travel on snowshoes. After much labor he finally reached the top, and peering over saw the game directly below, standing solemnly, their tails to the wind, and wholly unaware of the hunter's presence. In his anxiety to get a near shot, the man climbed down the steep side, and just as he was about getting ready to fire the clumsy snowshoes caused him to lose his footing, and down he went at full speed, sliding on the snow in the direction of the game. Losing all presence of mind in his novel situation, and even forgetting that he had a gun, he shouted out at the top of his voice, "Get out of the way there. Here we come." The old bighorns stood watching the hunter as he passed within a few feet of them, evidently considering the whole performance gotten up for their special entertainment.

There are a great many hedgehogs in the woods here, and all hunters have a deadly hatred of them, and always kill them whenever found, under the idea that they otherwise will not have good luck in hunting. They do great damage to the timber by girdling the trees in winter as they feed upon the bark. There are acres of pine trees in some places where scarcely a tree has escaped them, a great many being girdled all around and killed. The animal sits on the snow, it is said, when gnawing trees, so that these girdled places show the depth of the snow. I saw some work of hedgehogs, however, where they had barked the tree forty feet from the ground in places where the snow could hardly have been so deep. I only came across one in my wanderings, a big shaggy beast, too lazy to get out of the way. I did not want to shoot it for fear of frightening the game in the neighborhood, and so contented myself with pelting him with rocks, whereupon he ran and tried to hide under a fallen tree, where I left him. One night about midnight I was awakened by a loud thumping and pounding just outside the tent, and on going out found one of the hunters in his night clothes belaboring a hedgehog with a club. He was taking his revenge on the animal for falling out of a tree and waking him up. At each blow he would exclaim: "There, d—n you! take that."

An interesting feature about camp was the number of birds and squirrels that came around after pieces of meat and bits of provisions that we would leave about. There is a beautiful bird of white and black plumage, known to hunters as the camp jay or meat stealer. If not frightened away they will become so familiar after a few days' acquaintance as to come up readily and take a piece of meat held out to them on the end of a ramrod. The little chattering wrens are always present, hopping up and down the smooth bark of the cottonwod trees without ever a misstep. A chipmunk got a little too familiar with our pot of baked beans, and one day as he sat cocked up on the end of a log I put an end to him with my Marlin rifle. A wren could have flown off with the remains.

One day an Indian visited the camp of our neighbor hunters. He had been unsuccessful in hunting and evidently came for the sole purpose of getting something to eat. He was a tall, raw-boned old savage, and had the most repulsive countenance I ever saw on a human being. His face was very broad and almost flat, his jaws wide apart, and his mouth extending almost literally from ear to ear. He sat cross-legged on the ground for an hour without saying a word. A dirty blanket hung over his shoulders, and on his head an old wool hat, a conical-shaped affair, the rim sloping down and the top running up to a peak, in the end of which were stuck two eagle's feathers, which looked like a ridiculous attempt at ornament. He refused to answer any questions as to where he came from, what tribe he belonged to, how many squaws he had at home, etc., and pretended he could not understand. When asked if he used tobacco, he comprehended the meaning at once and held out his hand. The hunters, miners and old settlers have the greatest hatred and contempt for the Indians, regarding them as without any feelings of honor or pride, and many of them would have no more feeling about killing an Indian than they would about killing a bear. One of our hunters openly declared that if he should meet the old savage out in the woods he would put a bullet through him, merely to get rid of what he considered an intolerable nuisance. I was so convinced that he might carry out his threat that I felt called upon to persuade him against any such rashness lest it might get our party into trouble. The Indian in this section is one of the greatest obstacles in the way of preserving the game. They are given full liberty to kill as many as they please, and at any season, while the law prohibits the whites except at certain seasons. The Indians have nothing to do but hunt, and they pay no regard to the season, a doe with fawn being the object of their greatest efforts. They will butcher without mercy the last one of a herd of elk or deer whenever they can surround them in the winter when the deep snowdrifts render the animals almost helpless. There is no one who so deeply regrets the disappearance of the large game as the old Rocky Mountain hunter and ranchman, and when asked the best means for its protection he will advise first to kill off the Indians. It is true that the Indians are at present the greatest destroyers of game. It has become so scarce as to render hunting unprofitable to a white man. The ranchman along the frontier will only kill enough for his own needs, the skins being of little value, and he is very careful not to kill the females in the breeding season. Next to the Indians are foreigners, mostly English, in the wantonness with which they kill, regardless of law or anything else. Foreign snobs who have inherited money enough to pay their way to this hunting ground and back again will disregard all laws and every other consideration in their efforts to obtain a few heads and horns to carry back as trophies to boast of at home, everything necessary being a guide to point out the game to them. When the Government and the Territories will make and enforce such laws as will stop these two sources of wanton destruction, we may look for an increase of the scattering herds that are yet left to us, but which are now rapidly disappearing under our very eyes.

A great deal has been accomplished by the establishment of the National Park. The trouble is that the territory inclosed is not near large enough. From the Government's wide domain it could well spare one-fourth the Territory of Wyoming to be devoted to a grand game preserve, where the buffalo, the elk, deer in all its variety of species, the bighorn and the beaver and other fur-bearing animals, the moose and caribou and others, could remain for a number of years undisturbed. This section of our country contains all the requisites of mountain, forest and stream for such a purpose, and is certainly ill adapted to anything else.

But to return to our experience with the Indians. Afterward, when on our return, we came upon a small band of women and children. They were preparing for the night's camp in a little clump of bushes a short distance off the road; they seemed very shy and inclined to dodge behind the trees and keep out of sight. Some small children were out among the ponies, and on my trying to get near them they jumped on to the ponies and galloped off. Where we stopped for the night there was a band of seventy-five or one hundred Shoshones, also encamped for the night. They had been to Rawlins for Government supplies, and were returning to their reservation in the northern part of the Territory. The women did all the work, and the men, a good-natured, easy-going lot of loafers, were lounging about the camp taking no interest whatever in its affairs. I attracted their attention by taking out my spy glass, and soon had a crowd around me. They would look through it by turns and then expressed their great astonishment and delight. When asked any question they did not want to answer, they pretended not to understand. The women were shy and would not come near. I wanted to buy a pair of moccasins, and was taken by one of the men around to the different camps. Both men and women had their faces painted with the paint stone taken from the cliffs near Rawlins. About the eyes and cheeks was colored a bright red, and around the mouth a pale yellow color. The women were mostly fearfully homely, even repulsive. A few of the younger squaws were quite good-looking. One whom we visited to obtain the moccasins was quite handsome after the Indian style of beauty. She was well dressed and neat looking, her hair, carefully braided in large folds, came below her waist, a shapely intelligent face and eyes that fairly sparkled with blackness. As she chatted with my Indian guide or listened to his jabberings in return, her countenance would change from alternate seriousness to animated smiles, and I wondered what there was so interesting about the purchase of a pair of moccasins, and regretted that from my earlier acquirements had been omitted a knowledge of the Shoshone language.

There was supposed to be a lake somewhere in the vicinity, called Barret's Lake, after the discoverer. One of our hunters had heard of it as being on the headwaters of Little Sandy River and the river was described as running through it. We had found a number of lakes and ponds, but none of them answered to the description in this particular. The lake was supposed to be stocked with the largest trout, and several efforts were made to find it, but were unsuccessful. Feeling pretty sure that the lake must be on Little Sandy above us, and being anxious to see the cañon where the stream breaks through the mountains, I took an early start one day to find it. Taking my rifle and knapsack containing the little camera, a few biscuits and a piece of elk meat, I proceeded across the ridge and up the valley of the river. I had no fear of getting lost so long as I kept the river near me. I followed up the bank of the stream, cutting across the bends or going further inland whenever the brush and willows became too thick along the banks. It was a wild romantic road, diversified with alternate rocky cliffs, deep sunless woods and pretty open parks, like orchards, with their grass and white-barked aspen trees. As I get higher up the mountains the stream is a succession of waterfalls, hemmed in in places by rocks so that you can step across it and almost covered over with the thick growing balsam and spruce, whose lower limbs spread out along the ground to about the length the tree is in height. At places it is impossible to keep along the the stream, and I am compelled to make detours of a mile or so. Where the stream breaks through the cross ridges I have to climb over and down again, frequently letting my gun and knapsack drop down and then climbing down after them. Way up at the base of the main mountain I find the lake. It is just below where the stream breaks through, forming the cañon of the Little Sandy. I should judge this body of water, which covers perhaps twenty acres, to be about 10,000ft. above the sea. It is clear and cold and well stocked with trout. One side of the lake comes squarely up against the base of the mountain. On the other side the water is held by a rocky ridge, from the top of which one can see down the valley of the Sandy to the plain where our trail crossed the river. Standing at the lower edge of the lake, and looking up through the cañon, the scene is one of matchless beauty. The mountain on the right rises directly from the water's edge and slopes upward to a height of about 4,000ft. above the lake. About half this distance is covered with a thin, stunted growth of pine, the balance is a bare mass of gray rock. At the upper end of the lake, where the cañon first spreads out, there is a heavy growth of tall pines, banked with a fringe of willows at the water's edge, and above the tops of the pines, from our point of view, appears a bare peak seemingly higher than any other in the neighborhood and prominent by a streak of white, the remains of last winter's snow. The atmosphere is crystal in its purity. I look almost straight up at the lofty peak on my right, and imagine it is close by, yet I know it is a long way off. That "indescribable feeling of awe," that we read about, is no myth. Nature has arranged her works here on such an imposing scale, that you feel like taking off your hat in her presence. You look out across the quiet lake, and up above the swinging pine tops beyond, and you cannot but feel an impression of reverence and humility. There is the quiet undisturbed appearance of the primeval forest, the absence of anything artificial, the evidence that nothing has ever disturbed the full sway of nature. Everything remains as it was in the beginning—untouched by the hand of man. For centuries the scene has been unchanged. The spotted trout leaps up to catch the struggling grasshopper, the wildfowl bathe on the surface of the lake, the bear comes down to drink, and the elk and deer feed upon the margin as they did before Columbus was born.

Near the upper end of the lake where the shore slopes off gradually, is the enormous track of the bear, the long claws are very plain, and the great elbow-like foot. Further up in the cañon the scenery is wild beyond description; mountains of rocks in every conceivable shape, piled upon each other in confused masses. From a high point overlooking the lake I eat my biscuit and elk meat and prepare to return.

There are unusual indications of a storm brewing and this hastens our desire to get out of the mountains. The next morning we gather up our camp equipage, the hides and antlers of the elk and deer, and some other specimens and trophies, together with a good stock of jerked venison and elk, and reach that night our old camping ground on Lander Creek.

MORE ABOUT THE OTTER.

Editor Forest and Stream:

IN FOREST AND STREAM of Feb. 14, "J. G. R." gives an interesting article on "Habits of the Otter," and says, "they can live a long time under water, and when under the ice, occasionally put their nose against the ice to get breath."

As we all know there is no air space between the water and the ice, and the otter cannot draw the air through the ice from above, and does not put his nose up there to cool it. Then what is the explanation? It is this, and a very interesting and scientific process not generally known. The otter presses his nose against the ice, then exhales the air from his lungs, which forms a flat air bubble around his nose, and between the ice and water; the air is allowed to remain there a few seconds, and thus by its contact with the ice and water is cooled, purified and re-oxigenated, then the same is inhaled into the lungs, and the otter is ready for a new start; this may be repeated a number of times, until the loss and wastage of air requires a new supply. You will at once see the beauty and usefulness of the process. The beaver and some other animals do the same, to enable them to "live under the ice a long time, without taking breath."

The otter slide is made and used for the same reason that boys build a toboggan slide, a place where they can play and have fun. The otters will play for a long time, sliding down and scrambling back, with as much appa-

rent enjoyment as dogs having a frolic, or boys on a toboggan, and with no other motive.

These facts were gathered from an old hunter and trapper, who learned the same by studying the habits of a tame otter in his possession. He was afterward one of a surveying party, with the writer, in Michigan some years ago. Having never found this item regarding their breathing in print, it is now given, knowing the source of information to be authentic, and believing it to be a reasonable explanation, one that all sportsmen and naturalists ought to understand. GRAND RAPIDS, Mich.

CROWS AND POISON IVY.

AT the 138th regular meeting of the Biological Society of Washington, held March 9, four new members were elected. Mr. W. B. Burrows read a very interesting and instructive paper on "Dangerous Seed-Planting by the Crow," in the course of which he proved that this bird is a principal agent in the distribution of the poison ivy and poison sumach. The crow gathers the seeds of these and other species of *Rhus* from Maine to Florida, and during the entire fall and winter. One hundred and fifty-three seeds of poison ivy were found in a single stomach. At a fifteen-acre roost in Arlington cemetery, Mr. Barrows collected the excrement from a surface of three square feet, dried it and obtained twelve ounces of material, in which the seeds were counted. He found that one pound of the dried excrement which would be derived from four square feet of the average surface, contains 1,041 seeds of poison ivy, 341 of poison sumach, besides 3,271 seeds of harmless species of *Rhus* and a few others. The deposit is from ¼ to ½in. thick on the average and contains 346 poisonous seeds to the square foot. At this rate the roost of fifteen acres would furnish about 226,000,000 of such seeds. As the birds pass fully one-half their time flying over the country they have ample opportunity to spread the deadly species which furnish their food. The seeds germinate more quickly after passing through the digestive tract of the crow than they do naturally—some of them within forty-eight hours. This valuable paper caused a great deal of discussion, in the course of which it was related that certain beetles have been observed to pass through a toad's alimentary tract "alive and kicking." We are reminded here of the little blackfish of Alaska, *Dallia pectoralis*, which endures the processes of freezing solid and sojourning temporarily in the stomach of the Eskimo dog, where the genial warmth induces it to break for liberty, by and with the advice and consent of its container.

Dr. C. H. Merriam exhibited and described a new ground squirrel from Arizona, resembling the "antelope squirrel," but with the tail dark beneath and longer, and with longer ears.

Mr. C. D. Walcott discussed the genus *Olenellus* of Hall, stating its age, position and distribution, and the essential characters of its species. Beautiful drawings of the principal forms were exhibited, along with the types of several species.

WAYS OF THE WOODPECKER.—Aylmer, Que., March 5.—*Editor Forest and Stream:* When reading the notes on the downy woodpecker in your issue of Feb. 28, I thought I would send a little incident I noticed last spring. One morning while in the garden I was attracted by a continuous hammering on the telegraph wires, and looking up saw one of these birds perched on top of the nearest pole, vigorously hammering on an end of the wire projecting from the cap. Soon after I heard another woodpecker on a pole across the road, but this bird was hammering the post, and consequently produced only dull sounds. After repeating the tapping on different sides of the pole he seemed to become angry at the first bird's louder and more musical performance, for with a sharp cry he flew toward it, and after chasing it around and around the post, succeeded in driving it away. Once in possession of the coveted post, he, with an air which showed evident satisfaction, gave a few loud raps, then held his head back to listen. But he was doomed to disappointment, for, as before, he struck the post. Again and again he tried changing his position, but without success, and when a few moments later the other bird returned, drove him away, mounted the top of the pole, and struck the wire with defiant vigor, his chagrin must have been complete. I saw this repeated several times, but without the second bird learning the secret. For a week or two after this I often heard the same rapping and ringing, but did not go out to watch. What finally became of the clever bird, whether he was banished for witchcraft or left of his own accord, I am unable to say. I think a great deal of pleasure may be derived from watching birds. My interest was first awakened by the writings of Olive Thorne Miller.—FANNIE HEATHERINGTON.

WOODCOCK BREEDING IN NORTH CAROLINA.— Two gentlemen of this city, while gunning about nine miles from Rocky Point, Wednesday, found two young woodcock, apparently not more than two weeks old. They had no feathers, and with the exception of their long "bill" had very much the appearance of chickens just from the shell. It was for a long time claimed, especially by Northern writers, that woodcock did not breed in this section, but this view was shown to be erroneous many years ago by the *Star*, whose editor has occasionally seen young woodcock in Duplin county, and frequently on Eagle Island, opposite this city. It seems quite certain that in the swamps of this island the woodcock breed in large numbers; and in the month of September, when nearly all the birds are fully grown, as many as thirty to forty have been seen coming out of the swamp at one point and going rapidly across the river. This flight takes place in the evening about dusk, when it is very difficult to shoot with accuracy, which gives the birds comparative exemption from the deadly breech-loader.—*Wilmington (N. C.) Daily Star, March 8.*

A BEAVER FARM.—Messrs. "Tough" Hardin and Willard Cadwell, of Saratoga, Mont., have projected a beaver farm on the headwaters of the North Fork of Jack Creek. A number of acres, through which will run the waters of the stream, will be inclosed by a fence of closely woven wire; this wire at the point where it crosses the stream, being sunk some four feet beneath the water bed as an effectual precaution against the beaver digging under and out.

A SKUNK OF ODD COLOR.—Barnstable, Mass.—I have been greatly troubled by skunks, and during the past month I have captured eight of them in a box trap. They have made a home for themselves under the house, passing in and out under the piazza. This morning the trap was sprung, and upon close inspection found it to contain a light chocolate-colored skunk with a white head and neck. The color more closely resembled cocoa boiled with milk than anything else I can think of. I have never heard of such an animal before, can you give me any information on the subject through your columns? It gave forth the regulation skunk odor when perforated with two charges of No. 5 shot.—V. W. B.

OWL SHOOTING IN JERSEY CITY.—Jersey City, N. J., March 7.—Mr. E. T. Larrabee, of Mercer street, this city, while sitting at his window one day last week, noticed a shadow larger than usually cast by a sparrow flit past him, and an investigation revealed a large bird perched on the limb of a tree in an adjoining back yard. The sportsman's proclivities in Mr. L. immediately asserted themselves, and with the assistance of a rifle and some patient maneuvers to get a solid brick wall behind his quarry, a .22cal. bullet brought down what proved to be a screech owl.—R. H. C.

AN ALBINO CROW.—Dover, Delaware.—A crow recently captured here is an interesting specimen of "mongrelism." In appearance it partly resembles a pigeon; and, in striking contrast to the black plumage of the body, the wings are of a snowy whiteness.—DEL. A. WARE.

Game Bag and Gun.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

SPRING DUCK SHOOTING.

CHICAGO, Ill., Feb. 15.—Mr. F. A. Allen, one of the most prominent members of the wealthy and influential Monmouth Gun Club, and known all over the shooting world as the maker of the standard Allen duck call, was in the city last Thursday and seemed to know about everybody in town. Mr. Allen is in favor of spring shooting and is a bitter and effective foe of the measure looking toward its abolishment. The Monmouth Gun Club is probably fairly to be called at the head of the fight against the proposed amendment to the law. It is a strong and wealthy organization, numbering some forty of the best men in that section, and representing, perhaps, over two millions of dollars. It has been active in the circulating of petitions among the other sportsmen's clubs throughout the State, and has certainly reached most of the Chicago clubs in that way. It sent in to the Legislature one petition whose list of names measured 14ft. Peoria, Ill., sent in a list 25ft. long. In all there have been sent in, Mr. Allen informs me, over 18,000 names appended to petitions against the proposed amendment. This will give some idea of the earnestness of the fight, and of the pressure the lower part of the State is bringing to bear upon the Legislature.

Personally, I should like to see spring shooting stopped. I believe that the most thoughtful and unselfish sportsmen can only look upon its abolishment as a step in the right direction, and as desirable, if only upon the principle that whatever spares the life of a single duck a single hour is to-day a desirable thing. I do not, nor can I see how any one can agree with Mr. Allen when he says that there are as many ducks to-day as there were thirty years ago, or ten years ago; I believe him to be candid in his statement, but know that he speaks in reference to his experience in shooting at New Boston, on the Mississippi River, one of the best grounds in the world. Depletion may not be noticeable at such a point, upon the natural migration path of the main body of our wildfowl, but it certainly is only too apparent elsewhere, as almost any of our sportsmen must admit. Mr. Allen says this is due to the drying up of the streams, the tilling of the marshes, and the settling up of the country. This is largely true, and it is this very fact that stands against the Mississippi River shooters who find plenty. The birds, driven out of their ordinary courses, are yearly crowding more and more to the ever-present and unfailing water path of the Mississippi. The scarcity of other points is the abundance of the Mississippi. May not Mr. Allen see this, and may he not know that when the Mississippi flight is done with, our ducks are gone. Is it not evident that too much strain is being put upon the duck supply? It is true that a spring law would "stop shooting over 600 miles of the Mississippi River," for the shooting is best there in the spring; but would that not be better so? It would be better still to stop it both spring and fall for a time, although that is not needful. It only appears needful to some minds that some sort of cessation of slaughter should be fixed, and to these the anti-spring shooting seems most reasonable. To some other minds, equally free to have their own opinion, even if a frankly selfish one and equally numerous—indeed far more numerous—it seems best to keep up the slaughter so long as possible, upon the ground that posterity never did anything for us, and that therefore we need do nothing for posterity. To these it will not avail to sadly point out the fact that it is not for posterity, but for ourselves that we would do this benefit. The shooter of fifty years of age will live long enough to wish, when it is too late, that he himself had aided in the framing of some wise restricting measure. Whether this measure should be the stopping of shooting in the spring, I, for one, should not like to be called upon to determine, for some other measure may be equally wise; but if this were thought wise by the public opinion I should certainly lay up my gun without a grumble. As it is, I shall probably not lay up my gun this spring, and this I should admit frankly, though I would vote gladly for the proposed amendment.

This is merely my own one personal opinion, not worthy to be called a dictum, and ventured only under the privilege which should be accorded any fair-minded man. Nor has any of us the right to call the man who differs from him not fair minded, or to impute to him upon that basis motives of an unworthy sort. I do not believe for one instant that Mr. Allen wishes to see spring shooting continued because he might then sell more duck calls or bow-facers. I think that to attribute such motives to him is more than injustice, it is unkindness, to a bluff and hearty, a whole-souled and generous sportsman. If Mr. Allen wants the amendment quashed, depend upon it, it is Mr. Allen the shooter, and not Mr. Allen the manufacturer. As a shooter, he is entitled to his opinion, and we should win him from it by fair facts, and not attempt to drive him from it by abuse.

So also are the Monmouth Gun Club, so also are the other opponents of this measure, entitled to their opinions. It is useless to belittle their party or to abuse it. It is far better to admit, as I must from a growing knowledge of the shooters of this section, that their party—mistaken though I believe it, yet successful beyond a doubt—is a large one and a strong one, embracing, to an extent which has surprised me, numbers of the best, most popular, the most wealthy, and I must add, the most intelligent sportsmen of this State. It is the party of the practical to-day. It is the party typical of the spirit of this bald and selfish age. It is a party mistaken in its belief and ungenerous in its tenets, I feel sure; but that it will succeed in killing the proposed amendment against spring shooting is a thing so sure that it hardly admits a question.

Mr. Allen and I walked down South Water street to go and see Col. E. S. Bond, perhaps as well known a game dealer as this city has. We passed a stand where there were a few of the mallards which are now coming up from Missouri. We weighed one to see about the condition of spring ducks. It was a drake, and weighed not quite 2¼lbs. Mr. Allen says that in April New Boston ducks are very fat.

Col. Bond, big and jovial enough to almost fill up his little office and run over on the sidewalk, was found at his desk, and we asked him what he knew.

"I'll tell you what I know," said the Colonel, "I know that usually when you scratch a sportsman's back you find bristles."

"Is it not also true, Colonel," we asked him, "that when you scratch a game-dealer's back you find coupons?"

The Colonel didn't know about that, but at length went on, "What I mean," said he, "is that you sportsmen don't amount to much. You make a lot of talk about preserving game, but you don't preserve it. You are all a lot of butchers, and will kill all you can. I am talking out of a varied knowledge of sportsman nature, and I say the sportsmen of this country have never passed and upheld one measure looking to the preservation of game, and you are not likely to. You do a lot of talking, but it isn't anything but selfishness. You are all afraid that somebody else will kill the birds you want to kill; that's the sum of your philanthropy. Would any of you be willing to stop using a dog in field shooting? Would you all agree to use no gun larger than a 16-gauge? Would you all stop using decoys? Would you all give up blind shooting? What would you do, now, when it comes right down to hard pan? Why, you wouldn't do anything. You won't even go down in your clothes and get a $5 bill to give your State game warden. Look here"—and he produced a written subscription list—"here's a subscription fund we started last fall for Billy Minier, the game warden. See any sportsmen's names there? Mostly South Water street names, aren't they? Well, we fellows down here just raised that ourselves, and we gave it to him, and that's about all he got. What are the sportsmen doing? Why, they're talking!

"What about violations of the game law? Why, my dear sir, I don't hesitate to tell you that the sportsmen ought to come right to South Water street and consult before they try to get any game law passed. If the merchants of South Water street unite in supporting a law, it is almost impossible for violators to get off unpunished; and upon the other hand, if we think a law is nonsensical, we pay no attention to it. I could run $100,000 of illegal game through this office in a month, and you wouldn't know it if you stood right here. How is it going to be found out? Who is pushing any such matter—the State Sportsmen's Association? Not much. It's starving one man to death here now, and it would take more active work than that to detect and make convictions on this street.

"How about this Smith case? I'll write you a piece about that, sometime, maybe. There are two sides to that case, and it isn't lost or won till it's tried.

"What do I think about spring shooting? It would be hard to stop it, though I believe it would be for the best. I am not sure that it would be better than to stop fall shooting. There are thousands and thousands of young ducks murdered before they are hardly big enough to peep. Ducks decoy better in the spring, but they come to a call better in the fall, and they don't know so much then. Besides, there are thousands and thousands of ducks trapped in the fall.

"You didn't know that? Of course you didn't. There's a lot you don't know. There don't anybody but South Water street men know much about this trapping business. Listen here, and I'll tell you something. I used to stand in with the men who netted wild pigeons. I handled the great bulk of all the wild pigeons that came to this market. When the pigeons were used up, I personally know that a great many of the nets went into the North and Northwest after ducks. Four years ago I sold one New York man 15,000 mallard ducks, all trapped by one outfit in Dakota. Sometimes they caught thirty-five dozen at one throw of the net. They used 200 bushels of corn that fall in baiting their feed-bed, in one shallow lake. These ducks were all caught in the fall, and are not trapped at any other time. They say that you can't ship game out of Wisconsin. What a farce! Why, I know of one firm on this street which every fall buys from 20,000 to 40,000 ducks from Wisconsin trappers. Mind, I say from trappers alone, and not shooters. What do you think of that?

"What sort of a law do I think would be best to save the ducks? Nonsense, young man; nonsense! You sportsmen won't pass any effective law, and if it were effective you'd never rest till you got it repealed. If I were to suggest a law which I thought would afford some shooting and yet spare the ducks a little, I should say that the shooting season ought to begin not earlier than Oct. 1 or 15, and ought to end not later than April 1 or 15, and that some of the murderous modern facilities should be abridged."

These are the words of a man who knows more about game, the supply, the way it is taken, and where it comes from, than any sporting writer or editor in the United States. Certainly Col. Bond and Mr. Allen know more about ducks in a minute than this writer will ever have

time to learn. Sportsmen will not altogether agree with the views of either in some regards, but there is in the position of each a certain strength which at least entitles it to respect, and in the words of each something for sportsmen to read and ponder over carefully.

In person, Mr. F. A. Allen is not over medium height, but though rather slight in build, it is said there are few who would care to follow him all day on foot or in a boat. He is fifty years of age, but looks in the thirties. Col. E. S. Bond is a 200-pounder, and there are no flies on his head. They couldn't stay there. He is the soul of good nature and is loved by the sportsmen he abuses so roundly. In him they recognize a clear-headed and well-posted man, sure to act up to a high standard of liberality and good sense. E. Hough.

SHOOTING CLUBS OF CHICAGO.

X.—THE HENNEPIN CLUB.

THE Hennepin and Swan Lake clubs nearly join each other in their riparian possessions, and what is true of the one club is largely true of the other, so far as the character of the grounds, the nature of the game, and the manner of its pursuit are concerned. It is the boast of the Hennepin Club that no equal acreage upon the whole Illinois River—nor, indeed, in the whole State of Illinois—affords better mallard shooting than that controlled by it. Thus, for twelve days in the spring of 1888 the average of one member (Mr. W. W. McFarland) was 40 mallards a day for twelve days in one trip, there being such daily scores as 76, 90, 131. On one day 111 mallards were killed. The shooting, consisting as it does largely of timber or submerged cornfield shooting, is largely at mallards, and the above scores will do much toward warranting the assertions of the club.

The Hennepin Club grounds lie higher up the Illinois River than the Swan Lake grounds, and are reached by the same railway line, the C. R. I. & P. The round trip fare is in the neighborhood of $4 to Bureau Junction, the same sleepy little town which was mentioned in the Swan Lake article. One reaches Bureau while it is still enwrapped in the cold shades of midnight, and the best thing he can do is to go to bed and wait for a warm breakfast before he goes any further. In the morning Mr. A. Waugh, the common carrier for that section of country, will ask him if he wants to go to Hennepin, and will take him and his traps over if he does.

The road from Bureau to Hennepin is a quiet and pleasant one, winding around in a sleepy sort of way to accommodate itself to the vagaries of deep and crooked Bureau Creek. The low wooded hills to the right are now pretty well supplied with ruffed grouse and squirrels; the warm bottom lands are much haunted by woodcock in season, and the wide fields are now again, under the beneficent influence of the continuous close law, showing bountiful flocks and coveys of that distinctively American and Western bird, the prairie chicken. As the sandy road twists into the timber of the Illinois River there begin vistas of winding bayous and willow flats and low fields of corn swept about by the arms of the native forest, and there begin also stories of how on such and such a day, at this or that point, almost visible from the road, some certain shooter bagged nearly a boat load of mallards.

A loud halloa from the hither bank of the broad Illinois starts from his sleep the owner of the lethargic horse ferry, which has always been found sufficient for the people of that region. Him the wayfarers inform they will give to him a silver two bits to bear them o'er the water. But never, I ween, had Lord Ullin's daughter and her lover escaped even so far as they did from the irate Mr. Ullin had their boatman been so slow and their boat this long and deliberate craft, whose almost sole propulsion seemed to be the *vis inertiæ*.

Hennepin sits high on a bluff of lofty state and blinks her eyes over the rolling stream of the Illinois, here just 1,000ft. wide. Hennepin is fifty-five years old. She was once the rival of Chicago, and looked, indeed, with some contempt upon that village. She has to-day about 700 inhabitants, when they are all awake at once, which doesn't often happen. Hennepin has just three points of interest—a court house, an artesian well, and George Cunningham. The court house was built by George Cunningham, and I am not sure he did not dig the artesian well. He does almost everything there, besides acting as steward for the Hennepin Duck Club. The court house isn't very large, but it does for the necessities of a county which embraces only four townships, and where the term of court rarely lasts more than one week.

The shores of the Illinois here bear evidence of the trail of the market-hunter and the market-fisher. Big house boats, long lines of tarred netting, hoops, stakes, and all the fell appliances of the fresh-water fyke fishermen are visible every way. This old trapper, whose home is the big boat yonder, with the blue smoke coming out of the roof, will inform you that during the high water in the spring he sometimes takes as many as 100 rats a day. In those times his cup runneth over. He is one of hundreds of fellows in that country who loaf along the stream or the sedgy banks of the big lake marshes and pick up what they can at trapping muskrats, netting fish, killing ducks, or perhaps now and then hiring as pusher to some sportsman.

After the oldest inhabitant has done the honors of the place, and has showed you the artesian well, and the court house, and George Cunningham, you introduce yourself to the latter, and after that you are all right, so far as the Hennepin Club is concerned. Mr. Cunningham is not only architect, carpenter, boat builder, decoy maker, club steward, guide and pilot; he is also a modest, quiet, intelligent man, of ability enough to fill a wider field at need. More than that, he understands ducks.

Mr. Cunningham led the way down to the river bank, and pointed out the big club boat which does duty as the camping home of the Hennepin Club. The Hennepin Club is still a young organization, though one of the most vigorous of all the clubs. It numbers only twenty-five members. It is pre-eminently a hunter's club, and the big boat, which can be taken to any desired part of the shooting grounds, has until now seemed home enough for it in its strictly business employments on the marsh. The club, however, will soon erect a big club house, and knock all the romance out of itself.

When I saw the Hennepin Club boat it was lying a little heeled over, made fast high and dry at the foot of Hennepin Bluff. The lifting of the top-board of the Government dam at Henry, some miles below, had caused a drop in the river and left the boat aground. We entered it and found it a very comfortable and commodious affair. The interior was well fitted with roomy sleeping bunks, so arranged as to leave plenty of space in the main apartment. There was a big table, a good stove spoke of the culinary possibilities for which I am informed the Hennepin Club is somewhat famous. The floor of the boat was arranged in big traps, and in the cellar thus revealed in the hold below there were visible receptacles for firewood and supplies of all kinds. Stout rings along the outside deck showed where the hunting skiffs were fastened, and a wide sweep or so suggested the propelling power when a change of base was necessary.

THE HENNEPIN CLUB HOUSE.

At times of high water, when the duck season is at its height, the Illinois River is a big and angry stream, fully two miles wide, showing a considerable sea, and perhaps running full of heavy ice. Beyond the main body of this stream lie the best shooting grounds of the club. It might be supposed, therefore, that the boats we found in the club boat houses at the foot of the bluff would be what we found them—big, stiff, high boats, of a model quite different from the marsh boats. Compared with the Green Bay model the Hennepin boat is far deeper and flares much more in the midship lines. It is nearly or quite covered with iron or copper, as protection against the heavy ice. I saw two boats, the Juliette and the Cora, belonging to Messrs. W. A. Bond and A. R. Barnes, which were built entirely of iron with air-tight chambers fore and aft. It is claimed that either of these boats if full of water would float two men and their outfit. They were heavy and clumsy looking affairs, weighing about 240lbs. and costing $80 each. A man would have to work mighty hard to give me that kind of duck boat. Yet their owners think they have struck just the thing. That is what Mr. McFarland thinks about his big boat, which is drawn to fine lines bow and stern, with very high sides and a trifling narrow comb about it. This boat looks extraordinarily big and clumsy, yet it is said to be easy to handle and very safe. The Hennepin men hardly have any two boats alike. Each man is a theorist, and is perfectly convinced that he can build a boat better than any other boat that ever was. Mr. Cunningham is the builder of many of the boats whose theories have been carefully elaborated by their owners during long months of patient study. There are a few Hine boats also in the club's boat house. I heard also that some one was going to try a boat built on the Havana model, a rather shallow boat, drawn up to 2in. stem and stern, and provided with a rail around the comb to act as a rack for the decoys, etc. It is evident that the ideas of the Hennepin Club on boats are in a formative shape. I cannot help thinking that they would do far better to go direct to some boat building firm that offers an established article to the sportsman than to throw away time and money in trying to build a boat which never will come out quite as they expected it. It is, of course, impossible to build a boat which is both a good sea boat and a good marsh boat, for the former must ride where the latter must cut through; but there are fine models for either, beautifully made boats, light and durable, offered by the regular makers, and it is hard to see why these are not better than many of the affairs which are intended as improvements upon them.

These boat houses were as full of hunting appliances as an egg is of meat. Decoys, paddles, oars, woven rush blinds, boat trucks, and all that, occupied every inch of space. The "Sibley boys" and Mr. Carroll make their own decoys, and I believe built their own boats, which are plain, open skiffs. There were some Elliston decoys, but the great bulk of the decoy fleet has been made by Mr. Cunningham, who does such excellent work that I have made his method of decoy-making the text of a separate article.

The Hennepins, although a small club, are very active. They have close upon 5,000 acres of valuable marsh and timber lands bought or leased, and are all the time quietly adding to their possessions. Mr. W. K. Reed, cashier of the Dime Savings Bank, of Chicago, is the mainspring of the committee on lands, and is a land hustler from the remote behind. He is best known as the North American map fiend. He makes maps of every thing he sees. He has every quarter section within ten miles of Hennepin marsh down in colors, and can put his finger down on any piece of marsh and tell you how much it cost or ought to cost, how much the owner wants for it, and how far it lies from the boat house door. You can't talk to Mr. Reed three minutes without his pulling out a hand-painted map on you. If you ask him the way to the post-office he will explain it on a map. They say he has the street car system of the city all mapped out, and knows the number of the car which is due on any corner at any given minute; and when he goes to church he consults a diagram to find where his own pew is. I don't know about that. I only know he followed me out on the street and offered me a map of the Hennepin grounds, showing me how many mallards he was going to kill the next time he shot on the willow point on such and such a section, Tp. number so and so, range I forget how many degrees west of some principal meridian. Mr. Reed is also the artist of the club. He kindly made the sketch for the engraving of the club boat, and is also responsible for the picture in the club register, showing the condition of the club boat when it sank in four feet of water. Appended to this is the legend, "All on board were saved."

Fully alive to all the modern phases of duck shooting, the Hennepins have made and will make special efforts at feeding the wild ducks. Much of their land is corn land, subject to overflow. This land they will plant to corn and buckwheat. They will also sow wild rice this year in some of the localities specially adapted to it. They have attempted to introduce wild celery into some of the deeper lakes, but without very good success this past season. The celery seed was lost in transit, and when it finally arrived was thought to be spoiled. Mr. Cunningham told me they would this year make a persistent effort to plant the wild celery root, which they will obtain at Fox Lake. He showed me his contrivance for planting the root. It is a long-handled affair, provided with a sharp blade which can be sunk into the mud. In the side of the blade is an aperture into which the bit of root is placed. The blade is sunk in the mud, and the root is then discharged from it by the operation of the handle from above, the latter being double, and sliding upon itself. The deep, clear lakes of the Hennepin country resemble the Fox Lake waters, which abound in the wild celery, and are indeed almost a part of the same system: they should be readily susceptible of planting to this most excellent duck food.

The once-famous Senachwine Lake lies between the Hennepin and Swan Lake clubs, and just above Senachwine Lake, on the west side of the river, is the big pond known as the Goose Pond. Old settlers say that twenty years ago the clamor of the wild geese could be heard from the Goose Pond, clear across the Illinois River bottoms, at Hennepin court house on any morning of the season. Even to-day this pond is a great resort for the honkers, although they do not nest there now to any considerable extent. The Hennepin own bodies of marsh upon both sides of the river, and own about one-half of the Goose Pond. On the east side of the river they own the Hennepin and Hopper lakes, and all the marsh between. I believe they do not own the Sister Islands, but they often shoot on these well-known points. Mullin's Slough, the Horseshoe and Third Slough are all highly prized localities. All lying in overflowed country also are Wood's cornfield, Stanton's cornfield, and the Markley timber. In Hennepin Lake, Bond's Point, Barnes's Point and Carrollton are landmarks. McFarland's Teal Hole is another favorite spot. As to the Haunted Half Acre, there is a tradition that a vast "hoodoo" abideth thereover, so that no man may there gather the ducks fallen to his gun. Zenor's Lake is good mallard ground, and Seaton's Lake, another small one, is said to be much used by bluebills. Dore's cornfield, Dore's prairie, and Oak Ridge Lake are all mallard provinces.

The Hennepin Club is to be congratulated upon its good fortune in getting possession of the excellent and extensive territory it controls. Its grounds are admirably selected, and have for the most part been obtained at very reasonable figures. Most of the land has been quietly picked up at prices like $1, $3 or $4 per acre, and at such prices the land is a very good investment. In one case the club secured a thirty-years lease of 500 acres of good marsh land for $75. Shares in the Hennepin Club are $300 each, and the annual dues are $10. To meet the recent expenditures made in purchasing land, there were three assessments made last year.

There is not in Chicago a more pushing, active and thoroughly wideawake club than the Hennepin. It is full of enterprise, alive to every sort of improvement of its own resources, and has a business and sportsmanlike record of which it might well be proud, but isn't. A perfectly congenial, enthusiastic and harmoniously active little body of sportsmen, it is a splendid example of what shooters can do and ought to do to-day.

The bags of the Hennepin Club have been very good ones, and run about as those of the Senachwine and Swan Lake districts. Of course the club has felt the scarcity which has been so general this past season, and indeed there was hardly a decent bag made on the Hennepin grounds this past fall; this, however, is exceptional and altogether out of the way. The club is very sure that if there are ducks in the country, they are due at the Hennepin marshes. Mr. McFarland, a very successful and well posted duck shooter, says he would not exchange his one share in the Hennepin Club for three shares in the other (Kankakee) club he belongs to, or for shares in any other one club. Much of the success of the club, so far as its ownership of valuable property is concerned, is due to the untiring efforts of the president for 1888, Mr. W. K. Reed, ably seconded by Mr. McFarland in the

selection of the lands. Should this intelligent start be prosecuted, as doubtless it will be, the Hennepin Club will be possessor of some most desirable privileges.

Following is the list of the Hennepin Club: President, E. P. Hilliard; Secretary and Treasurer, J. B. Sibley; Director, F. E. Willard. Members: W. K. Reed, J. B. Sibley, W. W. McFarland, J. A. Sexton, C. R. Carroll, F. E. Willard, F. I. Bennett, H. S. Lepper, C. S. Lamb, H. D. Nichols, C. D. Gammon, M. J. Eich, J. V. Clark, Jr., G. M. Sibley, E. W. Dillett, E. H. Daft, J. F. Gray, A. R. Barnes, G. M. Davis, W. A. Bond, A. T. Ewing, Chas. Iglehart, E. P. Hilliard, R. B. Organ, J. F. Ballantine. E. HOUGH.

No. 175 MONROE STREET.

March 1.—In the Illinois Legislature the Committee on Game and Fish have reported a bill which makes it unlawful to hunt, kill, trap, net, ensnare or destroy wild buck, doe, fawn and wild turkeys between Jan. 15 and Sept. 15; grouse or prairie chickens between Nov. 1 and Sept. 15; rough grouse, quail, pheasant and partridge, between Dec. 1 and Oct. 1; squirrels between Dec. 15 and June 1. Brant, duck or any other water fowl are protected between April 15 and Sept. 15. During the spring season of shooting it shall be unlawful to shoot any wild game on Sunday, Monday or Tuesday of any week. It is made unlawful to shoot any birds with a swivel gun, or from a steam or sail boat, nor shall any one be permitted to shoot from any sink or sneak boat or blind in any open body of water. The bill is not especially liked by Chicago sportsman. South Water street (our game market) has a delegation present at Springfield. A number of sportsmen are also there. There never was so much interest shown in game legislation, and the result, whatever it may be, is awaited with concern.

CHICAGO, Ill., March 6.—We have got 'em again! The long-looked-for are here. The ducks have arrived. Three days ago a big flurry of bluebills and mallards appeared on the Illinois River and then dropped back. Yesterday five barrels of ducks came up from Lake Senachwine. To-day a telegram came up from Water Valley, on the Kankakee, saying that the ducks were swarming in on the marsh. The boys of the Kankakee clubs are going down to-day in numbers. The market men report any quantity of ducks being shipped in from New Madrid. Ducks are a drug on the market. The season will probably open now with a rush. E. H.

SNARING RUFFED GROUSE.

Editor Forest and Stream:

I notice that "Hermit" in your issue of the 28th ult. says: "Let me say, in justice to myself, that I do not yield the palm to any member of the Utica Association in my desire to protect any and all game birds or game animals of our country."

The Utica Fish and Game Protective Association have successfully demonstrated that they enforce the game and fish laws. Now note what "Hermit" says in his letter (Feb. 28): "If my critic ("U. F. & G. P. A.") were here I should take him to a locality where there are six grouse, five of them young birds: and then I could show him more than forty snares, some of them artfully and temptingly baited with coral-red barberries or rosy-cheeked baldwins."

Massachusetts game law says ruffed grouse can only be legally killed from Sept. 1 to Dec. 1, yet "Hermit" admits that the snarer around his "cabin home" is doing his level best to kill grouse contrary to the law.

"Hermit" says he desires "to protect any and all game birds." His words have a very incongruous look. The Utica Association would surely act in this case if in their territory, yet "Hermit" will "not yield the palm to any member of the Utica Association" in game protection. Now this is pure unadulterated nonsense. The whole import of "Hermit's" letters is to try to show that bird dogs (how many breeds does this include?), not snares, are the means by which the grouse are being exterminated. I beg to submit, for the benefit of "Hermit," the following editorial from the FOREST AND STREAM, under the date of October 19, 1882. In referring to ruffed grouse you use the following well-chosen words: "That the pursuit of them with dog and gun, in proper season, would ever exterminate them, we cannot believe. We have seen too many of their successful tricks, and witnessed too many of their triumphant escapes from the best of dogs and the best of guns to believe anything of the kind. * * * With snaring the case is entirely different, and the man who thoroughly understands their habits in a short time will exterminate them from any locality."

As "Hermit" says that snares are set now nearly three months after the time that the law says that grouse cannot be killed legally in his State, and his allowing the same after saying that he will "not yield the palm to any member of the Utica Association" in the matter of game protection, has a very peculiar look. A. C. COLLINS.

HARTFORD, Conn.

SHOOTING FOR FUN AND PROFIT.—*Editor Forest and Stream:*—In a recent issue a correspondent hurls an avalanche of abuse against the market-hunter, holding him up to the contempt of sportsmen as the despoiler of our game, and as the prime cause of its constantly diminishing numbers. In a spirit of fair play and justice to a much abused class of sportsmen will he tell me the difference between the one who kills a score of birds and sends them home to friends and him who kills a like number and sends them to market, to perhaps buy bread for his starving family? Does one protect or preserve more than the other, and if so which, and which is the most justifiable in the killing? Each has equal rights both under moral and statute law, and if the true sportsman tramps wearily home in the gloaming with disappointed hopes and empty pockets it is only because he lacks the skill, the experience and the woodcraft to load himself with game. I am no market-hunter, and I wish from the bottom of my heart their numbers were less. Still more do I wish that the so-styled true sportsman, who takes to the covers in early July to frighten to death the half-fledged woodcock and downy ruffed grouse under the name of "shortbills," would mete out to themselves the full measure of their misdeeds and divide with the market-hunter the responsibility which they lay entirely at the latter's door.—NOM DE PLUME.

SOME DUCKS ACCOUNTED FOR.—*Editor Forest and Stream:* While traveling to-day from Indianapolis to St. Louis, I noticed among the express matter on a truck at Terre Haute an engine which may interest some of your readers. This was the iron work of a punt gun, unfinished, but evidently on its way to some local gunsmith to be fitted up and prepared for service. In old times I have seen at Pat Mullin's place in New York guns manufactured for members of the Caroll's Island Club for use on the high-flying canvasbacks and redheads of the Chesapeake Bay, which approached this in size. Like them, this was single-barreled, but it is far larger than any shoulder gun that I have ever seen. The iron work alone is said to weigh 20lbs. The gun is not less than 5ft. 8in. long, and the diameter of the bore is an inch or perhaps somewhat more. Not far from the breech is a pin, working on a fore and aft hinge, which is to fit into the socket in the bow of the boat. I should suppose that the gun could throw a pound of shot. Some of your correspondents, as I notice by your paper, which recently I have bought each week in Chicago, are wondering where the ducks have gone. I think that in the hands of market-shooters a few guns such as this one would account for a good many of the fowl. This gun was consigned to Newport, Indiana.—G. (St. Louis, Mo., March 5).

ST. LOUIS, March 9.—Last Friday the cold wave broke and the weather became warm and pleasant. Reports came from the ducking places that the webfeet were making their appearance. Many went out, but as a rule bags were light. M. Billmeyer, E. C. Mohrstadt, W. Hettel, C. Hemphill and W. Clark spent several days in the vicinity of Dameron, on the line of the St. Louis, Keokuk and Northwestern Railway. A telegram was received from them stating that the ducks were coming in in fair numbers. If they came in, this gentleman says, they must have kept going, for when they arrived at the locality, the shooting was slow and of no especial interest. The only bag of any consequence reported was at Kid Lake, about 21 miles south of here, by Mr. H. C. Griesidieck. He left here Monday and returned Wednesday evening with 35 mallards, 10 sprigtails and a few greenwing teal. The game dealers have had good shipments of all kinds of ducks from points in this locality, and judging from the excellent condition in which they are, certainly suffered none in the "Sunny South." Quite a number of large fat snipe are being regularly received from near Galveston, Texas, and the northwestern portion of Kansas has sent in a few during the past two weeks.—UNSER FRITZ.

MISSOURI.—Alexandria.—The winter here in northeast Missouri has been a peculiar one for its mildness, dryness, limited expanse of clouds and temperate winds from the north and east. The snowfall has been very light, and the rains were few. One noted feature is the scarcity of migratory wildfowl and native birds, which usually remain with us all winter, flying northward or southward. Ducks were few; I have seen but two kinds, the mallard and what we call the sprigtail. Considering the openness of our great rivers, and the balminess of the atmosphere, we would suppose that ducks and geese would be here in great numbers. There are forces at work that we cannot account for. Usually we have many birds in our forests all the year round, but this winter we have been nearly forsaken by even the redbirds. Never, in all my close observation, have I noticed such scarcity. Quail are only moderately plentiful, and the grouse appear to be few in numbers. I have not seen an eagle all winter. —JASPER BLINES.

ITHACA, N. Y., March 7.—A large flock of wild geese passed northward over this city to-night, and as a result the spring shooter smiles wickedly as he softly murmurs that familiar ditty "Johnny get your gun."—M. CHILL.

PISTOL CARTRIDGES IN A RIFLE.—Will not somebody give briefly the results of his experience with the .22-5-30 long pistol cartridges used in a rifle? I do not find them at all accurate.—J. L. K.

DELAWARE.—One thousand of the two thousand live quail ordered by the State Game Association have been shipped from Alabama and will arrive in a day or two and will be distributed immediately.—DEL. A. WARE.

MAINE GAME LAW.

THE text of the bill amending the game law of Maine changed the reading of several sections of the statute as follows:

SECTION 9. Whoever hunts, kills or destroys with dogs any moose, or in any manner hunts, kills, destroys or has in possession any cow moose, or part thereof, forfeits one hundred dollars for every moose so hunted, killed, destroyed or had in possession; and no person shall, between the first days of January and October, in any manner hunt, catch, kill, destroy or have in possession any bull moose, or any part thereof, taken in close time, under the same penalty.

SEC. 10. Whoever hunts, catches, kills or destroys with a dog or dogs any deer or caribou, forfeits forty dollars for every deer or caribou so hunted, caught, killed or destroyed; and no person shall, between the first days of January and October, in any manner hunt, catch, kill, destroy or have in possession any deer or caribou, or part thereof, taken in close time, under the same penalty. Any person may lawfully kill any dog found, kept or used for the purpose of hunting moose, deer or caribou. Any person owning or having in possession a dog for the purpose of hunting moose, deer or caribou, or that is used for such hunting, forfeits not less than twenty nor more than one hundred dollars.

SEC. 11. Whoever has in his possession any such animal, or part thereof, between the first days of January and October, shall be deemed to have hunted, caught and killed the same, contrary to law, and be liable to the penalties aforesaid; but he shall not be precluded from producing proof in his defense that such animal was hunted, caught or killed in open time. Any officer authorized to enforce the game laws, may search for such animal or part thereof, subject to Sections 12, 13 and 14 of Chapter 132; and the warrant may be issued on his own complaint.

SEC. 12. Whoever catches, kills, destroys or has in possession between the first days of January and October more than one moose, two caribou and three deer forfeits one hundred dollars for every moose and forty dollars for every caribou or deer so caught, killed, destroyed or had in possession, except those lawfully taken in open time, or the increase of those domesticated, more than the aforesaid number of moose, caribou and deer, or parts thereof, shall be deemed to have caught, killed or destroyed the same in violation of law.

SEC. 13. Whoever, during close time, buys or sells any moose, caribou or deer, or any part thereof, and whoever carries or transports from place to place any such animal or part thereof during close time, or in open time, except animals or parts thereof in possession of the person who lawfully caught or killed the same, open to view, labeled or tagged, with the name of said person plainly written or printed thereon, shall forfeit the sum of one hundred dollars for each moose, and forty dollars for each caribou or deer, or part thereof, so bought, sold, carried or transported. And whoever, with intent to aid another in such transportation, by taking possession of any such animal or part thereof, or permits his name to be used on the label or tag attached thereto, shall be liable to the respective penalties aforesaid; such animals or parts thereof being transported in open time by common carriers or other persons, so labeled and tagged and accompanied by the person who lawfully caught or killed the same, shall be deemed to be in possession of such person and not in the possession of such common carrier. Whoever, by false representations, induces a common carrier or other person to take any such animal or part thereof to transport, shall pay a fine of not more than twenty dollars, and be imprisoned not exceeding twenty days.

SEC. 15. All game hunted, caught, killed, destroyed, bought, sold, carried, transported or found in possession of any person or corporation, in violation of the provisions of this chapter, and amendments thereto, shall be liable to seizure; and in case of conviction for such violation, shall be decreed forfeited by the court to the prosecutor, who may sell the same for consumption in this State.

SEC. 16. Any officer authorized to enforce the fish and game laws shall, while on duty, wear a badge as an insignia of his office, and may, without process, arrest any person found violating, or who has violated, any of said laws; and he shall, with reasonable diligence, cause a process to be issued and prosecuted against him.

SEC. 26. All fines and penalties recovered for violations of the preceding sections, to and including Section 9, shall be paid one-half to the prosecutor and the other half, with the costs, to the county where the action is brought or the warrant or indictment issued.

All fines, penalties and costs collected on complaint or indictment in the enforcement of any fish or game law, shall be paid to the court trying the same, and by such court to the treasurer of the county in which such court is held, which court shall certify to such treasurer the name of the person entitled to one-half of such fine or penalty, which said half shall be paid to him by such treasurer. In all actions of debt therefor in any court, if the plaintiff prevails, he shall recover full costs without regard to the amount recovered; and one-half of all fines and penalties collected in actions of debt, shall be paid forthwith into such treasury; any officer or other person who shall receive any fine or penalty, or any part thereof, for the violation of any fish or game law, except through the county treasurer, on complaint or indictment, as aforesaid, or if by action of debt, and neglects for more than sixty days to pay one-half so collected into such treasury, shall be punished by fine of not less than forty nor more than one hundred dollars for the first offense, and for every subsequent offense by said fine, and imprisonment not exceeding six months.

SEC. 21 is amended by adding that "woodcock and ruffed grouse or partridge shall not be carried or transported from place to place except in possession of the owner thereof under the same penalty."

[*Special to Forest and Stream.*]

AUGUSTA, Me., March 13.—The bill to amend the game law was defeated in the House. The law remains the same as before.

TALLMADGE, O., Sept. 24, 1888.—*United States Cartridge Co. Lowell, Mass.:* Dear Sirs—I have used a good many U. S. cartridges, and they have never failed to give satisfaction. Yours truly, (Signed) E. S. METLIN.—*Adv.*

Sea and River Fishing.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

A SPRINGFIELD CLUB IN CANADA.

SCORE another club of Americans in Canada. The Springfield, Mass., *Republican* reports: Edward S. Brewer and Damon N. Coats have returned from a trip of several weeks to the vast Canadian reservation for the control of which the Springfield fishing and game club was formed recently. They found "Government thermometers" registering 45 degrees below zero and snow so deep on a level that the little chimneys were all that afforded trace of the cabins of the hibernating natives. They encountered one blizzard which kept them prisoners two days and two nights and left the snow so deep and soft that a guide who had been sent off in the morning with a message for a camp seven miles distant, returned at nightfall, having been all day going one mile and back. Messrs. Brewer and Coats contracted for two cabins for the club and all the necessary furnishings, provisions and camp equipage. They select as club headquarters an island, about a mile in circumference, in Amabalish Lake, a beautiful sheet of water six miles long, one of the gems in the club's leased tract of 300 square miles. The principal house will have a piazza thirty-five feet long and six feet wide, from which a fine view of the surrounding territory may be had, and a monster fireplace inside which will burn "big wood." The island is 18 miles from the nearest point on the St. John Railway, which is an old Hudson's Bay Company trading post, not far from Chambord and right on the shore of Lake St. John. Henry Poole, a famous man in that section of the Canadian wilderness, has a hotel at this post, and will take care of the tender members of the families of the Springfield association, who do not care to make the 18 mile jaunt to the camp by birch bark canoes, up streams and lakes, over carries and through brush. The point selected for headquarters is about midway in the stretch of 30 miles along the Matebetchuen River, extending five miles on either side; so that small camping parties, two or three men and their guides, may pick out little favorite nooks by the score. Herein lies the novelty of the attraction, for no white sportsman has ever traversed the reservation; Messrs. Brewer and Coats have merely visited it, although they have spent several weeks there and covered a deal of ground, beside testing the fishing and hunting. They caught on this trip hundreds of brook trout weighing three and four pounds, and brought home a lake trout weighing between 16 and 17 pounds. They saw eight caribou shot near their stopping place, and one day during their visit a Montaigne Indian came to the trading post with $45 worth of skins. The lease covers many lakes five or six miles long and a host of small streams with trout pools that would make a fisherman's eyes start from their sockets. In one hole, perhaps 10 yards square, Mr. Brewer says he saw on his first trip, last August, at least 100 trout out of water at once, and the pool fairly boiled with the lashing. A party of 13 or 14 is already made up to go in June to the new camp and verify these reports. Henry O'Sullivan, surveyor-general of the Province of Quebec, returned with Mr. Brewer and has been stopping for several days at his Crescent Hill residence, visiting Smith & Wesson's pistol factory, the National Armory and other manufacturing concerns. The Springfield Fishing and Game Club is thus officered: President, E. S. Brewer; Vice-President, D. N. Coats; Secretary and Treasurer, E. M. Coats, and these with Frank D. Foot and Robert W. Day are stewards. The rest of the membership of 20 is as follows: Louis H. Orr, Walter H. Wesson, E. C. Barr, Dr. S. W. Bowles, Col. M. V. B. Edgerly, Dwight O. Gilmore, Henry S. Dickinson, Col. H. M. Phillips, E. A. Alden, N. D. Bill, A. B. Wallace, John Pettigrew and W. H. Lockwood, of Hartford.

DRUM FISHING AT BEAUFORT.

AMONG the considerations which allured me to Beaufort, last March, was this, that within easy distance of my rooms at Beaufort I could at any time or tide, be reasonably sure of some very fair fishing for various styles of pan fish, "boats and bait supplied," and that but a few miles away were the best drumfish grounds on the coast of the United States; that the drum had began to run and large ones were taken daily. This was about March 20 to 30.

The evening of my arrival I sat alone on the porch with my pipe and listened to the gossip of a party who afterward showed themselves to be mighty hunters, ardent anglers, warm friends and excellent yarn spinners. Their yarns were of the field and flood. One, a captain, gave vivid description of a battle royal between himself and hounds with a wildcat, which he pictured as a lynx-like beast, standing very tall, wonderfully ferocious, whipping the entire pack, at last subdued only by the intervention of some negro cur coon dogs. Another, a colonel, told of a deer hunt where the odor of a rattlesnake was accompanied by the starting of his horse, then on a stand, his discovery that near the fetlock was a single drop of blood, his hurrying toward an open 50yds. away, on reaching which the horse staggered, fell, and died in agony. Another, also a captain, told of his struggle with a broken-legged, throat-cut buck. Another, a governor—so they called him—made a good raise on every story told, till finally the subject of fishing led quickly into drum fishing, and there it staid.

Then I heard for the first time—I heard it often enough afterward—that no gentlemen could catch a drum; for although surrounded by boats of successful negro fishermen, the drum would not, could not, be induced to associate with the whites. Stories of fishing trips always ending in failure were rife, at which I, some little distance from the group, quietly smiled into my pipe, as I thought over the halibut and cod, groupers and snappers, lake trout and bass, and many great Alaskan fishes with names known only by Messrs. Goode, Bean & Co., that I had coaxed up from the wet, in nearly every country where fish and fishermen exist; and I thought to myself, just wait, I'll show you; for of the various reasons assigned none seemed to me satisfactory.

The next day, under the auspices of my friend Lieutenant Lyman, who has command of the Naval Station on Paris Island, fully outfitted with gear and plenty of fresh prawn, I set out on my first trial. In his comfortable, roomy catboat, the Yum-Yum, we made quick work of the eight or ten miles which separated the station from the fishing grounds at the mouth of Broad River, and anchored in the midst of a fleet of boats of all description, from little batteaux, small for a couple of men, up to big sloops carrying a dozen each. We fished faithfully for five hours all around us. Drum ranging from thirty to ninety pounds were being hauled into other boats. Lyman insists upon it that he had a bite. I did not, at least none that I knew of. My hook came up bare several times, but that I laid to crabs, toadfish, anything but drum.

That evening talking over the day's experience, after a jolly terrapin supper, Mrs. Lyman suggested a reason for our non-success. She with her family had sailed down in another boat and made us a brief visit, and, backed by them all, she now declared that we two had kept up such an incessant, and at times loud conversation, in regard to naval affairs, which we were settling in accordance with our own views, that, first, no fish with the sense of hearing would have come near our boat; second, that if one bit, we were so occupied in other matters that we did not know it. Several times she had spoken to us, and had received no reply, or one that had no connection with the question asked. Admitting, simply because it is not pleasant to radically differ from one's hostess, that this reason was *the* reason why we two gentlemen caught no drumfish, the solution covers only this particular case. The group again gathered the next evening after supper. This time I was one of them. Although I was still confused as to the proper distribution of names, I was quite sure to hit somebody by simply saying Captain, Colonel or Major. The subject reverted to drum fishing. Several gave in their experience, which in nearly every case, while injurious to their reputation as fishermen, did no damage to the claim of being gentlemen. It was the same old story:

Darkies to the right of them,
Darkies to the left of them,
Darkies all around them,
Hauled in the drumfish.

They didn't get a bite! One old salt, Captain Willets, had been temporarily suspected of ungentlemanly conduct. On his first trip he was one of a merry party in a tug, and had made a wager that within a given period he would secure a drumfish. With the others his line was over the rail soon after anchoring. When the others got tired and went into the cabin he would not leave his line. Presently sounds from the cabin induced him to go in for a minute; he remembered his bet and slipped out to his line, with but ten minutes left to win in. His thoughtfulness was rewarded. Within the time he had hold of a good fish, which after due playing was brought to the surface amid much advice and encouragement by the old fishermen, who had rushed out to see the fun. Just then one of the excited spectators cried out, "Well, I'll be dog goned if I ever see a drumfish come up before with his insides all cleaned out." And a boat with two darkies was detected paddling away. I have this from the captain himself, therefore know it must be true. The story suggested to me a probable clue.

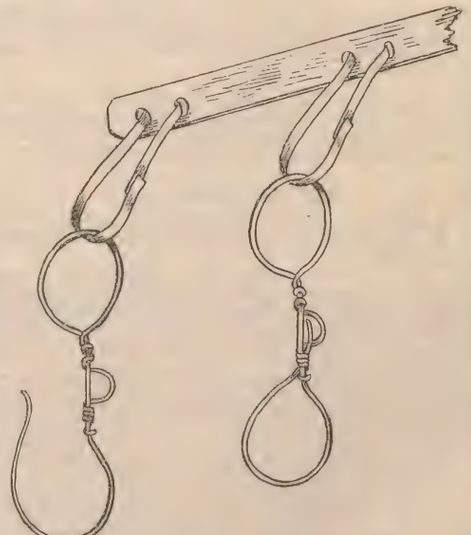
This clue I had in mind when a few days after I, too, was a member of another party on board of the same tug, the Bristol, the guest of Messrs. Brotherhood and Gillem of the phosphate works. We anchored as near the right place as our draft of water would allow. Half a mile from us a fleet of boats were anchored. Two or three of our most ardent anglers took one of our boats, and pulled away across Broad River to join the fleet. The rest of us kept several men busy for a while in fitting out and baiting for us. Then came an hour or so of uninterrupted quiet.

By and by the boat returned with several drum, but while one gentleman did claim that he had himself caught the very smallest, it was noticeable that no one asserted as positively in regard to the others. And although all claimed that the negro boat, which had been seen alongside of their boat, had supplied them with bait, no one asserted positively that bait was all.

A few days after this I made my third trip; and by making use of the knowledge I had gained, I was successful. Lyman invited me to go with him. It was a perfect day for fishing, cloudy, wind off shore, tide just right, a delightful day at the station. We fitted out a small boat this time, not the Yum-Yum, and started—by proxy. Two darkies went out and fished for us, and adopting the course of reasoning on which many Adirondack and Maine lake stories are based, we caught three fine fish; the colored men were our guides, and of course their catch was ours. Most every woods visitor will admit the correctness of this.

One other reason for the failures of white fishermen is simply lack of skill, due to lack of experience. The drumfish are caught in water from 20 to 30ft. deep; except for a brief interval the tides run strong; except the wind is off shore there is considerable sea. Expertness is necessary to enable a fisherman, fitted with heavy hand lines, sinkers from 1 to 2lbs. weight, line bellying one way with the tide, another by the wind and jerked in all directions by the pitching of the boat, to detect even a strong bite, much less that of the drum, which bites very gingerly, frequently sucking out the meat of a crab, leaving but an empty shell. Then if one is hooked, the mouth is very tender, and a tyro is very apt to lose his fish. The season for fishing lasts but two months; the colored fishermen go every day and work hard all day. The Southern gentlemen are not fond of many hard days' work in succession, hence gain little experience, and the colored brother outfishes him at his best. Sometimes the negroes are so successful that 200 or 300 drum, from 20 to 80 or 90lbs. each, are brought to the market. Then down goes the price, and a quarter will buy a big one. Prawns, clams and crabs are the baits in order of value, the first named comes with and goes before the drum, the others are always to be had. Early in the season the prawns only are used, and it is said that these fish will take nothing else. My experience, I think, justifies me in advising those who cannot go drumfishing in the Bristol to go by proxy, as we did. PISECO.

P. S.—The drum is a coarse stupid fish not worth catching.



A FISH STRINGER.

Editor Forest and Stream:

I send you with this a fish stringer, such as I have used with great satisfaction. It is not patented, and is not intended to be, my only motive being to bring it to the notice of the craft, that tackle makers may make them at a cost so reasonable that every fisherman, especially every black bass fisherman, can afford to add one to his kit and enjoy it, as I have done.

It is pre-eminently the thing for boat fishing or when wading the stream for black bass. The stringer consists of a leather strap, to which are attached wire snaps. It is used as follows: The leather loop is passed around a seat or otherwise made fast to the boat. The free end of the stringer, with the snaps attached, is thrown overboard. The wire loops are kept on an extra snap in the boat. When a fish is taken the loop hook is passed through both (remember both) lips of the fish and the end sprung into the keeper. The fish is now held by the wire loop; the end of the stringer is taken from the water, the loop-ring placed in one of the snaps, and the fish, now secured, is placed in the water. Thus one after another may be added to the string, each independent of the other, to be towed around for the time, with great pleasure to the fisherman and no doubt with a great degree of comfort to the fish. When wading, the stringer and wire loops may be fastened to the belt, and the free end of the stringer allowed to trail in the water.

There are many things to recommend this over the ordinary stringer. It is permanently attached to the boat or belt, so that it may not slip from the hand while

stringing a fish. The light lace-leather strap is very strong and not liable to cut in two on the edge of the boat. A fish is strung in less than half the time required in the old way. The beauty of the catch, either in the water or on shore, is greatly enhanced. But the main thing is the humanity of the device. Instead of the fish being jammed down one upon another on a common string, often strung through one lip, and oftener through the gills, and literally dragged to death, on my device each bass may swim along on his own little wire loop, open and close his mouth, breathe naturally and disport himself in a limited way, until with his mates he comes ashore to be mercifully bled to death by the thrust of a sharp knife through the tail. This is fair treatment of the noble captive while living, and he should only die by the knife. Out on the so called sportsman who allows his boatman to club his game to death or who throws his catch in the boat or on shore to gasp and die with the blood in. It is not only brutal, but the fish so killed is not fit for food.

The sample I send, though answering every practical purpose, is crudely made with such tools and materials as I have at hand, but an expert wire worker could make them very neatly either in brass or German silver. The lace-leather strap I find the best, being light and very strong, and may be replaced by a new one with little trouble at any time. There should be twelve snaps on each stringer and twenty-four loops, as on a large catch two or more loops may be placed on each snap.

If some good tackle maker will take this up and make them for the trade I have no doubt, from my experience, that many fishermen would use them, and I will take pleasure in aiding their introduction in any way I can.

INDIANAPOLIS, Ind. ELI LILLY.

[Mr. Lilly adds in a letter: "In regard to bleeding fish in the tail, the fish certainly bleed more freely and die quicker than when bled in the gills, and I fancy they keep better and have a better flavor. Bass caught, kept and killed my way, dressed with the bones out, broiled or baked with dressing, and sent to the table hot, hotter, hottest—well, they are good enough. By the way, we Black Bass people say you must always spell Black Bass with two big Bs."]

TUCKERTON WATERS.

III.—TACKLE.

IN the adaptation of tackle to the fish sought for lies part of the interest of fishing. He who holds a line or pole with no judgment whether one kind of rig or another is best, and no knowledge as to what kind of fish is most likely to be attached to his bait, misses most of the pleasure of fishing.

If one goes only to catch fish, a stout hand line and heavy dip rig will generally bring the best results. But it is not angling. This of necessity implies a pole. The angler's outfit for salt water includes rod, reel, line, hook, leaders, sinkers, floats and landing net. The first thing to determine on is the line. Get the finest that you can afford which will lift 12 to 15lbs.; 60 to 100yds. of it will do for bay fishing. Now, fine lines are expensive, and the salt water soon weakens them. If used frequently it will lose half of its strength in a month. A coarse line holds its own better. The great drawback to bay fishing is the strong tides. The finer the line the less does the tide tend to carry it away; the less lead, therefore, is needed to hold it to the bottom. The amount of lead depends upon the size of line, the strength of the tide and the depth of the water. The weight of lead in its turn determines the stiffness of the rod. Four ounces of lead requires a very stiff rod. Two ounces is compatible with considerable spring of rod, and one ounce is still better. My practice is to use two ounces, and when the tide gets too strong for it, either to drift with the current or stop fishing. Four ounces, with a stiff, strong pole and fine line will do most anywhere. The best plan is to have an assortment of sinkers, and change them as the tide changes. If a heavy lead is used on a light pole strike very cautiously, or the rod will break. A large fish will generally hook himself by the simple spring of the rod, but the small ones will not. It is better to let these escape than to risk a broken joint. Sometimes eddies may be found where there is little current, and quiet water may always be had at the turns of the tide. At these times for an hour or two very light tackle may be used.

In fishing with a float it is still desirable to use a fine line, for the drag of the water on it is much less. If the bait may float near the surface it does not pull very much, and a very light rod may used. If the bait is large, and must be sunk some feet by a sinker, the combined action of bait, lead and float will need a stiffer pole. When the line is liable to be clogged by seaweed, a very limber pole is likely to be overstrained. In all cases use the lightest lead and smallest float that will answer. The more line below the float the less lead is needed to bring it to any required depth.

When a float is used, any kind of a large, strong reel will do, but for bottom fishing the reel should be light enough to let the line down without any help. For this large-barreled plain reels are excellent.

There are two plans for adjusting the sinker. One is to place it at the end of the line, with the hooks fastened at suitable distances above it. The other is to have the lead above the hooks, and to raise it from the bottom far enough to bring the hooks in the right position. This last is the best. Where the hooks swing free below the lead they are less likely to tangle, besides they remove the bait as far as possible from the rest of the tackle. In general let there be one or two feet of line below the sinker, and let as much of it be leader and snood as can be afforded. It is much cleaner than line, and does not twist up so easily. It is better to use two hooks; then if one bait gets taken there is still something left. Let these hooks be of different sizes, and usually baited differently, so that the fish can have some choice. For barb or kingfish the bait should lie on the bottom. For seabass, blackfish and porgies it should be on or just above the bottom. For weakfish it is better two to six feet up. It is often desirable to have two hooks at the end of the line, and one swinging two feet out, some three or four feet from the bottom.

For many years I only used Chestertown hooks. They are strong, and hold bait better than any other hook that I know of, but they are a little clumsy and not very sure in hooking the fish. I have more recently adopted the Virginia hooks with satisfactory results. The smaller sizes are particularly nice. You can bury it in the small bait, and yet on the jerk it will strike clean and sharp against the fish's mouth. For small-mouthed bottom fish, as porgies, spots, cunners and blackfish, No. 8 is about the size. For barb, seabass and large blackfish use No. 4. They will also do for weakfish when baiting with shrimp. For weakfish generally use Nos. 2 and 1, while for striped bass with soft crab bait use No. 1 or even larger. These or similar hooks on double gut are quite expensive, and I buy the hooks and gut separately, by the hundred, and snood up the different sizes as they are needed. In using a long minnow or sand eel or strip of fish for striped bass, two hooks are advisable, one through the head of the bait and one through its middle. For the lower place, a treble hook can be used to advantage. The bass often seizes the lower half of the bait and starts off so quickly that he does not have time to get the whole bait in his mouth before he feels the resistance of the tackle. His movements are so quick that it is impossible to give him time before striking.

Whether the hooks be large or small, see that they are strong and securely fastened. In all salt-water fishing one is liable to strike a large fish. When such a fish is lost through weakness of tackle, even though it is but seldom, one does not soon forgive himself. The fish which we lose may not all be large ones, but the largest often do escape. Therefore, when snoods get worn and lines tender, throw them away or give them to the children. Where fish run generally of uniform size one is apt to adopt a style of handling which will lose anything unexpectedly large. Thus, last autumn when I was catching half-pound weakfish, I unconsciously got the habit of striking on a bite and then holding the fish firmly as he made his first struggle. This worked for small fish, but when a large one bit he had broken my snood before I appreciated the need of giving any line. When fishing for weakfish with a float it is necessary to strike quickly in order to take in the slack sufficiently for the stroke to reach the hook. But when my bite was from a ten-pound shark, who took the bait off with a rush, I lost hook, float and all. More watchfulness and sensitiveness on my part would have told me that this was no common pull. In fishing in a current it is natural to let the pole point in the direction of the line. Under these circumstances an unexpected strong bite finds the fisherman without any spring of the rod to ease the strain or give him time to collect himself.

It is in careful attention to the minutiæ of his art that the fisherman derives his chief satisfaction. Everything should be arranged with express reference to the kind of angling being done, and should embody his ripest experience. Every particular, adjustment or method should be able to explain itself, and should have its own history. This gives interest and pleasure even when luck has failed. We learn by our failures as well as by successes. The true fisherman is forever learning. He has confidence in his theories and practices, and yet he is continually changing both for something better. All seasons and places are available for either plans or execution. He can always either devise tackle or try it.

While the writer feels the charms of the forests and streams, and holds them to be tenderer, more delicate and fuller than anything which the salt marsh or bay can offer, just as the grass and flowers of the upland meadows are finer than their counterparts by the sea, yet sea fishing has its pleasures, and they are of the same kind, though different in degree, as are the delights of other angling. To arouse this interest in others more than to increase their basket, has been the object of this paper. PENN.

NOTES FROM SAVANNAH.—We are indebted to Mr. Thomas Lee, who has just returned from a cruise on the Southern coast, for news from some of the points visited. At Savannah, Georgia, the first ripe female shad seen by dealers were three caught in Savannah River, Feb. 28. The Yacht Club at Thunderbolt, near Savannah, has a small pool, about 10ft. across and 3ft. deep, caused by the overflow from an artesian well. We are informed that the steward of the club placed a few striped bass about 6in. long in this pool last April. They were fed chiefly on crabs and oysters, which they took freely, rushing partly out of the water in their eagerness to seize the food. Now the bass are about 20in. long and very stout. The water never freezes, and the temperature does not vary much. There is no kind of shelter for the fish. The steward put four sheepshead in the pool, and one of them which survived is now about 6in. long and very lively. There are several river catfish also in the little inclosure. The growth of the striped bass under the conditions related is remarkable, and so is the success in keeping a sheepshead in fresh water. At Body Island, Feb. 6, there were no birds on the marshes except a few snipe. Ducks were abundant, but excessively wild.

FISH PROTECTION BY ANGLERS.—We give below an illustration of the methods employed by an intelligent body of Pennsylvanians in the protection of public property. This association is ever active also in measures for the increase of the fish supply; its members have asked the Commissioners to stock the Delaware and the Susquehanna with large-mouthed black bass. This notice is sent out for posting: "The fish in the public streams of the State of Pennsylvania belong to the citizens thereof, and the catching and destruction of fish by means of nets and other illegal devices at any time, and especially in the spawning seasons, is in defiance of the law, and in violation of the people's rights. Every citizen should demand the arrest of the violators of the fish laws, and assist and encourage the prosecution of such offenders. The Anglers' Association of Eastern Pennsylvania, No. 1020 Arch street, Philadelphia, will pay the sum of ten dollars for every conviction for offense against the fishing laws of Pennsylvania, and request the active and earnest co-operation of all citizens in this matter."

TROUT IN NOVA SCOTIA.—Brooklyn, N. Y.—I have read with much interest the discussion on the sawdust question. I was glad to see that "Fisher," of Kingston, N. B., received such an answer, as his disparaging remarks on Nova Scotia "troutlets" deserved. I have had good fishing in New Brunswick, but for the past four years have been going to Nova Scotia in preference. I remember having whipped Pickett's Lake, near Kingston, for three days in the summer of '81 without success. Friends said that the trout were "Loyalist" fish and would not rise to Yankee flies; but Mr. Scribner, of St. John, who was there at the time, had no better success. Last summer in Nova Scotia I hooked at one cast two trout, weighing 5½ and 2½lbs. My experience is that the trout are larger and more abundant in Nova Scotia than in New Brunswick. I send herewith a Halifax *Chronicle* of the 22d ult. that has some pertinent remarks on sawdust and governmental action relating thereto.—P. B. V.

CHESAPEAKE BAY FISHES.—Investigations made at Fortress Monroe, Virginia, March 1, showed the presence of great numbers of small anchovies and spot, which were chilled by the extremely cold weather and came ashore. The fishermen were catching nothing in their traps except a few alewives and menhaden.

NOVA SCOTIA FISHES.—Alewives and salmon were caught at Tusket, N. S., March 5. This is the first appearance for the season, and the earliest catch of alewives ever known there.

THE CARP AS FOOD.—If "H.," whose dislike of the carp is so plainly stated in FOREST AND STREAM of Feb. 21, will take the trouble to read the articles on the results of carp culture in the United States published in the Bulletin U. S. Fish Commission 1883, and the Report of the same commission for 1884 he will find that he differs in his opinion not only from us, but from a vast majority of persons who have reared and eaten the carp. A reference to the valuable treatise on pond culture by Carl Nicklas will show, also, that the price of carp in Germany has increased within the last twenty-five years from $7.50 per cwt. to $15 and $17.50 per cwt. Wallem's recent report on the fresh fish trade will prove that in Dresden living carp sell now for 15 to 20 cents per pound, while in Leipzig the price is 22½ to 25 cents per pound. And this in a country which has wall-eyed pike, whitefish, trout and salmon! It is out of reason to expect a carp to capture lively animals, for its teeth are in the pharynx, and intended for crushing tender vegetables. It is a slander to say that it will thrive only in low surroundings. The best carp sold in some Eastern cities are from rivers whose waters are pure enough to support bass, and occasionally a salmon. The carp, however, was not introduced to take the place of game fishes; it was intended primarily for the warmer waters in which the Salmonidæ are not found, and it was expected to furnish an abundance of good food at small cost. A fish of this kind has an important place in our economy, entirely different from that of the leaping salmon and the rushing trout—a place worthily filled, and with satisfaction to those who have learned how to care for it and when to eat it.

WIRE LEADERS.—Mt. Vernon, N. Y., March 6.—*Editor Forest and Stream:* For some time past I have been watching your fishing notes to see if any report would be made by some one who has used the wire leader introduced last year by Shipley & Co. Will not some one who has tried it and knows tell the rest of us how it worked? I did not know about the affair until too late to give it a trial, but if it is practical it will be one of the most convenient articles of tackle that has been brought out in a long time. No more soaking; then also one can tie leaders with scarcely more trouble than if they were so much string. If those who have used novelties would only speak out and say whether or not they were good, more money would be spent for things really worth buying and less spent on plausible trash. Almost every angler tries something new each year, but no one is able to test all the novelties brought out each year.—LANCEWOOD.

BROOK TROUT IN NEBRASKA.—The U. S. Fish Commission has received from Pine Creek, Nebraska, a brook trout (*Salvelinus fontinalis*), three years and seven months old, measuring 17in. in length and weighing 2lbs. 4oz. This is part of the product of eggs sent out by the Commission four years ago. The size of the specimen is remarkable, and is, perhaps, unequalled except in Colorado, where the species thrives wonderfully.

CANADA BLACK BASS.—Day Mills, Algoma, Can.—I have put up a little cottage here to accommodate black bass fishermen. The "Walton Villa" is on the shores of Big Basswood Lake, and the fishing is good.—G. F. DYER.

FISHING RIGHTS IN PRIVATE WATERS.

NEW HARTFORD, Oneida Co., N. Y., March 9.—*Editor Forest and Stream:* I inclose a recent decision of Referee Northup, of Washington county, on the subject of the right to take fish from waters held by private ownership in cases where the law prescribes open and close seasons. The decision is one of great interest and importance, and the opinion given is able and searching. It will be doubtless of much interest to your readers. R. U. SHERMAN.

SUPREME COURT. The People of the State of New York against Aden McIntyre. L. H. Northup, Referee.

This is an action to recover penalties for violation of section 21 of the Laws of 1879, as amended by chapter 619 of the Laws of 1887, and prosecuted by the District Attorney of Washington county, by order of the Fish and Game Protector. It was admitted on the trial that in the year 1887, 1888, the defendant caught and killed and had in his possession ten black and Oswego bass and gill nets in and near Cossayuna Lake, in the town of Argyle, Washington county, N. Y., contrary to the said statute—if said statute applies to said lake.

There is no conflict of evidence in the case, and the only questions arising are questions of law upon the conceded facts. Cossayuna Lake is about three miles in length, about one-fourth mile wide, with one island of twenty acres and two small islands, and said lake is inhabited by black bass and Oswego bass. The lake is supplied with water from several small streams running into it (and as I infer, partly from springs). Its waters are discharged by a small stream running into Mud Pond, and from there by a stream into the Batten Kill, and thence into the Hudson River. The lake is within the bounds of the "Argyle Patent" granted in 1764, and the grant was absolute, reserving only gold and silver mines and pine trees suitable for masts in the royal navy. The owners of the land bordering on the lake also own the lands under the waters of said lake. They hold by mesne conveyances from the original patentees and are the absolute owners in fee of land adjoining the lake and lands under waters of the lake as fully and absolutely as is possible for any person to own lands on which are points or small streams of water.

The defendant is one of the thirteen several owners of lots bordering on and including lands under the waters of said lake. Said lake contains fish, and the land owners have in all from twenty-five to fifty small row boats, used for pleasure and for fishing. The lake is a resort for fishermen and there are three or four houses for boarders and guests on the shores of the lake, and the lake is in fact a place of public resort for fishing and pleasure. The lake and its outlet are not what is known as navigable waters or streams, and all are within said patent.

The defendant raises the questions:

1. "That by the laws of this State fishing with a net is not and never has been prohibited in Cossayuna Lake."

2. "That if the Legislature of this State have enacted a law with intent to prohibit such fishing, the same is unconstitutional and void, as destructive of vested rights and contrary to the provisions of Section 18 of Article I. of the Constitution of this State."

The defendant's counsel insists said act applies only to the waters owned by the State of New York and to navigable waters, and does not apply where the waters are owned by individuals. Cossayuna Lake is not owned by the State but is owned by individuals. Said Section 21, as amended by Chapter 619 of Laws of 1887, provides: "No person shall catch or kill any black bass in the waters of Lake Mohopee, or of Columbia county * * * between the first day of January and the first day of July, or in Lake George * * * between the first day of January and the first day of August, or catch or kill any black bass, Oswego bass * * * in Oneida Lake between the first day of March and the thirtieth day of May, except in Lake Erie * * *."

"Any person violating any of the provisions of this act shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of $10 for each fish."

Section 24 of said act, as amended by Chapter 11 of Laws of 1886, provides penalties for the use of nets, etc., in unlawful fishing. In construing a law it is proper and often necessary to see what was the object to be obtained by the law, and why it was passed and for what purpose, and what was the intention of the Legislature in passing the law, and also under what power of authority the Legislature assumed to act. For what purpose the courts will take judicial notice of the general condition of affairs as relates to the public, and matters of general notoriety. When the object and purpose of the law has been ascertained, and the law is one within the power of the Legislature to pass, it is the duty of the court to give such construction to the law as will carry out its general purpose and object, unless restrained by judicial construction or by the absence of words necessary to declare its object, and courts will not yield or waive the substance of a law for mere matter of form, nor by reason of the Legislature using the words "waters of" instead of "waters in" this State. It is a matter of history that the Legislature has sought for years to secure and enforce the cultivation of various kinds of fish, including black bass and Oswego bass, for the production of food.

The courts will take judicial notice of the various laws passed in relation thereto. The State pays annually large sums for the production and propagation of fish, and to furnish fish for stocking any waters in the State.

What force is to be given to the words, "or in any other waters of this State?" The contention of defendant's attorney is that it includes only the waters owned by the State. If this contention is correct the law would be a nullity as to a large part of the State. Section 18, as amended by chapter 618, of the Laws of 1887, provided: "No person shall at any time kill or catch, or attempt to kill or catch any speckled trout, brook trout, salmon trout, or landlocked salmon, with any device save that of angling with line or rod held in the hand, except in Lake Ontario and the Niagara River, and in waters which are wholly private, and in the latter only then by permission of the owner thereof. * *" A violation of the provisions of this section is declared a misdemeanor, and liable to a penalty of $25, and $10 additional for each fish taken. This section defines "private waters" for the purposes of sections 18 and 19 only, "to mean ponds or streams fed wholly by artificial sources, or by springs existing upon the same farm or tract belonging to the owner or proprietor thereof; or water brought by artificial pipes or channels other than natural, into artificial ponds or reservoirs of the owner or proprietor." Section 19 provides that "No person shall catch or attempt to catch, or kill, or expose for sale, or have in possession after the same has been caught or killed, any speckled trout, brook trout, California trout or brown trout, save only from the 1st day of April to the 1st day of September, except in the Forest Preserve. * *"

Section 19 further provides that "any person who shall at any time catch or take any brook trout from any of the waters of this State, less than six inches in length, shall immediately place such trout back in the waters from which it was taken, and shall use due care not to kill or injure the same, and the catching of such fish by means of nets is hereby prohibited." The sale of any trout less than six inches in length is prohibited. A violation of any of the provisions of this section is declared a misdemeanor, and person guilty is liable in addition thereto to a penalty. From the foregoing provisions it is beyond doubt that the Legislature intended to make the provisions of section 21 applicable to all waters in the State of New York, whether owned by the State or by individuals. The only other question is, has the Legislature power to pass such an act?

Article X. of the Constitution of the United States is "The powers not delegated to the United States by the constitution nor prohibited by it to the States, are reserved to the States respectively, or to the people." Section 1 of Article III. of the constitution of New York is "The legislative power of this State shall be vested in a Senate and Assembly." By this section all legislative power in the State is vested in the Legislature S. N. Y., 472,474. In the people ex rel agst Flagg 46 N. Y. 401,404, it is said "All legislative power is conferred upon the Senate and Assembly; and if an act is within the legislative exercise of that power it is valid, unless some restriction or limitation be found in the constitution itself. The distinction between the United States Constitution and our State Constitution is, that the former confers upon Congress certain specified powers only, while the latter confers upon the Legislature all legislative power. In the one case the power specifically granted can only be exercised. In the other all legislative power not prohibited may be exercised.

There is no express prohibition of the power to legislate as to fish and fishing; nor can a prohibition be implied, unless the act comes clearly within some power denied to the Legislature. The counsel for defendant relies upon section 18 of article 1 of the constitution of this State, "but nothing contained in this constitution shall affect any grants of land within this State made by the authority of the said King or his predecessors; or shall impair * * any other right of property. * * " I have found both as matter of fact and of law that defendant and other land owners are the absolute owners of the lands and waters of Lake Cossayuna as fully as any one can own lands on which there are ponds and streams. No right of property in defendant has been impaired—his rights of property remain the same as they were before the passage of the act in question.

The power of the Legislature to pass the law in question is decided in Phelps vs. Racey, 60 N. Y. 10. That was an action to recover penalties under chapter 721 of Laws of 1871, for having in his possession and exposing for sale, quail and pinnated grouse. The answer admitted the possession and exposing for sale, and averred that the same was in his possession in the month of December, 1872, when the killing in this State was not prohibited, or it was received from the States of Minnesota and Illinois where the killing was legal at the time. The plaintiff demurred to the answer on the ground that the fact did not constitute a defence and the General Term sustained the demurrer. Defendant appealed to the Court of Appeals and that court affirmed the judgment. The court said, page 13, "The mandate is that any person having in his or her possession between certain dates, certain specified game killed, shall be liable to a penalty. The time when or the place where the game was killed or when brought within the State, is not made material by the statute, and we have no power to make it so." "The penalty is denounced against the selling, or possession after that time, irrespective of the time or place of killing.

"Here the property was acquired subsequent to the passage of the act and with the presumed knowledge of its provisions and conditions. The Legislature may pass many laws, the effect of which may be to impair or even destroy the right of property." Private interest must yield to the public advantage. All legislative powers, not restrained by express or implied provisions of the constitution, may be exercised. The protection and preservation of game has been secured by law in civilized countries and may be justified on many grounds, one of which is for the purposes of food. The measures best adapted to this end are for the Legislature to determine, and courts cannot review its discretion. If the regulations operate in any respect unjustly or oppressively, the proper remedy must be applied by that body. Some of the provisions of the act in question might seem to one versed in the mysteries of the subject, unnecessarily stringent and severe, but we cannot say that those involved in this action are foreign to the objects sought to be obtained, or outside of the wide discretion vested in the Legislature.

The late case of Berthoff vs. O'Reilly, 74 N. Y., 509, reaffirms the power of the Legislature and holds that a law may not be declared unconstitutional or void because deemed to be opposed to natural justice and equity. See also Gould on Waters, sections 183, 283, and cases there cited. (New ed.). At page 521, 74 N. Y., it is said: "That a statute impairs the value of property does not make it unconstitutional. All property is held subject to the power of the State to regulate or control its use to secure the general safety and the public welfare."

In 7 Cushing (61 Mass.), 84, it is said: "All property is held subject to those general regulations which are necessary to the common good and general welfare." So in the case before us, the Legislature in its discretion has decided that the public good and the public welfare requires that no black bass or Oswego bass shall be caught or killed between the first day of January and the thirtieth day of May, in any of the waters in the State of New York. The defendant has knowingly violated this law and must pay the penalty. The proof shows ten fish caught and killed by defendant in violation of the law, and the people are entitled to a judgment for one hundred dollars damages and costs.

THE BURLINGTON "ELI."

The formerly popular Vestibule Fast "Eli" Train of the Burlington Route has been resumed between Chicago and Kansas City, St. Joseph and Atchison, leaving Chicago daily at 5:30 P. M. The Burlington's Vestibule Trains to Omaha, Denver and St. Paul will continue as before. They are the best trains between Chicago and the points mentioned. Tickets can be obtained of any ticket agent of connecting lines, or by addressing P. S. EUSTIS, G. P. & T. A., C., B. & Q. R. R., Chicago, Ill.—*Adv.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Fishculture.

OHIO FISH COMMISSION.

THE Thirteenth Annual Report of the Ohio State Fish and Game Commission for the year ended Dec. 31, 1888, shows a gratifying advance in successful fishculture, by which the net profits of the fishermen and wholesale dealers have been increased to about a half million dollars during the year. The whitefish and the wall-eyed pike have received the principal share of attention, because of their unequalled importance. Lake Erie is the great fishing reservoir, and here the greatest efforts of the Commission have been exerted. "The hatching of whitefish in great quantities has not only very largely increased the supply of this fish, but has augmented the catch of all other food fishes, arising probably from the fact that predatory fishes have more largely fed upon the smaller whitefish to the saving of the others." "With one exception * * * the fishermen ascribe the increased catch to the work of the hatchery."

The experiment of artificial propagation has been so successful that the Commissioners urge the establishment of a new hatching house with double the capacity of the present old and unsatisfactory building at Sandusky. The Commissioners "recommend that a survey and plat be made of the fishing grounds, and that these be leased for terms of years to the highest bidders; as this survey will require a year for its completion that there be a tax laid upon pounds or traps of $15 each for each season. Having the fishing grounds platted and leased to parties giving bond for the careful observance of laws for the fullest protection of fish, there may be hope of still more rapid bettering of this general interest."

Eighty million whitefish were liberated in Lake Erie in March, and 60,000,000 wall-eyed pike in May. The wall-eyed pike planted in southern Ohio in former years have dropped down into the Ohio River and stocked it fully. The eggs of this species are easily obtained, and at less cost than any other; the entire expense of handling and delivering 60,000,000 in 1888 was about $774.

One million eels taken at Troy, N. Y., were widely distributed in the State. A pond was prepared and stocked with channel catfish, *Ictalurus punctatus*.

"Reports from the county and reservoir wardens show a much better observance of the laws than in former years," yet the reports of the wardens show that there were 254 arrests for violation of the fish law, and 126 for violation of the game law.

The report of the superintendent of the Sandusky hatchery, Mr. Henry Douglas, shows that of the 160,000,000 whitefish eggs taken last fall, 100,000,000 were lost by the high temperature of the water Nov. 8 and 9, which was 14 degrees higher than on the same dates in 1887. This report states that "the universal experience of the fishermen in the waters of Lake Erie the past season confirms the good work the Commission has done in the past to increase the supply of that finest of food fish—the whitefish. The season of 1888 has been the most successful in the annals of this important and rapidly growing industry. The catch of whitefish last spring has exceeded that of any previous year during the same season, while the catch the past fall was unprecedented. I would fail in my duty did I not take this opportunity to express my personal obligations to the fishermen and fish dealers of Sandusky and Toledo and the islands for the valuable assistance they have afforded me in collecting the spawn and in other ways advancing the work of the hatchery."

The chief warden calls attention to nets in Lake Erie which are seven or eight miles long and contain twenty to thirty separate pounds. Here is an illustration of the difficulties he has to encounter in the performance of his duty: "In June last I was arrested by warrants sworn out by fishermen whose nets I had captured in Lake Erie and tried in a magistrate's court at Painesville, Ohio, for grand larceny. I was acquitted, rearrested on a charge of malicious destruction of property, and bound over to court. The grand jury failed to find a bill against me. The fishermen then sued for the full value of the nets. The case is now pending." In this way wardens are intimidated by the very people who are benefited by the work of the Commission and the operation of protective laws. In some localities it is difficult to get wardens to act through fear of personal injury or the loss of reputation. Many persons, however, who at first opposed protection are now convinced of its necessity and are aiding the good cause.

Dr. James A. Henshall, in his "Observations on Ohio Fishes," gives a brief account of the literature of the subject, and then proceeds to state the results of his investigations during the spring and summer of 1888, with particular reference to the food fishes, which he finds to represent the sturgeon, catfishes, suckers, minnows, sunfishes and basses, perches and fresh-water drum. He observed that the Ohio was well stocked with good food and game fishes, notwithstanding the extensive fishing with seines and nets.

KANSAS FISH COMMISSION.—The sixth bi-ennial report of the Fish Commissioner of Kansas covers the period from July 1, 1887, to Dec. 1, 1888. The amount of the annual appropriation is $1,500. The Commissioner receives $3 per day for time of actual work and is reimbursed for traveling expenses, cost of correspondence and other necessary outlays. Carp were supplied to 765 applicants in 84 counties; 32,500 bass obtained in Wisconsin and Minnesota were placed in five streams; 5,000 Colorado trout were deposited in the Solomon and Republican. The law against taking fish from streams by means of nets, seines, traps, set-nets, etc., is not obeyed, and the requirement of fishways in dams is evaded whenever possible, owing to the unwillingness on the part of county attorneys to institute suits against the owners of obstructions. Interest in fishculture is steadily increasing in all parts of the State, and the Commissioner appeals to the Legislature for the modest sum of $1,500 annually to maintain the efficiency of the work.

NEWFOUNDLAND FISHCULTURE.—Mr. Adolph Nielsen, formerly Inspector of Fisheries in Norway, reached St. John's Feb. 15, to begin his duties as Superintendent of Fisheries. He is about to select a site for a hatchery for marine fishes which will accommodate 200,000,000 of young cod. He will deposit the fish in Placentia, Saint Mary's, Conception and Trinity bays. The fisheries of Newfoundland will be exhaustively studied with a view to their better development, and new markets will be sought for the fishery products. Mr. Nielsen's training in the well-organized fishing industries and fishcultural methods of Norway will soon make itself apparent in his new field if the Government support him with funds and the necessary legislation to insure the success of the work which he will inaugurate.

FISH HATCHING AT DULUTH.—Dr. R. O. Sweeny and Foreman Root are in the midst of their fishcultural work at the U. S. Government hatchery near Duluth, Minn., having already developed one and a half million lake trout eggs which they obtained from Lake Erie. On March 1 two million whitefish eggs were hatched and the fry deposited near Knife River. The landlocked salmon eggs are beginning to hatch. The brown trout and saibling eggs will probably all be developed before the middle of March.

ANNAPOLIS, Md., Sept. 19, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I am glad to be able inform you that I have found your Climax paper shot shells perfect, and the only shell I have yet found in every respect equal to the Eley shells for use with Schultze powder. Yours very truly, (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club Utica, N. Y. James W. Dunlop, President.

March 26 to 29, 1889.—First Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. George H. Hill, Superintendent, 34 Monroe street, Chicago, Ill.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

ALBANY DOG SHOW.

THE second annual exhibition of the Albany Kennel Club closed its doors on Friday, the 5th inst. In many respects the show cannot be said to have been a success. The entries were light, considering the amount of premiums offered, and the attendance from the opening to the close was not what we expected to find. Last year there were fifty-five classes, with an entry of 289; whereas this year the amount of prize money was doubled, three judges were appointed, kennel prizes were offered, ninety classes were made, the valuable Apollo Stakes were put up, and the catalogue gave exactly 320 as the number of entries, of which 41 were absent. Of these Mr. Hudson, the president of the club, entered 18, 12 of them young puppies and one a mongrel black dog. Mr. Wilmerding put in 4 dogs, "not for competition." The pointers Meadowthorpe Duke and Meadowthorpe Primrose and the English setter dog Meadowthorpe Heather were not entered by the owners, and, of course, no entry fees were paid for them. Mr. Tallman, the superintendent and a judge at the show, made a personal canvass of the Troy exhibitors, and entries were begged in a manner which showed how desperate was the effort that was being made to get as many entries as Troy. That the club failed to get a large entry did not surprise those who are acquainted with a majority of the better class of exhibitors; on the contrary, the result was foreseen by nearly every independent exhibitor with whom we are acquainted. At the New York show we heard a well known pointer man say: "Troy will have about 400 dogs, Albany 300, Utica 200 and Rochester 150. Worcester will appoint capable and independent judges—Elmore, Gresham, Miss Whitney, Krueger and the like, and notwithstanding Chicago's very high premium list will have quite as many dogs as that show, and more than Albany, Utica or Rochester." The soundness of this prediction is being demonstrated as time goes on, and the events of the next few weeks will clearly and positively prove that the dog interests of this country cannot be controlled by a handful of men, and that the independent dog owners, that is, the majority of dog owners, have no intention whatever of allowing dog shows to become a traveling circus in which the same performers appear in every town, although not always in the same costumes. That so clear-headed a man as Mr. Tallman should have permitted himself to be placed in the very unenviable position of a judge asking his friends to show under him was a thing to be regretted. Judges are not even supposed to know the dogs that are brought before them, let alone to have said, "I wish you as a personal favor to enter your dog. I will have my man look to him." We are informed that Mr. Tallman did not seek the dual office of judge and superintendent. The object in asking him to fill both positions was to economize; but economy at the exhibitors' expense is not to be encouraged. It took Mr. Tallman seven hours to judge pointers, setters and beagles, and during that time the show was without a superintendent. If the entries had been large and the building packed with visitors what, may we ask, would have been the state of affairs? How many hours would it have taken to judge the classes if Mr. Tallman's had been well filled, or if the competition had been keen? There is something else to be said against the system. Mr. Tallman is employed by the well known firm, Spratts Patent; if he be permitted to act as superintendent and judge what guarantee will we have that this enterprising firm may not deem it wise to come out with an advertisement saying they will bench, feed, superintend and judge dog shows at so much a dog. The fact is there is nothing in the system that will commend it to right-thinking persons and it should be discouraged. We have given ourselves much trouble to ascertain the views of a large number of exhibitors, and we are in a position to state that they are opposed to it. The question is not one of whether a superintendent who has solicited entries will be influenced by the appearance in the ring of the owners whose dogs he has begged. We are dealing with principles, and here the principle is wrong, wholly wrong; and for this reason, if for no other, it is to be condemned. It is fortunate for Mr. Tallman that he has had considerable experience with setters and some with pointers. His judging, on the whole, was satisfactory. We cannot agree with several of his decisions in the pointer class, but the setters were well judged, especially the English; and we feel quite sure that few men situated as he was would have given as much satisfaction. As we stated in our despatch from the show, mastiffs and fox-terriers were badly judged, and there were several blunders in the collie classes, one of a serious nature. If Mr. Mortimer would undertake to pass only on those classes with which he has had some experience as breeder or owner, devoting a few years of study to the ones he is not familiar with, we would be saved the trouble of criticising, adversely, so very many of his decisions. We shall on this occasion let him off easy, because we feel quite sure that he did his best, and that what appeared in several instances to be most unjust decisions were due to lack of knowledge, and not to any other cause. The placing of Moses over Sears' Monarch was a foregone conclusion, because this judge placed Moses over Alonzo at Richmond. But in making this decision Mr. Mortimer blundered, and that was the end of it; whereas, when he placed the Messrs. Rutherfurd's fox-terrier Raffle over Mr. Thayer's Hillside Dandy he, like Mr. Tallman, evoked hostile criticism. Mr. W. Rutherfurd is a member of the Westminster Kennel Club; Mr. Mortimer is an employee of the Westminster Kennel Club, and as such he had not the moral right to judge Mr. Rutherfurd's dogs. It was also in bad taste for Mr. Hitchcock, another member of the Westminster Club, to be showing dogs in the ring under Mr. Mortimer. We impute neither collusion nor the intention to render any but just and correct decisions. We are dealing with principles, not with men nor motives, and here as in the other case the principle is bad. A judge is not permitted to judge his own dogs; he should not be permitted to judge an employer's. If he judges his own dog and sends it out of the ring without a ribbon he loses only the prize money; whereas, if he throws out his employer's dog he may lose his situation, and he and his wife and family, if he has any, may find themselves without a home. In our opinion the temptation to do wrong is the greater in the latter case. There is some talk of bringing this and other matters of like character before the American Kennel Club, and it is to be hoped that the club will not permit such a state of things to be continued. The management is to be censured for having admitted a number of mangy dogs. Many of them were dressed every evening with sulphur and lard and the chances of the disease being disseminated was thus lessened; but their presence on the bench was to be deplored, and the unsavory epithets that were floating about the building might well have been dispensed with. Spratts' people looked after the benching and feeding, and their work left nothing to be desired. Mr. Hudson worked with a will from the opening to the close of the show; and if we had not known that the Albany Kennel Club was a member of the A. K. C. and therefore a club composed of more than one member, we would have certainly taken him to be president, manager, bench show committee, in fact, the whole club. It was to be regretted that the other members of the club did not come near the show; they left all of the work to be done by one man and his secretary. Mr. Hudson informed us that he thought the club would pull through without loss and that he would be satisfied if it did. We feel quite sure that the mistakes that have been made at this show will not be repeated. There is no apparent reason why Albany should not give as good a show as Troy, but to bring about the result the cheese-paring policy must be discontinued, working members must be admitted to the club, exhibitors must be prohibited from showing under their employees, in fact, there must be a new and complete change in the general management of affairs. We thank Mr. Hudson and his active secretary for their courtesy and kindness and wish them better luck next year, when we shall hope to have the pleasure of seeing and meeting some of the other members of the Albany Kennel Club.

MASTIFFS—(MR. MORTIMER).

Wacouta Nap, the only entry in the challenge class for dogs and bitches, was shown far too light in flesh He was given the prize. There were four entries in the open class for dogs, and Moses, for whom the judge appeared to have a special liking, was given first over Sears' Monarch. The decision was wrong. Moses is a big dog and is built on good lines and that is all. He is very deficient in skull and muzzle, has large ears, rather light eyes and is not good in feet. Monarch has been criticised so often we need say nothing further about him beyond the fact that he was shown in beautiful condition. Moses is the larger dog; Monarch is decidedly the better mastiff. Third was given to Merlin, a rather plain specimen. Defects: Forehead not flat; cheeks too flat; color of eyes too light; muzzle too long; ears large and not black; body should be deeper and more cylindrical; hocks straight; coat too long; very throaty. Not quite a show dog. Lieut. Colonel, c.: Shallow in skull and muzzle; forehead dished—a very bad head; light in bone; out at elbows; light in loin and quarters; not a show dog. Pharoah Queen, that was given first in the bitch class, was first in the novice class at New York, and was fully described in our report. She was shown very light in flesh, and her weak hindquarters looked even worse than they did when she was last shown. Boss Lady Clare, that took second, is nearly her equal in head, and is decidedly better behind it; she should have been first. Pansy, third prize: Long and shallow in muzzle; skull and muzzle decidedly lacking in volume; lacks wrinkle; ears large, not well carried and not dark enough in color; color of eyes too light; pasterns defective; knees showing weakness; light in bone; has a greyhound tail; does not stand perfectly straight in front; lacks character; not a show bitch. In puppies vhc. was given to Winchell's Daisy, and c. to the same owner's Empress. We thought Empress worth a dozen like Daisy, but the catalogue shows that Mr. Winchell values Empress at only one hundred dollars more than Daisy. The vhc. bitch is a very plain puppy and was in no condition for the show bench. She has a small, plain head, which is decidedly lacking in volume of skull and muzzle, and shows no mastiff character whatever. She is also wrong in knees and carriage of ears, shallow in body, light in loin, has a very bad tail, is throaty and, in fact, not a show bitch in any point. She is by Moses out of Boss Minnie, and is just such a puppy as we would expect to find from this cross. Empress is not sufficiently blunt in muzzle, yet it is a decidedly better one than Daisy's. In forelegs and feet she is also defective. Her ears are not black, neither is the mask as dark as it should be. She is a well-grown specimen with good body and excellent hindparts.

ST. BERNARDS—(MR. MORTIMER).

There were two entries in the challenge class for rough-coated dogs and bitches, and without ever examining the competitors the judge handed the blue ribbon to the handler of Barry II. and gave second to Gemma I. Between these two specimens there is a very narrow margin, and it took us a full half-hour to arrive at the conclusion that with Gemma I.'s lack of condition Barry II. was fairly entitled to the prize. First in the open class for dogs was easily won by Plinlimmon, Jr., with Mount Sion second and Herr Otho third. These were the only entries in the class. The first two are well-known, but Otho is a new one. Defects: Muzzle lacking in depth; left eye having the appearance of being injured; cheeks too full; ears too large; not a bad head, yet not a good one; body should be more massive; loin light and flat; too short in back; lacks width and power in hindquarters; straight behind; set of forelegs not correct; rather light in bone; lacks general massiveness and does not move well behind; an undersized specimen whose head is the best part of him. First and second in the corresponding class for bitches were given to Queen and Lady Aveline, both winners at Troy. Ruth was properly placed third. Defects: Forehead too prominent; stop should be deeper; muzzle shallow and pointed; ears wrong in burr and not well carried; expression not correct; body would be improved by more length; tail carried too high; right hock swollen and inflamed; is a trifle underhung. An undersized specimen spoiled by a plain head. First in puppies was given to Othello that was a winner at Troy. We preferred for the place Bernaline that was second, being decidedly better in head and coat, but not so large nor so lengthy in body. Wm. M., placed third, is snipy, cheeky, not good in ears, too full in brow, not quite correct in markings, flat in loin and with only fair expression. He will not develop into a show dog. The challenge class for smoothcoats brought out two entries, Daphne and Rigi, and the judge reversed Miss Whitney's decision at Troy. There is lots of room for difference of opinion between these dogs: but in their present condition we think that Rigi should have won. The open class for dogs contained two entries, Beauchamp and Victor Leo. They were placed in the same order as at Troy. Lola and Apollona, first and second in the bitch class, are well-known. Princess, third prize, is not a show bitch. In puppies Lady Hector, that was first at Troy, was sent out of the ring with a c. card. She is a decidedly better specimen than Wm. M. that took third in the rough-coated puppy class. On this occasion she was shown by Mr. Wm. A. Thacher, having been purchased by him from Mr. Draper on the first day of the Troy show, or three days after the entries for Albany had closed.

NEWFOUNDLANDS—(MR. MORTIMER).

There was only one Newfoundland in the class, Meadowthorpe Prince George, but Mr. Hudson put in a little black mongrel that was given bench room and added one to the list of entries. Second prize was of course withheld for want of merit.

BLOODHOUNDS—(MR. MORTIMER).

These classes brought out the same entries as at New York. Barnaby's Nell, second in the bitch class, being decidedly better in head and wrinkle than her dam, Ripple Buxom, and quite her equal in other respects, should have been first. This breed is new to most of the judges in this country and blunders may fairly be excused.

GREAT DANES—(MR. MORTIMER).

Lady Bess, first at Troy, and described in our report of that show, was the only Great Dane shown. Sponge, her only competitor, is a mongrel.

DEERHOUNDS—(MR. MORTIMER).

The challenge class for dogs and bitches was represented by Ramona and Highland Laddie, which were placed as at Troy. Clansman, formerly Meadowthorpe Factor, that was first in the open class at New York, scored a very easy win for his new owner, Mr. Thayer. Second was given to the Somerset Kennels' Olga. It showed bad taste to bring this bitch into the ring. We are informed by the person who had charge of the Somerset Kennels' dogs that the Somerset Kennels are owned in part by a member of the Westminster Kennel Club, and as pointed out in the introductory an employee should not be permitted to judge dogs owned by his employer. This bitch was first at New York. Third was given to Duncan, that should have changed places with Pride of the Heather. These dogs, which are owned by Mr. Thayer, are well known to all admirers of the breed. Norval, that was given hc., should have been ordered out of the ring; he was a bag of bones. Malcolm, first at Troy, was the only puppy shown, and won.

GREYHOUNDS—(MR. MORTIMER).

The gallant and sturdy Balkis was without competitors in the challenge class, and the open class for dogs and bitches brought out the New York winners Meadowthorpe Douglas Fleming, Fleetwood and Highland Chief. We stated in our report of the New York show that Meadowthorpe Douglas Fleming had no business in his present condition to beat either Highland Chief or Fleetwood, and we are glad to see that the criticism was not unheeded. Puppies brought out a real good one in The Bard, a well-grown and developed youngster that, unless something befalls him, will do some winning next year. He was sent out of the ring with a c. card, and when his owner asked the judge for an explanation he replied that he had a short neck and bad legs and feet. He has a long and most elegantly formed neck and stands on the very best of legs and feet. Taken all in all, he is the best greyhound puppy we have seen in America. Bootblack, his only competitor, will never develop into a show dog. He is plain in head and lacks liberty all over.

FOXHOUNDS—(MR. TALLMAN).

Roseville Rover, favorably described in our Troy report, and Clonmel Rakish, another winner at Troy, were properly placed first and second. Bye, third prize, is a new one: Good head, ears long and of nice quality, but not lying close; throaty, not straight in front, average feet, a bit light in bone, chest should be deeper, also back ribs, loin light and flat, second thighs not well developed, coat and brush better than average, looks like a cross between the English and American hound, and is not as stout and sturdy looking as we want in a dog of this breed. Lady, hc., light in bone, weak in head, throaty, not straight in front, legs not well set, light in bone, stern too long and badly carried, poor coat, not a show bitch. Bounce, unnoticed, is plain in head, crooked in front, wrong in shoulders, flat and light in loin, long-cast, in fact, not a show dog in any point.

POINTERS—(MR. TALLMAN).

The challenge class for dogs contained only the Westminster Kennel Club's entries, Naso of Kippen and Lad of Bow, the former a wreck of his once great self. On his body were a number of bare patches, his coat was open, coarse and dry, and the little there was of it was badly stained with mange cure. He should have been ordered out of the ring. Lad of Bow, while not in the same wretched condition, showed traces of having been treated for the mange. He was placed first, and we heard a number of admirers of the breed say that he had no business to beat his kennel companion. In placing him first Mr. Tallman was right, the only mistake being in noticing Naso of Kippen at all. In the corresponding class for bitches, Lass of Bow, in better condition than her kennel companions, was rightly placed over Queen Bow. These are a couple of useful, second-class bitches that are well-known to our readers. Pontiac and Brake, in the open class for dogs, held the same position as at Troy. The more we look at these dogs the more positively certain are we that Brake is the better, and more than that, very decidedly better. Bang, third prize, is of better type than Pontiac; in fact, he is a better dog, but on this occasion he was not in good condition and was rightly placed third. Victor the Blue Stocking, vhc., is coarse in skull, shows some jowl, is too short in muzzle, stands wide in front, is not first-class in stifle, and might be much better in set of stern. We would have turned him out of the ring without notice, not on account of his defects, but because we do not approve of awarding honors to dogs that as soon as they leave the ring must be dressed from nose to tip of stern with mange cure. Sachem, vhc., is a full brother to Victor the Blue Stocking, being by the lamented champion Beaufort out of Zuba. He, too, was not in good condition. Doctor, hc., has the following defects: Light eyes; muzzle too shallow; brow too full and stop not well defined; throaty; not quite straight in front; legs not well set; light in quarters; too leggy; not a show dog. There were four entries in the bitch class, but as two of these were absent the competition was narrowed down to Golden Rod and Westminster Sal. The former is owned by the Bryn Mawr Kennels, the latter by the Westminster Kennel Club. We cannot indorse the decision in favor of Golden Rod. This bitch is well known. We would have turned her out of the ring in quick time. Like her kennel companion, Victor the Blue Stocking, she had to be treated for the mange. Westminster Sal, defective in head, legs and feet, and not first-class behind, was good enough for first.

In the light-weight class for dogs King of Kent, fully described in our New York report, scored a very easy win, and Forest King, described in the Troy report, was second, with Greenbush Boy third. As this last is a new one we will give his defects: Eyes yellow; muzzle lacking in depth and neatness; ears of beautiful quality, but set too high; neck somewhat heavy; feet inclined to turn outward; set of legs not quite correct; loin flat and rather light; hocks too straight; tail rather coarse and not carried straight; lacks style, character and quality. Sancho, vhc.: A bit course in head; not clean in muzzle; set of legs not right; not straight in front; flat in loin; tail not well carried; lacks character, quality and true pointer finish. He is a white and lemon dog of rather catchy appearance and was not in very good condition. Fashion, vhc., is well known. This dog has deteriorated. Hickory's Staunch, hc., is a black, white and ticked. Defects: Eyes too light; throaty; light in loin; tail too long and thin at the root; light in quarters; lacks true pointer character. Freedom, Bruce Beaufort and Naso of Troy were absent. There were six entries in the corresponding class for bitches, but only two were shown. Stella, first prize, is a weed, and Wanda, placed second, is a well-known third-rater. A little *contretemps* occurred over the judging of the two puppies. The owner of Criss had asked permission to take his dog home on the ground that it was sick; the veterinary surgeon after examining the pup pronounced it well and sound. The judge withheld first prize for want of merit, and as Criss had won first at Troy Mr. Thacher, his owner, asked for an explanation. Mr. Tallman replied that the dog was sick and in an unfit condition to take a prize. We were pleased to see that one of them understood his business. Second prize was given to Lenox, whose owner informed the judge in the ring that he did not care for red ribbon and begged to return it.

SETTERS—(MR. TALLMAN).

The classes for English setters were not well filled and the quality was decidedly worse than we expected to see. Royal Prince, well known, was the only entry in the challenge class, and of the seven entries in the open class for dogs, but five were shown. Lindo, second at Troy, was a very easy winner, with the black and white Dan second. Head too heavy, stop not clearly defined, shows slight fullness before the eyes, ears wide and short, expression not correct, a coarse head, neck heavy and not clean, loin flat and rather light, feet not first-class, hindquarters rather narrow and lacking in power, quality of coat not first-class; a specimen lacking quality and true character. Count Henricks, hc., is an old face, and Ghost, hc., has the following defects: Skull wrongly formed, brow and stop very faulty, a plain head showing wrong character, feet too small, elbows not in good position, narrow behind, swings a bad stern. Jim, unnoticed, is a yellow dog. In bitches Zona, that was second to Princess Beatrice II. at Troy, was here given first after a sharp tussle with Chautauqua Belle, who was third at New York. The Pittsburgh bitch loses in head, but has all the best of it in neck, behind the shoulders and in legs and feet. Pearl Bondhu, another old winner, was third, with Frolic Bondhu, first at Utica, and vhc., at Syracuse, hc. Her defects are: Plain head, throaty, bad feet, light loin and wrong set of ears; she might also be better in coat and hindquarters. Judy of Troy, vhc., is defective in eyes, stop, muzzle, neck, forelegs and coat. Puppies were a miserable lot of four, and the first prize was very properly withheld. Jess, that was given second, is bad in eyes, snipy and light in bone; she will never be a show bitch. The special for best in all classes was given to Zona. The way that Mr. Tallman placed his dogs in these classes, while hardly being a fair test of his ability as a judge, leads us to think that with a little practice he will make a good judge.

Blarney, Laura B. and Nellie took the prizes in the challenge classes for Irish setters, and in the open class for dogs the order was Desmond II. first, Ned second, Dick Swiveller third and St. Cloud vhc. These were the only competitors, and as they have all been recently described in our columns all we need say of them is that with the exception of St. Cloud, who was not in good coat, they were well shown. In bitches Cora B. and Fannie, shown by Mr. Hudson, were early disposed of, and the well-known Lou III., Bessie Glencho and Lady Fawn were left to fight out the battle. Bessie Glencho, who has just raised a litter of puppies, is at all times a light and weedy bitch, but on this occasion she looked even worse than she did at Troy, and we would probably have placed her third. Lou III. beats Lady Fawn in head, neck, position of shoulders and in color, but is not her equal in other points; there is very little to choose between them, and consequently lots of room for difference of opinion. Of the nineteen puppies shown twelve were entered by Mr. Hudson. In dogs Mardo, first at Troy, scored again here, and Rex, who is only fair in head and not first-class on his pins, was second, with Frank Mayo, a four-months youngster that looks like improving, third. We stated in our report of the Troy show that Effie, winner of third prize, was a better specimen than Lexie, placed second. Effie was here given first, with Lexie third, and Miss Monse, that lacks in head, second. We judge it was quantity rather than quality that caused the management to divide the class.

Little Boy and Don repeated their victories in the challenge class for black and tan setter dogs, while Roxie, entered among the dogs, was considered good enough to have a special class provided for her. We stated in our report of the New York show that Leo B., who was given second prize, was as good as anything in the class. Mr. Tallman brought him to the front on this occasion and gave second and third to the other New York winners, Meadowthorpe Heather Harold and Meadowthorpe Heather Roy. Ben, vhc., is not a show dog. Defects: Bad mouth; muzzle not deep enough and not clean; sour expression; light behind; not correct from hips to stern; knees and feet very defective; color too light. Royal Duke, Jr., hc., is light in loin, carries a high flag, is not straight in front, has poor feet, stands over at the knees and is undersized. Duke II., unnoticed, is light in eyes, wide in skull, wrong in muzzle, defective in shoulders, out at elbows, wide in front, stands over at the knees and is wrong in tail coat. Duke, also unnoticed, is very throaty, heavy and coarse in head, heavy in neck, flat in loin, wrong in carriage of tail and light in color. Meadowthorpe Bellmont, that needs rest, was best in the bitch class, but the judge got all wrong when he placed Meadowthorpe Blossom over Becky Sharp. Blossom was first in the puppy class at Troy, and Becky Sharp, who was in elegant condition, is too well known to need description. Meadowthorpe Blossom was the only puppy shown.

SPANIELS—(MR. WILMERDING).

In the challenge class for spaniels, dogs and bitches over 28lbs., five were entered and one shown, Newton Abbot Laddie. He was first at Buffalo, London, Syracuse and Richmond, 1888, and also first at New York and Troy this year. There were two entries in the class for field spaniel dogs. Considerable time was spent over Glencairn and Newton Abbot Lord, and at one time it looked as if Newton Abbot Lord would be the winner. The judge appeared to detect something wrong in Glencairn's shoulders, and devoted the greater part of the time to a consideration of that part of the dog's anatomy. Glencairn eventually proved the winner, and in our opinion he was many points ahead. In the bitch class it was again Bridford Gladys and Lady Abbot. Newton Abbot Skipper and Bridford Ruby took the prizes in the classes for field spaniels other than black, and Patsy O'Connor won in the class for Irish water spaniels; they had no competitors. In the challenge class for cockers those old competitors Miss Obo II., Chloe W. and Doc again faced the judge. We have been strumming it into spaniel men for the last two years that neither Chloe W. nor Doc. are within many points of Miss Obo's form; but notwithstanding this Mr. Wilmerding has on three or four occasions placed Doc over Miss Obo. We are pleased to find that at this late hour in the day he has come over to our way of thinking. Miss Obo II. won, with many points to spare. Between Doc and Chloe W. it is a very close thing, and we were prepared to see either of them win. On this occasion Doc, probably on account of his having been considered better than Miss Obo, took second. Chloe W. is as good as he. In the open class for dogs Jersey, Giffee and Max were placed in the same order as at Troy; they were the only entries.

In the corresponding class for bitches Dolly Obo, placed first, with her undershot jaw and monkey face, had no business whatever in front of either Beatrice W. or Sensation. Hornet, too, was overrated. We thought it a very close thing between Beatrice W., vhc., and Sensation, third; these were the pick of the class. That Dolly Obo is a cocker behind the head nobody will deny, but her narrow, pinched, shallow and underhung jaw is not to be tolerated in a dog of this breed; and when a specimen with such defect is brought into competition with fairly good ones, she should be pegged back. Sensation is not altogether of true type, whereas Beatrice W. is handicapped with nasty, gooseberry eyes. Hornet, that took second, is well nigh as crooked as a dachshund in forelegs, and, like Sensation, she is too long in body. The decisions, we were told, were governed in a large measure by what the judge considered "type;" and as the awards in favor of Dolly Obo showed that "type" behind the head is in Mr. Wilmerding's opinion of vastly greater importance than "type" in front of the neck, he should, to have been consistent, have placed Dolly Obo first, Beatrice W. second, Zelia II. third, Sensation fourth and Hornet fifth. The judge should know that it is far more difficult to procure a good head in a dog of this breed than it is to get a good body. We are altogether opposed to sacrificing true character in head for a short and chuncky body. Lady of Learning and Goldie, both well-known winners, were the only decent specimens in the class for cockers, dogs and bitches, of any other color than black. Puppies were a wretchedly seedy lot, with Hornet many points ahead.

COLLIES—(MR. MORTIMER).

With one or two exceptions the dogs shown in these classes were also shown at Troy. Scotilla and Bonny Brae represented champions; and Scotilla, in elegant condition, outclassed his competitor. The open class for dogs was badly judged. Far View Donald, that was third at New York, was given first. His very catchy color and markings, it could not have been anything else, won him the prize. Clipper, that was second at New York, is a vastly better dog in head, ears, mane, frill, top and undercoat, and should have won, with Meadowthorpe Jura and Roslyn close up for second place. Why Far View Guy Mannering and Far View Douglas were given hc. and c., respectively, is one of those things which we are at a loss to understand. They are both terribly plain in head, wrong in ears and short in coat. Sir Walter Scott, that was given hc., is a vastly better specimen than either; in fact, there is no comparison between the three dogs. He was fourth at New York. Nullamore and Reality deserved their cards. In bitches first was given to Metchly Surprise, a decision we cannot indorse. Jakyr Dean, first at New York and described in our report of that show, was decidedly the best of the class. Metchley Surprise is wrong in carriage of ears, light in bone, not quite straight in front, defective in hocks and hindfeet and very soft in coat. Our report of the Troy show has it that she has a plain head. She has a fairly good head and an average body. Collie Belle, described in our Troy report, should have been second, with Metchley Surprise third. In the puppy class nothing was in it but Jakyr Dean and Meadowthorpe Gip; the last named was third in the puppy class at Troy.

POODLES—(MR. MORTIMER).

Frome, that took second, was the only one shown. It is a very poor specimen, being sadly deficient in coat and bad in head.

BEAGLES—(MR. TALLMAN).

Little Duke and Bounce were the competitors in the challenge class. The prize was awarded to the last named, who is very plain in head, wide in front and lacking in quality. Little Duke, that is well known, was our choice for first. The open class for dogs and bitches was a good one and was divided. First in dogs was given to the Somerset Kennels' Storm. He is too fine in muzzle and rather flat in skull; does not stand quite straight in front, but has good bone and feet. He is also too wide through the chest and lacks liberty behind. We liked Frank Forest for the place. This dog needs no description. Third went to Tony Weller, that was crowded by Racer, Jr. Both are well known to our readers. Cloud, fairly good in head, excellent in shoulders, forelegs and feet, but rather long-cast, and neither first-class in stern nor coat, was about the best of the bitches, but we thought Belle of Woodbrook inferior to Twinkle, being throaty, not straight in front, not quite right in set of legs, too wide in front, rather long-cast and narrow behind and only just fair in feet. Banner Queen, third prize, is too weedy for us. Yardsley Boy, the only puppy shown, is rather long-cast and not just to our liking in head. Belle of Woodbrook was entered as having won first at Boston, 1887. Here there is a mistake.

BULLDOGS—(MR. MORTIMER).

Mr. Thayer took the challenge prizes with Britomartis and Robinson Crusoe, and in the open class Rabagas, who is now almost equally as well known as Mr. Thayer's cracks, was the only entry worthy of notice.

BULL-TERRIERS—(MR. MORTIMER).

The judging of the challenge class merits severe criticism. Jubilee, in nice condition, was properly placed first, but Lady Tarquin, in a terribly mangy condition, should never have been allowed to enter the show, let alone to receive a prize; her joints were red-raw, about half of her coat was gone and she was so lame that she could hardly be made to walk across the ring. It was not much of a compliment to the judge to send into the ring a dog that was in such a beastly condition. The open class brought out three well-known winners, Royal Rose, Marguerite and The Earl. They were properly placed, with Royal Rose well ahead.

FOX-TERRIERS—(MR. MORTIMER).

Three nailing good ones were shown in the challenge class, Result's handsome daughter Rachel, Splinter's redoubtable son Lucifer and New Forest's stylish daughter New Forest Ethel. After the judge had cast a cursory glance over the three the blue was given to Rachel. The judge must have a peculiar knowledge of fox-terriers, to be able to judge a class like this in three minutes, which was the exact time taken to arrive at a decision. The open class for dogs was brim full of quality. Raffle of course won and second was given to Hillside Dandy. The last named is so vastly superior in nearly every point that, notwithstanding his puppyhood, he should have scored a very easy first. Raffle was described in our New York report. In addition to the defects therein noticed he is undersized, not first-class in his hindparts and not a good mover. Hillside Dandy is the best puppy we have ever seen bred in America, and with ordinary luck there is a brilliant future before him. Blemton Volunteer, that was second to Reckoner at Troy, was placed third. Here again Mr. Thayer was badly used, for Reckoner undoubtedly should have been third. The reserve was given to Blemton Coronet, who is also inferior to Reckoner. He is cheeky, faulty before the eyes, light in bone and loin and not first-class in coat. We were disappointed in Shepherd Lad, that took c. He is neither first-class in head, ears, neck, feet nor shoulders. Banquo, c., is too large, wide in front, coarse in neck, but better than average in head; he does not stand right on his forelegs. First in bitches was given to Blemton Consequence, who, behind the head, is a remarkably smart terrier, although she might stand better in front. Warren Sparkle, second prize, was sent home before we had an opportunity to examine her. Verdict, Princess and Fräulein Mixture, that were third, reserve and vhc., have all been described in these columns. The puppy class was the best in point of quality that we have ever seen in America, and the judging was the worst. First was given to Blemton Ravager, a dog with a beautiful body, excellent coat and the best of legs and feet, but with a head that will always put him back when he is shown in a fairly good class under competent judgment. If he had a *fairly* good head we would pass him as a good one; but the very most that can be said of his head is that it is not the head of a show dog. He is big enough already. The two best puppies in the class were Warren Bluffer and Hillside Dandy; the last named is more matured, was in better condition, showed himself decidedly better when

under judgment and should have won. At last it is our pleasure to congratulate the Messrs. Rutherfurd upon having bred a good terrier. We have pitched into them so often for showing rubbish that we have heard it said that we never miss an opportunity to have a dig at them. This sort of talk is all bosh. We know a good dog when we see him, and we will never be a party to pushing into prominence dogs which we know are duffers. That Warren Bluffer is a better dog than the first prize winner in this class no man who has a knowledge of terriers will deny. The youngster at present has rather a sleepy expression, and his ears, although of good quality and lying close, are not so good in formation as they might have been, and they are not set on quite to our liking. His coat, too, is not all that could be desired and he did not show up well in the ring. He is to-day a decidedly better dog than Raffle and he crowded Hillside Dandy for first prize in this class. We shall not be surprised to see him develop into a better dog than Mr. Thayer's stylish puppy. Blemton Ravager, the winner, should have been third. Vhc. and reserve was given to Blemton Braggart, a high-stationed, light-boned and bad-footed son of Bacchanal and Tiara. Next to him came Blemton Trumps, vhc., a decidedly better terrier. He is shorter in leg, as good in head and coat, and decidedly better in feet. Beverwick Crescent, hc., and Beverick Snare, c., were sent home before we had an opportunity to give them as much attention as new dogs are deserving of, therefore we will leave them over until another occasion. With the exception of Mr. Belmont's decisions in the specials at New York and Mr. Mortimer's equally astounding awards at Hartford, when Valet and Gibson's Nick were given vhc. cards, this was the worst fox-terrier judging we had ever seen at a dog show in this or any other country.

OTHER TERRIERS—(MR. MORTIMER).

These classes were lightly filled and the judging was decidedly better. Meadowthorpe Glen Ettle, first at Troy, was the only Scotch terrier shown, and won. Meadowthorpe Coila and Kirkella were first and second in Skyes, properly placed; they held the same positions at Troy. In Irish terriers it was Dennis first, Breda Tiny second and Breda Jim third. For reasons that have often been given, we would have placed Breda Tiny first, with Breda Jim and Dennis very close for second. Two black and tan terriers faced the judge. Buffalo General, second at New York, and Sir Wallace, that was second at Troy, were placed in the order named. The dogs have been freely criticised and all we need say of them now is that Buffalo General is so vastly better in head than Sir Wallace that he was properly given the award. Three light-weights were shown—all bad ones. They are entirely wrong in head and would never be seen in a good class. The Dandie class brought out the same dogs as were shown at Troy. Meadowthorpe Wonder here won over her kennel companion Meadowthorpe Reiver; it was a close thing between them and of course there is room for a difference of opinion.

PUGS—(MR. MORTIMER).

Here there were seven entries and four classes, with one absentee. Bessie, Othello, Vic and Bob Ivy, all owned by Dr. Cryer and all winners, need not be described. Rustic Queen, second in the open bitch class, was criticised in our New York report. The only new one was Rhonofer, that was first in the open class for dogs, beating Othello. Defects: Head too flat; muzzle too long and lacking in volume and bluntness; ears much too large; eyes not large enough; loin should be more massive; tail carried too high and it is not close enough in curl; head color smutty; body color not clear and trace not defined enough; white vent; head small in proportion to size of body. Othello, that was second, while too large and wrong in color, is so vastly superior in all other pug attributes that he should have won.

TOY SPANIELS—(MR. MORTIMER).

Here Roscius and King Pippin, whose faces are familiar to all readers of this paper, were again first and second, and had no competitors.

ITALIAN GREYHOUNDS—(MR. MORTIMER).

Cupid, that was second at New York and first at Troy, was here a winner over Lilly. The last named is built on fairly good lines, but is too large, and, like Miss Van Buren's Fannie, is bad in color. The correct color for a dog of this breed is golden fawn; and when our Western contemporary came out in its New York report and said that Fannie had beautiful color it made itself a laughing-stock for those who understand the breed.

MISCELLANEOUS—(MR. MORTIMER).

There were only two in the heavy-weight class, Meadowthorpe Diamond and Sir Lucifer. The retriever won, but he is not at all a good specimen, and we feel quite sure that if the judge had had any experience with the breed he would have considered Sir Lucifer quite his equal. In the light-weight class a very serious blunder was made in placing Punch, a very poor Bedlington, over Cotswold Jacko, who is one of the best wire-haired fox-terriers in the country. This dog was first at Richmond and second at St. Paul, Punch was shown at New York and Troy; at both these shows first prize was withheld for want of merit. Between Jacko and Punch there is no comparison. Mr. Dole's dog is better from the end of his nose to the tip of his tail.

AWARDS.

MASTIFFS.—CHALLENGE—1st, St. Joe Kennels' Wacouta Nap. —OPEN—*Dogs:* 1st and Mastiff Club's special, C. C. Cook's Moses; 2d, E. B. Sears's Sears' Monarch; 3d, J. L. Winchell's Merlin. Com., Miss Louise Boutelle's Lieut. Colonel. *Bitches:* 1st, C. C. Cook's Pharoah Queen; 2d, C. Porter, Jr.'s Boss Lady Clare; 3d, J. L. Winchell's Pansey. *Puppies:* Prizes withheld. Very high com. and com., J. L. Winchell's Daisy and Empress. Kennel prize, J. L. Winchell; best bitch, Pharoah Queen.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—1st, W. J. Ehrich's Barry II.; 2d, Hospice Kennels' Gemma I.—OPEN—*Dogs:* 1st, E. B. Sears's Plinlimmon, Jr.; 2d, Mrs. J. M. Nicholson's Mount Sion III.; 3d, Halfway Brook Kennels' Herr Otho. *Bitches:* 1st, J. & A. Marshall's Queen; 2d, E. B. Sears's Lady Aveline; 3d, J. W. Dunlop's Ruth. Very high com., Halfway Brook Kennels' Queen Valentine. Com., C. E. Davis's Nell. *Puppies:* 1st, Mrs. J. M. Nicholson's Othello; 2d, C. E. Davis's Bernaline; 3d, Halfway Brook Kennels' Wm. M.—SMOOTH-COATED—CHALLENGE—1st, Hospice Kennels' Daphne; 2d, J. W. Dunlop's Rigi.—OPEN—*Dogs:* 1st, Teague & Tilton's Beauchamp; 2d, C. H. Evans's Victor Leo. *Bitches:* 1st, Keystone Kennels' Lola; 2d, J. Kevan's Apollonia; 3d, F. C. Hawkin's Princess. *Puppies:* Prizes withheld. Com., W. A. Thacher's Lady Hector.

NEWFOUNDLANDS.—1st, J. & A. Marshall's Meadowthorpe Prince George; 2d and 3d withheld.

BLOODHOUNDS.—*Dogs:* 1st and 2d, Brough & Winchell's Premier III. and Barnaby Scott. *Bitches:* 1st and 2d, Brough & Winchell's Ripple Buxom and Barnaby Nell. *Puppies:* 1st, Brough & Winchell's Barnaby Scot. Best, Premier III. Kennel prize, Winchell & Brough.

GREAT DANES.—1st, F. W. Fonda, Jr.'s Lady Bess; 2d and 3d withheld.

DEERHOUNDS.—CHALLENGE—1st and 2d, J. E. Thayer's Ramona and Highland Laddie.—OPEN—1st, 3d and very high com., J. E. Thayer's Clansman, Duncan and Pride of the Heather; 2d, Somerset Kennels' Olga. High com., C. Rathbone's Norval. *Puppies:* 1st, Alba M. Ide's Malcolm. Kennel prize, J. E. Thayer.

GREYHOUNDS.—CHALLENGE—1st, H. W. Huntington's Balkis. —OPEN—1st, H. W. Huntington's Highland Chief; 2d, Somerset Kennels' Fleetwood; 3d, Meadowthorpe Kennels' Meadowthorpe Douglas Fleming. *Puppies:* Prizes withheld. Com., Alba M. Ide's The Bard.

FOXHOUNDS.—1st and 2d, Hoosick Valley Hunt Club's Roseville Rover and Clonmel Rakish; 3d, J. B. Sanders's Bye. High com., B. Sanders's Lady.

POINTERS.—CHALLENGE—*Dogs:* 1st and 2d, Westminster Kennel Club's Lad of Bow and Naso of Kippen. *Bitches:* 1st, Westminster Kennel Club's Lass of Bow; 2d, Columbus Kennels' Queen Bow.—OPEN—LARGE—*Dogs:* 1st, E. Dexter's Pontiac; 2d, J. Pentz's Brake; 3d and very high com., Bryn Mawr Kennels' Bang and Victor the Blue Stocking. Very high com., Mitchell Harrison's Sachem. High com., D. C. Conig's Doctor. *Bitches:* 1st, Bryn Mawr Kennels' Golden Rod; 2d, Westminster Kennel Club's Westminster Sal.—SMALL—*Dogs:* 1st, E. Dexter's King of Kent; 2d, J. A. Marshall's Forest King; 3d, W. H. Beaulac's Greenbush Boy. Very high com., H. Ransom's Sancho and J. Pentz's Fashion. High com., E. R. Bellman's Hickory Staunch. *Bitches:* 1st, E. R. Bellman's Stella; 2d, Stratford Kennels' Wanda. *Puppies:* 1st and 3d withheld; 2d, D. C. Conig's Lenox. High com., W. A. Thacher's Chris. Kennel prize, Westminster Kennel Club.

ENGLISH SETTERS.—CHALLENGE—1st, F. Leonard's Royal Prince.—OPEN—*Dogs:* 1st, Mt. Washington Kennels' Lindo; 2d, R. Johnson's Dan; 3d, withheld. High com., J. Greer's Ghost and J. J. Smellenburg's Count Hendricks. *Bitches:* 1st and two specials, Mt. Washington Kennels' Zona; 2d, Peet & Lyon's Chautauqua Belle; 3d, Columbus Kennels' Pearl Bondhu. Very high com., W. A. Gilbert's Judy of Troy. High com., I. P. & W. W. Gray's Frolic Bondhu. *Puppies:* 1st and 3d withheld; 2d, H. Reineck's Jess.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, E. W. Clark, Jr.'s Blarney. *Bitches:* 1st, Kildare Kennels' Laura B.; 2d, C. T. Thompson's Nellie.—OPEN—*Dogs:* C. T. Thompson's Desmond II.; 2d, J. F. Wolf, Jr.'s Ned; 3d, P. Camblos's Dick Swiveller. Very high com., St. Cloud Kennels' St. Cloud. *Bitches:* 1st, Columbus Kennels' Lou III.; 2d, St. Cloud Kennels' Bessie Glencho; 3d, S. H. Marshall's Lady Fawn. Very high com., W. C. Hudson's Cora B. and Fannie. PUPPIES—*Dogs:* 1st, E. R. Stephens's Mardo; 2d and 3d, W. C. Hudson's Rex and Frank Mayo. High com., W. C. Hudson's Arrah-na-Pogue. Com., E. A. Pierpont's Elcho Fitz-Maur, T. S. Murphy, Jr.'s Dan, W. C. Hudson's Dion. *Bitches:* 1st and 3d, J. F. Wolf, Jr.'s Effie and Lexie; 2d, Mrs. H. F. Ludlow's Miss Monse. Very high com., D. C. Conig's Julia. Kennel prize, W. C. Hudson.

BLACK AND TAN SETTERS.—CHALLENGE—*Dogs:* 1st, S. G. Dixon's Little Boy; 2d, W. E. Rothermel's Don. *Bitches:* 1st, H. F. Smith's Roxie.—OPEN—*Dogs:* H. C. Biddle's Leo B.; 2d and 3d, Meadowthorpe Kennels' Meadowthorpe Heather Harold and Meadowthorpe Heather Roy. Very high com., H. C. Glover's Ben. High com., W. S. Hammett's Royal Duke, Jr. *Bitches:* 1st, special and 2d, Meadowthorpe Kennels' Meadowthorpe Belmont and Blossom; 3d, T. L. Campbell's Becky Sharp. *Puppies:* 1st, Meadowthorpe Kennels' Meadowthorpe Blossom. Kennel prize, Meadowthorpe Kennels. Local special, Dr. F. L. Classen's Kent IV.

SPANIELS.—CHALLENGE—1st, Oldham & Willey's Newton Abbot Laddie.—FIELD—OPEN—BLACK—*Dogs:* 1st and 2d, Oldham & Willey's Glencairn and Newton Abbot Lord. *Bitches:* 1st, Woodstock Spaniel Kennels' Bridford Gladys; 2d, Oldham & Willey's Lady Abbot.—ANY OTHER COLOR—*Dogs:* 1st, W. T. Payne's Newton Abbot Skipper. *Bitches:* 1st, Bridford Kennels' Bridford Ruby.—CLUMBERS—Not for competition.—IRISH WATER—1st, J. R. Daniels's Patsy O'Conner.—COCKERS—CHALLENGE—1st, Oldham & Willey's Miss Obo II.; 2d, American Cocker Kennels' Doc. —OPEN—BLACK—*Dogs:* 1st, Oldham & Willey's Jersey; 2d, Woodstock Kennels' Giffee; 3d, M. Spellissy's Max. *Bitches:* 1st and very high com., Oldham & Willey's Dolly Obo and Beatrice W.; 2d, American Cocker Kennels' Hornet; 3d, G. Bell's Sensation. High com., M. Spellissy's Zelia II.—ANY OTHER COLOR—1st and 2d, Oldham & Willey's Lady of Learning and Goldie; 3d and very high com., W. C. Hudson's Gov. Cleveland and Mollie H. *Puppies:* 1st, American Cocker Kennels' Hornet; 2d, 3d, high com. and com., W. A. Rosekrans's Fritz, Max, Dot and Mollie. Kennel prize, Oldham & Willey.

COLLIES.—CHALLENGE—1st and Collie Club special, Chestnut Hill Kennels' Scotilla; 2d, W. D. Hughe's Bonnie Brae.—OPEN—*Dogs:* 1st and Collie Club special and equal second and high com., G. & H. B. Cromwell's Far View Donald, Douglass and Guy Mannering; equal second, and very high com., Meadowthorpe Kennels' Meadowthorpe Jura and Reality; 3d, J. Watson's Clipper. Reserve, Chestnut Hill Kennels' Roslyn. Very high com., W. D. Hughes's Nullamore. High com., Chestnut Hill Kennels' Roslyn Sensation and J. P. & W. W. Gray's Sir Walter Scott. *Bitches:* 1st, 2d, and very high com., Chestnut Hill Kennels' Metchley Surprise, Jakyr Dean and Spoiled Miss; 3d, Dr. H. S. Quinn's Collie Belle. High com., G. & H. B. Cromwell's Far View Bertha. *Puppies:* 1st, Chestnut Hill Kennels's Jakyr Dean; 2d, Meadowthorpe Kennels' Meadowthorpe Gip. Kennel prize, Chestnut Hill Kennels.

POODLES.—1st, withheld; 2d, B. Pruyn's Frome.

BASSET HOUNDS.—1st, C. Porter, Jr.'s Babette.

DACHSHUNDE.—1st, L. & W. Rutherfurd's Rubenstein.

BEAGLES.—CHALLENGE—1st and Beagle Club special, Somerset Kennels' Bounce; 2d, Ardsley Kennels' Little Duke.—OPEN—*Dogs:* 1st, Somerset Kennels' Storm; 2d, A. Parry's Frank Forest; 3d, W. H. Child's Tony Weller. Very high com., Lewis Bros.' Racket II. and Ardsley Kennels' Racer, Jr. *Bitches:* 1st and 2d, Somerset Kennels' Cloud and Belle of Woodbrook; 3d, Lewis Bros.' Banner Queen. Very high com., Ardsley Kennels' Twinkle. *Puppies:* 1st, Ardsley Kennels' Yardsley Boy. Kennel prize, Somerset Kennels.

BULLDOGS.—CHALLENGE—1st and 2d, J. E. Thayer's Britomartis and Robinson Crusoe.—OPEN—*Dogs:* G. Rapier's Rabagas. Best pair, Robinson Crusoe and Britomartis.

BULL-TERRIERS.—CHALLENGE—1st, H. A. Harris's Jubilee; 2d, Sunnyside Kennels' Lady Tarquin.—OPEN—1st, F. F. Dole's Royal Rose; 2d, H. A. Harris's Marguerite; 3d, Sunnyside Kennels' The Earl. Com., G. B. Conly's Rock Rock. *Puppies:* Withheld. Best pair, Jubilee and Marguerite.

FOX-TERRIERS.—CHALLENGE—1st, 2d and very high com., Blemton Kennels' Rachel, Lucifer and New Forest Ethel.—OPEN—*Dogs:* 1st, L. & W. Rutherfurd's Raffle; 2d and very high com., J. E. Thayer's Hillside Dandy and Reckoner; 3d and reserve, Blemton Kennels' Blemton Volunteer and Blemton Coronet. Com., J. H. Shepherd's Shepherd Lad and J. A. Burdon, Jr.'s Banquo. *Bitches:* 1st and 3d, Blemton Kennels' Blemton Consequence and Verdict; 2d, L. & W. Rutherfurd's Warren Sparkle. Reserve, J. E. Thayer's Princess. Very high com., J. A. Burdon, Jr.'s Fräulein Mixture. Com., Grace P. Marvin's Dame Trot. *Puppies:* 1st, reserve and very high com., Blemton Kennels' Blemton Ravager, Blemton Braggart and Blemton Trumps; 2d, J. E. Thayer's Hillside Dandy; 3d, L. & W. Rutherfurd's Warren Bluffer. High com. and com., C. Rathbone's Beverwyck Crescent and Beverwyck Snare. Kennel prize, Blemton Kennels. Apollo Stakes, Blemton Ravager.

SCOTCH TERRIERS.—1st, Meadowthorpe Kennels' Meadowthorpe Glen Ettle.

SKYE TERRIERS.—1st, Meadowthorpe Kennels' Meadowthorpe Coila; 2d, Oldham & Willey's Kirkella.

IRISH TERRIERS.—1st, J. F. McFadden's Dennis; 2d and 3d, Chestnut Hill Kennels' Breda Tiney and Breda Jim.

BLACK AND TAN TERRIERS.—1st, A. W. Smith's Buffalo General; 2d, Keystone Kennels' Sir Wallace.

TOY TERRIERS.—1st and 2d, H. U. Van Buren's Beauty and Topsey; 3d, P. H. Conroy's Major.

PUGS.—CHALLENGE—1st, Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st, Miller Bros.' Rhonofer; 2d, Dr. M. H. Cryer's Othello. *Bitches:* 1st, Dr. M. H. Cryer's Vic; 2d, G. Bell's Rustic Queen. *Puppies:* 1st, Dr. M. H. Cryer's Bob Ivy. Kennel prize, Dr. M. H. Cryer.

TOY SPANIELS.—1st and 2d and brace special, W. Phillips's Roscius and King Pippin.

DANDIE DINMONT TERRIERS.—1st and 2d, Meadowthorpe Kennels' Meadowthorpe Wonder and Meadowthorpe Reiver.

ITALIAN GREYHOUNDS.—1st, Miss Edith Van Buren's Cupid; 2d, M. A. Torrey's Lilly.

MISCELLANEOUS.—LARGE—1st, Meadowthorpe Kennels' Meadowthorpe Diamond; 2d, C. Rosser's Sir Lucifer.—SMALL—1st, C. Porter, Jr.'s Punch; 2d, F. F. Dole's Costwold Jacko.

THE MASTIFF CHALLENGE CUP.—Chicago, March 9.—*Editor Forest and Stream:* Will you kindly draw the attention of intending exhibitors of mastiffs at our coming bench show, April 9 to 12, to the fact that those wishing to compete for the $150 challenge cup of the American Mastiff Club, for the best American-bred mastiff dog or bitch, should apply to Richard H. Derby, Sec'y, 9 West Thirty-fifth street, N. Y., for the proper entry blank, and make their entry with him.—R. P. H. DURKEE, Chairman Bench Show Committee.

LONDON (ONT.) DOG SHOW.—London, Ont., March 6.—*Editor Forest and Stream:* The London Kennel Club, of London, Ont., claim Tuesday, Wednesday, Thursday and Friday, Sept. 10, 11, 12 and 13, 1889, for their International bench show of dogs to be held in this city in connection with the Provincial Fair.—C. A. STONE, Manager.

GREYHOUNDS AND COURSING.

THAT "every dog has its day" is an aphorism which has taken place in the doggy world in this county since the first dog show was held in 1876. First of the prime favorites were the beautiful silky-haired setters, beltons of softest blue and white, others of dark mahogany red, while many felt proud beneath lovely coats of orange and white, or rich black and tan. Next came the pointer and bright, sparkling little spaniels (both field and toy), followed closely by that great defender of the little toddlers and the fair sex, the majestic mastiff. The collie, too, with its long bushy coat, found its way into general favor, while the stately St. Bernard, noble and generous, received an "equal first" at the hands of the public. The little ever wide-awake fox-terrier, too, would not be repressed, and demanded his rights of recognition, which have been generously accorded him. All the various breeds, however, have had to make room for that one which is for many reasons destined to be the favorite of favorites, the greyhound.

A retrospective view of the greyhounds in this country through the past twelve years shows a marvelous improvement both as to their breeding and form. Though their ancestors originally came from England, still, through both carelessness and indifference their pedigrees in very many instances were irretrievably lost or so badly mixed by inaccuracies that it was impossible to untangle them and discover the true lineage. However, as the years grew on, and the interest became more pronounced, the greatest care was shown in the selection of a full pedigreed sire for stud purposes, and a bitch with a line of ancestors as long as your arm became absolutely necessary, and none others would be accepted. Greyhounds of royal lineage were imported, and by degrees the forms of our dogs have undergone a wonderful change for the better; and soon we ought to be able to show as good-legged, strong-backed, clean-cut, finely-outlined dogs as can be found in the world.

These qualities, at one time entirely overlooked by our owners and breeders, are now recognized as most important factors and absolutely essential to enable the dog to perform the duties for which he is specially adapted. In these points all coursing men agree, and the experience of a hundred years condensed into the foregoing remarks, should be accepted by us who are young, very young yet, in this particular breed. As to the formation of the head there has been expressed a great diversity of opinions, and by some of the oldest coursers, gentlemen who have owned some of the grandest specimens, and have seen all the flyers run. One faction holds to a conformation similar to that of the bull-terrier, viz., very broad at the base of the skull, as indicating greater power to kill, a great desideratum where a dog has a hard sturdy class of hares to encounter and hold. Another and equally successful body of coursers disregard this formation, looking rather for breadth before and below the eyes, as indicating therein greater killing power. The latter class, too, seems to be more in harmony with the old saw,

"A head like a snake,"

and it certainly makes it far more symmetrical and beautiful to look at.

Of all the breeds of dogs we now have about us the greyhound is by centuries the oldest. The monuments throughout the oriental world have their forms engraved upon them, while throughout the Latin countries we find ancient paintings of them, wherein they occupy a high position in the affections of their princely and noble owners. Magnificent tapestries still exist where the greyhound forms no slight part of the beautiful foreground, while modern artists have delineated their features in colors quite rivaling the ancients. Thus for more than two thousand years we can trace its existence, and the only marvel is that it has preserved its form throughout all these years when dynasty after dynasty has risen and crumbled to dust, leaving nothing behind them but a history and a few ruins.

The greyhound of to-day and its brother of one thousand years differ only and immaterially in their coats. The former's is short and close like the bull-terrier's, while the latter's is very long, silky and almost flossy, waving most beautifully as it flies over the ground with no less ease than "the swallow skims along the smooth lake's level brim." The race of ancients is now almost extinct, there being but one in this country that I have ever seen or heard of, while in England, I think, there is a single brace, which, I believe, is the property of Lady Emily Peel. From want of use in its proper sphere, the ancient has lost most, if not all, of its accredited courage, and when his value became apparent to the English people as affording them another most delightful and exciting sport, they set to work to remedy it by a cross-breed with the bulldog. The first outcome of this proved to be heavy-headed dogs, somewhat low of stature, but of indomitable will and courage. Having in this way secured their object, little remained to be done except to breed back constantly to the greyhound, so as to preserve its form, while at the same time its stamina and courage to kill remained unchanged. How well and intelligently this cross breeding has been conducted is illustrated in the magnificent specimens that to-day adorn the fields or shine upon the show bench. There is no breed of dogs that has received greater care or attention than the greyhound. Upon the proper mating and rearing, coupled with conditioning, depend his success, and this once achieved he proves a young fortune to his owner, both for his wins in the field and value for breeding purposes.

Stakes, where there are entries from all parts of the country, are of constant occurrence during the coursing season, amounting to as high as £1,000 to the winner, while at the smaller meets the winner may get from £10 up to £100. The value in nearly all cases depends upon the number of entries. Though not the most valuable in a pecuniary sense, the great Waterloo Cup, which is run for on Lord Sefton's estate at Altcar, near Liverpool, England, is far and away the most desirable, the most sought after. The names of the owners as well as the winners are handed down to posterity, and the whole realm does not possess a prouder man than the courser who has secured that trophy of trophies, the Waterloo Cup. The very cream of the coursing world is assembled to witness the contest, and if the weather be fine the great Derby itself does not prove a greater attraction.

With characteristic enthusiasm we have taken up the most noble sport, coursing with greyhounds, and to-day throughout our near West, the Southwest, as well as on the Pacific slope, clubs are springing up very rapidly, and before long the entire country from Maine to California, from the lakes to the gulf, will be dotted over with coursing fields, where the best and fastest dogs of the world will meet and achieve names for themselves that will last long after they have ceased to be.

The success or failure of a greyhound depends entirely upon its conformation. Leaving the coursers to their particular fancy as to the style of heads most desirable, we find the neck should be long and clean cut, drake-like in both respects and not arched outward, as seen in many of our dogs. To be a good and sure killer the formation as described is necessary, though there are some instances of great dogs being deficient in this respect.

Too much importance cannot be attached to the legs and feet and their manner of setting on. The terrible strain to which they are subjected in being conditioned as well as when running demands that the forelegs shall be set on well under the body, be as straight as gun barrels, of good strong bone and the pasterns strong and thick through, not showing weakness, even in the slightest degree. Prime quality of feet is as essential in the greyhound as it is in a man who would run across country or enter a long and wearying race. No matter how well conditioned the dog may be, if

his feet are defective his chances of winning are very small. They should be like the cat's, close, compact and thick through the pads. This form will allow him to travel over rocks and stones, through plowed fields with perfect safety, while the splay-footed, thin-padded foot will soon become sore, and in a newly turned field entirely swamp the dog, while the better footed one goes galloping past in grand style.

Much of the success in a greyhound depends upon the heart and lungs, and to insure their perfect freedom of action it is necessary that the chest be deep and the ribs well sprung. Flat-sided dogs are rarely ever fast, and should one perchance be run across it would be found that he was utterly unable to gallop for any length of time, but be relegated to the list of those useful only for rabbit coursing, where the quarry is quickly killed or run into its warren.

At no time is the full value of a good, broad, nicely arched, strong back better demonstrated than when the hare is forced from its original course by the dog or leaves it by its own volition. When the turn comes and both dogs are nearly side by side, the weaker backed one will gallop far beyond the hare, from his inability to turn quickly, while the stronger will be able to recover himself the quicker and so score the greater number of points. The mere fact of a greyhound having killed its hare is no evidence of his having won the stakes, for there are many instances where the killing has been done by one dog while the other scored all the points.

The hindquarters are virtually the propelling power of the dog, and unless they are properly formed in all respects the value of the dog is decreased in proportion to the defect. They should be strong and muscular, the stifles well bent, and the more cimeter-like in form the greater the power. Well let-down hocks indicate greater leverage and consequent increased speed. The tail, the steering apparatus of the greyhound, should be as near rat-like as possible. With coursers its fineness is of little consideration provided the remainder of the dog can gallop fast and stay as well, but with those who exhibit their dogs at the shows this part of his anatomy is looked upon as indicating to some degree the breeding.

As the uses of the greyhound are speed, coupled with ability to undergo a punishing course to a successful issue, the matter of color is of no moment whatever; and as a result of such a conviction we have nearly all the colors imaginable. Red, red and white, and *vice versa*, black, black and white, and white and black are the colors most frequently met with, while the less common are pure white, red or black brindle, blue, solid or mixed with white.

That careful and intelligent breeding is generally productive of good results cannot be better illustrated than by glancing over the coursing items of our English contemporaries, where page after page is devoted to that one subject. "Like produces like;" and so it is we see the best blood so perfectly intermingled that the strains now before the public are capable of performing prodigies both in speed as well as endurance. If our own breeders will study closely the lessons the coursers of the old world have given them, the improvement in this magnificent breed of dogs will be in perfect harmony with the wonderful strides we are making in all athletic and out-of-door sports.

Of the temper and disposition of the greyhound enough cannot be said in praise; gentle in the extreme, affectionate and intelligent as a spaniel where he is made a companion of; peaceable with other dogs, yet able to hold his own with the very worst of them when attacked, using his powerful jaws and lancet-like teeth with killing effect; especially attached to his master, from whom he cannot be easily weaned; proud and aristocratic in his bearing to a marked degree; these qualities coupled with his great value in the coursing field recommend him to the especial favor of the dog-loving world. H. W. HUNTINGTON.

Editor Forest and Stream:

In reading your paper of Jan. 31, I notice some remarks on coursing by Mr. H. W. Huntington, in answer to a letter written by Dr. Van Hummel. As my greyhounds are mentioned in their correspondence, will you allow me space for a few lines?

I quite agree with Mr. Huntington in his able letter that those interested in coursing cannot do better than go to England and select some high-priced greyhounds. It would be to the interest of coursing if a few sportsmen would take hold and show the same spirit in the selection of greyhounds as our shooting friends do in selecting pointers and setters, we should then soon have coursing taking high rank among our field sports, but Mr. Huntington infers that my importations are not quite costly enough for this country. Allow me to put him right on this point.

My imported White Lips, who ran so well last year in this country, was never bred or owned by Mr. Dent, but she was very highly tried as a puppy. She won the first time she came out, taking the Medway puppy stakes at the Hoo Club meeting. In her next race she filled the nomination of that well known and rare judge of a good greyhound, Mr. Miller, owner of Misterton, in the Newmarket Champion Stakes, one of the most important puppy stakes in England. Mr. Miller is not a likely man to run anything but a well tried puppy, when he could have the pick of so many good ones. During the latter part of the season of 1888 the kennel White Lips was trained in as a puppy was somewhat neglected, consequently the greyhounds in that establishment did not show their true form.

If Mr. Huntington will refer back to the Waterloo Cup winners, he will find that many winners of that important event, like White Lips, did not show their best form as puppies; no better example than last year's winner, Burnaby, who was a second-season dog when purchased by Mr. L. Pilkington, his present owner, for £40. It is the same with greyhounds as it is with race horses. We have heard the most experienced trainers say that when a youngster has once shown fine form, if he appears to lose it for a season, he will in most cases come back to that good form again, unless he meets with an accident; so I think it will puzzle Mr. Huntington or any one else to know how good White Lips may have been when she ran at Great Bend last year. So the American greyhounds must not be passed over so hastily and pronounced so very bad because White Lips led and beat them. Let Mr. Huntington give us all the pleasure of his society this year at Great Bend, and let him bring along one of these $5,000 greyhounds he speaks of. And he must not return to the East feeling discouraged should White Lips lead and beat this high-priced one. No greyhound can have more good running blood in her veins than this bitch.

My other imported bitch Partera is by Mortimer, a son of the celebrated Coomassie, twice a winner of the Waterloo Cup, out of Mrs. Junks, by Lord of Avon. This bitch has two crosses of the much sought for David blood in her. I got Partera quite as a personal favor from Mr. L. Pilkington, owner of Burnaby, last year's winner of Waterloo Cup. I cannot do better that quote his own words in a letter to my brother: "I should advise your taking Partera instead of Patrosa, for I think she is the better greyhound; she is much better looking; she is a particularly fine bitch; indeed, I seldom have had a better looking one, and she is grandly bred. Both bitches are grand stayers."

My latest importation, Lord Neversettle, is by Jester out of Mr. Stone's Squirrel. This combines the best racing blood in England at the present time. Jester is the sire of Huic Hollos, and many other winners, and is own brother to Paris, sire of Miss Glendyne and Princess Dagmar, both winners of the Waterloo Cup. Lord Neversettle won three courses in the Gosforth Derby (64 dogs) with the best tried puppies. He was only beaten by Carracci, one of the dividers of the stake. Lord Neversettle divided the Partington stakes at Heatley. We can state without fear of contradiction that it is the opinion of many of the best judges in England that Lord Neversettle is one of the fastest dogs of the present day.

The *Sporting Life* of Jan. 5, published in London, Eng., makes the following remarks: "The greyhound Lord Neversettle, by Jester out of Squirrel, has just been shipped to Hutchinson, Kansas, U. S. A., and from his marvellously good breeding should prove a worthy sire to the stud."

In conclusion let me say that a greyhound, like a young race horse, must be selected by his racing points, and good blood, here lies the great secret in purchasing your greyhounds in England. Do not be led away with the idea that only £1,000 can get you a good one. Let a greyhound have fine shoulders, a strong neck, short back, well sprung ribs, and a powerful loin, so he can gallop round a table, and with big quarters to send him up the hills, and above all, good legs and feet; built on these lines, he is as good on the show bench as he is on the coursing field.

I hope before the year is out to have the pleasure of meeting Mr. Huntington at one of our big bench shows. He must not be surprised if he finds one of my imported greyhounds a hard nut to crack. H. C. LOWE.

Editor Forest and Stream:

Mr. D. N. Heizer, of Great Bend, Kas., one of the most prominent members and officers of the American Coursing Club, spent a few days in Chicago last week, and it was my pleasure to have a talk with him about the greyhounds and the jack rabbits of his vicinity. Mr. Heizer is pleased to note that at recent English sales Jester stock has brought even better figures than those demanded for the saplings had over by Great Bend men last year. These dogs he reports as developing and doing finely. Trales has come into a considerable demand as a stud dog. With true gameness, Mr. Heizer insists that he will go away with the money next year.

Mr. Heizer informs me that Bessie Lee, winner of the All-Aged last October, has lately changed hands in rather a singular manner. Bessie Lee was bred by Uncle Bobby Smart, and after the decision last fall Uncle Bobby claimed that he had only given Mrs. Luse the puppy upon the condition that if she won, he, Uncle Bobby, should have back either the bitch or her winnings, there being no actual conveyance of title. Sale of the bitch was effected to one Ridenower, to whom entered Uncle Bobby with a navy six, and persuaded him he didn't want Bessie Lee. In the ensuing replevin suit Uncle Bobby was awarded possession of Bessie Lee. Rather an unfortunate affair all around, it seems. If the bitch hadn't won there wouldn't have been any trouble. Mr. Luse will therefore not nominate Bessie Lee next October.

Kansas has had one of her Italian winters this season, and the jack rabbits could not do otherwise than thrive. Mr. Heizer says that a week or so ago a small party took seven good greyhounds and went over to Amos Johnson's farm, toward Ellinwood, for a little run. There had been a light snow and a cold wind, and the jacks not having stirred about much were well gaunted and speedy. There were nine jacks started, and out of the nine only one was caught; although the whole seven of the greyhounds were slipped. This result was in nowise due to the inferiority of the dogs, but to the superiority of the hares. Take a strong jack rabbit that has been gaunted for a day, and it will require an exceptionally good brace to kill, and no single greyhound will do it on a clear field and with a good start allowed. Quite different from rabbit-baiting, this! It cannot be too strongly emphasized that coursing, as conducted at the American Club meet, is a sport rightly so called, possessing all the elements thereto, and devoid of all the quality of onesideness or certainty in the event. There is no sport more fascinating, and the meets above mentioned grow like a rolled snowball, from the fact that each visitor comes next time and brings his friends.

Mr. Huntington's late articles on coursing are of interest to a great number of Western readers, who sincerely hope that he and his friends may be present at the next meet of the American Club, and that in the meantime he may do much to encourage the sending on of dogs whose owners cannot attend. The next annual meeting is going to be a big affair, but it cannot be too big, and there cannot be too many gentlemen like Mr. Huntington present. One thing it is refreshing to be able to say, and that is, that there need be no doubt or hesitation in regard to the quality of the sport which will be had. The meet is no longer a question in any regard, but a success; and especially should it be borne in mind that the supply of hares is assured. More men, more greyhounds and better, more money, more enthusiasm yet, are the things wanted; although there is absolute supply of all these now, there is always room for more. As to the jack rabbits, they just come up out of the ground, apparently. I feel sure that no Eastern gentleman will make the trip to these breezy and clear-aired plains and see the dashing sport of coursing with any shadow of after regret for his time and outlay. Make it a mass meeting of all our greyhound men next year. There are plenty of surprises in store for the next meet. Let the greatest surprise be the general one at the magnitude of the attendance.

About the success of the American meet there is no question, but there does seem to be some little question about the credit due to the original effort at inaugurating this success. In Mr. Huntington's later article he remarks:

> In Dr. Van Hummel's reply to my article under the above heading, he gives us an account of the severe struggle he and his co-workers had to bring coursing in the West to its present estate of existence, and tells me how that very few either understood or appreciated its beauties and exhilarating effects; how at their first meet there was scarce a corporal's guard and a very few dogs, yet how from time to time they have educated, as it were, their brothers to a full appreciation of the glories of coursing and instilled into them a determination to try conclusions with whoever might care to compete. The result of the combined efforts of the Doctor and his friends is now plainly visible in the grand exhibition they had at Great Bend last October, and illustrates most beautifully what can be achieved by dint of hard work and perseverance. My only regret is that the genial Doctor could not be induced to remain here in the East a little longer, and through the medium of his enthusiasm instil into some of our greyhound owners a bit of the push, backbone and "get-thereness" which he imparted to his Western friends, resulting finally in the formation of the American Coursing Club.

There is an unintentional injustice in the statement as it reads, and I should like to correct it, and if I do Dr. Van Hummel injustice thereby, it shall certainly also be unintentional. The first part of the paragraph is that which refers to "Dr. Van Hummel and his friends," and the unfairest part is that which gives the "genial Doctor" more prominence and more credit than his friends. The plain fact of the matter is; there is only one man who deserves any mentionable credit for starting the American Coursing Club, and that man is Dr. G. Irwin Royce, who seems latterly to be rather lost sight of. It was Dr. Royce who gave his time and who gave also of that unpurchasable commodity, enthusiasm, at a stage when others were holding back. In the first steps of organizing a meet Dr. Royce acted under the backing of a gentleman who guaranteed all expenses, it is true, but it was he who was upon the ground, who gave time and labor and enthusiasm, and who was, indeed, for the first year at least, the whole club in himself. As to Dr. Van Hummel's "severe struggle," he himself knows as well as all the rest of us that his only severe struggle was to keep from falling off the fence where he sat during the first year. He has been a regular attendant since, just as the other members, and has brought his dogs to try to win money, just as the other members have; but when it comes to speaking of an unselfish and devoted pushing of coursing interests, and a purely impersonal and unmercenary love for the sport, Dr. Van Hummel knows, and so does every man in the club, that there hasn't been a man worth mentioning by the side of that nervous and fly-away Dr. Royce, who was all over the field at once. Dr. Royce has not won a first as yet, it is true, but he has done his best, and I am sure a great many would rather see him win one than any other contestant. The man is a fool who expects to get credit for his work. The work itself must be the reward, and that itself will soon be forgotten in the rapid drift of men and things. The American Club is growing and changing, and in this growth it is easy to forget the early history of its struggles or to recount it inaccurately. Now, I won't have it that way. I would not and do not disparage Dr. Van Hummel. I would not credit the "genial" Doctor less, but the nervous Doctor more. I want to say that much for Dr. Royce while there is time and opportunity. And next fall, if it should be my pleasure to report this meet, as it has been for each previous meet from the first, I shall be happy to baste Dr. Royce the best I can if he doesn't have his dogs in the slips on time, which is something he never does if he can avoid it. He is always looking after some other fellow's dogs.

The American Club men will hope that Mr. Huntington may meet success in stirring up his lethargic Eastern friends. There is no better way of starting a club in the East than to come out and see one in the West. One can do almost anything when he feels as if he had to, and I am sure that is the way Mr. Huntington would feel if he saw coursing as "she is did." As to the question of catching and shipping fifty jack rabbits to the East, while I do not know the name of an individual to whom I could direct him, I should think it very strange if the jacks could not be found. They might all be dead when they reached their destination, for they are great fellows to butt out their brains against a cage. There is no more wild and untamable animal than the jack rabbit, and those who know it say that it can never be tamed at all. Whether it would thrive in the East is a great question. It is native to a high and dry country.

E. HOUGH.

CHICAGO, Feb. 11.

The following letters from Mr. M. E. Allison, manager of the National Coursing Association, of Hutchinson, Kas., will be of interest to those who have lately made inquiries about obtaining live jack rabbits for coursing purposes, and will be of yet greater interest as bearing upon the sport of coursing in what may be called its most recent form. The National Association was the first inclosed coursing club to organize in the middle West, and it probably holds more chance for extended growth than any similar association of the country, its only considerable rivals being in California. The first meet, held last October, was given under the most trying circumstances, the necessary details not being completed, chiefly through lack of time. It is to be hoped that the association will be able to get plenty of hares together, and have everything ready for a rousing meet this spring. The establishment of a good spring meet will be of the utmost interest to coursing men, who now have practically but one meet a year. More than that, if the Hutchinson Association be shown to be a practical working concern, and no doubt appears that such will be the case, it is almost sure that coursing will be seen all through the East. Mr. Allison says:

"Our first meeting we knew would be a partial failure, under the circumstances, at best, but we needed all the assistance and sympathy of our friends instead of condemnation. We all make mistakes and my mistake was to hold the meeting at all. We were unprepared, but we had advertised it, and we had to do something, and we did the best we could under the circumstanses. We are still short of rabbits and if I don't get at least fifty more yet this winter I will postpone the spring meeting until fall. We have had no snow and the weather has been so warm that they could not be caught this winter. I have had contracts with California parties to furnish them and they say that has been the trouble there. They have had one drive for me and failed. They are to have another soon and still hope to get them. I will make no more mistakes in holding meetings without rabbits and those well-trained. I have had a great many inquiries as to how the enterprise is getting along and showing anxiety as to its success. It is attracting the attention of prominent showmen. I have got enough rabbits now to stock up on by waiting for them to breed, and they have done splendidly this winter. It is snowing today for the first this winter and if it get deep enough I may be able to get some here yet. Mr. H. C. Lowe is still here working his dogs every day. I have hunted very little this winter and my dogs could not catch a flea. They have had no exercise since the meeting."

In a letter of Feb. 23 Mr. M. E. Allison says: "I am very much afraid we will not be able to hold our spring meeting on account of lack of rabbits. They are the hardest things to get I ever saw. I have had several contracts with California parties to furnish them, and sent them money to buy boxes, and they have held drives for our benefit and so far have failed. I shall not advertise the meet or do anything until I am sure everything is all O. K. The weather is against us this winter.

"I have built a track from the mouth of the chute to the escape about twenty feet wide as smooth as a floor. I took the sod all off and leveled it up like a broad road, and I think when a dog gets after one on that road he will just fly through there. The rabbit will be trained to know his only means of escape is at the lower end, and the closer he is pressed the more apt he is to keep this track. I shall build a brush fence about a rod in front of the escape, so that a rabbit can get away from the dogs before he goes through the escape. I have arranged a very good device for capturing rabbits on the outside of the park. It is a pitfall along the fence, covered with boards, so that when they step on it the board tips down and drops them in. There is a tunnel under the fence so they can escape into the park. This plan has met with good success, and we have got a dozen or more that way. They follow the path along the fence, and are into it before they know it. From the letters I am getting every day it makes me think more of my enterprise all the time. I got a letter from Taylorville, Ill., today, asking for information on how to start a park and stock it up. Inclosed coursing will be the thing in the next five years."

EASTERN COURSING CLUB.

A MEETING for the purpose of effecting permanent organization of the Eastern Coursing Club was held at the Hoffman House, New York, Saturday, March 9. At request of the gentlemen present Mr. J. Herbert Watson took the chair.

On motion of Mr. Growtage, the report of the committee on constitution and by-laws was accepted. Mr. Blackman moved that the report be acted upon by sections. Seconded by Mr. Huntington. Carried. The report was then taken up by sections and finally adopted as a whole. The constitution provides that the membership shall be unlimited. The initiation fee is $5 with annual dues of the same amount. The board of directors, to consist of nine, three to be elected each year. The annual meeting to be held during the annual coursing meet or during the months of October, November and December of each year.

The election of members of the board of directors was as follows: Messrs. Thos. H. Brush, W. J. Blackham, L. Mortimer Thorne, Jr., W. B. Growtage, Edgar A. Garbutt, Robt. Lambert, H. W. Huntington, J. Herbert Watson and Alba M. Ide.

A meeting of the board of directors having been called to

follow immediately after adjournment, it was moved by Mr. Garbutt and seconded by Mr. Blackham that the meeting adjourn. Carried.

The meeting of the board of directors was called to order, Mr. J. Herbert Watson in the chair. The election of officers was as follows: President, Mr. W. J. Blackham; Vice-Presidents, Messrs. L. M. Thorne, Jr., C. S. Wixom, C. D. Webber, J. F. Simons and H. W. Smith; Treasurer, J. Herbert Watson; Secretary, H. W. Huntington.

The chairman directed lots to be drawn for the terms of office of the directors, and appointed Mr. Huntington as teller. The drawing was as follows: For one year, Messrs. Brush, Garbutt and Lambert; two years, Messrs. Watson, Growtage and Ide; three years, Messrs. Blackham, Huntington and Thorne.

An informal discussion was then held as to the future policy of the club and the best means of securing desirable property on Long Island and stocking it with English or German hares or Western jack rabbits. The advisability was discussed as to the keeping of a register containing a full record of the pedigrees, markings and public performances of all Eastern greyhounds, as well as their age, breeders, etc. A portion of the work also to be devoted to stud services, produce stakes, sales and importations, for which a fee of 50 cents be charged, while a similar charge be imposed for an official abstract of the former data. The register to be published in book form as soon as the number of registrations warrant it, and sold at $1 per copy.

Communications were received from various owners and breeders of greyhounds, expressing their hearty sympathy with the club's object and promising their liberal support.

On motion of Mr. Garbutt it was voted that the coursing rules of the American Coursing Club be adopted by the club. Carried.

The next meeting of the Board of Directors having been called for Friday, March 15, at 8 P. M., at 79 Downing street, Brooklyn, N. Y., the meeting adjourned.

H. W. HUNTINGTON, Sec'y.

IRISH AND GORDON SETTERS AT FIELD TRIALS.

BOSTON, Feb. 26.—*Editor Forest and Stream:* The other day I asked a well known owner and advocate of Irish and Gordon setters why it was that these strains were never seen at our field trials. His answer was: "Gordon and Irish setters would come to the front as soon as 10-hour heats would be established, for these dogs, for good, honest all-day field work, were superior to the modern English setters or pointers. For one or two hours' flashy and brilliant performances the Llewellyns were the best. This had been shown over and over again at our field trials, but thorough sportsmen who are themselves not afraid of hard work would, as a rule, prefer the Gordon or Irish setters for all practical purposes."

Now, for twenty-two years I have shot over English setters, did most of my shooting in Virginia and North Carolina during December and January, and never took with me more than two dogs (English setters). I generally started about 7 o'clock in the morning and got home after dark; this I did daily for about six weeks, using the dogs alternately. My dogs did their work as honest and as cheerfully as can be expected from any dog.

I have not had much experience with Irish and Gordon setters, but to judge from what I had formerly heard and seen about them, "endurance and speed" do not seem to be their forte.

Much has been written and said about field trials; by some they are considered true tests, by others mere circus performances; and I believe that the only way to make these trials really popular and important would be to establish "all-day heats," and if you, Mr. Editor, would enlighten the public on the possibilities and advantages of such an undertaking, all your readers would undoubtedly be under great obligations to you. STAMINA.

FOX-TERRIERS AT NEW YORK.

Editor Forest and Stream:

I see that your reporter has taken Mr. Belmont to task for giving the brace prize at New York to Rafile and Diana over Raby Mixer and Richmond Dazzle, but "nary a word" does he say about a decision which was fifty per cent. more unjust and unpardonable. I refer to the kennel prize. This was considered a gift to Mr. Thayer, with his very strong team; but of course nobody was surprised that it was given to the Messrs. Rutherfurd. Now, sir, are we to understand from your reporter's silence that he considered the brace prize wrongly awarded and the team prize correctly awarded? I have been in terriers for nearly fifteen years, and during this time have never seen a more outrageously unjust decision than the awarding of that kennel prize to the Rutherfurds. Your reporter at New York, or perhaps I had better say the gentleman who was taking notes nearly the whole of the time, and who it was generally supposed was representing your valuable paper, has the reputation of being, by far, the best judge of dogs in this country; he has a quick eye and has never before been known to allow so unjust an award to go on record without a line of disapproval behind it. He owes an explanation to himself, as well as to the fox-terrier fanciers, to say whether or not he approves such a flagrant miscarriage of justice. If he indorses the decision I and others must hereafter consider him as ignorant of the breed as Mr. Belmont himself. Let us hope that his having failed to condemn this parody on judging was due to an oversight. BELVOIR.

THE UTICA SHOW.

[*Special to Forest and Stream.*]

UTICA, N. Y., March 13.—The dog show opened yesterday morning. There are 192 entries, of which 40 are absent. The few exhibitors present are happy because only seven of the dogs shown have failed to get a card. The attendance was fairly good last evening, but this morning only three or four visitors have passed the box office. The management expect a better attendance this afternoon and during the two remaining days. Ten of the eighty-one classes are empty, and there are only nine English setters in four classes, and only four Gordons in three classes. The weather is lovely, and the club may yet come out ahead.

DOG TALK.

MR. D. N. HEIZER, of Great Bend, Kas., writes: "I have just received a letter from Mr. Allison in regard to the procurement of jack rabbits. He finds it up-hill business, and the best he has been able to do so far has been to get about 50 and them all local rabbits. He has made a number of contracts with parties in California, who have invariably failed to respond when it comes down to business. They are not to be had simply for ordering. Since the 23d of February, I have had three beautiful families on my hands. Lady Milly Glendyne, with a remarkable family of eight. Little Lady Glendyne, the proud mother of seven. Lady Graham Glendyne, showing her teeth with jealous concern over a family of six. They are as handsome a lot of little greyhound puppies as has ever been my good fortune to look upon, and I regard them a great contribution to the sport. They are doing well and will have the best of care."

The report of the English St. Bernard Club for the past year contains one paragraph that will undoubtedly possess interest for American buyers. The report says: "The Americans have been busy throughout the year taking out some of our finest specimens of the breed, and it is gratifying to be able to state that the English breeders have not altogether suffered by their doing so, for the quality of the dogs exhibited at the late show was so high that it was the general opinion that they were superior in almost every respect to the dogs that have left the country."

We have advices from Worcester, Mass., that the dog show to be held there April 9 to 12, promises to be one of the best of the year outside of New York and Boston. Every arrangement is being made to insure its success. The premium list is a liberal one and many valuable specials will be offered. Among the latter are $25 for the best St. Bernard, and $10 each for best mastiff, fox-terrier, cocker spaniel and collie. The judges are Messrs. N. Elmore, beagles, foxhounds and dachshunde, S. R. Hemenway, spaniels (classification No. 2), Fred. Gresham the remaining classes. There will be a class for Yorkshire terriers, which was by mistake omitted from the premium list. The show building will be open on Saturday, and dogs that are exhibited at Boston can be benched there and remain over Sunday in care of their keepers until the opening of the show. Many entries have already been received and the indications are that the show will have the support of a large number of the most prominent exhibitors.

We are informed that when Uncle Dick received the medal won by the Hornell-Harmony Kennels at the recent Pittsburgh show, a blush of injured innocence mantled his brow as he pathetically exclaimed, "Great Scoot! To think that I, of all men, should have won another pewter medal after putting Mr. Wade up to exposing them before! Well, if this isn't the irony of fate!"

The Seitner-Carrie letter published in fac-simile in our last issue has created something of a sensation. We trust that the purpose of the publication will be attained in influencing all dog clubs to steer clear of men with unsavory records, and to pin their faith to men only as Cæsar's wife should have been—above suspicion.

The third meet of the Occidental Coursing Club, held at Newark, Cal., Feb. 22, was a very successful one. The winners were: First, Mr. Keating's Pat Malloy (King John—Fanny Parnell); second, J. E. Watson's Saturday Night (Friday Night—Mother Demdike).

Dr. M. H. Cryer informs us that the pedigree of his imported pug dog Othello as it has been given is incorrect. Mr. Frank Griffin, formerly secretary of the English Pug Dog Club, writes him that Othello is out of Scamp II. (Tum Tum II.—Belle Petite).

The English Kennel Club, at a recent meeting, decided to admit Brighton and Darlington dog shows to the first class, and it was voted that hereafter, instead of first and second class shows, the distinction two-point and one-point shows will be used.

The *Stock-Keeper* very gravely says, "We are in a position to state that it is not quite certain as to whether Mr. William Graham, of Belfast, will visit, in the capacity of judge, San Francisco show or not." We doubt if the "Irish Ambassador" himself could better this.

The *Stock-Keeper* says it is not at all improbable that the collie dog champion The Squire will cross the water, his destination being the Chestnut Hill Kennels.

Mr. W. R. Tebbutt, Boston, Mass., has purchased from Mr. Freeman Lloyd, London, Eng., the old English sheep dog Agricola, a winner at some of the recent English shows.

The Collie Club of England, at a recent meeting voted that the Collie Club Challenge Trophy is in future not to be restricted to members of the club, but is to be open to all comers.

In our report of the New York show it was inadvertently stated that Mr. Davidson judged foxhounds. Mr. Elmore judged the American classes.

There is considerable talk of combining a show of poultry with the dog show of the Pacific Kennel Club, to be held in May.

Can any of our readers give us the pedigree of the mastiff dog Lion, formerly owned by Mr. Du Vernet, Boston, Mass.?

Entries for the Philadelphia Dog Show close April 1. The address of the secretary is Francis S. Brown.

The Scottish St. Bernard Club will hold a show of St. Bernards at Glasgow, Scotland, next month.

The Terrier show (London, Eng.) will be held at the Royal Aquarium, April 3 to 5.

LEE II.—New Market, Md., March 4.—*Editor Forest and Stream:* I will admit my surprise when I read the report of awards at New York, and more surprised when I read the criticisms on beagles in FOREST AND STREAM, which says, "Lee II. is not a show dog; is plain and wedgy in head, ears short and badly carried, body coarse." Of course people that were at the show will take the awards and criticisms for what they are worth, but those that were not there might be misled. Lee II. has a beautiful head, 16in. spread of ears, and properly carried, fine chest, good body, nice coat and brush, and stands on legs and feet that are right. He is a dog of very superior running qualities, and is the build to stand hard work. The stab he received at New York may hardly be call a flesh wound. He has been indorsed by several judges of the breed, and one of them judged Fitzhugh Lee and gave him first, says Lee II. is as good a dog as he, and has a better head. And I say it is seldom one comes across so good a head and ears combined as Lee II. has. Let the cat hop as she may, Lee II. is deserving the front ranks, and is going there "all the same."—POTTINGER DORSEY.

[The fact that Lee II. received no mention under so capable and conscientious a judge as Mr. Elmore, is evidence sufficient that this dog is not what is expected in a show dog. No doubt he is a good field dog, but we consider him decidedly lacking in show form. The opinion of one judge who "judged Fitzhugh Lee and gave him first" goes for nothing. Fitzhugh Lee has a very indifferent head, but to compare Lee II. with Fitzhugh Lee as to quality of body is an injustice to the latter dog. In addition to this Lee II. carried himself badly both in the ring and when we examined him, and seemed to lack all the merry style of the beagle. As to our opinion of the dog's head we cannot see the necessity of changing anything in our criticism. Should this dog "go to the front ranks," as Mr. Dorsey predicts, we would be compelled to say that the quality of the breed is deteriorating. In a show dog we want bone, substance and strength, combined with quality, elegance and symmetry. A dog may have the former and be a good field dog, but a lack of the latter unfits him for any honors on the bench.]

CHICAGO DOG SHOW.—Chicago, March 9.—*Editor Forest and Stream:* The following additions have been made to classes and specials: Collies (smooth), dogs and bitches, Mr. S. W. Parker offers $10 for first and $5 for second. The same gentleman also offers $10 for the best Irish terrier. Mr. Norman Williams offers $25, to be known as the President's prize, for the best kennel of not less than four bull-terriers owned by one exhibitor. Mr. John Crevar offers $25 for the best kennel of not less than four pugs. Mr. Geo. L. Dunlap offers $25 for the best kennel of not less than four greyhounds. Mr. W. W. Sweeney offers a cup for the best Irish setter dog sired by Sarsfield, age to be considered; also a cup for best Irish setter bitch, same conditions. Donor not to compete. The American English Beagle Club offers a collar for best beagle owned by member.—JOHN L. LINCOLN, JR., Sec'y.

ELMIRA POULTRY AND PET STOCK ASSOCIATION.—The Elmira Poultry and Pet Stock Association was organized with these officers: President, Geo. W. Chidsey; First Vice-President, H. B. Batterson; Second Vice-President, Henderson Gaylord; Secretary, Joseph F. Carter; Assistant Secretary, E. W. Andrews; Treasurer, C. A. Bowman; Executive Committee, the officers of the Association and W. W. Albro, H. C. Howland, Eugene Delemarter, F. N. Dounce, T. M. Losie, P. C. Pettit, E. E. Thornton.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Forest Prince. By Fred Van Woert, Ephratah, N. Y., for black and white English setter dog, whelped Jan. 14, 1889, by Gun (champion Gladstone—May B.) out of Victoria Laverack (Tempest—Lilly).

Young Tippler. By Thos. E. Unks, Bowling Green, O., for white, black and tan fox-terrier dog, whelped Dec. 25, 1888, by Beverwyck Tippler (Bacchanal—Blemton Thyme) out of Lillias (Splauger—Blemton Lilly).

Lark Belthus, Ted Belthus, Carl Belton and Rena Belton. By Rural Kennels, Wakefield, Mass., for English setters, three dogs and one bitch, whelped Feb. 19, 1888, by Leigh Belton (Yale Belton—Princess Lily) out of Rural May (Belthus—Daisy).

Pete Obo, Jr., Rural Obo, Dick Obo, Bennie Obo, Lou Obo and Winnie Obo. By Rural Kennels, Wakefield, Mass., for black and black and white cocker spaniels, three dogs and three bitches, whelped Feb. 16, 1889, by Pete Obo (Black Pete—Miss Ginger) out of Floss B. (A.K.R. 3449).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Blossom—Bannerman. H. S. Gilbert's (Millersburg, Pa.) beagle bitch Blossom (Blunder—Rue) to A. C. Krueger's champion Bannerman (champion Marchboy—Dewdrop), Jan. 6.

Polly—Rover. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Polly (Racer—Sara) to his Rover (Thom—Lady Hinton), Dec. 28.

Kitty—Rover. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Kitty (champion Bannerman—Dots) to his Rover (Thom—Lucy Hinton), Jan. 15.

Millie—Rowdy. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Millie (Racer—Bannergirl) to his Rowdy (Rattler III.—Myrtle), Dec. 2.

Lady—Glen. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Lady (Racer—Maggie) to his Glen (Cornet—Solo), Feb. 17.

Little Music—Max. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Little Music (imported Ringwood—imported Music) to N. Elmore's Max (Bob—Jenny), Jan. 15.

Ashmont Queen—Edwy. Holmes & Taylor's (Omaha, Neb.) mastiff bitch Ashmont Queen (Major—Clio) to Dr. Geo. B. Ayres's Edwy (champion Orlando—Countess of Woodlands), Feb. 28.

Lou—Beaufort H. E. F. Carver's (Bridgewater, Mass.) pointer bitch Lou (Glen Graphic—Jennie) to Geo. W. Lovell's Beaufort H. (champion Beaufort—Zuba), Feb. 24.

Nell—Judge. B. C. Russell's (Keene, N. H.) pointer bitch Nell (Sam—Gyp) to W. M. Williams's Judge (Ned—Floss), Feb. 23.

Duck—Old Don. Thos. Johnson's (Winnipeg, Man.) English curly-coated retriever bitch Duck to his Old Don, Feb. 20.

Bembi—Old Don. Thos. Johnson's (Winnipeg, Man.) English curly-coated retriever bitch Bembi (Nibbins—Beauty) to his Old Don, Feb. 2.

Cambria—Dick Bondhu. Thos. Johnson's (Winnipeg, Man.) English setter bitch Cambria (Cambridge—Pet Laverack) to his Dick Bondhu (Dashing Bondhu—Duchess Primrose), March 1.

Manitoba Belle—Manitoba Gladstone. Thos. Johnson's (Winnipeg, Man.) English setter bitch Manitoba Belle (Pride of Dundee—Jeanette) to his Manitoba Gladstone (Mark J.—Cambria), Jan. 24.

Pitti Sing—Mingo. Thos. Johnson's (Winnipeg, Man.) English setter bitch Pitti Sing (Baron Doveridge—Norah) to W. B. Wells's Mingo (Druid—Star), Feb. 20.

Mona Bondhu—Foreman. A. W. Lewis's (Fall River, Mass.) English setter bitch Mona Bondhu (Gus Bondhu—Lill Cambridge) to C. Fred Crawford's champion Foreman (Dashing Monarch—Fairy II.), March 5.

Petrel IV.—Foreman. Arthur E. Davis's (Worcester, Mass.) English setter bitch Petrel IV. (Don Juan—Petrel III.) to C. Fred Crawford's Foreman (Dashing Monarch—Fairy II.), Feb. 2.

Albert's Fancy—Foreman. S. H. Crawford's (Pawtucket, R. I.) English setter bitch Albert's Fancy (Royal Albert—Fairy Belle) to C. Fred Crawford's champion Foreman (Dashing Monarch—Fairy II.), Feb. 1.

Foreman's Lass—Royal Albert. Harry Waldron's (Providence, R. I.) English setter bitch Foreman's Lass (Foreman—Grace B.) to C. Fred Crawford's champion Royal Albert (Sir Allister—Novelty), Jan. 18.

Pet Berwin—Royal Albert. Walter B. Peck's (Cumberland, R. I.) English setter bitch Pet Berwin (Dashing Berwin—May Druid) to C. Fred Crawford's champion Royal Albert (Sir Allister—Novelty), Jan. 7.

Mollie Laverack—Foreman. C. Fred Crawford's (Pawtucket, R. I.) English setter bitch Mollie Laverack (Tempest—Lily) to his champion Foreman (Dashing Monarch—Fairy II.), Jan. 3.

Rural Neva—Gus Bondhu. Rural Kennels' (Wakefield, Mass.) English setter bitch Rural Neva (Pride of Dixie—Fairy Belle) to A. M. Tucker's Gus Bondhu), Feb. 17.

Little Nell—Dick Swiveller. P. Cambilos's (Philadelphia, Pa.) Irish setter bitch Little Nell to his Dick Swiveller, Feb. 10.

Fannie Obo—Don E. Mount Waite Kennels' (South Framingham, Mass.) cocker spaniel bitch Fannie Obo (A.K.R. 6499) to A. Clafflin's Don E. (A.K.R. 5726), Feb. 21.

Bessie C.—Black Pete. Brown Cocker Kennels' (Waterbury, Vt.) cocker spaniel bitch Bessie C. (Obo II.—Darkie) to J. P. Willey's Black Pete (Obo, Jr.—Phonsie).

Lillie Belmont—Beverwyck Trap. Jas. E. Unks's (Muncie, Ind.) fox-terrier bitch Lilly Belmont (Earl Leycester—Coquette) to his Beverwyck Trap (Dusky Trap—Daze), Dec. 29.

Sallie—Don. Mount Waite Kennels' (South Framingham, Mass.) fox-terrier bitch Sallie (Scarsdale—Spider) to Mr. Cobb's imported Don.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Rural Dot. Rural Kennels' (Wakefield, Mass.) beagle bitch Rural Dot (Flute M.—Belle), March 3, four (two dogs), by W. E. Deane's Little Duke, Jr. (champion Little Duke—Rose).

Sue. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Sue (Thom—Venus), Feb. 3, three (two dogs), by his Tom.

Kitty. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Kitty (champion Bannerman—Dots), Feb. 18 five (two dogs), by his Rover (Thom—Lucy Hinton).

Millie. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Millie (Racer—Bannergirl), Feb. 7, three (two dogs), by his Rowdy (Rattler III.—Myrtle).

Lot. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Lot (Grand Duke—Belle), Jan. 17, seven (four dogs), by C. Richardson's ——.

Princess. The Elms Kennels' (Forest Lake, Minn.) Great Dane bitch Princess, Feb. 23, ten (three dogs), by their Cæsar; all blue.

Belle of Maine. Geo. W. Lovell's (Middleboro, Mass.) pointer bitch Belle of Maine (champion Graphic—Zitta), March 4, ten (eight dogs), by his Beaufort H. (champion Beaufort—Zuba).

Ruby. Jas P. Swain, Jr.'s (Bronxville, N. Y.) pointer bitch Ruby (A.K.R. 4893), Feb. 10, four bitches, by Wm. M. Williams's Judge (A.K.R. 6390).

Fly. Jas. P. Swain, Jr.'s (Bronxville, N. Y.) pointer bitch Fly (A.K.R. 4745), Feb. 25, nine (seven dogs), by F. T. Perkins's Mainspring (Mike—Romp).

Rural May. Rural Kennels' (Wakefield, Mass.) English setter bitch Rural May (Belthus—Daisy), Feb. 14, four (three dogs), by F. A. Patch's Leigh Belton (Yale Belton—Princess Lily).

Floss B. Rural Kennels' (Wakefield, Mass.) cocker spaniel bitch Floss B. (A.K.R. 3449), Feb. 16, six (three dogs), by A. S. Johnson's Pete Obo (champion Black Pete—Miss Ginger).

Jet Obo. Brown Cocker Kennels' (Waterbury, Vt.) cocker spaniel bitch Jet Obo (A.K.R. 4810), Feb. 24, seven (six dogs), by his Black Harry (Black Pete—Althea); all black.

DEATHS.

Pet. White, black and tan beagle bitch, whelped May 29, 1883 (Racer—Vic), owned by A. C. Krueger, Wrightsville, Pa., in parturition.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. P. C., Brooklyn.—My rabbit hound is all the time scratching his ears and crying. I have examined his ears, but find nothing but a little dirt in them. A Gordon setter bitch has pups by a cur dog; will she be any use as a brood bitch after this? She is eight years old. Ans. Canker of the ears. Get the following:

R Tr. opii	3i
Bromo-chloral	3i
Aq	3ii

Mix. Drop a little into the ears night and morning. It will probably make no difference with your bitch.

H. B. M., Greenwich, Conn.—Will you kindly tell me what to do for my pointer dog 18mos. old. He lies and howls as though some one were beating him; appears like he had cramps. Ans. The dog has either acute rheumatism or colic, due to some irritation in the bowels, worms or some substance that has caused inflammation. Give a full dose of oil and follow it in four hours with 18grs. of Dover's powder.

Rifle and Trap Shooting.

RANGE AND GALLERY.

PISTOL SHOOTING.

SPRINGFIELD, Mass., March 7.—Members of the Smith & Wesson Revolver Club shot two matches at their rooms this evening with this result:

Rifle Match.

UNSER FRITZ.

CHICAGO.—A revolver club has been formed here after the model of the Eastern clubs. It is called the Chicago Rifle and Revolver Club and has a range at 351 State street. Henry Fuerman, 9 West Ohio street, is the promoter. At the opening shoot with open sights, off-hand at reduced Massachusetts target, possible 72, 60ft. for rifles, 50ft. for S. & W. revolvers, the scores ran:

	Rifle.	Revolv'r		Rifle.	Revolver
M Bolan	71	64	W Bishop	65	..
A Sorensen	70	68	E Mitchell	61	..
F Parker	70	64	T Wingate	60	..
H B Thurston	66	..	R Cunniff	52	54

FINE GALLERY WORK.—Boston, March 9.—Since Jan. 1 there has been a well attended match going on at the Massachusetts rifle gallery on Washington street. The conditions stipulated any rifles of .22cal., position, any, providing the rifle be shot from the shoulder, number of scores to count 10, and 10 consecutive shots in each score, entries unlimited, ties to be decided by the next best score or scores, target the standard American, reduced to 40yds. The gentleman who has taken first prize in the contest is Dr. Heber Bishop, who makes a new record, and the second man in the contest, A. Loring, breaks all previous records, as did Dr. Bishop with the .22cal. rifle. The score of Dr. Bishop is 995 out of a possible 1,000, while the score of his nearest competitor is 989. Mr. J. Kelley, of the Massachusetts Rifle Association, is third with 987 points, Dr. J. H. Sullivan is fourth with a score of 986, Mr. J. G. Waldo is fifth with a score of 984, and Mr. D. Webster is sixth with a score of 972. Below are the tabulated scores of the medal winners:

Dr H Bishop	10	10	10	10	10	10	10	9	10	— 99
	10	10	10	9	10	10	10	10	10	— 99
	10	10	10	10	10	9	10	10	10	— 99
	10	10	10	10	10	10	10	10	9	— 99
	10	10	10	10	10	9	10	10	10	— 99
	10	10	10	10	10	10	10	10	10	—100
	10	10	10	10	10	10	10	10	10	—100
	10	10	10	10	10	10	10	10	10	—100
	10	10	10	10	10	10	10	10	10	—100
	10	10	10	10	10	10	10	10	10	—100—995
A Loring	10	10	10	10	9	10	10	10	10	— 99
	10	10	10	9	10	10	10	10	10	— 99

	10	10	10	10	10	10	10	10	9	— 99
	10	9	10	10	10	10	10	10	10	— 99
	10	10	10	9	10	10	10	10	10	— 99
	10	10	10	10	10	10	10	10	9	— 99—987

Dr. Bishop, who is one of the crack shots of the Megantic Fish and Game Club, stood 40yds. off. He used in shooting the greater part of the match a Stevens "Hunters' Pet" rifle, with 20in. barrel, skeleton stock, with rear peep and front fixed aperture sights. The other competitors used an ordinary Stevens rifle, with heavy 28in. barrel, with rear peep and front wind gauge and aperture sights. During the last few days of the competition all of the competitors used a Maynard rifle. All the rifles used were made with the quick twist, to take the new .22cal. U. M. C. long rifle cartridge.

NEWARK, N. J.—The board of directors of the Newark Shooting Society decided to begin the regular season's shooting on Thursday, April 4, to be continued every Thursday thereafter during the season. The board appropriated money for the purchase of a trophy to be shot for by members only on the second and fourth Thursday of each month. The conditions will be 10 shots each on the German 25-ring target, the members being divided by the shooting committees into three classes, Class A to allow Class B 10 points on each score of 10 shots, and Class C 25 points on each score of 10 shots. The member making the highest score at each competition will be declared the trophy winner for that day, and the member winning the most competitions during the season will become the owner of the trophy. In order to make the match more interesting each member will pay in a small sum at each competition, and the member making the highest score in each class (the trophy winner for the day being barred) will receive a share of the entry fees in that class. The shooting committee was also empowered to open a free-to-all match to be shot on every Thursday and on all holidays, and perhaps on every Saturday as well. This match will be shot on American champion target, the entry fee being 25 cents for 5 shots and entries being unlimited. Besides a division of the entry money, each competitor making the score of 67 or better during the season will receive a gold medal; each competitor making ten 623 a silver medal, and each competitor making ten 57s a bronze medal. The highest possible score in five shots is 75.

SAN FRANCISCO, March 3—The grounds at Shell Mound Park to-day were crowded, the attendance being composed principally of the members of clubs who make use of the park during the picnic season, and the shooting clubs and their families who occupy the target ranges at intervals throughout the year. To-day was the opening day. There were only three monthly shooting matches Company B, of the First Infantry, Company B of the Third Infantry and Battery A, Second Artillery, appearing at the butts. Three ranges were occupied continuously during the day by marksmen anxious to win the cash prizes, put up by the proprietor of the park, amounting in all to $205. J. McCutcheon and K. Wertheimer, two of the foremost marksmen in this city, tied for the first prize at 93. The prize was finally won by Mr. McCutcheon.

The members of the Germania Schuetzen Club met at Harbor View to compete for their marksmanship medals. To become permanent owner of one of those medals it is necessary to win it three times in succession. G. Helm was the fortunate winner to-day of the first class medal, he having held it against all comers in the class for the past three months. The winners to-day were: Championship class, J. Dornbier, 402 rings; first class, G. Helm, 418 rings; second class, C. Adams, 379 rings; third class, H. Brockenwager, 277 rings; fourth class, A. Utschig, 393 rings. First best center shot, J. Dornbier, 24 rings; last best center, G. Helm, 24 rings.

PHILADELPHIA, March 7.—At the regular practice of the Hartranft Rifle Club on their range at Frankford, the members found they had a wild March wind to contend with, blowing from 3 to 12 o'clock, making in very hard to hold. Standard American target, 200yds., off-hand:

E Travis	10	9	7	6	6	7	6	8	9	10—78
J J Mountjoy	10	4	6	9	7	4	8	5	5	9
Military allowance:										4—73
E Stees	7	9	8	6	7	8	6	7	6	3—67
J H Buehler	4	9	9	7	6	4	6	5	4	10—64
W Wurllein	7	6	5	5	6	7	5	4	4	5—54
H Steinbeisser	2	7	5	3	5	5	4	6	7	3—47
J T Oliver	4	2	8	6	0	2	5	5	4	0—36

BOSTON, March 9.—The riflemen had to shoot in a northwest gale to-day at the Massachusetts range. Mr. Fellows's pistol scores were fine under the conditions. Mr. Francis (Rabbeth) won the gold medal in the 20-shot rest match, and Mr. Clarke won the gold champion medal, following are the best scores of to-day:

Twenty-shot Rest Match—20yds.

J Francis	11	11	8	8	8	12	10	10	8	12

Military Match.

W D Huddleston	4	4	4	5	5	4	5	4	4	4— 43
A Sharp	4	4	4	4	4	4	4	4	4	5— 41
C Andrews	3	3	2	5	5	4	4	4	5	4— 39

CHICAGO, Ill., March 5.—Following are the scores made by the members of the Grand Calumet Heights Club at their range, March 2; 30yds., possible 55; 22cal. rifles, 4 matches, sweepstakes:

A T Loyd	47 50 53 54	E C J Cleaver	52 50
W L Pierce	47 46 51 54	* E Hough	51 47 49 54
Geo E Marshall	45 49 51 50	* Not a member.	

Ties, miss and out: Loyd won. E. C. J. CLEAVER, Sec'y.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Omaha, Neb., Gun Club Tournament, April 16, 17 and 18.

May 21 to 23.—Minneapolis Gun Club Tournament, Minneapolis, Minn. James Pye, Secretary.

June.—Annual Tournament Sportsmen's Association of the Northwest, Tacoma, Wash.

June 3 to 7.—New York State Association for the Protection of Fish and Game. Convention and Tournament, Albany, N. Y.

TRAP CHAT.

In our note to a "Miss-and-out Complication" last week, last line, read that A had not exhausted his privileges until he missed in the eighth or a subsequent round. The word "seventh" was manifestly an error.

The Amateur Tournament advertised to be given in St. Louis, April 23 to 26 has been called off by its projector, Fred. A. Fodde. St. Louis ought to support a good tournament every year, and if Fodde will announce one for this fall, we believe it can be made a grand success.

The match announced last week between Charlie Smith and Gus Manitz to take place on the 21st inst., has been postponed until Thursday the 28th, as Smith's gun is up for repairs and will not be ready before that time. A forfeit of $25 has been posted as a guarantee against further delays.

CLIVEDEN VS. PRINCETON.—Philadelphia, Pa., March 5.—On March 2, the Cliveden Gun Club, of Germantown, shot a match with the Princeton Sophomores at standard targets from three bluerock traps, 16yds. rise under Standard Target Co.'s rules. The score was 52 to 52 and four times the teams tied, which resulted in the Princeton Sophmores beating by 1. The Cliveden Gun Club was represented by Messrs. Sherrerd, Low, Bates and Master, the Princeton Sophomores by Messrs. Gladwin, Williams, Furness and Whitehead.—H. B. M.

DAVENPORT, Ia., March 8.—The regular monthly shoot of the Forester Gun Club was held to-day. The majority of the members who usually attend this shoot were out hunting, and as a result but few were present and only one match was shot. The target used was the Keystone which the club has just adopted. The match was at 6 singles, 18yds. rise, and 3 doubles, 15yds rise, four prizes:

Leonard	011110	10 10 11— 8	Brannigan	100100	11 11 10— 7	
Cook	111010	00 11 00— 6	Culins	010001	00 01 10— 4	
Maser	111000	10 10 10— 6	Racester	010100	00 10 10— 4	
Shado	101111	11 11 11—11	Schmidt	010011	10 10 01— 6	
Howard	011111	11 11 11—11				

First money was taken by Shado, second by Leonard, third by Brannigan and fourth by Schmidt.—W. M. PURCE.

ALGONQUIN GUN CLUB.—On club grounds, Weehawken, N. J., March 7. Mr. Collins and Mart Lindsley were present. Lindsley arrived too late to shoot. Match at keystones, 8 traps, 18yds. rise, Jersey City Heights rules.

First practice:

Dr Van Schaick	111—3	Jas Auld	111—3
Bradle	001—1	E H Fox	111—3
Dr Lordley	111—3	R Auld	001—1

First sweep:

Dr Van Schaick	101101—4	E H Fox	110110—4
Bradle	010010—2	Jas Auld	101110—4
Dr Lordley	110010—3	R Auld	110000—2

Ties on 4 for first at 10 birds, 16 and 18yds. rise: Van Schaick 8, E. H. Fox 9, Jas. Auld 5. Ties on 2 for third at 10 birds: Bradle 3, R. Auld 5.

Second sweep:

Van Schaick	0111011111—8	R Auld	1010001110—5
Bradle	0011000010—3	Myers	1010011100—5
Lordley	0011101011—6	E H Fox	1111110111—9
Jas Auld	0111100010—5	Collins	1101111111—9

E. H. Fox and Collins divided first.

Third sweep:

Myers	1111101110—8	Goodman	00000000w
Fox	0001110101—5	Van Schaick	1001111001— 6
Bradle	0101011010—5	Collins	1111111111—10
Lordley	0001110100—4		

GRAND CALUMET HEIGHTS CLUB.—Chicago, Ill., March 5.—A few members of the Grand Calumet Heights Club met at their club grounds, twenty-eight miles down the lake shore, on last Saturday, March 2, and held the first trap shoot of the season, besides having a most enjoyable time. One lady, Mrs. Marshall, was present. Match No. 1, 9 bluerocks, 18yds.:

Alex T Lloyd	101011011—6	E C J Cleaver	111111111—9
Geo E Marshall	011111100—6	*F. Hough	101110101—6
Wm L Pierce	010001101—4	*Visiting shooter.	

Match No. 2, 18 bluerocks, 18yds.

Loyd	010111010101111111—12	Cleaver	101011101011111000—11
Marshall	011000111001011001— 9	Hough	111111110101110111—15
Pierce	111000011100000010— 7		

Match No. 3, 9 bluerocks, 18yds. (team shoot, Loyd and Marshall vs. Cleaver and Hough):

Loyd	100111111—7	Cleaver	111000110—5
Marshall	001000000—1—8	Hough	011111111—8—13

Match No. 4, 9 bluerocks, 18yds.:

Loyd	011111100—6	Cleaver	011101001—5
Marshall	010100101—4	Hough	111111100—7
Pierce	100011000—3		

E. C. J. CLEAVER, Sec'y.

LEONIA, N. J., March 9.—The Hackensack Gun Club of Hackensack, N. J., and the Leonia Gun Club shot a friendly match at bats on the grounds of the latter club. The irregular flight of the targets caused by the high wind that prevailed during the entire shoot resulted in quite a few miscalculations. The match was followed by two sweeps. Lunch was served during the progress of the shoot.

Hackensack Team.

Capt Geo McDonald, Jr	1011101101000011111—12
Rich Yereance	1100111110100100010—10

BROOKLYN, March 6.—The Fountain Gun Club had proposed, if the weather permitted, to hold an old time shoot at Woodlawn Park, Gravesend, to-day. Although it was a good day for shooting, the attendance was rather small. Captain Crammer introduced to the members of the club Miss Annie Oakley. Having been proposed as an honorary member of the club, she was admitted to shoot in the club match. The birds, furnished by Mr. H. W. Blattmacher, were good. The majority of them, being fast incomers, slightly bothered the lady shooter, who was used to fast drivers. Captain Crammer and A. Purdy shot seven each, but as the latter was not eligible, Captain Crammer won the first prize, with Miss Annie Oakley second and H. Thorpe third:

H Thorpe (25yds)	0111101—5	J Carney (25)	1110010—4		
A Purdy (30)	1111111—7	R Wells (24)	1010101—4		
Captain Crammer (30)	1111111—7	P Leib (25)	1011100—4		
Miss A Oakley (25)	1111110—6	J Beacham (27)	1111010—5		
H. Blattmacher (25)	1010011—4	D Moore (29)	1110010—4		
J E Lake (27)	0110001—3				

After the regular shoot several sweepstakes were shot off. Miss Oakley took part in them and missed but one bird in the three shoots. She could have killed the bird very easily with the second barrel, but she said: "I missed my first; let it go. It has another chance." The score of the sweepstake is as follows:

First sweepstakes, 25yds.:

Captain Crammer	111—3	Miss Oakley	111—3
A Purdy	111—3	H Blattmacher	110—2
J Lake	100—1	H Thorpe	110—2

Second sweepstakes:

Captain Crammer	111—3	Miss Oakley	101—2
A Purdy	111—3	H Blattmacher	100—1
J E Lake	101—2	H Thorpe	111—3

Crammer won on shooting off ties in both matches.

Third sweepstakes:

H Thorpe	110—2	J E Lake	111—3
H Blattmacher	100—1	A Eddy	111—3
Miss Oakley	111—3	Captain Crammer	111—3

Miss Oakley won on the shoot off.

After the shoot a quiet little match of 5 birds each for a consideration was shot off between J. E. Lake and H. Thorpe. The former won by 5 to 3.

WELLINGTON, Mass., March 9.—The regular weekly shoot of the Wellington Gun Club to-day had the largest attendance of any Saturday shoot for several weeks, there being 35 trap shooters present. A strong northwest wind blew across the traps, making clean scores a rather difficult feat. The Bennett brothers, the well known pistol shots, were present, and showed that they can handle the shotgun as well as revolver. The scores made in the merchandise match are as follows: Bradbury 11, Chapin 7, Lang 11, Casey 9, Stanton 13, Allerton 8, Mose 8, Bennett 11, White 6, Choate 11, Leon 13, Baxter 11, Schaefer 12, North 9, Perry 10, Field 8, Bond 13, Snow 12, Herrick 9, Warren 9, Archibald 8, Moore 10, West 9. The scores made in the silver cup match were as follows: Leon 14, Snow 6, Choate 8, Schaefer 12, Lang 11, Chase 10, Baxter 10, Moore 12, Casey 14, Warren 7, Bradstreet 8, Bradbury 6, Perry 9, Allerton 11, Gale 11, North 10, Short 10, Bond 6, Stanton 10, Mose 6, Wilson 10. Swift 14, Chapin 9, Field 11, Bennett 7, Conant 6, Herrick 8, West 8, Archibald 9, Peabody 6, Jones 10, Lewis 5, Russell 8. The winners in the sweepstakes matches were as follows: Six bluerocks, Stanton, Casey and Baxter; 6 bluerocks, Casey and Leon; 6 clay-pigeons, Stanton and Baxter; 6 macombers, Leon, Stanton and Bradbury; 6 bluerocks, Choate, Short and Moore; 6 clay-pigeons, Blake; 3 pairs clay-pigeons, Blake, Bond and Stanton; 9 bluerocks, Leon; 6 macombers, Choate, Leon, Swift and Stanton; 8 clay-pigeons, Leon; 6 bluerocks, Perry, Snow and Jones; 7 bluerocks, Moore, Casey and Swift; 6 macombers, Swift, Choate and Stanton.

LARCHMONT, N. Y., March 6.—The members of the Larchmont Y. C. and their guests had a good day at the trap to-day. Two events were shot, as follows:

First cup, entrance $5; duplicate entries allowed; 5 birds, handicap rise; ties, miss and out; 10 entries.

W A Brokaw (27yds.)	11111—5	A W Mott (25)	0111 —3
C W Colt (28)	11110—4	W A Brokaw (27)	1010 —2
C W Colt (28)	1011 —3	Jas Kent (25)	1100 —2
A W Mott (25)	0111 —3	Alex Taylor, Jr (29)	1100 —2
Alex Taylor, Jr (29)	1110 —3	Jas Kent (25)	1010 —2

Second cup, entrance $5 each; duplicate entries allowed; 3 birds, handicap rise; miss and out; 9 entries.

Alex Taylor, Jr (29)	111111—6	C W Colt (28)	11110—4
E L R Stewart (25)	111110—5	W A Brokaw (28)	1110—3

BALTIMORE, March 6.—The Baltimore Gun Club held a shooting match at their grounds in Acton's Park to-day. The high wind rendered the shooting difficult, but the scores made by the marksmen were exceptionally good. The shooting was confined to the Keystone targets thrown from five traps. Over 1,000 of the clay targets were shot at. During the match Mr. Wm. Linthicum accidentally shot Mr. A. C. Chase, who had gone to the lower end of the grounds to watch a couple of the shooters who were after some crows in an adjoining field, and was over 100yds. from the shooting stand when Mr. Linthicum shot at a target. A moment after the gun cracked Mr. Chase was seen to raise his hand to his neck, and, returning to the score, he said he had been shot. The distance saved a bad wound, though it was somewhat painful. Both men are in the gun business. The best shooting of the day was that by Mr. E. Cleveland, who broke five consecutive pairs of double birds with a 16-bore gun, standing 18yds. from the traps. Five matches were shot by two teams of the club, with the following result. Each shooter fired at 6 birds:

	Match 1.	Match 2.	Match 3.	Match 4.	Match 5.
Hefline	4	4	4	4	4
Denny	4	5	4	5	5
Hall	4	4	6	4	4
Linthicum	3	4	4	4	4
Hartner	3	4	6	4	5
Jury	4	3	5	4	4
	22	24	29	25	26

The losing team were Messrs. Williar, Melone, Williams, Pilson and King, and were beaten by a few birds only. Four matches at double birds were shot by Cleveland and Hefline, Cleveland winning four and Hefline one match. In two single shoots at 6 birds each, Cleveland broke 11, King 8 and Linthicum 10.

LOS ANGELES, Cal., March 3.—The Rod and Gun Club held their monthly medal shoot to-day at Prospect Park. The attendance was rather light for this wide-awake club. The shoot was at bluerocks, 20 singles and 10 pairs of doubles. The following is the score:

Britton	1010111111111011111101111111—26
	01 11 11 10 11 10 11 10 11 10—15—41
Bird	0110111110111111001011101111—21
	11 10 10 11 10 10 11 11 11 01—15—36
Walker	0110101110011001011111110111—21
	10 10 01 11 10 01 10 10 10 11—12—33
Unger	1111101030101011001110111011111—21
	11 01 10 10 11 10 11 10 00 00—11—32
White	0010001010101011001110111111101—16
	00 00 01 01 00 10 11 00 11 10— 8—24

SPRINGFIELD, N. J., March 8.—A live bird shoot was held at the grounds of the Union Gun Club at Springfield to-day, and a select party of crack shots were kept busy from 10 A. M. until near dark. C. M. Hedden, of Newark; A. B. Hedden, of East Orange; W. H. Green, of Kearny; M. F. Lindsley and Mr. Post, of Hoboken; J. L. Smith, of Hackettstown, and J. Riggets, of Rockaway, were in the party. The birds were an extra good lot, even for these grounds, where the birds are always flyers. Nevertheless the scores were fully up to the average. The number of birds shot at and the number killed by each contestant was as below:

	Shot at.	Killed.		Shot at.	Killed.
E D Miller	55	48	Post	27	15
C M Hedden	43	35	Lindsley	18	13
A B Hedden	40	31	Riggett	13	12
W H Green	50	36	J L Smith	14	10
Freeman	40	22	Conover	18	13

GREENFIELD, Ia., March 7.—Greenfield Gun Club match at bluerocks, 10 singles and 5 doubles, 15 and 18yds. rise, shot under national rules, Gun Club badge prize:

E H Bickford	0011111011	00 00 10 11 01—11
Wm Scholes	0101011100	10 11 10 10 00—10
W E Chamberlain	0101110111	11 10 10 10 11—14
G T Porter	0100110100	00 00 10 10 00— 6
Walter Scholes	0001010100	00 00 00 00 01— 4
Bert Dew	1011110111	10 10 10 10 10—13

The Greenfield Gun Club has its regular shoots for the Gun Club badge the first Thursday in every month. The badge remains the property of the club until some member holds it 12 consecutive months, when it becomes his personal property. At this contest the day was cold and windy, which accounts for the poor marksmanship.

PATERSON, N. J., March 9.—Paterson City Rod and Gun Club. Good birds, very strong wind in their favor. Match at live pigeons, ground trap, 21yds. rise, 80yds. bound, shot under old Long Island rules, $25 first, $15 second:

J Welcher	001100110—4	Wm Smith	1101111110—7
S Hill	1101101101—6	R Bustard	0011110l1—6

Owing to disappointment in birds we were unable to hold a large sweep as we had expected to do. Smith won first, $25; no birds for Bustard and Hill to shoot off ties; divided second money, $15. Birds from one basket, boy picked up on ground for trapper.

PHILADELPHIA, Pa., March 9.—The Gloucester Gun Club and the Mt. Vernon Gun Club shot a friendly match at clay-pigeons, resulting in the success of the latter by four birds. It was a very close, interesting and exciting contest Ten men on a side at 10 birds each, the totals stood: Gloucester Gun Club 73, Mt. Vernon Gun Club 77.

NO MONEY STAKES.—The Allegheny (Pa.) Gun Club has decided to discountenance shooting for money prizes. Medals and other articles will be offered for competition, but no money sweepstakes will take place on the grounds of the new club.

BERGEN POINT, March 9.—On the grounds of the New Jersey Athletic Club the seventh of a series of pigeon shooting matches for the club's challenge cup occurred. Eight contestants shot at 18yds. rise, bluerock targets. With a score of 15 B. T. Kissam won the event. R. Sundermann won second with 14. Five matches of the series yet remain to be shot, and George S. Virden, Richard Sundermann and J. N. Bodine, who have each won one match, may tie Kissam, who has won four events. A qualification shoot for the club's proposed team was also held. Eight marksmen participated and the best score was 15.

OTTAWA, March 6.—Being a holiday and away up on the spring weather list, the St. Hubert Gun Club assembled at the range and opened a 50 bird sweep in five matches, 10 birds each. In the first Geo. White, A. H. Throop, P. Trudeau, R. G. Dalton and W. J. Johnston shot, and in the following four Dr. A. Martin stood in. The pot was $3.50 each. At the close the scores stood: Throop 42, White 37, Trudeau 37, Dalton 28, Martin 26. The St. Huberts are at work on the programme for the tournament on May 24. A team of five will tackle the Boyd tournament in Montreal this month.

WICHITA, Kan., March 6.—The State championship contest between Chas. Smythe and William Staucer resulted in a score of 92 to 88 in favor of the former. The shoot was 50 single targets, 10 pairs and 30 live birds.

CARVER'S SHOOT.—Dr. Carver has posted the balance of his stakes for the match with Al Bandle, which is to take place at Cincinnati, March 16, and has announced his acceptance of the terms proposed by Budd and Stice, so all three matches will undoubtedly be shot. The match between Carver and Stice is set for March 23, at Grand Crossing, Chicago.

NEW DURHAM, N. J., March 6.—A lively pigeon match was shot this afternoon at Danielson's shooting grounds in New Durham for $100 a side between two teams of the North Hudson Gun Club and New Durhams, 10 birds each man, 21yds. rise, resulting in a victory for the New Durhams by this score: New Durhams—W. M. Donaldson 7, J. Wollmington 8, J. Hughes 8, C. Wollmington 7, J. Cutwater 9. Total 39. North Hudson—P. Agen 8, L. Westervelt 8, F. Grobels 8, T. Hughes 7, G. De Klyne 6. Total 37.

BROOKLYN, March 9.—The Phœnix Gun Club of Brooklyn held its first shoot of the season at Dexter Park, Jamaica Plank Road, this afternoon. Nine marksmen participated. Owing to the high wind and the good quality of the birds, the scores made were not up to the usual standard. The conditions were gun below the elbow, one barrel only. 21yds. rise at 15 birds each. J. Chambers won the club badge and first prize with 10 birds. The other scores were: D. M Freeligh 9, J. Akurst 9, M. Brown 8, H. Rutan 8, F. P. Smith 7, W. Hughes and A. Beatty, 6 each, and C. Lang 5. Referee, Captain Freeligh; scorer, J. Boyle.

RIVERTON, Conn., Jan. 24.—I cut off several papers Jan. 1 with a view to economy in part, but I find I miss FOREST AND STREAM too much, so "here goes again." Send back numbers from Jan. 1, please.—D. H. S.

ANOTHER ONE.—I am well pleased with the paper and think it is improving with age and must place it at the head of the list of journals of its kind that I have seen.—W. C. R. (White River Junction, Vt.).

I think I must be one of your oldest subscribers, and express my gratification that your early promise of interest and instruction is so well sustained and appreciated.—C. (Franklin, Tenn.).

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

CANOE TENTS AND CAMP OUTFITS.

THE IANTHE CANOE TENT.

Editor Forest and Stream:

After reading with much interest the valuable articles on canoe equipment, which have appeared in your columns during the past few months, we have decided to submit for the benefit of those interested the description of a canoe tent, which is the result of experience gained by several seasons' cruising.

Having frequently found it convenient to sleep afloat, it was our endeavor to perfect a roomy tent with but small surface exposed to the wind, one capable of being set without leaving the seat and also wind and waterproof.

The first change from the conventional flat-topped Albany wigwam was to dispense with the room gained in the angle formed by the roof and forward end, thus reducing the wind surface by about one-half, and also saving much material by bringing the roof from the highest point aft right down to the forward point of cockpit. Then a small halliard was run from cleat on after coaming, through a ring on mizenmast foot, up to and through a deadeye on masthead and down again to ring at mastfoot, to which, when not in use, it is fastened by a snaphook.

In setting this tent it is only necessary to hook the forward end over point of cockpit, fasten the snap hook *E* to spreader (or span) *B*, and hoist. By this means, it will be readily seen, the tent may be either set or struck without leaving the seat, and with as much ease when afloat as ashore. The greater portion of the surface exposed to the wind is placed so far aft that its tendency is to keep the canoe in the wind; but as neither sails nor rigging are interfered with, the dandy may be partially hoisted if desired. The covered deck aft of the well will be found convenient for stowage. An extra row of rings (*H H*) will make it possible to reef down quickly in case of hard blow. The material we have found most satisfactory is 8oz. awning duck, from Boyle's, 203 Fulton street, New York, which the New York Mildew and Waterproofing Co., of 180 Fulton street, will waterproof for three cents a yard.

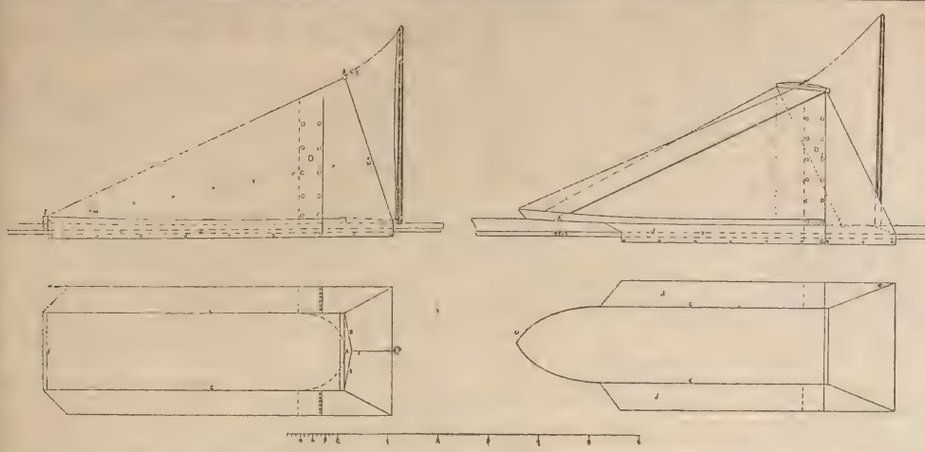
In the after end of the roof—which in the Idlemere is directly over the after end of the cockpit, and in the Atalanta 6in. forward of that point—a pocket large enough to contain a spreader, *A*, should be sewn. To this spreader a short cord, *B B*, with a bight in its center is fastened, to distribute the strain. In the Idlemere a spreader is likewise run through a pocket in the forward end of the roof, *F*, but the Atalanta's tent is cut the same shape as the forward point of cockpit, and pieces *K* are fastened to it, making it fit tightly to coaming and giving a curved roof. In either case a stout cord, *C*, is run in seam at each side of roof, from the after spreader to the forward end, in order to support the weight of sides. The sides, which are hooked in the usual manner at the gunwale, should have an opening, *D*, about six inches forward of the after end of the pit. The forward part overlaps about six inches, and is secured by a double row of buttons, both of which may be fastened in bad weather.

A mosquito canopy may be made the same shape as the tent, and either sewn around the inside edge of the roof or, if only occasionally used, hung from hooks. The sides of the canopy should be cut sufficiently large to allow several inches of it to rest upon the decks. A cord, running around the inside edge of the roof, and fastened to it at about every foot, will be found useful in holding up the canopy when not in use.

L. B. PALMER and J. L. DOUGLAS (Ianthe C. C.).

A SLEEPING BAG FOR COLD CLIMATES.

The sleeping bag shown in the accompanying cuts was made by S. W. Silver & Co., of London, the travelers' outfitters, for Sir Allen Lang's Arctic expedition. The idea is a very good one, and may serve as a suggestion to canoeists.



THE MAC'S CRUISING OUTFIT.

Editor Forest and Stream:

In a moment of absent-mindedness about three months ago I promised one "Retaw" (he with the palatial tent, who stows his coal oil in his billy) to give a description of my cruising kit in the FOREST AND STREAM. Since then on an average about once a week he pokes me up with a postal card reminding me that I have not yet done so.

If the truth were known my present kit very much resembles "Nessmuk's" fry pan and an extra sock, inasmuch as it consists of two pieces, a table knife with cracked handle and a glass butter dish with a screw top. Not that I was always thus meanly provided for, but a younger brother taking advantage of my impecunious state one Christmas time, seductively waved a five in front of me with the result that my then almost perfect kit and I parted company, and I've never gotten sufficiently ahead of my landlady to replace it.

Good-natured "Hyla" of our club, with whom I usually camp, has a kit large enough to accommodate two, and I usually pair off with him, but he takes it out of me by making me scratch out the porridge pot every time after breakfast. I've swabbed that old pot with sand, clam shells, spoons, chips and many other instruments, while the owner of the kit reclines on the beach smoking a fragrant weed and every once in a while shouts out in a dictatorial voice, "That ain't the place for that," as in my haste to get through with the blessed kit I try to put the pepper-box in where

IDLEMERE. ATALANTA.

IANTHE CANOE TENTS.

the butter dish should go; and so on he'll keep jabbing in his oar till I feel like licking him.

In packing the cruising outfit in the Mac the sleeping bag, composed of two thicknesses of gray blankets doubled over and sewn up the side and one end, is put into an oiled canvas bag and slid up alongside of the centerboard, the aft end of the bag just coming to the aft end of the trunk.

The other side of the trunk is occupied by the dunnage bag of oiled duck, light weight, about 3ft. long and 10or 11in. in diameter, with sundry small pockets inside it near the top to hold soap and other small articles that you may want to use without wishing to turn your bag inside out to get them. It is usually partially filled with an extra flannel shirt, not white, a pair of socks and trousers, soap and bath towel and my never-to-be-left-behind oilers, packed on top to be handy in case of rain. As the aforementioned duds only occupy about one-third of the space in the bag a small cotton bag containing several loaves of bread usually fills the space between the duds and the tie string.

The tent used is a pyramid shaped article 8×8 with an 8 foot light bamboo pole, sod cloth 15in. wide and two large ventilators near the roof. Nine iron or steel pins hold it firm where pins can be used and a few stones around the sod cloth answers the same purpose when they cannot.

All my canoes have had room to sleep aboard, but my experience in that line is limited to one night when I scraped my hip bones on the coamings and otherwise enjoyed myself so much that I never repeated the dose, but on the first chance sold that canoe tent to an unsuspecting novice who wanted all the fixings; I didn't, so he got them cheap. He's since gone out of canoeing.

The recollection of the only breakfast cooked under that tent is still quite vividly before me—it was a cold morning in October in '86. Hyla stuck his head out of his canoe tent remarking that it was a pretty cold morning to cook outside, so we each lifted our leeward curtains and tried to make breakfast. I laid out my cooking kit on the hatches and seat across the deck; had to go out for water; hump your back, double yourself up, shake the sand off your feet and you are in luck if you get seated again on the floor of the canoe without knocking about half your jam pots, spirit lamps, etc., over while doing so.

The water was soon boiling, and shaking in the oatmeal she was well underway; an appetizing odor being stirred up as the spoon went round and round the bottom keeping it from burning. Pretty near done, and blessed if I haven't forgotten the salt. Turning around in a hurry and reaching to the aft hatch for it, I lifted one knee an inch too high and kerflop goes the whole stew in my lap and on the floor of the canoe. Tableau! It being Sunday I had to swallow all the good strong adjectives and cuss words that came quite readily, I must admit, to my lips, they filled me up so that I quite lost my appetite for porridge that morning, and, by the time I'd gone out and scraped my trousers with a chip and polished them with a wisp of hay I was quite ready for the next course.

Ere I'd finished the meal I'd reached the firm conclusion that when I was built they hadn't calculated on me living in a canoe tent. These articles may be good enough when you have to sleep in a swamp with no dry land whereon to lay your head, but in the cruising I've done on many waters I've always been able to find a spot to pitch my tent where I at least had standing room, room to lie down and move around like a Christian instead of prematurely acquiring a hump on your back, like an old man of eighty, by trying to fold blankets on a wet morning in the ordinary canoe tent.

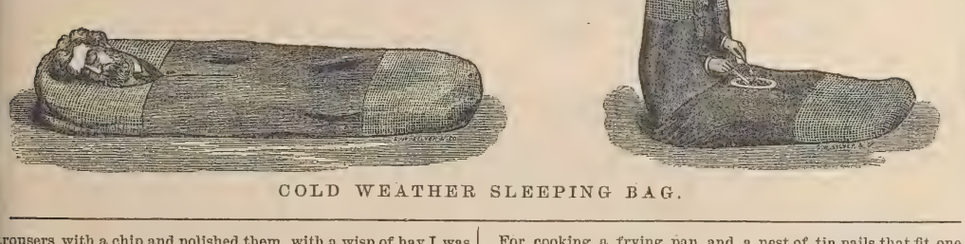
The bed used is soft curled hair in two oiled cloth cushions about 2in. thick and 30in. square; in making up the bunk they are hooked together, and when laid lengthwise make a good, soft, comfortable bed. Being oiled they are life preservers. I use them as cushions all day, sleep as soundly on them as the other chaps do on their fancy air beds at twelve dollars apiece, not to mention the amount of wind expended each time they inflate these rubber affairs.

The tent is stowed under the aft hatch with a small axe and a lantern. This leaves 5ft. of cockpit clear of all traps but the grub box, upon which I place the cushions and sit. Under the side deck I have a couple of small compartments built, in which I carry sponge, fishing tackle and a combination tool.

The Mac has 3½ft. of air-tight compartment in each end, no hatches or frills to them, have only had occasion to use them once in four years, when I found them in good order. When you want them you want them badly, and the more you have the better you'll like it. Besides the ordinary deck tiller I use a forward one placed under the forward deck, it is made of spring steel so as not to take up space, is screwed to under side of deck, the handle can be worked by the knees when sitting down; or the feet, provided you're endowed like myself, with about 13in. of them, can be utilized in working the cross bar. MAC.

TORONTO, March 7.

P. S.—If this screed passes the editor's eagle eye and capacious waste basket, "Retaw" will be looking for a job poking some one else up.



ANOTHER CANADIAN KIT.

Editor Forest and Stream:

Mr. Carl Fuller's letter on "Some Cruising Experiences," and the other papers that recently appeared in the FOREST AND STREAM, induce me to say a few words respecting my own experience in this line. And first with regard to the canoe. I have, on long cruises, generally used an open Peterborough, and have had a comrade, but I would certainly advise any one to take a smaller boat and go it alone; unless there are heavy portages to be made, and even then it is often easier to portage two small canoes than one large one. Above all have your canoe decked, and this for two reasons—first you can sleep in it and secondly you will avoid much loss of time. I have lost much valuable time on account of wide stretches of water being too rough for my laden canoe to live in. The comfort of being able to sleep in your canoe is unspeakable. Two years ago there were only one or two of the cruisers in our club who used a canoe tent, now the exception is the other way. Last year I got Colonel Rogers, of the Ontario Canoe Company, to build me an open canoe in which I could sleep; this was easily accomplished by making a deck 3in. long at each end and about 2in. wide round the gunwales and doing away with the crossbars. My canoe is, however, shallow, and would not do for very rough water.

Bedding is a difficult matter. I have tried several things, but blanket bags to button along the edges are, I think, the best. I have besides canoe cushions enough to form a mattress, for I like a soft bed. Rubber sheets I have found most unserviceable; they tear so easily, and if exposed to the sun they soon become rotten. I prefer a tarpaulin made of drill or some light stuff. I have used for the last two years an oilskin ground sheet made of heavy unbleached cotton (muslin). Wet the cotton and paint it with boiled linseed oil on one side, then let this dry; wet it again, and then paint the other side, and repeat this until your cotton is waterproof. The wetting prevents the cotton from absorbing too much oil. For eating tools I carry a sheath-knife in a plain brown leather case on my belt. Be careful to have the case made so long that only about one inch of the handle of the knife is visible, and let the knife fit tightly. On one of my cruises we all lost our sheath-knives from their dropping out of their cases (one case, it is true, was made of pasteboard artistically covered with handsome leather and bound with brass, and it dropped to pieces the first day). I have tried a clasp-knife with a dagger catch suspended by a lanyard round the neck, Jack Tar fashion, but it was impossible to keep it clean, scales of fish, etc., would get into the handle and the wet used to rust the springs. Jack Tars always carry sheath-knives when the regulations of the ship permit them.

I take plated forks (I cannot stand that abomination a three-pronged steel fork), tin spoons, a folding corkscrew, a can opener, and graniteware cups and deep plates. There is nothing equal to graniteware; it is so clean and durable. I have had my plates and cups several years in hard use, and with the exception of a few chips they are as good as ever. As we live in a wooded country, we take an axe and cook our food over an open fire, and do not require spirit lamps. Last spring I thought I would take a coal oil lamp on one of our club cruises. Knowing the treachery of the brute, I put it in a tin pail with plenty of rags to absorb any oil that might slop out. We had a sail to our first camp (my canoe sails on her bilge), and when I arrived at camp the oil was in the pail. I poured it back, congratulating myself on my forethought. It cooked to perfection. The next day I upset my canoe in a squall, and I carry no more oil lamps or stoves. A candle lantern in a tin case which is sufficiently large to hold the extra candles, is a great comfort.

COLD WEATHER SLEEPING BAG.

For cooking a frying pan and a nest of tin pails that fit one inside the other should satisfy a Francatelli. The outside pail should not be put on the fire, and then you will not be troubled with soot. The frying pan should have a hinged handle and a case made of duck or sacking. I used for a long time a frying pan with a movable handle, but I found that it often dropped off at a critical moment. Carry eatables in cotton bags except salt and matches, which must be kept in tightly corked bottles. I then stow all the things in a waterproof bag. I use for clothes and bedding what we know locally as kit bags, which are manufactured for the Northwest mounted police. They are in shape like a bolster with the opening on top covered with a waterproof flap; duck sacks treated with a couple of coats of paint are a good substitute. I also carry a ditty-bag with pockets all round on the inside to hold tools, eating apparatus, spare tackle, fishing lines, etc. Many canoeists dislike boxes in a canoe, but I must confess I like a solid seat for paddling, and there is nothing so convenient as a box for holding a luncheon. I have made a box seat with a rounded bottom so that the corners will not damage the canoe, with a back supported by straps. ASTICOU.

PURITAN C. C.

THE Puritans are still in the water, that is, when business will allow, and several members are in active training for the paddling races next season. The atmosphere in the house is suffocating, with its load of turpentine and varnish odors, and sails and rigging are undergoing inspection and refitting. Commodore Baxter's new canoe is all sided, in builder Robertson's hands. Secretary Cartwright is having a small open paddling canoe built by the same builder.

The schedule of events for next summer has been submitted by the regatta committee. It consists of cruises and races filling all the free days from May 5 to Sept. 29.

May 30. Sailing and paddling record races No. 1, at Peddocks Island.
June 15, 16, 17. Annual meet at Nantasket.
June 16. Record races No. 2, sailing and paddling.
June 17. Record races No. 3, sailing and paddling.
July 4. Record races No. 4, sailing and paddling.
Sept. 8. Record races No. 5, sailing and paddling.

Records calculated as at the A. C. A. meets; greatest possible number of points, 50. Besides the races there are cruises set for every corner of Boston harbor and bay. Members taking the cruises scheduled are requested to place upon the map the landings, beaches, springs, stores, camp sites and so forth, keeping an accurate log of everything interesting and useful to canoeists.

Several new members are to be added to the list at the next meeting. There are fully half a hundred unattached A. C. A. men in the vicinity of Boston, who seem to have no desire to join any club. Saturday evenings and Sundays the club house at City Point is warmed, and all such unattached men are invited to visit us. ILET.

ABOUT THE LOWER BAY IN A SINGLEHANDER.

HEARING that the fall flight of snipe was "on" and that good sport might be expected at Sandy Hook and vicinity the singlehander Useful was made ready, and one bright morning about the middle of August, not many years, ago, hoisted sails from her anchorage at Port Richmond, Staten Island, and started for that well known locality with a nice southerly breeze.

It may not be amiss to say a word or two of the outfit. The boat is 15ft. l.w.l., 18ft. on deck, 5ft. 6in. beam on deck, planked lapstreak, jib and mainsail rig, built by the writer during his leisure hours.

I was provided with a waterproof cockpit cover of oiled canvas, which when laced down on the outside of coaming excluded rain, spray and on occasions some nasty seas, an A tent, which could be hung from the triced up boom when sail was stowed, and laced to outside of coaming, a naphtha burner, such as are used to heat soldering irons in large canning establishments, for coffee and chocolate, the usual canned provisions and a quantity of those chip dishes which are used by the grocer in selling butter and lard (these will be found a great convenience, as they are thrown away after eating from), a 12-bore (cylinder) Scott gun 7lbs. and the usual ammunition, and I had almost forgotten a most important article—a mosquito bar. Other than these it is needless to mention the necessaries which every cruiser must carry.

Fully equipped then, a rather late start was made, as the tide did not turn until between 10 and 11 o'clock, and the crew desiring to stop at Keyport for a friend, was in no hurry, as that point could be easily reached by nightfall. The route through Staten Island Sound was decided on as being the shortest and pleasantest sailing. Nothing of any moment was observed until the new Baltimore and Ohio bridge across the Arthur Kill at Elizabethport was reached, except, indeed, as noted in the log, two brick schooners were seen hard and fast aground on a mud reef, thrown up a few weeks before by Dubois' dredgers in digging a trench for a pipe line across Newark Bay, from the Corner Stake Beacon to Bergen Point, at a point contiguous to the C. R. R. of N. J.'s bridge across that bay. Why these dredgers were allowed to leave this ridge of mud and sand, several feet high and several miles in length, is one of those things "which no fellow can find out." It is to be hoped if the schooners were injured, as they were heavily loaded, they recovered damages from the dredging company.

The ebb tide through the easterly draw of the B. & O. bridge is certainly dangerous for vessels going through without sufficient steerageway, and from what he saw the crew is inclined to believe a great deal said against the bridge by the Pennsylvania R. R. people. But then they were competitors and would themselves erect the same or a similar structure, no matter how much it incommoded navigation, if it suited their interests. One thing can be said of this draw, it is the widest one in the world. Query—Why did they not make the bridge a double track one?

After passing this bridge many boats are seen scattered through the Sound, the occupants of which are engaged in raking or dredging oysters from the bottom of the channel, oftentimes in water 25 to 30ft. or more in depth. These oysters are not fit for food, being bitter and acrid, but on planting for a season in Raritan Bay or Long Island Sound waters, become very palatable, depending much, however, on the season.

At Rossville a stop was made to procure some bait, in case the crew should take it into his head to fish, and to see Frank, the genial proprietor of the hotel there. This town, like most Staten Island villages not visited by the railroad, is in the same primitive condition it was twenty years ago, no perceptible change or improvement being made. After the bait had been obtained and an additional stock of ice laid in, the jib was hoisted and a fresh start made.

The wind had now hauled well to the eastward of south and was blowing a good breeze, so much so that the crew began to think he would proceed with more comfort if he had a reef tucked into his mainsail. His topsail had been taken on deck before leaving Rossville. He was about taking in his jib and tying the reef when he noticed on his starboard bow a canoe whose occupant seemed to be in some trouble. Standing on until the next board would bring him alongside, in due time the Useful was as close to him as the shoaling water would permit. On hailing it was found that he, finding his canoe made but little headway in beating against the menacing wind and rough water, determined on paddling, being desirous of reaching his destination, Cheesequake Creek, before nightfall; but at almost the first energetic stroke of the paddle it snapped, and he had narrowly escaped a capsize, and had some water in his boat. At the spot it was impracticable to land owing to the oozy mud extending some hundreds of feet from shore, so he was invited to come on board the Useful and bail out. The canoe was soon emptied of her unwelcome cargo, and her occupant, who was found to be a native of Passaic, and known to the crew, was invited to finish his trip on the Useful, taking his canoe in tow. This he did the more readily as the greater part of his paddle was lost, and his cushions and other articles were wet, coupled with which his canoe was better adapted for paddling than sailing, being narrow and low, with but a small folding board.

The canoeist's traps were soon spread out to dry on our canvas deck, or rather cockpit, cover, with an occasional lashing to keep them from blowing away to leeward, and we were under way again, having lost but very few minutes. The canoe having no

painter or, in fact, any convenient eye or cleat to make one fast to at her extreme bows, began to sheer in a manner which bid fair to turn her over, unless something was done. Notwithstanding the protests of the canoeist, the crew finally was allowed to put a handy brass screw-eye in her nose, from which quarter lines were run to the stern of the Useful, and no further trouble was found in towing.

At Sewaren several small boats were met, whose occupants were taking some nice weakfish of about 1½lbs., on the low water slack. At Tottenville some peculiar craft were noticed at Brown's shipyard, one of which, the Presto, designed and owned by Com. Ralph Munroe, of the Biscayne Bay Y. C., we were told, deserves a passing notice. She is about 40ft. l.w.l. length, and say 10ft. beam and not less than 30in. least freeboard, quite a long and rather heavy overhang, balance rudder, with no sternpost or deadwood, yawl rig or a modification of it, wherein the mizen or dandy, or whatever it should be called, except what the builders call it, namely, the mainsail, is provided with a gaff and boom, she appeared quite the ideal cruiser for shoal water, being flat on the floor, with well rounded bilges and very sharp forward, with hardly any perceptible hollow lines. Her run was easy, though somewhat heavy, and her sheer was very pleasing to the eye; but withal she had the appearance of being an improved sharpie. At a later period this boat was seen outside the Hook in a beat against a strong wind and tide, when her performance left nothing to be desired; in fact, the writer, who was at the time on a big tug, would have felt much safer on her, and if it is ever his fortune to become acquainted with Com. Munroe he would like to have a sail in her under just such conditions. By the daily papers we are informed that the Commodore has made the voyage to Florida in her this winter. On the stocks was noticed a *fac simile* of the Presto, christened by her designer, the Commodore, the Prestolet, we were told. She was some 34 or 35ft. long on deck, with quite a large cabin, and intended for periauger rig. She was for sale. These craft would have delighted the eye of your former correspondent, "Loyalty," judging from his ideal as depicted in your paper, if, indeed, the worthy Commodore and he are not one and the same old salts.

As the tide would soon turn flood, and southerly winds at this time of the year go down with the sun, it behooved us to get underway again without delay, if we would make Keyport before night, having to stop on the way at Cheesequake Creek.

On clearing Ward's Point the crew wished that he had tucked that reef in his mainsail he spoke of a while ago, as the fresh breeze blowing against the ebbing tide made the water rough for small craft; however, lacing the canvas cover tightly over the coaming, and putting under cover anything the spray would injure, we let her drive, sitting well out to windward on deck seats, and increasing our stability by absorbing in our clothing quite an amount of salt water, but who cared, not the canoeist, for he was already wet, and I might say dry again, and the crew rather liked the bath, having plenty of dry togs below, so begging occasionally we made fairly good weather of it. The tide beginning now to run in the same direction as the wind, by now and then making a short tack to the eastward we were able to keep well to windward of our course. All this would be of no moment were it not for what followed. The bay where we now were was full of stakes marking oyster beds, and we were kept busy dodging them and the puffs; meeting a stake we could not avoid or did not notice we went over it, and heard it scrape along the bottom, but being very pliable it could do no damage of course, and no further attention was paid to it in the endeavor to avoid another. As we afterward found, however, on coming up astern it caught Passaic's canoe and tore her loose. After getting away from the staked beds, or "out of the woods" as Passaic put it, we looked back, to find the canoe adrift about a mile astern and evidently full of water.

Our crew has heard a worthy dominie say that under some circumstances profanity, if not too gross, is excusable, acts, in fact, as a safety valve to allow the escape of vile humors which, if kept imprisoned, disturbs the mental atmosphere and makes a fellow out of sorts for no end of time.

However, no time is to be lost; so down helm and square away for the wreck. Approaching it, it was seen to catch against a stake for a moment, then break away and pitch up against another with the water making a clean breach over it. If we had to work carefully to avoid the stakes in beating down, we had to be doubly so in going before it, in order to avoid tearing our mainsail or breaking our boom. I won't try to tell you how on coming alongside and grabbing a line out of the canoe, water logged as she was, she refused to tow, and before we could let go our anchor we began to foul the stakes; at last, however, we were clear, and the canoe on deck, bottom up, lashed fast, with its stern just clearing our traveler, our boom well topped up, and standing if not our course, close to it. After getting the canoe on board we had taken the opportunity to visit the ice box and quaffed a couple of bottles of Milwaukee with the effect of inducing a more equable frame of mind. We made Cheesequake Creek in good time, where the canoe was launched, and Passaic left the crew, who promised to stop for him on his return.

Keyport was finally made, but the beat was tedious against a head tide with a failing wind. Making fast at the shipyard the boat and traps were given in charge of an old oysterman, and the crew started out to hunt up his friend.

"Man proposes but woman often disposes." So in this instance Keyport's better half thought fit to present him with a son and heir on the previous night, and of course a shooting trip for him was not to be thought of. Passing the night at a hotel, the crew had about made up his mind to go back, when he happened to bethink himself of Passaic, who was an expert shot and a good fellow, so borrowing a gun from Keyport after breakfast a run was made back to Cheesequake. Here some canoes were observed, among others that of Passaic. Canoemen it seems were talking of getting up what they call a "meet" here, hence his presence on behalf of his home club, with others on a similar errand, he was not easily persuaded to accompany the crew, but yielded after being told that the mosquitoes were not nearly so bad at the Hook, and no trouble would be experienced there in sleeping. This was the fact as far as the sleeping part went, but the mosquitoes were about equally as bad one place as the other. Without a mosquito-bar it is folly to expect comfort in sleeping in these or similar localities on the water near shore.

Passaic's canoe was left in care of an acquaintance, and coming on board the Useful, with a good breeze from the southwest we headed for the Hook. Up to this time the crew had rather a poor opinion of the sailing qualities of a canoe, but a surprise was in store for him; headway had hardly been gained, when a large Rushton canoe, 16×30, with two good-sized balance lug sails, ranged up alongside and was slowly, but surely, leaving us. The crew thought as soon as we got well under way we would pick him up and leave him, but no, there was no mistake about it, he was leaving us, so giving the stick to Passaic the topsail was sent aloft, which enabled us to hold our own, but no more, and it was not until a balloon jib 18ft. leach, 14ft. on foot and 23ft. on the stay, was sent up that we began to leave him. With this press of sail, requiring a preventer backstay led back to the traveler, it was no wonder we began to go by, still on waterline length he was a foot longer than the Useful. The crew is now prepared to say that with wind on the quarter or dead aft in from a moderate to a good breeze a large canoe will hold her own with the average sailboat of her length, and in rough water is inclined to believe would pass her.

We took in our light sails and tackled the Rushton under mainsail and jib reaching; on this course we could best her a little, but in a turn to windward she was simply nowhere. The canoe's inferiority to windward, I take it, is owing in a great measure to her sails; the balance lug for running and reaching may be, and probably is, all right, but for windward work it is unscientific. Theory and practice prove that the fore-and-aft sail with gaff and boom is best adapted for beating—no pun intended—and a modification of the periauger rig could no doubt be used on canoes wherein the sail is handled with one halliard, as is now done on some small craft. Nothing in the sail line, the crew thinks, can ever successfully compete with the boom and gaff fore-and-aft sail in windward work. The freedom of movement of the peak of the sail causes it when the wind is stronger it move somewhat more to leeward than in light wind. This elasticity is what materially aids the boat so rigged in "climbing," and is lacking in the leg-of-mutton sail. In the matter of "going about" the canoe structure must be always defective, owing, of course, to the lack of weight and slight immersion, coupled with the wind and water resistance on the hull. The canoe, though, is a beautiful and useful craft in its place, the truth being that many of its cranks claim for it too many good qualities, all of which it can not possess in the nature of things.

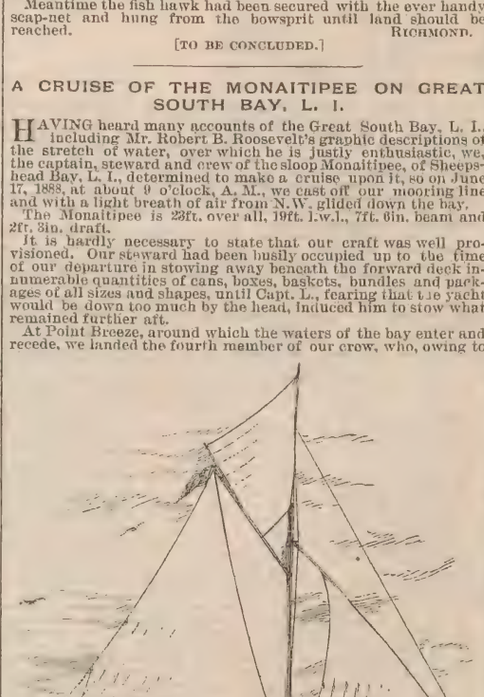
Bidding the Rushton adieu we again head for the Hook with a favoring tide. Off Port Monmouth quite extensive fyke nets are stretched, in which many menhaden besides weak, blue and kingfish are caught. Perched on top of the poles were several fish-hawks, one of whom appeared a very fine specimen, which Passaic desired to obtain for stuffing on being told that there was some arsenical soap on board, so one of the guns was put in readiness, some shells of No. 4 shot inserted, and we waited a nearer approach. When about 40yds. off our specimen started to fly, being the last to take wing—bang! bang! and the crew laughs heartily at the disappointment of Passaic as the bird sails away; but hold! what does he so gradually descend in his flight for, and sail so close to the water? he is hit as sure as shooting. Putting in some shells we haul our wind and soon come again within shooting distance of him, who again slowly attempts to fly. Bang! Again a few convulsive flutterings of the wings and all is still. The crew speculates on the reason why a bird hard hit in the body with a charge of shot dies quickly, whereas another with its head almost blown off and brains exuding will flop around quite actively for a time. Passaic recalled an incident where in his barnyard, having occasion to shoot the head off a fowl for dinner, he did not observe some yards further along behind a bunch of weeds, a favorite layer, the chicken with its head off flopped around and spoiled a pair of trousers for him, while he was standing aghast at the cruel and unlooked for results of his shot, whose victim lay quite still and dead. The explanation is no doubt found in the fact that in the one case the lungs are free to breathe as when the head is taken off, but when a body is shot through the lungs they fill up, and of course death is instantaneous.

The crew related how, in Sullivan county, New York, he had shot a black duck which was promptly retrieved by his setter, and was put into his pocket, but who shortly afterward began to revive, and got quite lively. On examination no blood or marks of shot were seen, and supposing the bird had been hit on the head by a pellet which glanced and was only temporarily stunned, he determined to bring it home. It was found, however, that it could not fly, was listless and would not eat. Food, however, was forced down its throat, and it moped along for about a week. At last time came for going home, and as it was seen the bird was not right, although no external evidence of injury existed, it was killed and carefully picked and then dissected. It was not until the skull was opened that the wound was discovered. A pellet of No. 6 shot had entered the skull at one corner of the eye, passed through the brain transversely, and lodged in it against the opposite side of the skull.

Meantime the fish hawk had been secured with the ever handy scap-net and hung from the bowsprit until land should be reached.

RICHMOND.

[TO BE CONCLUDED.]



A CRUISE OF THE MONAITIPEE ON GREAT SOUTH BAY, L. I.

HAVING heard many accounts of the Great South Bay, L. I., including Mr. Robert B. Roosevelt's graphic descriptions of the stretch of water, over which he is justly enthusiastic, we, the captain, steward and crew of the sloop Monaitipee, of Sheepshead Bay, L. I., determined to make a cruise upon it, so on June 17, 1888, at about 9 o'clock, A. M., we cast off our mooring line and with a light breath of air from N.W. glided down the bay.

The Monaitipee is 23ft. over all, 19ft. l.w.l., 7ft. 6in. beam and 2ft. 3in. draft.

It is hardly necessary to state that our craft was well provisioned. Our steward had been busily occupied up to the time of our departure in stowing away beneath the forward deck innumerable quantities of cans, boxes, baskets, bundles and packages of all sizes and shapes, until Capt. L., fearing that the yacht would be down too much by the head, induced him to stow what remained further aft.

At Point Breeze, around which the waters of the bay enter and recede, we landed the fourth member of our crew, who, owing to

business, was unable to accompany us on the trip. He stood on the beach and watched us as we faded away; and how we pitied him.

Yachtsmen can come and go at will, providing the wind and tides are favorable, but on this day the wind, what there was, was decidedly unfavorable, having hauled around to south by the time we reached the point, and the tide being on the flood made it an utter impossibility to beat out of Rockaway Inlet. We stood back and forth for a couple of hours with hardly enough wind to keep the mainsheet taut, until becoming disgusted with such unprofitable sailing, we ran ashore on the inside of Rockaway Beach and went in bathing, after which we had dinner.

We were doomed for the day, as no wind came until late in the afternoon, and then only enough to enable us to run into a cove just inside of Rockaway Point, where we anchored in four fathoms of water. Furling the sails we went ashore in the flat-bottomed tender we had brought along, and strolled about the beach until dark. Returning, we climbed on board and prepared for another swim. We splashed about for over an hour, and then partaking of a light supper, and enjoying a smoke, turned in for the night, and lay listening to the roar of the surf and the musical hum of mosquitoes until Morpheus closed our eyes in slumber.

Monday, June 18.—At 3:30 in the morning we were aroused by the steward, who was always the first one to awake. Faint streaks of dawn were just beginning to appear in the east. Not a ripple ruffled the glass-like surface of the little bay around us, "No wind, what? Well, we may get a breeze later." We ate our breakfast by the light of the cabin lamp, and then got up sail. A faint breath of air was beginning to fan our cheeks as we ran up the topsail. Tom, who composed the crew, with the assistance of the steward laid hold of the cable and brought the anchor under the bowsprit, then running up the jib she gradually fell away and began to slip out into the inlet. What there was of the breeze came from the westward, and we were soon, with the aid of the ebbing tide, clear of the Rockaway Shoals, and headed down the shore, rising and falling with the long even swells that came rolling in from the ocean.

The captain and steward becoming wearied of such monotony, added to the heat from the sun, about 8 o'clock got into the cabin and prepared for a snooze, saying at the same time not to wake them up until something in the shape of a hurricane came along. He, the helmsman, had no cause for calling them, but about 9:30, when the Monaitipee was rolling along off Far Rockaway, and the solitary helm man was in imminent peril of joining his two friends in the cabin by going to sleep, he was brought back to his senses by a jerk at the tiller. With a start he opened his eyes, and found his vessel coming up into the wind, perceiving at the same moment that a light breeze had set in from the south'ard. The yacht now began to leave a mark behind her, and the regular swish, swish under the bow was music to the ear of the lonesome crew. When the captain, awakened by the motion of the yacht, came up through the companionway we were running along in front of Long Beach, having just passed Funday Inlet. A grin of satisfaction overspread his bewhiskered face as, producing his briarwood, he rammed home a charge of "Old Gold," and relieving the steersman settled down for a comfortable smoke. Readers will please understand that this was our first trip in this direction, and all we knew of the localities was what we could get from the charts we had provided ourselves with, together with a little information gathered from other sources, so that when we made a break for Jones Inlet we took the wrong course, and came within an ace of getting on to a shoal. As it was we went about in the breakers, and stood off shore for a half mile, then perceiving a row of stakes further east we understood our situation. We had started to go in to the westward of the first stakes, whereas we should have gone between the first and second row of channel marks.

Seeing our course clear we squared away for the inlet. The wind had freshened considerably, and it was now blowing a good whole sail breeze. Away we scudded, one minute perched high up on an immense wave and the next in a watery gulf, while a towering roller comes rushing at us from astern as though it would swallow us up. But the gallant Monaitipee rises gracefully on its crest, and shoots away like an arrow from a bow. In a few minutes we entered the mouth of a creek and turned sharply to the left. Continuing on for a short distance in a westerly direction, the creek makes another turn to the northward. We followed; the course of the stream, passing quite a number of boats, the occupants of which gazed at us curiously, knowing, no doubt, that we were strangers. Hailing some men who were standing in the water, which was up to their waists, and who were lifting a large net into a wide, flat-looking boat, we inquired which was the way to Freeport, for the creek directly ahead branched off in several different directions. Being informed we continued on, while the men in the flat boat, having got their net on board, hoisted a large spritsail and came on behind us. We luffed and allowed them to pass that they might act as pilots, and it was well we had some one to show us the way, or I doubt if we could ever have reached Freeport that day. The stream ran in a zig-zag fashion, and the channel was first on one side and then on the other.

We finally entered a little narrow canal-like stream about 20 or 30ft. wide, and after a few more twists and turns came suddenly into view of a wharf. On one side of the stream, which was a little broader here, were a half dozen great reels, resting on posts planted at either end. Around these mammoth spools were wound the fishermen's nets for the purpose of drying. Several rickety-looking old catboats and sloops lay about the creek, and a strong smell of decaying fish pervaded the atmosphere. Tying up to one of the piers, we leaped on shore, glad of a chance to stretch our limbs. It was about 1 o'clock, and we were beginning to feel the necessity of eating. While the steward and crew were in search of a grocery store, to get some fresh bread and some minor articles, the captain took it upon himself to cook a bluefish which he bought from the fishermen who guided us in the creek. It was a very warm day, and when dinner was ready we sat down in the shade of an old shed near the wharf to eat it. We spent a very enjoyable hour here, although the surroundings were not of the kind calculated to give one an appetite, decomposed fish being quite numerous in the vicinity.

After a look about the quiet little town we returned on board. An old man, whom we found gazing interestedly at our yacht, good-naturedly endeavored to describe our course through South Oyster Bay; but he might just as well have saved his breath, for after talking half an hour, during which he related stories of shipwrecks outside the inlet, part of the history of the lower, and occasionally referred to a bulkhead that we would come to somewhere, once past which we would be all right with a clear sweep before us, we knew just a little more than before we met him.

As we were getting under way we observed him with his head bent forward, and a puzzled expression on his face endeavoring to read the name on the stern of our boat. We began to laugh, and informed him that it was an Indian name—the English definition of which is Queen of the Sea. He walked off muttering something about putting it on in plain English, and we began poling out past the first bend preparatory to getting up sail, there not being room enough to tack in the limited space. On our way up we met a large sloop of perhaps twenty or thirty tons coming in. One could have jumped to either bank from her deck, and we only got past her by crowding into a corner where the stream made a turn in another direction. We wondered if she could ever get out again with anything but a fair wind. It was now blowing quite hard from the west, and we soon found ourselves out on the long stretch of water known as South Oyster Bay. With boom well off we skimmed along for mile after mile, guessing the direction we should go, until we fell in with some clammers who pointed out the way to Amityville. Jibbing the mainsail to starboard, we followed the channel, which made a curve to the N. E., and just as the sun was sinking from sight we let go the anchor in the muddy little creek which leads to the town.

The harbor was quite an improvement on the one at Freeport, however, and the view around was much more pleasant. The place was filled with small craft, many of which were duck or sneak boats. Prominent among the fleet were some fine looking cat-rigged boats with very bluff bows, and apparently of light draft, which of course is quite necessary in these waters.

We spent the evening walking about the place seeing the sights. On our way back to the yacht we stepped into a "combination" store, where they sold everything from a loaf of bread to a pair of shoes, and purchased some fishing tackle. We were thinking of the Island inlet, and in case the bluefish had commenced to come in, we would need some more squids. One thing about this town struck me very forcibly, viz.: the number of mosquitoes to the square inch. With their assistance we were very lively in getting on board, and once inside we lost no time in firing up our lamps, and then the battle commenced in earnest to see who could stand the smoke the longest. We never found out positively, but when we awoke next morning about 3 o'clock we were inclined to think the mosquitoes had had the most fun. The captain woke us in his frantic endeavors to clean out the cabin by the aid of a blue shirt which he was slamming around without any regard for glassware or bric-a-brac. With the coming of daylight they disappeared to some extent, and when the wind began to blow hard from the east we were troubled no more by the deliciously insects.

We got away about seven o'clock, with a single reef in the mainsail, and beat through to Babylon, where we arrived about 9:30 A. M. We were very much pleased with this pretty town, and spent considerable time looking around at the handsome residences and hotels. The Argyle had not opened as yet, but we took a walk about the grounds which were quite extensive. On our return we stepped into a photographer's and had some tintypes manufactured, and we are indebted to these pictures for some of the amusement we had during the remainder of the cruise. After we had partaken of an unusually large dinner, we hauled up alongside the steamboat landing and went ashore for water. The wind which was still from the east had increased to quite a piece, and we started for Fire Island with two reefs in the mainsail and one in the jib, but on the second reach we shook out one reef as she stood up splendidly. The bay was flecked with white caps as far as the eye could see, and but few sails were visible. A large catboat with three yawl boats in tow had started out ahead of us but we soon overhauled and passed her. That was a delightful sail, with only enough slop to make things lively, and a good piping breeze blowing, while the sun occasionally came out from behind a cloud to dry up some of the spray on the deck. It was nearly five o'clock when we brought Sammis's into full view, and a little later luffed up along side the pier in front of the hotel.

We went ashore and over to the lighthouse, crossing the little stretch of barren sand hills which intervene. Gnats and mosquitoes swarmed up out of the grass as we walked along, and we all started off on a run toward the stone steps which lead to the base of the tower. The keeper must have thought we were going to take the place by storm, and retired inside for security, for we walked around for some time before we saw any signs of life. Finally a man came out of the front door, and we made known to him our desire to see the mechanism of the lamps and the interior of the place in general. He hesitated, saying something about it not being his turn, but nevertheless he conducted us inside. We passed through a long hallway to the circular iron stairway which leads up to the lamp. We went up and gazed with interest upon the wonderful light, a sight of which is so welcome to incoming mariners. Our guide amused us by relating several stories connected with the history of the beacon, and told some pretty tales about the enormous number of birds that were killed annually in consequence of its dazzling brightness; blinded by its rays they dash madly against the thick lenses and drop to the balcony or to the ground, one hundred and some eighty odd feet below, some stunned and others killed. Remunerating the guide, which he delicately hinted was customary, we descended and returned to our ship. We anchored off a short distance from the pier for the night to prevent taking the bottom, for where we had landed the water was rather shoal. The air was quite cool over here, and we put in a comfortable night, undisturbed by our enemies.

Next morning we were up early, and after a hasty breakfast we ran up our canvas and started down the inlet to have a try at the bluefish, the lighthouse keeper having informed us that they were beginning to come in. Two or three catboats were ahead of us, and we perceived that they occasionally took a fish. Throwing out our squids we began tacking about near the edge of a shoal over which the incoming tide was rapidly flowing, and were soon gratified by landing a small 2-pounder. Strikes were frequent, but in some miraculous manner they would nearly always manage to escape just when we were sure we had them within our grasp. But in a couple of hours time we had all that we could conveniently take care of without having them spoil on our

hands, so we reluctantly gave up the exciting sport. We found that we had lost two squids and the best part of a line. We said at the time that we would make another trip here in August or September, when the fish were larger and more numerous, and though we never did, we had some good sport later in the summer at Rockaway Inlet.

Our next port was to be Patchogue and we decided to take advantage of the fine westerly breeze that was blowing. Only rounding up to get our tender, which we had left anchored in front of the pier, we began our trip across the bay in a diagonal direction, going to the west of Fire Island proper, and across the shoals, where a number of pound-nets or seines were located. We had hauled the small boat across the cockpit rail, and the yacht, relieved of the drag, was making good time. We had run the gauntlet of several shallow places, where the keel had stirred up the mud and sand, when suddenly, without a moment's warning, the boat stopped and the mainboom came flying around and jibed over to port, immediately after which she shot away again, pursuing a southeast course instead of an easterly one. The cause of this maneuver was simple: the main sheet had caught over an exceptionally large and knotty stake, with which the locality was studded, bringing the boom amidships, when the wind caught it and sent it over on the opposite side, the sheet at the same time slipping off over the top of the pole, which had been bent to the water. The tender came near going overboard, but was prevented by the skipper who hung on to it by the rowlock. After this incident we kept a sharper lookout. We soon gained the main channel, where there are about three fathoms of water and then settled down for a long reach.

We were carrying full mainsail and jib, but no topsail, but the Monaitipee had enough, nearly all the other boats we met with being reefed. Off Nicholls Point we tell in with a large catboat. She appeared to be about 40ft. long on deck, had a square cabin aft and an open hatch in front of it. She had a load of mussels, and was tearing along with two reefs in her enormous mainsail.

"Are you going to Patchogue?" we asked when near enough to hear us, hoping perhaps we would have another pilot.

"No, Bayport."

That settled it, but we kept along for about an hour within speaking distance, and we soon had all the information we needed.

Shortly after the departure of our friend we passed Blue Point and entered Patchogue Bay, another mile or so and we shot into the harbor, the busiest port on the bay. Building and repairing was going on all about the place, and craft engaged in the clam and mussel business were constantly arriving and leaving. Marine railways, capable of lifting out anything from a yawl boat to a good-sized schooner, were situated about the harbor, and were nearly all in use. We dropped anchor on the west side in front of a carpenter shop and sail loft, had dinner and then went on shore. During the afternoon we walked aimlessly about, in the evening we went to the local theatre, where we saw a five-act melodrama entitled "Kathleen Mavourcen," or a name which sounded very much like it.

The manager of the company, after the performance, came before the curtain, and in a voice almost choked with emotion, informed the audience, which numbered about seventy or eighty, that owing to the remarkable success of the play during the two weeks it had been exhibited in the town, and by the request of many of the prominent citizens, he would continue to amuse the population for another fortnight. Amid a round of uproarious applause we escaped and returned to our home in the snug little cabin of the Monaitipee, not without some expressions of pity for the Patchogueites and their affliction.

To-morrow we were to start on our return, our time being limited. We had seen a good part of the bay so far, and would see more on our way back. We hoped that when we came again we would have more time to loaf around.

The next day, Thursday, we were away about 10 o'clock, and with a very light breeze reached Islip, where we lay all night, running over to Bay Shore Landing in the morning, where we stopped until noon waiting for wind; then getting a good puff from the S.W. we started off, and in two long reaches, only making a hitch to windward off Babylon, we arrived at Amityville about 4 o'clock in the afternoon.

Driven out of here at 5 o'clock next morning by our old enemies, the mosquitoes, we began a beat through South Oyster Bay. Arriving at New Inlet early, we anchored near the Life-Saving Station a little to the eastward, and went on shore and took things easy for a couple of hours, finishing up with a swim. After this we got up sail and made for Freeport, where we arrived about 2 o'clock. Had dinner, took a stroll about the village, and a little before sunset went on board and ran down to Jones Inlet, anchored just inside, ready for an early start in the morning; but during the night she took the bottom when the tide went out, and when we awoke we found the steward lying on the floor against the centerboard box, having been tumbled out of his bunk when the boat rolled over on her bilge. We had to wait until the tide came up, which occupied a couple of hours, then setting all sail we worked out of the inlet and stood up along the shore, having a pleasant trip all the way. Caught two bluefish off Long Beach. When we headed into Rockaway Inlet it was blowing hard, and the topmast preventer stays were taken off. With the glasses we could already see our friends on Point Breeze and knew they had recognized us. Squaring away before the southwester we flew toward our destination. Rounding the Red Can Buoy between Dry Bar and Barren Island, we had to haul on the wind, and the lee deck was buried to the cabin until reaching Dead Horse Channel, then easing away run for the Government Cut, which leads into Sheepshead Bay. Passing through, we made a few boards to windward and cast anchor in the inlet in front of Point Breeze. On the beach we were met by our friends, and after a good old dinner cooked on shore we ran up the bay and made fast to our moorings, well pleased with our trip on the Great South Bay.

A. M. L.

BISCAYNE BAY Y. C. ANNUAL REGATTA.

THE first regatta of the year, that of the Biscayne Bay Y. C., of Florida, which was held on Feb. 22, was in some respects a failure and in others a decided success. That it failed to be all that was hoped and expected was entirely owing to the weather, which contrary to the established precedent of February regatta days in this latitude was a "wet norther;" that is the day was one of cheerless gloom whose monotony of light winds and calms was relieved by frequent squalls of wind and rain that in the afternoon settled into a steady downpour of rain and a breeze that seemed to box the compass about once in each five minutes.

The races were two in number, one started at 10:30 A. M., open only to yachts belonging to the club; and a second called at 3 P. M., open to all comers. The calms and light airs of the early morning prevented five yachts from up the bay that had been entered for the race from reaching the starting point in time to participate in it, and also disappointed many spectators who had promised themselves the pleasure of witnessing the regatta.

The handsome sloop yacht Awixa, dressed with gay signal flags, was tendered by her owner, Mr. T. B. Asten, as judges' boat and was anchored in deep water about half a mile off the club house at Cocoanut Grove to mark the starting point. On board of her were Messrs. Asten and Edward Prince, who acted as judges, and Messrs. Alfred Munroe and Chas. Peacock to serve as time-keepers. The course was from an imaginary line between the Awixa and a buoyed flag up the bay, to and around a stake boat anchored in the deep channel just north of Bear Cut, thence down the bay to and around the inner ship channel buoy off Cape Florida and thence home to point of departure, making a triangle 14 miles in length. Of this triangle the first two sides were reaches and the third a dead beat to windward.

The start was a flying one, and all the yachts entered for the morning race, though divided into four classes, were sent off together. The only entries in the first class were Com. Ralph Munroe's 43ft. schooner Presto and T. A. Hine's 52ft. schooner Nethla, between which the race was close and exciting from start to finish. As a result Nethla finished 1m. 43s. ahead of Presto, but with time allowance the latter won by 4m. 20s.

The interest of the race in the next class was centered upon Secretary Kirk Munroe's new 35ft. schooner Allapatta and Treasurer de Hedouville's 33ft. sharpie Nicketti. Both boats were new and untried, their waterline measurements were the same, and both carried the same amount of canvas, though in the schooner it was divided among three sails to the sharpie's two, the sharpie had also 6in. greater beam than the schooner. Nicketti was off 18s. ahead of her rival, but in less than five minutes Allapatta had passed her. At the first mark Allapatta was 1m. 4s. ahead of her rival, and at the second a good 10m. in the lead. From this point, however, her hopes of victory were dashed, for in hauling up for the homeward beat she was immediately outpointed by the sharpie to an astonishing degree. She outfooted the sharpie on every tack, but the latter's wonderful windward work gave her an easy victory and she crossed the home line 6m. 8s. ahead of Allapatta.

In Class 3 there were but two entries, and as one of these was disqualified the event in this class resulted in a walk over for Mr. Chas. Peacock's sloop Rafaela. In Class 4, as there was but one entry, there was no race, and the pennant is still held by the catboat Mamie which won it last year.

As the prizes in these races were challenge pennants, their winners have already been summoned to defend them, Presto having been challenged by Nethla, Nicketti by Allapatta, Rafaela by Said, and Mamie by Mr. Edward Prime's fast catboat, to which he has given the not very euphonious name of Grunt. These races are all arranged to come off on Saturday, March 9.

The afternoon races followed quickly upon the conclusion of those in the morning and attracted a large number of entries in the first and fourth classes, a smaller number in the second, and none in the third or small sloop class. Besides Nethla and Presto the starters in the first class were the 39ft. sloop Ada and the 40ft. sharpie Amy. In Class 2 Allapatta had only the 28ft. sharpie Egret as competitor. Class 4 showed six entries, five of which were open catboats, while the sixth was the canoe Kittiwake, Mr. C. L. Norton, of the New York C. C.

The breeze had freshened, but during the entire race the rain fell in torrents. As in the morning, Allapatta displayed wonderful running qualities, leading the entire fleet for several miles after the start. Half way to the first mark she was passed by Presto, while at the same time Nethla and Ada were engaged in an obstinate luffing match well off to windward. The order at the first mark was Presto, Allapatta, Nethla, Ada, Amy and Egret. At the second it was Presto, Nethla, Ada, Allapatta, Amy and Egret. In the windward work home from this point Nethla passed Presto and reached the stakeboat first, but not far enough ahead to save her time allowance. As a result Presto beat Nethla 3m. 22s., with Ada third and Amy last. In the second class Allapatta, having shifted some of her ballast between races and being thereby enabled to do much better windward work than in the morning, not only distanced her only competitor Egret, but held her own with the last of the larger boats and came in only a length behind Amy.

The race for small boats over a six-mile course was made most interesting by the presence of the canoe Kittiwake, which, starting among the last, passed one after another of her competitors until but one remained. This one was the Rena, notably one of the fastest boats on the bay, and, holding her own to the finish, she beat the canoe by twelve minutes, the rest following in a long extended procession. This race was made exciting and uncomfortable by heavy squalls of wind and drenching rain.

The following evening witnessed a reception at the club house, which was gayly dressed with bunting and hung with Chinese lanterns and side lights. During the reception, which was attended by about fifty guests, the yachts at anchor were illuminated with colored fires, and their prize pennants were presented to the captains of Presto, Nicketti, Allapatta, Rafaela and Rena.

On the following day Awixa, with Messrs. Asten and Anthony aboard, started for the west coast. Nethla started on a cruise along the reef, and Allapatta, Nicketti and Egret started on a cruise up the east coast. Col. Norton with his canoe also started for Key West, intending to make a west coast cruise.

O. K. CHOBEE.

SEAWANHAKA CORINTHIAN Y. C.

THE second regular meeting of the Seawanhaka C. Y. C. was held on March 9, with Vice-Com. Center in the chair. The following amendment, offered by Mr. Whitlock, was passed:

"To change the designation of all classes of schooners, sloops, cutters and yawls below Class I. in each sub-division, so that each class shall be designated by the number denoting the highest limit of l.w.l. length in that class, thus: Class II. of schooners to become 90ft. class, Class III. of schooners to become 75ft. class, Class II. of sloops, cutters and yawls to become 80ft. class, etc."

An amendment offered by Mr. J. Beavor Webb, to insert after the words "No person shall be interested in more than one yacht entered for a race" the words "in the same class," was also passed.

Mr. J. F. Tams offered an amendment to Rule IX., relating to crews, proposing to remodel the wording of the rule, as it is not quite clear in its present form. Some discussion followed over the question of further amendments to the same rule, in the matter of Corinthian crews in the larger classes and also the proper basis for an allowance of crew, Mr. Hyslop pointing out the unfairness of the present method, by which crews are allowed according to the length on deck, thus favoring the new yachts at the expense of the older ones with less overhang. A committee of three—Messrs. J. F. Tams, E. S. Auchincloss and L. F. d'Oremieulx and Vice-Com. Center—were finally appointed to revise the rule and report at a special meeting, to be held as soon as possible. Secretary d'Oremieulx offered a resolution to the effect that a committee of three be appointed by the chair to consider the question of the desirability of changes in the measurement, classification and time allowance, with a view to future improvements in the rules of the club. While no immediate alteration of the existing rules is proposed, it is considered advisable to have a committee which shall give special attention to the matter during the coming racing season, and report at the close. The resolution was adopted, and Vice-Com. Center appointed Messrs. John Hyslop, A. Cary Smith and W. P. Stephens as members of the committee. Vice-Com. Tams also announced that he would give a prize of the value of $50 to the huckleman of the yacht in any class making the best corrected time in the annual race of the club. Ten new members were elected.

CORINTHIAN Y. C. OF NEW YORK.—The annual meeting and election of the Corinthian Y. C. of New York was held on March 4, the following officers being elected: Admiral, Chas. H. Tweed, cutter Minerva; Sec'y, M. Roosevelt Schuyler; Meas., E. B. Clarke. Messrs. Campbell Clark, R. S. Hone, J. Bruce Ismay, W. Lloyd Jeffries, Horace Kelly and Jas. W. Pryor were elected as active members, and Capt. Henry Erbin, U. S. N., Capt. Theo. F. Kane, U. S. N., Messrs. Edward Burgess, A. Cary Smith, J. Beavor Webb and Lieut. J. C. Foley, U. S. N. (Com. Dorchester Y. C.), were elected as honorary members. There is now a long list of applications for membership. The club is preparing for an active racing season, and in addition to regular regattas, proposes to sail open races for small craft over a course on the Upper Bay, in full view from the club house. The model room of the club has lately been enriched by the additions of models of Minerva, Stranger, Clara, Ileen, Wenonah, Surf, Ulidia, Delvyn, Petrel, Mayflower, Oriva, Yampa and Galatea.

THE NEW YORK YACHT RACING ASSOCIATION.—On March 8 the second preliminary meeting of the New York Y. R. A. was held at the Gilsey House, with Mr. Petersen, Yonkers C. C., in the chair, the following clubs being represented: Brooklyn, Columbia, Jersey City, Newark, New Jersey, Sing Sing, Staten Island Athletic, Tappan Zee, Williamsburg and Yonkers Corinthian. The formal organization was completed and the following officers elected: Pres., Com. Prime, Yonkers C. Y. C.; Vice-Pres., F. W. Pangborn, Jersey City Y. C.; Treas., R. K. McMurray, Staten Island Athletic Association (yachting department); Sec., Geo. W. Perkins, Columbia Y. C. Board of Trustees, C. W. Voltz, Williamsburg Y. C.; D. Cameron, Newark Y. C.; H. B. Pierson, Jersey City Y. C.; W. W. Washburn, Sing Sing Y. C.; George E. Gartland, New Jersey Y. C. The proposed constitution and by-laws were then taken up and adopted, and a committee was appointed to prepare racing rules, to report at the next meeting, March 15.

THE SOUTH BOSTON MOSQUITO FLEET.—South Boston, March 4.—*Editor Forest and Stream:* The annual meeting of the Mosquito Fleet Y. C. was held on Feb. 26, the following officers being elected: Com., W. C. Cherrington; Vice-Com., Jas. Bertram; Fleet Captain, J. W. Bragdon; Sec'y, G. H. Noonan; Treas., S. C. Higgins; Meas., C. A. Borden; W. C. Cherrington, G. H. Noonan, J. P. Bullard, Jas. Powers and W. T. Fisher, Directors. The club was organized on Aug. 14, 1888, and now has 45 members and an even dozen of boats; there are also 8 mosquito boats now building or ordered in this vicinity. Our object is to obtain racing for boats 15ft. and under, over all length being the racing length. Most of the boats moor in the cove at the foot of K street, where a club house will be built the coming month. The club signal is a pointed burgee 15in. by 10in., blue field, red border and white star in center. The secretary may be addressed at 35 Central street, Boston.—S. C. HIGGINS.

BUILDING NOTES.—Mr. Grinnell's schooner will be named Quickstep and not Acushnet, as reported last week. The keel of the new 40 was successfully cast at Ayer's yard on March 9, and the work is progressing rapidly on the 30.... Lawley is pushing the work on the Forbes schooners, Verena and Mariquita, but has not yet begun the Hasbrouck or Fosier 40-footers or Mr. Owen's 45. Mariquita will have a hollow boom.... At Salem, Frisbie has planked and decked the McVey 40, and will begin to plank the 30 this week.... A sloop yacht, 52ft. l.w.l. and 19ft. beam, is now building at Trenton, Mich., for Judge Longworth, of Cincinnati. She will be named Minx.

PORTLAND Y. C.—Annual meeting, March 6. Officers and committees were elected as follows: Com., C. W. Bray, sloop Viva; Vice-Com., Geo. C. Owen, sloop Idler; Fleet Captain, R. H. Miller, sloop Lelia; Sec'y, Chas. D. Smith; Treas., C. F. A. Weber; Meas., Jos. H. Dyer; Fleet Surgeon, Walter Woodman, M.D. Trustees, Com. ex-officio, Wm. Senter, J. Hall Boyd, Paul R. Stevens. Regatta Committee, Com., ex-officio, H. E. Duncan, R. S. Rand, Geo. D. Rand, D. P. Stevens. Membership Committee, T. Hall Chase, C. J. Farrington, E. H. York, Sec'y ex-officio. House Committee, C. E. Rolfe, Jas. C. Fox.

JERSEY CITY Y. C.—The annual meeting of the Jersey City Y. C. was held on March 7, the following officers being elected: Com., H. B. Pearson; Vice-Com., Leon Abbett, Jr.; Pres., John A. Hilton; Sec'y, Chas. C. Pierce; Treas., P. V. Figueria; Meas., G. L. Winn. A board of trustees was also elected consisting of 11 members, in whom is vested all the club property under the charter granted by the New Jersey Legislature. The treasurer's annual report shows the club to be in strong financial condition, with every indication of soon having a surplus in the treasury.

ESSEX Y. C.—Officers 1889: Com., R. J. McGrath; Vice-Com., Wm. J. Walker; Rear-Com., P. McKeon; Fleet Captain, W. E. Wicklehaus; Sec'y, Wm. C. Rothe; Treas., Wm. B. Garrison; Financial Sec'y, J. A. S. Leonard; Fleet Surgeon, H. P. Pfeiffer, D. D. S.; Trustees, W. H. Bielberle, Chas. Vetter, E. Goldsmith.

LADY EVELYN.—Sir Roderick Cameron, of Staten Island, former owner of the schooner Reva, has purchased the schooner Lady Evelyn in England. The Lady Evelyn is a wooden yacht designed and built by Wm. Fife, Sr., at Fairlie in 1870. She is a cruiser of about 90ft. l w.l., 18ft. 6in. beam and 10ft. draft.

CHANGES OF OWNERSHIP.—The schooner yacht Flossie, owned by Capt. H. H. Williams, of Thomaston, Me., has been sold by the Boston Yacht Agency to Mr. J. W. Hill, of Boston. She is 52ft. over all, 46ft. l.w.l., 16ft. beam, 6ft. draft, built in 1885. W. K. Pryor & Co. will refit her, adding two staterooms.

ICE YACHTING.—On March 9 a race was called by the Orange Lake I. Y. C. for the Higginson challenge cup for third class, but only the Frigid started, the wind being very strong and weather cold. She sailed the 10-mile course in 20m.

YONKERS C. Y. C.—Officers, 1889: Com., A. J. Prime; Vice-Com., J. S. Warren; Sec'y, A. T. Rose; Treas., Halcyon Skinner; Steward, Thomas E. Booth; Trustees, J. B. O'Dell, F. A. Rigby, J. F. Brennan, J. H. Thorne, George Bailey and George H. Kaler.

SING SING Y. C.—Officers 1889: Com., Ralph Erandeth; Vice-Com., W. W. Washburn; Rear-Com., Benjamin R. Smith; Sec'y, W. L. Youmans; Treas., James Thompson; Meas., Philip Sandtag.

A NEW 40-FOOTER.—Mr. A. Cary Smith has received an order for a racing 40 from a New York yachtsman. She will be built of wood and will be ready early in the season.

CAPTAIN'S BERTH WANTED.—We call attention to the advertisement in another column for a berth as captain of a steam or sailing yacht.

SILVIE.—This well-known schooner has been sold by Mr. C. V Whitten to Mr. B. F. Sherman, of Boston.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. E. A. M., New York.—Barnegat Bay or Long Island south shore.

R. H. C.—The black bass season in New Hampshire will open June 15, not May 1, as given last week.

F. F. H.—We do not know the maker, but you can have a new set of barrels put in by an American maker.

R. H., Red Hook, N. Y.—In your tests of pattern and penetration of shotguns is the distance 40yds. from the muzzle? Ans. Distance from breech.

W. H. G., Chicago.—Where can I get parts of lock of Sharp's hammerless rifle, model 1873? Ans. They have not been made for six or seven years, and we do not know where you can get them.

R. L. L., Philadelphia.—I saw to-day a rifle whose barrel had seven bores, each .22cal. and all to be fired at once, making it a sort of hybrid rifle and shotgun. I do not know anything about the accuracy of this arm, but it might do no harm to look into it. Perhaps some of your readers have used it. Could we not hear from them? Ans. We described this arm some years ago.

E. J. P., Newport, Tenn.—Please tell me what the difference is if any, between "chubb" or "Welshmen" of the eastern North Carolina waters and our black bass. Ans. The large-mouthed black bass is called "chub" on Tar River, North Carolina, and "Welshman" on the Neuse. This bass is found in the sluggish waters of Tennessee, while the small-mouthed species occur in your clear, cold streams.

PUBLISHERS' DEPARTMENT.

BASE BALL.—The Staten Island Athletic Club Base Ball Team are making arrangements for a vigorous campaign the coming season, and will make a determined effort to hold the championship of the Amateur League, which they won last year. They have secured some good talent, such as Bates, who formerly pitched for Harvard, Larkin of Princetown for first base, and DeGarmendia, well known as one of the best second basemen in the country, who will play in that position on the team. Under the management of Mr. Thos. J. Conroy, well known to the angling fraternity, a vigorous policy has been adopted, and every effort will be made to keep the Staten Islanders on top. Dates are now being made for games with all the prominent college and amateur teams, and the season promises to be a lively one. They are open for engagements with first class amateur and semi-professional nines. The Staten Island Club have without doubt the finest grounds in the country, and a summer afternoon can not be passed in a pleasanter way than by a visit to one of their games. They will probably open the season about the middle of April.

BOOKS RECEIVED.

FIELD AND HEDGEROW. Being the last essays of Richard Jefferies, collected by his widow. Longmans, Green & Co., London and New York. Price $1.75. This is a series of charming essays reprinted from the *Fortnightly Review, Pall Mall Gazette, English Illustrated Magazine, Chamber's Journal* and half a dozen other of the leading English literary periodicals. It treats professedly of country life and scenes, and exhibits a gallery of studies of English country life; but the simplest incident—the peasant at his labor, the swallow on the wing—affords a text for an essay, polished in style, embellished with illustration drawn from a well-stored mine, and enriched with philosophical reflections and dreamy fancies, which render the book essentially good company for people of cultivated tastes.

Of "UNCLE LISHA'S SHOP" the Davenport, Iowa, *Democrat-Gazette* says: There are or were plenty of people in the Green Mountain Yankee land who spoke the vernacular to perfection—with its peculiar nasal twang, clipped and run-together words and its expressive idiom and native wit so dear to the native ear and heart. Vermont Yankee talk differs from that of the other New England States. One may not be able to tell just how, but the bred Vermonter knows it when he hears it—or when he sees it written down the accurate patois that Mr. Robinson so thoroughly commands. Now Uncle Lisha was the town shoemaker, and at his low-browed, unpainted shop his neighbors met on rainy afternoons and evenings, and talked up their affairs, their huntings and their fishings in those anti-railroad times—some fifty years ago. They all had yarns to spin of hunts and trails, of fox and bear, school meetings, courtings, turkey shoots and the like—the gossip of a neighborhood, mixed with leather, wax and tobacco smoke, and among them a Canuck. From what was said at these gatherings the farmer-artist author takes his cue and coins his chapters with such skillful touch that to read them or hear them cleverly read is to enjoy such lines of fun, fine pathos, perfect pictures of quiet country life and landscape as one may rarely find in books. Indeed it may be truly said to be the best exposition of real scrumptious Vermont Yankee talk that has been given in book form, and the *Democrat-Gazette* can give its readers no better advice in this regard than to get it, read and grow fat. A dollar to the publishers will secure it by mail.

The FOREST AND STREAM, which is the cleanest and most reliable paper of its kind published, bids fair this year to surpass its records. Besides providing for a series of sketches of frontier life and special articles on Indian life and lore, hunting trips and natural history, it will continue its efforts for the protection of game and the inculcation in men and women of a healthy interest in outdoor recreation and study.—*Daily Northwestern, Oshkosh, Wis.*

HUNTER'S PATENT

Safe & Rapid Loader.

Pat. April 17, 1888. Pat. April 17, 1888. Pat. May 29, 1888.

The Collins Gun Company, of Omaha, Nebraska (the oldest and largest gun house in the West), writes: "We will be only too pleased to allow you to use our name as reference, and would say that we have tried every loader that has been placed on the market, and without any hesitation pronounce your machine the only machine yet that we have ever seen that is worth anything for our use, to wit, loading wood, Schultze or black powder for trap or game shooting."

Mr. Curtis Wright, a well-known club man of Connersville, Ind, says: "The loader is at hand, and more than meets my expectations. It is a beautiful piece of mechanism, and perfect in every way; it is made for both strength and convenience, and cannot fail to take the lead in the market, as no one could ask anything better. The shooting fraternity owe you a vote of thanks for getting out so complete an article."

A number of other references on application.

The CRIMPER is also sold separate. Will crimp at least three shells to any other crimping one. Also clips shells any length—caps and decaps. Prices and full description address,

Yachts and Canoes For Sale.

Cruising Yacht For Sale or Charter.

The owner of a well-known yacht, 47ft. long, 14ft. beam, 6ft. draft, perfectly fitted out for the comfort and accommodation of four to six persons in the cabin, and three men in forecastle, patent w. c. and all modern improvements, will sell or charter her at a reasonable price on account of important business engagements preventing his leaving the port during the summer months. The yacht is built upon a beautiful model, has two rigs, can be sailed as a sloop, when she is very fast, or as a yawl for cruising. She was built during the winter of 1886, of best of material, under the personal supervision of the owner, and is a staunch and excellent sea boat, well suited for cruising in the gulf of St. Lawrence, and has been so employed, where capital sea trout and other fishing can be enjoyed, and salmon may be included, seal and white porpoise hunting, duck and shore bird shooting. This is an opportunity seldom offered. Address P. O. Box 1081, Quebec City, Can. Satisfactory references in New York or elsewhere given and required.

For Sale---Cedar Canoe,

16×30, very fast, new last August; complete with cruising and racing sails.

YACHT CAPTAIN.—A COMPETENT MAN desires a berth for the coming season. Sail or steam. Address YACHT CAPTAIN, care of Forest and Stream office.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

ANSWERS TO CORRESPONDENTS.

PRACTICAL FOREST RESTORATION.—III.

IN the two previous articles, attention was directed to nature's own methods of restoration of wholly or partly denuded forest areas; and to suggestions, firstly, for intelligent coöperation with her, by aiding her in the distribution of seed, and secondly, by controlling results by selection of seed of desired species of timber, to be grown in substitution of those species which would take, or hold possession of the soil, if nature were left to her own unaided efforts. In the present paper we shall treat of artificial methods of creating new forests or restocking denuded ones. The term artificial is employed, because on the method contemplated, the seedling trees having been raised in seed beds, in a nursery, are transplanted into the area they are intended to occupy, either directly from their seed bed, or after one or two transplantings in the nursery.

The attention which should be given to the culture of the seedlings in the nursery, the number of times they should be transplanted, the space and time allowed for their development, will depend in a great measure upon the conditions of the soil in which they are to be transplanted. If the plants are wanted to fill up openings in a forest tract, created by the removal of a timber tree here and there, yearling seedlings will do well enough, as far as regards their ability to draw nutriment from the soil under the conditions; but if the soil is already occupied with a carpet of young seedlings of another and undesired variety, it will be necessary to plant plants so much stronger and more developed, that they will take the lead of the plants in possession and dominate them. If it is intended to stock up a bare area, yearling seedlings would be unsuited, although it is possible that in a mellow soil, with a favorable season of alternate showers and sunshine, they may establish themselves and develop so healthily during the spring months that they would pass safely through an average summer and winter; but it is never safe to count on exceptionally favorable circumstances, and the plants once spread over a field cannot receive that care and attention which it is possible to bestow upon them in the nursery, or at least a thousand plants in the nursery can be cared for by an outlay of labor which would hardly suffice for half a dozen in the open.

Plants that have been transplanted two or three times in the nursery, adapt themselves better to the conditions of their new environment, not merely because they are larger, but because at every transplantation there is arrest of growth of the portion of the plant above ground, while all its vital energies are directed to the sending out of fresh rootlets, until in a plant which has been three times transplanted, at intervals of a year, the organs for the absorption of food from the soil are perhaps a thousand times more developed than in a plant taken from the seedling bed at the close of the first year. With such immensely enhanced facilities for the absorption of moisture, and consequently of its food in solution from the soil, it will survive exposure to drought, which would be quickly fatal to plants which, having few absorptive organs, could not take up moisture as fast as it would be evaporated from its leaves and bark in the sun's rays, and which in the absence of that capacity would rapidly wither and die.

The important first step in planting a forest being then the raising of nursery stock, a few simple instructions will now be in place:

Selection of site. There can be no more suitable place for a nursery than an open spot in the forest, caused by the recent removal of one or two big trees, especially if there is water at hand, which may be utilized at need. In such a spot there is a carpet of dead leaves on the surface, covering a soil rich in decomposed humus, which is the proper dressing for trees; there is sufficient shade to maintain the soil moist, with sufficient light to foster the growth of the young seedlings. All that is wanted in excess of this is water in case of protracted drought, and in some regions this is a matter of so much importance that all other advantages may be considered as only secondary in comparison with it. The nursery must be made where there is water, and the young plants shaded from the direct rays of the sun at its fiercest, if water and natural shade are not to be found in proximity. The site having been selected, the first steps are the collection of the seed and preparation of the soil.

IMPORTATION OF PHEASANTS.

WE learn that the 100 hen pheasants ordered by the Jekyl Island Club, of which we spoke in a recent article on the propagation of pheasants by this club, have been received at the island without the loss of a bird. This is most remarkable, considering the season, and it is very encouraging to those contemplating experiments in raising pheasants. We hope it will be tried by others. The next importation by the club will probably be of grouse and partridges from England.

The Jekyl Club enjoys an exceptional opportunity in owning an entire island, sufficiently extensive to give ample scope and cover for all kinds of game. Our Southern coast affords very few, if any, other such islands, since the rest are cut up into different ownerships and therefore not attainable.

The advantages an island presents are many. The game does not leave it. Poachers and pot-hunters can be kept off—the banes of inland tracts where attempts have been made to preserve. Islands are the thing, but unfortunately they are scarce.

THAT ADIRONDACK PETITION.

WE publish the text of a petition now circulating to the effect that the entire Adirondack wilderness should be acquired by the State. This is not a new proposition. It was discussed in these columns ten years ago; it has been before the public longer than that. What reasonable hope is there that it will ever get beyond the petition stage? The men sent to Albany nowadays are not the class of men to consider any such proposition seriously unless there be a job in it, and if they did consider it and devise measures to carry out the scheme and acquire the North Woods, what reason is there to suppose that in the State administration of that reserve there would not be political jobbery and thievery, in comparison with which ceiling steals would be as grains of sand to boulders? No inspired vision is required to foretell what is going to happen in the future with respect to the North Woods. The work of destruction will go on there. Successive Legislatures—engrossed in jobs—will shirk their duty in the matter, and the people will blind their eyes to the state of affairs. Then, when the ruin shall have been wrought, and it shall be too late for reparation, the awakening will come. Meanwhile let the public comfort itself with the thought that the Forestry Commission is catching deer in the Adirondacks for stocking a deer park in the Catskills. If the people of the State of New York will turn out *en masse* and chase these deer they will be quite oblivious of the railroad invasion and forest destruction of the North Woods, and need feel no worry over the ruin impending.

BITS OF TALK.—II.

"YES, they say he is a wild fellow, spending all his father's money—and you know there is a pile of that. He's up to all sorts of pranks, and he makes it fly fast enough; and they tell some hard stories of his escapades. I know he's wild and all that; but see here, did you ever know a real true sportsman, one who's got it in him, I mean, to be a bad man? I never did; and I'll tell you what it is, that young chap is a sportsman, thoroughbred. I've been in camp with him weeks at a time, and that's the place to bring a man out for just what he is every time, no fail, you'll find him out there; and I just know that he is a man, through and through, every inch of him. They may say what they please about his pranks and his spending the old man's money, but I've camped with him and I know. He's all right."

"You are perfectly correct in one thing, but out of bearings on another," replied the Judge. "It is all nonsense to say that a man cannot be a rascal and a true sportsman, if by true sportsman you mean one who has an overmastering passion for the woods and the pursuit of game and fish; my observation teaches me that a man may be so intensely fond of shooting that he will steal a gun to shoot with. But as to finding out what quality a man is, you are quite right, the camp is the place for that."

SNAP SHOTS.

ILLINOIS sportmen are at loggerheads over a measure in the Legislature of that State to do away with spring shooting of wildfowl. This is a subject on which there promises to be some lively debate before very much can be accomplished in the way of making new laws. Meanwhile the ducks are on hand in great supply on the waters shot over by Chicago sportsmen, and the boom of the chokebore is heard in the land.

A lively war is in progress in California between the club men who lease shooting rights on the marshes and the shooters who do not belong to these clubs. The clubs control pretty much all the available shooting country, they are in earnest in defending their grounds from intrusion by outsiders, and have sought to have the trespass laws amended in their favor. The outsiders, who resent what they claim to be an infringement of their privileges, have banded together in a Sportsman's Protective Association, for the purpose of maintaining their rights against the aggressions of the club members. The conflict partakes of the nature of a class war, the preserve shooters being stigmatized as patricians and monopolists, and retorting that their opponents are pot-hunters and scoundrels. We have a long communication setting forth the condition of affairs, and it will be published next week.

Throughout the whole South and now as far north as North Carolina there has been a most unusual scarcity of wildfowl. In places where bags of fifty brace could usually be had not a feather is to be seen this season. There are no ducks in Georgia and Florida. They are not in the extreme South. Is it the effect of the mild winter North? But even that hardly suffices for a reason, as February was a cold month.

Col. F. S. Pinckney, who died in Jacksonville, Fla., March 19, was a prolific writer on angling topics over the pseudonym "Ben Bent." He was enthusiastic in all that related to his favorite pastime, and enjoyed a wide acquaintance and popularity among his fellows of the craft.

This is the time of year when the first bird songs are heard, and you meet men in the street with angling flies in their hat bands.

The Sportsman Tourist.

"Sam Lovel's Camps." By R. E. Robinson. Price $1.

SEPTEMBER ON BIG SANDY BAY.

THERE are little charming oases in the desert of business routine that often stand out in brilliant green in the memory of those holding a title thereto. Some of these little glints of brightness to the hard-working business and professional man appertain to the domain of travel and outdoor sport; others may come under a different title; but all are characterized according to the tastes, influenced sometimes by circumstances of the individuals. It is probably true that every mind desires at times relaxation from the fatigue incident to work; and by work is meant that occupation which requires the tension of brain and muscle throughout the year. Paradoxical as it may seem to many people, that very relaxation may embody harder mental and physical labor than the drudgery sought to be escaped. Mark Twain in "Tom Sawyer" propounds a metaphysical fact without elaborating the reasoning when he told the story of the fence and whitewash brush, and also when he adverts to the fact of a man's climbing Mount Blanc and calling it sport, but shunning it as the hardest of work when the element of necessity and pay enters into it. We want rest or change, or both. The brain that has wearied in searching out and comparing legal precedents and rules, or has tired from footing up a few miles of ledger columns, will involve itself in just as severe work in a game of skill and find relief, and so will the bodily structure borne down with work find relief in the muscular exertion of play. But perhaps the best results are obtained when the individual tastes and opportunities will permit of such change of action as will equalize the condition of mind and matter. It is upon the latter hypothesis that the trip was undertaken which this letter is designed to in part commemorate.

Big Sandy is the name of a small bay indenting the east shore of Lake Ontario, although I believe there is an arm of the lake on the Canada side bearing the same name. It is about a mile and a half in length by something over a quarter of a mile in width. Upon the east is located a little hotel called the Lake View House, and about a mile south along the lake shore, at the mouth of Big Sandy Creek, is situated the U. S. Life Saving Station. The geological formation of the neighborhood is peculiar. Separating the lake from the bay is a narrow strip of almost pure sand scarcely more than 100yds. in width, with hills of drifting powdered silica strewn quite 60ft. in height, upon which dwarfed pines and oaks struggle to retain their hold in the unstable deposits. Upon the landward side no trace of sand appears, but instead you find rich alluvial deposits which are highly productive under cultivation. This sandy belt crops out for a few miles along the Ontario, making a sloping shore, hard and firm to walk upon when the spray has wet it down, but drifting and loose when dry. From the bay southward stretches a vast rice marsh, thickly interspersed with wild celery, of some 2,000 acres in area, bisected by the Big Sandy Creek and its tributary, South Creek, affording choice feeding grounds for wild duck, rail and blackbirds, while upon the outlying flats congregate the snipe, plover and curlew.

In the late afternoon of a September day, four outers with their duffle and accompanied by a retriever stepped from the cars at a small station on the Rome and Watertown Railway. The party included in its membership a dentist, an insurance underwriter, a merchant and a lawyer. They were met upon alighting by a young man with a black-tinted moustache who answered to the name of Charley. He had a wiry little team hitched to a democratic wagon, which looked somewhat frail for the safe transportation of the party over the ten miles that intervened between the station and the bay. But looks are often deceptive, and after an hour's ride the Lake View House was reached with no accident or excitement, except an occasional collision between the canine member of the party and the native dogs frequently met along the route. George Wood, the proprietor, met the party with a genial smile from his stalwart height of six feet and over, and in response to our inquiry as to the shooting, threw a big chunk of ice upon the spirits of the hunters when he said, "Now, by Jaky, if you had come last week you would have found the birds just too thick, but mabby we can scare up a few to-morrow." This answer was certainly somewhat discouraging. However, we were not fully acquainted with George. We came to know him better after the lapse of a few days. As supper was waiting and our appetites were in fairly good order, we deferred for the present further conversation, aside from some pertinent comment upon the apparently doleful outlook.

Some four years ago Mr. Wood leased this large marsh tract, and organized the preserve into a close corporation with himself as president, secretary, treasurer, board of trustees and general manager combined. Having posted the notices required by law warning trespassers from shooting on the lands, he laid down one very good rule for his guests, that there should be no shooting on Saturday, Sunday and Monday of each week, and rigidly enforced the regulation. The wisdom of this is apparent to one who has hunted where shyness is a predominant feature among game.

Upon the following morning while darkness still shrouded the shore line in gloom, and mist hung heavily over the water, our party in two boats of the light St. Lawrence model pushed into the wild rice, and awaited the morning flight of fowl. Soon they came in scattering bunches, not sufficient in numbers to satisfy a pot-hunter, or the amateur club house slaughterer, who loads his 10 or 8-bore with all it will stand, and is unhappy unless he can kill or cripple an even hundred an hour, but affording shots for a fairly decent bag; and as the sun appeared above the horizon the marsh resounded to the incessant discharge of shotguns. After two hours of sport we emerged from the covering of rice and rushes into the open waters of the bay, and dashed away in a race for a much desired breakfast. When the inner cravings of a keen appetite, born of early rising and exercise, had been satisfied, we took a turn out on the bay for pickerel. Now, pickerel catching does not involve a great display of skill, and, compared with the fascination of hooking and playing the gamy black bass or the agile trout on a delicate line with a six-ounce bamboo, is tame enough, but when one is on a mission of slaughter he will find the rapidity of strikes and the size of the pickerel in Big Sandy commensurate with any excitement to be got out of trolling. One begins to believe the trout and grayling, the bass and salmon have all relegated themselves to inaccessible places from the way they have disappeared from waters that a few years since fairly teemed with them. Therefore it has come to pass that we troll for pickerel, still-fish for bullheads and, perchance, bob for eels in waters near at home, and, save the mark, call it sport (?). There are a good many things nowadays that depend on main strength and awkwardness rather than on delicacy and art.

Getting an early dinner, after our sumptous haul on the trolling lines, we pushed off in our boats for exploration. We could just see from the boat landing the flag staff of the Life-Saving Station, and curiosity prompted us to turn in that direction. Rowing to the large sand flat that encompassed the outlet of the bay, and drawing out the boats, we started on a tramp up the beach. On all sides the golden plover and yellowlegs were uttering their plaintive whistle and diverted us for an hour to the filling of the pockets in our shooting coats. It was quite 3 o'clock when we reached the station and introduced ourselves to the captain and crew. Every courtesy was shown us in conducting our party through the buildings and grounds and explaining the various apparatus needful in this humane but perilous avocation. Twice a week they go through the boat and gun drill, practicing the former out on the lake. The gun practice consists in shooting a bolt, to which is attached a line, over a mast planted on the opposite side of the river. To this line must be attached a buoy which will convey the crew to a ship-wrecked vessel. Captain Fish informed us that the present season had been free from serious disaster. But he told us how last year a vessel went ashore about four miles north during the season of snow and ice, and how the crew battled with the freezing surf in getting the life-boat to the rescue. Every member of the crew only escaped freezing by the violent exertion necessary to reach the wreck, while several of the ship-wrecked mariners were taken from the stranded vessel, corpses sheeted in ice

It is but seldom that the regular lake mariners come to grief, and a proportion of wrecks demanding aid from the life stations are from the large body of amateur yachtsmen and single-handers, so-called, as well as canoeists, who navigate the lake with a hardihood coupled with ignorance of these waters. As an instance of reckless cruising, I may cite the passage of a handsome steam yacht, owned on one of the small inland lakes of New York, returning from a cruise to Montreal. This boat ran from Kingston to Oswego one night in September during such a storm and heavy sea as few of the staunch lake vessels cared to encounter. True, this yacht was of excellent model and carried powerful engines; but suppose she had become crippled by some breakage? I doubt very much if, in such event, her light spars and small canvas, if the latter was readily available for use, would have prevented her from stranding on a dangerous shore. And I very much fear if her crew were sailors enough with proper rigging to claw off a lee shore.

It was long past dark and the wind had become half a gale when we left the hospitable quarters at the station to return. We had a hard pull against a head wind on the bay that kicked up a brisk little sea on this small landlocked bit of water, and our arms ached when we drew up on the boat landing at our hotel. After partaking of a generous supper we ensconced ourselves in the little bar room among the half dozen other sportsmen guests present, and over our pipes and an occasional glass of beer became better acquainted with our landlord. We soon found that the stalwart proprietor played a good hand at old sledge and enacted the rôle of romancer with equal credit. Let a party of hunters sit around a blazing wood fire on a crisp autumn evening, each man equipped with a pipe of good tobacco, and you may rest assured the marvelous will predominate in story-telling. I recall with a smile a little episode our ubiquitous host related of the preceding winter.

"You see," he began, "it is mighty lonesome here in the middle of winter, when it is so cussed cold that none of you fellows care to come out and see a body. Well, one morning my brother, who lives just back up the road, came over and said, 'George, let's go on a fox hunt.' Now, I would rather go hunting foxes than to a funeral any day, except one, and that is a fellow down the lake: when they plant him I'll go to his funeral if I am not dead. Well, we filled our pockets with doughnuts and other grub, took our guns and dog and cut across the pond to the lake shore. By and by the pup started a track and lit out up the beach a ways and then swung inland. Now, said I, I know just where the little critter will strike the bank again, so we legged it off for a couple of miles. All at once we both stopped, for we saw close against the bank three wild geese roosting in the snow. I agreed to go around and come on them over the bank while my brother was to walk slowly along the beach and shoot if they tried to fly away. I crawled through the snow for a thundering long ways, and at last looked down on them from the top of the bluff. But they did not stir or even wink. I didn't know what to make of it. They warn't dead and it puzzled me because they didn't scare away. Well, I had the gun just ready for them, so we went up and took them in our arms and made up our minds they were about froze and hungry. By and by they thawed out and we allowed they were about starved the way they stowed the doughnuts, and so we sat and visited with them in the snow until our feet got real cold. Then we were puzzled how to get them home. We finally concluded to carry them, and slung the guns across our backs and started. On the first send-off I carried the two geese while my brother carried the gander. Then we would change off. I tell you, after we had waded through the snow for a mile with them it became mighty hard work. At length, coming to a smooth strip where the snow had blown off I stopped to rest and put the gander down. I guess my body and the doughnuts had warmed him up, for he walked off clever enough on his pins. So we put them all down and found we could drive them along ahead of us until we came to deep snow, when we would carry them over to the smooth places and set them down again. Well now, didn't we have fun, and didn't we just talk and brag about the flock of decoys we would have next season out of these birds. Well, as the geese began to warm up they trotted right along, so we had to step pretty lively to keep up, and then we got to laying bets on their racing. The gander seemed to be a little spryer than the other two and I thought he needed weighting down a little, so I took a fur collar I had in my pocket and slipped it over his neck, which slowed him up some. We were just having a gay old time and had got down the shore to just across the pond there and had one little smooth strip to run over before we turned in to come across, so we started them up again, and they put out right smart, and they kept going faster till we had to run to keep up, and they flapped their wings which helped them along all the faster, and just as they came opposite the house over there where we wanted to turn in, would you believe it but the ungrateful cusses just sang out *honk! honk!* and went flying away and we a couple of blamed fools stood and watched them until they went out of sight down past the station. Then I turned to my brother and said, 'Well, I'll be durn!" and he said, 'Yes, you be durn', why didn't you shoot?' Now, seeing both our guns were tied on our backs, that wasn't possible, but I do believe if we had had the guns in our hands we were too paralyzed to shoot. And then there went my fur muffler, a brand new one too, and one my wife made me a present of, which did not reduce the expense any. Well, we just came plodding home here across the ice, and made a hot tod, and sat and cussed our fool's luck. About an hour afterward and while we were trying to wonder how it all came about we heard a racket among the fowls at the barn. I got up and went out to see what was the matter, and I hope to die if I didn't see that same old gander flying away, and there right on the hitching post hung my fur muffler. The cuss was too honest to steal and had brought it back."

As he concluded the story a silence fell upon the party which was oppressive. Some one whistled a few bars of a plaintive air, then some one asked, "George, what became of the pup and the fox?" "Oh!" he said, "the pup got mad because we left him and went up to Woodville and hired out to a friend of mine, where he is yet. But say, mebby you don't believe that story? Well, I can show you the muffler, and you can ask my brother when he comes over to-morrow, so what more proof do you want?"

Early upon the following morning we were out on the marsh distributing No. 6s from our chokebores impartially among teal, widgeon and black duck. But to recount the exploits of one day is substantially to indicate the daily life at the bay. Mornings we shot ducks, forenoons we fished for pickerel or anything else that would bite, and in the afternoons we did some loafing, some target shooting, or took a sail on the lake, while toward evening we went for rail and plover and took another crack at the wildfowl. Upon the whole, we found Big Sandy a pretty fair sort of all round resort. Wildfowl shooting is fairly good, pickerel fishing (especially in the creek) excellent, yachting on the lake pleasurable, and George Woods' *cuisine* admirable. The officers and crew at the Life Saving Station are genial and accommodating, and number among them some good shots and expert fishermen, and we found ourselves greatly obliged to Messrs. Wheeler, Anderson and Williams of the crew for showing us the retreats of wildfowl among the rice ponds, and the best river and bay trolling ground for the largest pickerel.

To the tourist-sportsman who loves the rugged grandeur of the mountains and the dark recesses of the forest, and who has the means as well as the time to spend in casting his fly upon waters far from the centers of civilization, or awaking the echoes of primeval fastnesses with the crack of his rifle, Big Sandy will prove tame indeed. But to the business man residing in the inland towns of New York, who can spend now and then a day for a breath of fresh air, and who prefers recreation of a mixed kind to a plethoric game bag, this little arm of Ontario will become interesting. There are many delightful nooks within the borders of nearly every State in the Union where economy can be practiced with full returns in recreation and health. How many people there are dwelling in our large cities, such as New York, Boston and Chicago, who read the glowing accounts of sport among the pines of Maine, among the rugged peaks of the Rockies and far away Alaska, or the bogs and uplands of the Carolinas, who sigh as they figure up the expenses of such a trip, the tariff of board bills and the hire of guides, and then compare the luxurious list of expenditures with the scantiness of their bank accounts.

I do not address this communication to the man of one sport This letter does not refer to him who pins his hope of earthly bliss upon the rifle or shotgun, the rod or trolling line, the canoe or yacht, nor the bycicle or saddle, but on the contrary to that large body of all-round outers who seek health and recreation in which is the spice of variety, an intermingling of the above sports, within reasonable means. And to these staunch representatives of our Commonwealth I say, curtail your beer and cigar bills and save up enough to take yourself, your wife and little ones if you have them, your dog, your gun and rod and perhaps your canoe, for a few weeks' outing, or perchance for a few days at intervals throughout the summer and fall among the easily accessible places less than a day's ride from your homes. I have in my mind's eye aside from Big Sandy many cosy little hotels whose *menu* is excellent without an accompaniment of prices that seem to absorb the earth, situated along the lovely Cayuga Lake in New York, on Buzzard's Bay in Massachusetts, adjacent to the Susquehanna in Pennsylvania, and among the lake lands of Wisconsin, all of which are easily accessible to some one of the large cities before referred to.

CAYUGA.

UNCLE LISHA AND SAM LOVEL.—*Editor Forest and Stream:* Fifty years ago I was a Yankee boy and my life until I was twenty years of age was passed amid such scenes and such people as Mr. Rowland E. Robinson has pictured in "Uncle Lisha's Shop" and in "Sam Lovel's Camps." The singular fidelity to nature with which these surroundings of my youth are depicted makes me wonder, while the author's wholesome feeling, his sentiment, his love for our common mother fills me with delight and enthusiasm. I have never read any two books which moved me as these do. Every Yankee and especially every one who has been a Yankee but whose memories of the life of his native state have been dimmed by time and distance, must feel a thrill as he reads these books. I have written very feebly but I feel deeply about them.—EX-YANKEE.

THE YELLOWSTONE PARK.

Editor Forest and Stream:

Knowing the interest you take in the Yellowstone Park, it gives me great pleasure to inform you that Congress has appropriated $50,000 for the construction and improvement of roads in the Park.

By the terms of the act making the appropriation, $25,000 is to be expended upon the roads already surveyed and in process of construction and improvement, while the additional $25,000 is to be expended upon the construction of a road from the Upper Geyser Basin, across the Continental Divide to the Grand Cañon, and from that point to the Yellowstone Lake and then to the junction with the road to Cook City.

This insures a complete system of roads through the entire Park, so that it will not be necessary to retrace any part of the route as at present. In other words, it gives to the tourist an entire circuit of the whole Park, so that he can visit every object of interest in it.

The bill for the government of the Park and providing for the administration of justice, passed the Senate, as you are aware, early in the session, but has been delayed in the House on account of the opposition of certain Representatives. It was amended in the House committee so as to be practically worthless, and was then reported to the House and placed upon the Speaker's table. I was assured by members of the House friendly to the Senate bill, that it would be impossible to take the amended bill from the Speaker's desk, but if the Senate bill could be sent back to the Senate and then returned to the House, it could be taken up and passed without amendment.

With this view I succeeded in having the bill recalled from the House to the Senate, where some immaterial amendments were placed upon it, and it was then returned to the House of Representatives. A motion was then made in the House by the friends of the measure to take it up for consideration, but Mr. Payson, of Illinois, objected, and the business of the House was in such condition that one objection was sufficient to kill the bill.

It seems very apparent that nothing will satisfy certain parties except the running a railroad into the Park under the pretense of reaching the Cook City mines, but in reality for the purpose of passenger traffic.

To this legislation no friend of the Yellowstone National Park can ever consent. In order to secure necessary legislation for the government of the Park its friends have proposed that the Yellowstone River should be the northern boundary of the Park, so that the railroad from Cinnabar to Cook City could be constructed without entering the Park at all.

The refusal of the projectors of this enterprise to accept this proposition shows beyond question that their real object is not to build a railroad to Cook City, but to build a railroad into the Park.

General Noble, the new Secretary of the Interior, is familiar with the Park, and from this fact we have everything to hope during Harrison's administration.

G. G. VEST.

UNITED STATES SENATE, March 15, 1889.

Natural History.

FIVE DAYS A SAVAGE.—I.

NOTES OF A HUNTER-NATURALIST IN THE NORTHWEST.

LUMMI ISLAND, Gulf of Georgia, June 28, 1888.—I am sitting in my boat looking out on the Gulf. The boat is drifting with the tide; it is a perfectly calm, clear, beautiful morning, and as I lazily drop down with the current, I pick up my pencil to tell you what a time I have had during the last week. As I write, the steady swash, swash, of the slow lazy gulf swell comes to my ears mingling with the cry of the fishhawk, and the songs of the wrens and the swallows from the shore. I float over the shoals and a little fish of the sculpin family watches me with quivering fins and wondering, staring eyes.

At my left, the point of the island runs out into the gulf with here a low beach, and to the north, bold, rocky shores, covered with great cedars and firs, mighty trees from 150 to 200ft. in height, except where in one spot a lone settler has made a clearing with axe and fire. There his log house stands out against the background of the high, dark forest, seeming the house of a pigmy in comparison with the great tree towering above it. The trees in this country make man's work look puny and insignificant. To the north stretches the gulf away and away, until the blue of the waters meet the blue of the heavens and the horizon is lost in the summer haze. A little toward the east, I can see Point Roberts dim and hazy; and just above the horizon on the right stretches the shoreline on the mainland, the fertile flats of the Lummi River and the great fir forests of the bay, the home of the Siwash, who dwells here now, as his forefathers did of old, the sovereign of the soil.

Looking astern I see the point of low trees and the shining white beach; and there are the still whiter tents of the Coast Survey party gleaming among the trees.

As the boat drifts down past the point other islands come in view, and still the boat drifts on, and still I am too indolent to take the oars. And have I not a right to be so deliciously lazy to-day? I think so. And I will tell you why. But first let me get out my pack of blankets. Now I will place them in the stern. So! with my oilskins and rubber boots for a cushion and my pack for a back, I can rest more comfortably. Never mind the scorching sun. My skin is as brown as it can be from a month's exposure, and the gentle swell will not disturb me. When I have finished the story of the last few days, I think you will agree with me that I am entitled to a little rest.

For five days I have lived alone on these waters and among these rocky inlets. For five days I have stemmed the currents of the full moon tides and battled with the winds and waves. By night and day I have climbed the cliffs, threaded the thickets and tramped along the beaches. I have hung between sky and sea on a slender rope suspended from the rocks above, have dug into the earth on the verge of the rocky precipice for the seabird's eggs. My gun has brought food from the air and my spear the fish from the deep for my morning or evening meal. For five days I have lived on my own resources. As the wild Indian lives, so have I sojourned among the solitudes. I will tell you about it all, but first a few words of explanation as to where I am and wherefore.

First, then, I am among the islands of the San Juan Archipelago, situated on the northwestern boundary of the United States and east of Vancouver Island. The most northwesterly of these, the Sucia group, are the islands I have been lately exploring. To reach these the traveler should first go to Seattle, Washington Territory; from there he may go to Whatcom on Bellingham Bay in one day, and there he may hire a boatman, or do as I did—take an Indian canoe and a couple of Indians as a crew—and cross to the islands. When I was on the steamer Evangel, the captain, who by the way is very gentlemanly and obliging, and knows the country thoroughly, told me that there was a U. S. Coast Survey camp on Lummi Island for the present; and when informed that I was collecting specimens for a museum, he advised me to go there and see Captain G., the chief of the survey party. He described him as an eminently scientific man, and a very hospitable and genial gentleman. I therefore hired an Indian canoe to take me across the bay, and, to make a long story short, I found Captain G. to be all that had been described and more. He and his estimable lady made me exceedingly comfortable, giving me a tent and quarters for my own use, and assisting me in every way that he consistently could.

It is supposed by some people that these survey parties partake of the character of a picnic. But let any one see as much as I have seen in my travels, let him know the dangers, discomforts, inconveniences and hardships the surveyors have to encounter, and I think he would not wish to undertake their work. Captain G. is a fine mathematician and a hard worker. I have seen him working with his instruments all day on the coasts, covered with clouds of blood-thirsty mosquitoes, wet to the skin by occasional showers, and returning to camp at night computing until 11 o'clock on his logarithms; and this when one eye was almost blinded by the strain of overwork, and all to keep his work up to his standard.

A small steamer was kept by the party with which to go to the further stations, and as I wished to go to the Sucia Islands, I waited here until the work of the party required a trip in that direction. These island were said to be of a tertiary formation, and in the sandstone cliffs many fossil shells have been found. Here, also, I was told, sea birds bred in some numbers. For these reasons I wished to visit them. Accordingly, I obtained a flat-bottomed boat from a settler, with a mast and spritsail. The rudder was gone, but there was a good pair of oars, one of which could be used for steering when sailing the boat. There was also a piece of strong line, some 200ft. long, which I could use in climbing. I then took a large tin box, which I had made watertight for my specimens, and in this packed my guns and materials for preserving skins, eggs, etc.; also the case of taxidermists' instruments, a butterfly net, hatchet, geological hammer, chisel, etc. I also made up a roll of blankets, with shelter tent and rubber blankets, a change of clothes, oilskin suit and rubber boots, and this with ammunition for a week completed my outfit. I did not take any cooking outfit, thinking to carry enough edibles to last a few days and depend on the inhabitants for the rest of my sustenance; but in this I was disappointed.

On a bright morning, just a week ago to-day, I launched the little 15ft. skiff, and made her fast to the stern of the Fuca. After a sail of two and a half hours we came to anchor in a fine little harbor on the west side of the Sucia Islands. The captain and his party were off in a small boat almost as soon as the anchor was down. Away they went, pulling smartly toward the west point, the man-o'-war's man giving them the naval stroke.

Joe and I, taking my skiff, spread the sail and followed at an easier pace. Running the boat on the beach, we crossed the end of the island, and here found a rocky cliff studded with the remains of marine shells. These were imbedded in the hard rock, and, in order to get at them, one of us had to go above with a rope while the other remained below. The surface of the cliff, being partially disintegrated by the action of the elements, offered no sure footing nor hold. As I walked the beach below I located the finest specimens that projected from the rock above, and then Joe attached the rope to a tree, and up the rope I could then climb hand over hand, and securing myself by passing the line around my body I could cut out the fossils with hammer and chisel. In this way, and by chipping out what we could reach from the foot of the cliff, we secured some fine specimens of fossil shells.

Along a low space of shore line I also found a few specimens of a dark song sparrow (*Melospiza fasciata rufina*), and off the point saw a small group of the black oyster catcher (*Hæmatopus niger*). These took wing and flew west toward the skipjack rocks. I made a mental note of this and determined to follow them next day. Here we came around the point where the captain and his men were working, and found that Mr. Garfield had found some birds' nests in the earth near the top of the bank, below the tripod, and in trying to reach them for me he had fallen down the bluff some distance. I could see the holes, which were nearly 50ft. from the beach, near the top of a nearly perpendicular cliff which overhung at the summit, rendering it almost impossible to reach the eggs. However, having had a line made fast to a small tree above, I determined to try it at once. Going up the rope, I took up a bight in it which I passed around my body, and making it fast I worked away at the first opening, which I was able to do by reaching some roots and drawing myself under the edge. To my delight I found it to contain the nest of the rough-winged swallow (*Stelgidopteryx serripennis*), with seven freshly laid eggs. The depth of the hole was about 2ft. Placing nest and all in my hat, I passed it up to the man above.

The next hole was a larger one. I sounded it with a stick for some six feet, and concluded to go above and dig from the top. Stuffing a coat in the mouth of the hole I climbed with difficulty over the edge; then digging down, found some seven feet from the edge a belted kingfisher's nest with young nearly fledged. These we did not molest.

We now took the boat again, and having eaten our lunch went ashore at a point more toward the eastward, where we found many small shells, some of them being perfectly fossilized, and some large ammonites, which it was quite difficult to get out in perfect shape. The day being thus well spent, the steamer prepared to weigh anchor. I found now that my provisions had at the last moment been forgotten by the steward and myself, and left at camp. I thus had neither provisions nor cooking utensils. All urged me to return to camp, but as the steamer would not be at the islands again for some time, I did not wish to lose advantage of my tow, as the tides were very strong, it being about the full of the moon. So I concluded at once to stay and, as Pat said, "tough it out" until I had explored these islands.

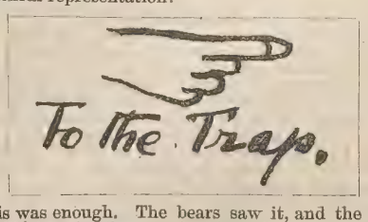
There are one or two "squaw-men" on the Sucias, and Indians, wandering north, frequently camp there. I thought I might get some provisions from them. Well, I took what there was left of the lunch, bade my kind friends adieu, and having packed my things on the boat, was sitting with a board across my knees skinning birds. As the steamer moved, Mr. G., watching me from the stern, said to the captain, "I believe that man would be comfortable anywhere."

Putting up my little sail, I took the steering oar in hand and sailed merrily away toward a snug harbor I had noticed toward the head of the little bay. Here I found a gap in the cliff perhaps five rods in width and the same in depth, forming a basin with a sharply shelving rock bottom and a beach a rod in width which separated it from the channel on the other side of the neck. Here was a dead tree some 125ft. long, denuded of its limbs, which the high tides had some time cast up. Its smaller end hung out directly over the water, forming a natural bridge to the beach over the flotsam and jetsam which accumulates in such places. On the beach ridge grew a sheltering fringe of young firs, beside which ran an old deer trail. There was plenty of drift-wood at my feet for a fire, stumps and rocks were there for table and seats, and everything was ready at hand.

It is strange how everything seems just made to order for the convenience of the veteran camper when he chooses a place to pass the night. I determined that this night should be comfortable. One drawback, however, was the mosquitoes, which were there in millions. But I soon had a fire started, and worked without much inconvenience from these little pests. Rolling a clean log on the down side of the deer trail to keep from sliding down toward the water, I cut some boughs from the young balsam firs, making a fragrant and springy bed. I then crossed my natural bridge to the boat and brought my bundle containing blankets, rubbers and shelter-tent. Picking up two long sticks, I sharpened these with the hatchet, drove one in at each end of the bed, and suspended my shelter between them by the lines. I then spread down the rubber blanket, the others on top, pegged down the edges of my tent, and tucked in the border beneath the blankets. As the ends of the tent were of fine, strong netting, I was thus secure from the mosquitoes, etc., without any lack of fresh air. I then put up my sail as a wind break, piled on a forestick and backlog on the fire, and loading my gun with buckshot, I crawled into my bunk and slept.

EDWARD HOWE FORBUSH.

ANOTHER SKUNK OF ODD COLOR.—"V. W. B." may be interested to know that a skunk, similar to the one killed by him in Barnstable and noted in your issue of March 14, was trapped in West Yarmouth last fall. This skunk was gray—about the same shade as a gray squirrel—and was the only one of the color ever seen by the trapper who secured him. Barnstable and Yarmouth are adjoining towns. The skunks may have belonged to the same litter.—BRADLEY.



THE BIRDS' RETURN.—Buffalo, N. Y., March 17.—Robins appeared in the city very early, the 6th being the first day on which they were seen, to my knowledge. During the past week bluebirds, song sparrows, robins and grackles appeared at the park, and if we have many more of these bright, balmy days, the birds will come in force.—E. P. B.

Game Bag and Gun.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

A NEW BEAR STORY.

IT is claimed by Kit Clarke, who tells the story in his new book, "Where the Trout Hide:" "The Bradstreet of the forests rated Jimmy A1. A1, as angler, but equally high as a most enthusiastic votary of Nimrod, and every effort in his power had been laboriously exerted toward capturing, either dead or alive, but principally dead, a black bear. It seems he had promised the pelt of a bear to a certain estimable young lady of his native heath, and the adjacent woods had been faithfully scoured in a vain effort to meet traces of bruin. "Traces," said Jimmy, "traces is what I want." At last his multitudinous wanderings were rewarded by the discovery of a bear's roost, a spot where *ursus* nightly held high revel. Here they stealthily met by night, and here Jimmy clandestinely assembled himself in the open daylight, and deftly concealed a ponderous and murderous snare, quaintly designed to entrap any bear that fondled its unique mechanism. Then, as an adjunct to the elaborate preparations, and as a sort of guide to any members of the bruin household strolling in the vicinity, Jimmy posted birch bark signs upon a number of the adjacent trees of which this is a faithful representation:

"This was enough. The bears saw it, and the young lady still pines for the promised bear skin."

RIFLES FOR SMALL GAME.—*Editor Forest and Stream:* In my experience with rifles for small game I have used a .32-cal. rifle. I shot a hawk at 75yds. with a short cartridge, a woodchuck at 200yds. with a long cartridge, and it is the thing for chipmunks, red squirrels, etc.—WOODCHUCK.

ADIRONDACK FOREST PROTECTION.

UTICA, N. Y., March 15.—*Editor Forest and Stream:* Inclosed you will find a copy of a petition, which is being very extensively circulated and signed in this part of the State. It is sent out by the Black River Fish and Game Protective Association, and we are anxious to enlist public sentiment in its favor as far as possible. Knowing your paper to be enlisted in the struggle for the preservation of the forests our association, takes the liberty of asking your support in its present undertaking. Petition headings will be sent to any one on application to the undersigned.—W. E. Wolcott, Secretary Black River Fish and Game Protective Association, *Herald* Office, Utica, N. Y.

PROTECTION OF THE ADIRONDACK FORESTS.

To the Honorable the Senators and Assemblymen of the State of New York:

Whereas, Large tracts of forest lands situate in the region known as the Adirondack Mountains, or as otherwise designated, the North Woods, are owned and held by individuals, and

Whereas, the State has no care or control of any forest lands so held by individuals, and

Whereas, A large part of said Adirondack Mountain region belongs to the public domain or is owned by the State, and

Whereas, The protection and preservation of the forests of the State is both desirable and imperative, and

Whereas, The forests of these Adirondack Mountains protect and keep ever full the sources of streams which supply water to the State waterways, and contribute largely to the proper rainfall over the State, and

Whereas, The forests are the last refuge for deer and other game in this State, constituting a self-supporting and self-sustaining food supply, and

Whereas, The land where these forests stand is undesirable if not absolutely worthless for agricultural purposes, and

Whereas, We, the undersigned, citizens of.....view with grave apprehension the unprotected condition of these forests, and foresee with anxiety the dangers which threaten them; therefore we do respectfully and earnestly pray that your honorable body will, at the earliest possible moment, enact such laws as will result in restoring to the public domain the Adirondack forest lands now owned and held by individuals, clubs and corporations, and that you will enact such other laws as will forever protect and preserve the whole Adirondack forests to the benefit and enjoyment of the people of the whole State.

HUNTING THE WILD TURKEY.

AN article in Forest and Stream of July 5, 1888, relating to the bighorn of the Rockies, made note of their extreme wariness and what a difficult matter it is to successfully hunt them; and I wondered then and still wonder if they are or possibly could be more wary and cautious than the wild turkey, numerous flocks of which roam the woods in Pennsylvania and other States.

The turkey is, I think, about the hardest game to kill that is found in this part of the country, for if he discovers a hunter on his track—and a very slight noise will put him on his guard—he has but to raise himself on his wings and soar far beyond the reach of the hunter, leaving him staring at the space in the trees through which he has passed. Or if not much alarmed, as is sometimes the case, the bird will lead the hunter a long chase on foot, giving him, perhaps, an occasional glimpse of his fleeting form through the bushes at a long distance, but not a chance to catch sights on him with rifle, and generally too far off for shot to do more than increase his speed or make him take to wing.

A turkey shot while on the wing with a shotgun—and I have been told with a rifle, but doubt it—will, even if hard hit, soar for quite a distance, and, as a general thing, finally drop in some level patch or thicket of some sort where he is safe from discovery and there die from his wounds. Of this I know of several instances. A friend of mine, two or three years ago, shot a turkey with shot. The turkey flew off across a large ravine or hollow to the opposite hill, and the hunter, feeling sure that he had hit it hard, crossed over after it, but it could not be found, though he hunted long and diligently. Some time after he was hunting about the same place, and happened on his turkey, one wing sticking out of a snowdrift. This is the fate of many turkeys every season, and the reason is that in their wings they have such great facilities for escaping the hunter. Another hunter of this place who has been very successful in turkey hunting, having killed three in one season, shot a turkey while on the wing, breaking a wing bone. This, of course, brought the gobbler, a large one, to the ground, when it immediately took to its legs, and, with the speed of the wind, so the hunter said, put quite a distance between them before he recovered from his surprise. He followed it for two hours, and finally had to give up, as it was growing dark, and the tracks still showed as lively on the turkey's part as at first.

A person not well acquainted with the turkey and his habits is very apt to think from what he has heard or read, that the turkey call is the greatest necessity in turkey hunting, and that with one it is an easy matter to secure a turkey. This is not the case, and in fact it is very seldom that a call can be used successfully, and about the only time is after a flock has been scattered and are badly excited. They will after a while commence calling to each other, and then is the hunter's time to get between two logs or some similar screen between the divided flock. Some of the turkeys will be quite sure to pass near him, when by a judicious use of his call he may bring them within range. (When I say "near" I mean about 75 to 100yds., as a shot at a turkey at a shorter distance is a rare thing.) It is a great deal more likely, though, that when the turkeys get within 100yds. or more of the hunter they will take a sudden notion to go another way. They have, as we say, "caught on to the call" and are suspicious after being scared from their feeding grounds. If the hunter has seen them at all he has most likely waited for a closer and surer shot and has not got any, but most likely the turkeys have picked their way through brush and thickets with heads erect and eyes glancing in all directions, and the moving into position of the gun, or any similar move, may have been observed by them and scared them away.

The best time to hunt turkeys is after a pretty heavy snow—heavy enough to deaden the crackling of the leaves under foot—when it has cleared up and they have come off the roost in the hemlocks to feed on beech nuts or hemlock buds. The best weapon, I think, because it is the surest, is the Winchester repeater of any caliber not less than .32, and the larger the better.

On one of the many turkey hunts I have taken in the last three years, a party of four of the Wildcat Club, of which I am a member, were encamped five miles west of this place, on the old Springfield, where we have a good, substantial hunting cabin, with woods for miles and miles around it. The Devil's Tract, on our north and east, is a very heavily timbered and rocky forest, in which the deer make, as a general thing, their headquarters, and where the turkeys roost in the great hemlocks. An excellent spring of pure water, so pure that to the taste it is almost sweet, trickles out of the ground not more than ten yards from the door of our cabin. Add to this the Springfield trout run, which runs in the woods back of the cabin and into the Blacklick Creek about a mile from the camp, and you have a fair idea of some of the natural advantages of our location for a hunting and fishing cabin. With plenty of eatables and a jolly set of campers we generally have a first-class time. It was the second or third week in December last, and we had been camped three days, during which time it had snowed and blowed almost constantly, and the only game that had been killed was a jack rabbit, which Ponto, the editor's hound, had given an hour's chase, and the junior merchant of the party had bagged. On the fourth day (Friday) we arose from our bunks to find that the storm had abated, and a good day's hunt might be expected. We all got ready after a hearty breakfast, which the Doc, our cook, knows so well how to get up, and started out. The editor and junior merchant declaring their intention of taking their two hounds, Ponto and Billy, and having a foot chase; the senior merchant thought he would watch around the deer crossing, and look up things in general; and the salesman said he was going for jaybirds with his little Stevens rifle. Taking my double-barrel shotgun I started out for turkeys. When I had crossed the Blacklick Creek, and climbed one of the steepest hills I found myself on a narrow flat composed mostly of beech, and well adapted as a feeding ground for turkeys. Here I struck a fresh turkey track which I followed for about a mile, and found myself in about as rough a place as I was ever in, an immense thicket covered all over with snow. The track had mysteriously disappeared; so, thinking if it had got too rough for the turkey to go through I wouldn't stand much chance, I gave her up.

I had seen her once, but she was too quick for me, and dodged into a thicket before I could get my gun up. She saw me when I saw her, and after that would every now and then rise and fly about 50 or 100yds. and then light and run a piece. I finally struck another track, which seemed to be a much larger and better one, for the first was a small hen and would not have weighed over 10lbs. at the most. I followed this track a piece when another good-sized track branched on to it. They finally separated, and I took the first of the two, which was the largest. Every now and then I would notice where she had been scratching for beech nuts, which put me on my guard, as I knew I could expect to come on her soon, and I almost had her over my shoulder so sure was I of getting her. I finally did come on her, and could just see her tail moving up and down as she would thrust her head forward to pick up a nut. She was around a bend in the old log road, along which she had traveled for some distance. I leaned cautiously around a tree and took dead aim on her body. The shotgun roared, the turkey staggered, and Nim, my spaniel, rushed in on her. But just about that time the turkey seemed to remember that she had wings, and away she went up through the trees. Another load of turkey shot did no more good than the first, and she flew on, likely only to drop and die in some laurel patch along the creek. On examination I found that I had drawn some blood, but concluded that it would be no use hunting for her.

I then went back and took the other track and followed it until I came to two wing marks in the snow on a log and the track ended. By this time it was getting toward evening, and not knowing exactly where I was, I thought I had better start for camp. After walking about a mile and a half, or perhaps two, I came to a farmhouse and discovered that I was going in exactly the opposite direction from camp, and was about three miles away from it. Had I not come to the farm, which I knew, I would have been in sight of town in the next hour. I changed my course and reached camp after a hard walk, tired and disgusted. I found that I had company in both respects, as after hunting hard all day nothing of much account had been bagged.

They had been very uneasy about me, as it was after dark before I got back, and they had been shooting signal shots, which I had heard and taken for a celebration over a monster buck or some other monarch of the forest, which had been laid low by the sure aim of some of the party. Or perhaps the wildcats, of which there were quite a number known to stay on the "Devil's Tract," had surrounded the camp and the besieged were acting in self-defense.

The senior merchant, who wears far and near spectacles, had lost one of the glasses and hadn't seen any deer on that account. We fixed a piece of wood in the frame so as to bind the other glass in, and this produced much merriment on account of the comical look which it gave the senior, and he laughed so much that he took a bad cold, which required wild cherry tea to break it up. About midnight a terrible thump, thump, thump, on the cabin door was heard by all. We jumped to our feet and reached for our guns; the Doc expressing the idea that it was a bear which, having smelt the frozen rabbit and our desire for blood, was trying to kick the door in, and suggested that we set fire to the cabin and make our escape in the smoke and confusion. The editor, who had pulled a blanket over his head, and whose nerve was rapidly returning, suggested that the Doc put the dish towel on the poker as a flag of truce, and offer the bear one of his tobies, which, if accepted, would likely have the desired effect, besides furnishing us with smoked bear meat. Finally some very expressive language from the outside was heard, and the opened door admitted a man. The newcomer was a messenger from the family of the junior merchant, and had orders to take him home dead or alive, as his flue was on fire and his family were afraid to stay alone with it. After loading his game in the sleigh, and expatiating on the question "Is marriage a failure?" he took his departure. At daybreak all was activity and packing up for the home stretch had commenced. At the breakfast table the senior merchant told a story concerning the only wild turkey he had ever killed. It seems that when a boy the senior worked on a farm in Ohio, and that every Sunday an immense old gobbler would come out of the woods and into the barnyard of the farmer, who was a very religious man and always attended church in the neighboring town, taking the senior with him. The boy had noticed the turkey's visits on several occasions, and it seriously troubled him to think that it always came on Sunday and that he had no way of securing the prize without the farmer knowing it. He finally concluded to run the risk and so, when one Sunday morning came, he was sick and unable to attend church with the family. As soon as he thought they were a safe distance away he took down the old flintlock musket, primed it and went out to the barn, where he stationed himself at a convenient hole in the side and thrusting the musket through, waited for the appearance of the gobbler. He came at last slowly picking his way across the fields with a gobble, gobble, gobble, which sent the blood flying through the boy's veins, and which was answered by the farmer's turkeys. On, on, he came until at last he was within range and the boy could wait no longer, so taking dead aim he fired, and rushing out discovered the turkey flopping around at a great rate. He finally got it killed and took it to the woods, where he hung it up, and on returning loaded the old musket and hung it up. The family returned and were no wiser. The next morning he was still indisposed and thought he would take a hunt, maybe he might run across the turkeys. He went to the woods, got his gobbler, and took it to town, and the storekeeper gave him a quarter for it. It weighed 43lbs., and was the largest turkey he ever heard of. The editor had killed three wild turkeys, I had killed one, and the Doc had killed one, for which he paid a dollar and a quarter. After breakfast and the packing was done we started out to take a hunt, they to hunt until dinner time and return to camp where the sleigh would come for them and I to hunt through the woods home. I was going after my turkeys of the previous day; this time armed with my Winchester, which I had longed for the day before; but as it happened I now got a splendid wing shot for a shotgun and had no use for my rifle at all. We all arrived home safe and sound and expect to occupy the cabin some during the trout fishing season and also next fall. W. R. T.

SHOOTING CLUBS OF CHICAGO.

XI.—THE GRAND CALUMET HEIGHTS CLUB.

THE man was nearly right who said of the Chicago clubs that there is not "any one of them alike." It is a fact that each has some features of interest not possessed by any of the others. It is this fact which has made the visits to the clubs so exceptionally pleasant, and which is the main foundation of the belief that so long a series of articles may still retain some interest, even for those not members of the clubs themselves.

Of all the clubs, none has more unique features than the Grand Calumet Heights Club, and none will better repay the curious seeker after novelty or pleasure.

This organization, not yet two years old, but already numbering well on toward a hundred members, is practically an offshoot of the old Lake George Club, which, like itself, lies in the famous Calumet region, by many thought to be the greatest duck country in the West, and equal or superior, in natural advantages, to the famous Fox Lake district. The Tolleston, Lake George and Grand Calumet Heights clubs, are all kindred "sandhill" or "Calumet" clubs, and lie not far apart in that favored region, as a glance at the appended map will show. Without some sort of map, it would be hard to explain the peculiarities of this singular section of country, although no map and no description can place it justly before a reader.

The main Calumet stream connects Calumet Lake with Lake Michigan. Its mouth is now built up with the wharves and docks of South Chicago. Calumet Lake is feebly imitated by Hyde Lake, Wolf Lake and Lake George, which lie between it and the big water. It was in this marshy district, supplied fully with all sorts of feed, and inhabited by countless myriads of ducks in the good old days, that the old Kleinman homestead lay. Kleinman *père* kept the wagon hot, hauling ducks to Chicago, and if the boys didn't have another wagonload killed by the time he got back there was blood on the moon. That was where the Kleinmans learned to shoot.

Out of this district two more absent-minded streams start forth, but these run in a general direction, exactly opposite to that of the main Calumet. The Little Calumet starts out for the middle of the State, changes its mind over by Blue Island bluffs, where it takes in the "Feeder" from the "Sag," and then whirls around four or five times and wabbles in an entirely drunken and disreputable fashion over toward Lake Michigan, which it reaches no one knows where. It passes through Tolleston Marsh, and is the basis of the Tolleston Club, which has been described in an earlier article. The only object the Little Calumet has in going out into the country in this way is to get up in the world. Near Miller station the Little Calumet is by the Government survey shown to be 19.3ft. higher than the Grand Calumet, which is only three miles distant from it. A canal cut across this neck—as is the proposition now before a certain improvement company—would drain Tolleston Marsh dry as a bone apparently. It would not affect the Grand Calumet marshes, which are always of just the same level as Lake Michigan, since they lie right along the shore, and would be maintained by seepage in some localities, even if the crawling current of their main waterway had more ambition than it has.

As may be seen the Grand Calumet, the remaining one of these three erratic rivers, is necessarily a slow, deliberate, tortuous and torturingly crooked stream. It doesn't go inland, and it doesn't go north. It just strolls off among the sandhills and pine barrens toward the foot of the lake, sometimes running within a half mile of Lake Michigan, and then again changing its mind and taking a whirl over in the opposite direction. Its general appearance is that of a long, crooked valley of rice and cane, running between low wooded banks, and stretching out from half a mile to three-quarters of a mile or more in width. Somewhere in this winding marsh, hid often by what a poet would call the lush and dank sedges of the marsh, creeps the deliberate Grand, 10 to 15ft. deep in much of its channel, a lake creek rather than a river, and a darling for ducks.

History does not quite agree whether it was Mr. Lloyd and Mr. Booth or Mr. Lloyd and Mr. Cleaver who first explored the Grand Calumet to its end. The first two gentlemen were old Calumet Lake habitués, stopping at Florence Benner's old house, and the latter was one of the old Lake George Club. They bethought them it might be well to seek fresh fields and pastures green, and the result was an exploring voyage, which started at Wolf Lake, went through the cut-offs into the Grand Calumet and down

MAP OF LAKE MICHIGAN SHORE.

that stream to its mouth. The first camp was made about a mile below the village of Clarke. From there on the explorers found themselves in what is very nearly a complete wilderness. Huge sandhills, covered with scrubby oaks and gigantic pines, rose up in serrated ridges. The river meandered and meandered, often nearly blocked by floating islands of matted vegetation. At last they got through, and their little craft caught sight of the blue waters of Lake Michigan, nearly at the extreme foot of the lake. Fifteen miles up the beach, not a house and not a soul in sight. Four, five, eight—nobody knows how many miles back from the lake—and not a soul or a habitation for one, except the old negro who was found dead in his cabin, and the dugout of the horse-thieves who, undiscovered for months and months, were finally arrested in Indiana without requisition by South Chicago parties, and justly, though non-technically, sent to the penitentiary. Eagles were seen in the woods, and can be seen to-day. One night a wildcat came down to the beach. Wolves are still sometimes seen. The country is to-day as wild looking as any you will see in the middle of the North Woods. Picturesque, rough, a little gloomy and forbidding, a stranger set down in the middle of it might think it the foothills of the southern Rockies. It seemed only pleasing to our explorers, who hastened to spread their sails, and so sped in their hunting boats across the foot of the lake, north and northwest, until they landed at Sheffield on the shore, and so again passed by means of a narrow channel into the system of lakes from which they started.

This was two years ago. This was within thirty miles of Chicago. No other city has anything of consequence which Chicago has not also, and Chicago has some things which no other city has. I submit that there is no city in America which can show so strong a string of sportsmen's organizations, and none which has so good and immediate a foundation for their existence and their growth. There is no more notable a sporting center in the country, unless it be that on Chesapeake Bay, and it is probable that a familiarity with that section would lead one to give it second place.

Very well, our explorers had seen the new land, and pronounced it good. The result was the organization of the Grand Calumet Heights Club, the leasing of 1,500 acres of land lying between the lake and the Grand Calumet River, the securing of a tidy flag station twenty-eight miles down the B. & O., and the expenditure of considerable sums in buildings and improvements. The club was put on a good footing. Memberships were placed low, at $25, although none but proper persons were ever allowed to enter the club. Annual dues were placed at $5. Bonds were issued, which even now are gradually being wiped out by the accretion of funds resulting from the sale of memberships and the paying in of dues. The membership was limited to 100, and, although the club is only in its second year, its membership is now seventy odd, being specifically as follows:

President, Alex. T. Loyd; Vice-President, J. J. Gillespie; Treasurer, W. N. Low; Secretary, E. C. J. Cleaver; Directors, the above, with Wm. L. Pierce, A. W. Harlan, W. A. Wilde and E. T. Ellicott. Members: Edward Adams, S. M. Booth, Geo. Barnard, Jas. F. Bird, W. H. Barry, J. E. Baggott, T. H. Ball, Dr. Boerne Bettman, O. W. Barrett, F. R. Bissell, E. C. J. Cleaver, C. S. Cleaver, F. W. Cleaver, W. J. Clark, W. T. Clark, H. E. Chandler, Eugene Capelle, John Critchell, G. H. Carlson, C. A. Cleaver, R. H. Donnelly, F. H. Dahlgren, Dr. L. L. Davis, E. T. Ellicott, C. E. Felton, J. J. Flanders, J. J. Gillespie, John Gillespie, W. H. Gill, Oscar Krouse, Chas. Kern, A. T. Loyd, C. C. Landt, W. N. Low, Harry Leser, John Leser, Geo. W. Lauterbach, L. J. Marks, K. Marks, Geo. J. Maillet, W. F. McWhinney, Walter Metcalf, F. E. Moore, Jas. L. McBirney, T. H. Miller, Jr., Geo. E. Marshall, W. Penny, O. H. Porter, W. L. Pierce, James Pittaway, E. N. Hurlbut, R. W. Hyman, Jr., Dr. A. W. Harlan, H. E. Howard, C. N. Hale, C. R. Heneage, Wills Isbell, H. W. Jenney, E. S. Jones, D. T. Jones, E. S. Rice, E. C. Sherman, W. Spalding, John M. Smyth, N. C. Simmons, Robt. Somerville, Frank Taylor, Arnold Tripp, A. T. Thatcher, John Wain, W. A. Wilde, C. E. Willard, C. E. Worthington, T. J. West, W. W. Wilcox, A. C. Young, S. E. Young. Honorary members: M. A. Hart, M. T. Hart, F. H. Britton.

In the foregoing list there is a large percentage of young men, and many of these are still young in the sportsman's craft. They are as a body, however, energetic, enthusiastic, progressive and aggressive, and for the time they have been at it have done more than any one club of the city in the way of growth and development. The social element is strongly developed in the club. The club house, situated directly upon the shore of Lake Michigan, is a most delightful retreat in the summer. The spot is always breezy, entirely free from mosquitoes, and possessed of that interest which always attaches to a wild and unfrequented locality. Last summer parties of good numbers were an almost constant occurrence. Not a week passed without seeing some one down at the club house, and on one occasion ninety guests, ladies and gentlemen, clamored for place at the dinner call. Fishing, boating, bathing and exploring are all possible at the Grand Calumet Heights Club, which has, indeed, a far greater diversity of interest and amusement than is possible at any club of the city. Trap-shooting and target shooting with the rifle are possible under peculiarly favorable conditions. The blackbird traps throw the birds directly into the water of Lake Michigan, and those which are not hit are recovered unbroken, for the water is only a foot or so deep on the gradual beach, and is found not to damage the birds thus dropped into it. There is probably not any other trap ground in the country where this unique feature obtains. The big lake is useful as well as beautiful. Its presence renders the use of the rifle a thing not to be constantly guarded and dreaded, as must be the case at most clubs. No target butts are necessary, and the bullets have the whole lower end of the lake for an untenanted range. Long-range naval ordnance would be harmless there, for it is a portion of the lake rarely visited by vessels, and the pleasure craft of the club members show almost the only canvas seen there.

The lake fishing off the Calumet beach is good. Two ladies have taken as many as 100 perch in a morning's fishing, and although perch fishing does not afford very exciting sport, it serves to pass away an idle day for gentlemen as well as the ladies. The Grand Calumet, distant only half a mile inland, often shows a good day's fishing for bass and pickerel. The woods near at hand have a good many rabbits in the winter time, and the close law has developed a pretty fair supply of ruffed grouse. There is always sport of some sort to be had in the daytime, and at night the great veranda or the big reception room invites to a dance if the season is such that the fairer sex is present; or if it is in the ducking season, the tired hunters may cock their feet upon the balcony rail, or blow blue clouds and tell portentous yarns around the mammoth stove in the gun room. It is the just boast of the Grand Calumet men that one may visit their club every week in the year and amuse himself differently each time.

The policy of this club is not a close one, and there is no suspicion of the cloven foot in any of its management, such as might suggest that the club was mostly an affair to glorify or gratify a few. There is no rule barring out such visitors as the members choose to bring down, and "the more the merrier" seems to be the liberal and hospitable precept. Gaming is not allowed in the club house, there being one rigid rule, that money shall not be staked at cards.

Leaving aside all social and summer pleasures, however, let us consider what the club may claim under its primary object, that of a ducking club. Let it be borne in mind that this Calumet country has always been a magnificent duck country, and even to-day is by no means shorn of its glory, since the natural feed and the natural resorting places for the ducks still exist in much of their former excellence. Let it be remembered also that this club lies almost directly at the foot of Lake Michigan, with nothing between it and Macinac Island. The lake flight—and it is a very considerable one—naturally coasts along until it goes near to the heel of the lake. It may be that the bluebills and redheads find some resting place off the big reef at Kensington, or some feed in the lines of city sewage which run out into the lake yet higher up; but, if this is so, it only tends to establish a shore flight up and down the lake. Indeed, such a flight does exist, and often yields good tribute to the gunners of this club. Upon the other hand, if the ducks wish to leave the lake they may naturally be expected to do so over the narrowest possible strip of land dividing the lake from the inland feed; and they may also be expected to establish a flight back and forth between these localities. This is precisely the case at Grand Calumet Heights Club grounds. The birds work backward and forward between the lake and the marshes of Little Calumet and Grand Calumet. Harried too persistently on the great Tolleston marsh they fly over and drop into the big lake, or stop on the quiet river. Pounded at too severely on much-beleagured Calumet Lake they essay a wearied flight between the devil and the deep sea, and drop into the little-hunted bends of the Grand Calumet, where, alack the day for them! they find the little boat houses of our club, and meet the puff of the expectant gun, as deadly, if less frequent than before.

The boat houses, and the little abode of old Blocki, the odd character who, with his ten-year-old son Gus, takes charge of them, lie on the bank of the river, about half a mile from the club house, and a few hundred yards from the little railway station building. A crooked trail winds through the sandhills over to the boat house, marked by an occasional blazed tree. This sandhill country is very puzzling, the different little eminences being so much alike and the character of the wooded

growth monotonous. I have rarely seen a country, outside of the sandhills of the Cimarron—which this section much resembles—where one could so easily get "turned around." It is a joke of the club to misdirect a new member as to the path, in which case he may be two hours or so in going the half mile. There is a rumor to the effect that one member has ordered a half mile of wire, which he proposes to stretch along the path.

The marsh shooting of the club is done with boat, decoys and blinds, as on the other marshes mentioned, and it will not be necessary to describe it. The boats used are of the flat, home-made South Chicago make, or of the Green Bay model. The president of the club, Mr. Alex. T. Loyd, has built him a couple of boats, one of cedar and one of sassafras, on a model of his own. This model is over sixteen feet in length and is thirty-three inches amidship; the swell of the boat is a trifle aft, and is intended to be just where the weight of the shooter comes, a fact which gives the boat a rather singular look; the cockpit is high and short, the boat being better for rowing than for poling on that account; the clinker strips run up sharp fore and aft, and swell out over a round and trim bow and stern, with a high rake and a sharp point, almost a veritable image of that notable seaboat the Esquimaux skin cayak. This boat is on the whole a graceful one and a good one, not so steady as the Green Bay boat, but so extremely good a sea-goer that Mr. Loyd often goes out when the other marsh boats dare not venture forth at all.

Of the boats used on the big lake, there is space to describe only two, Mr. Cleaver's Merganser, and Mr. Loyd's Calumet Turtle, both of which offer something new in duck lore. The Merganser is a vast, low-lying scow, with a great water-tight cockpit nearly 3ft. high perched like an elongated turret upon it. The scow is worked out a quarter of a mile or so into the lake, and anchored with a 200lbs. iron anchor. The cockpit is surrounded by brush nailed fast to it. The fleet of decoys is let out down wind from the corners. The great boat rides the heaviest waves with ease. The ducks apparently mistake it for an island, for they do not pay much attention to it, and come right into the decoys. Very good bags of mergansers and also of redheads and bluebills have been made from this odd contrivance. The ducks understand marsh blinds, but they are ignorant about this one, evidently, and they decoy into it much better than to a grass blind. The Calumet Turtle is built on much the same principle, except that its cockpit is not so high, and its supporting scow or boat is neater and trimmer, being pointed at both ends, only a few inches of air chamber being left between the perfectly flat top and bottom. The boat rides low in the water, the waves washing over its supporting platform boat, and running up on the sides of the turret in such way as to leave its outline indistinct. The blind is built of brush as above described. Both of these boats seemed to me ingenious and effective; so too did Mr. Loyd's scheme of fastening a large air-tight sealed tin can under the cover of the bow and stern of his hunting boat. The latter thus provided, weighs hardly a pound more, and even if filled with water, the big tin life-preservers would not let it sink. Here, I think, is a valuable hint to those who go down to the marsh in boats.

Besides the varieties of sport already mentioned there is one kind of duck shooting followed at the Grand Calumet grounds which is not possible at any of the other clubs and which impresses one as rather a unique sort of fun. This is merganser shooting along the ice in the spring. There has been a large body of these birds wintering on the lower end of the lake this year, and they are always early in making their appearance. They frequent the marshes to some extent, but seem to prefer the shallow water along the bar. They are restless in their habits, and continually fly up and down the shore. The ice is packed into the lower end of the lake and crowded upon the bars by the action of the waves into a huge field of hillocks and rough ridges, which is this spring three-fourths of a mile wide. A warm day and an off-shore wind breaks the ice into long seams and threads of water, and often moves it all out except about 100yds. of rough little ice cliffs that hang on the bar. The hardy duck hunters walk out upon this ridge or cross to it in boats—in one case a hunter poled out on a cake of ice—and put out their decoys in the strip of water lying beyond the edge of the icebar. No blind is used, the shooter lying down on the edge, or seeking shelter in some cave or crevice. The birds work back and forth along the ice and decoy very well indeed, and good sport is had at the hard-flying if hard-eating sheldrake and kindred ducks. Often a good bag of bluebills and redheads is gotten in this way. I cannot imagine any more picturesque form of sport. It was a foggy day when we went out on the ice, and in a moment we were out of sight of shore. The ice rose all around us in a thousand huge fantastic forms, glimmering dully through the mist and making the scene like the dream of the Arctic sea.

The club has two main buildings, the club house and the keeper's house. The latter is more than ample for Mr. Harnes and his good wife. They keep it well and are well liked by all who go there. Their tenure is that of a salary and perquisites. Mr. Harnes furnishes all the blackbirds used by the club, and has the privilege of sale of ammunition and other incidentals. He also boards the members at a fixed rate, and his privileged little hotel among the sandhills, and its select attendance will, I hope, add much to his revenue this year, as doubtless it will, since this is one of the best visited clubs out of Chicago, its members feeling sure that there will always be something to interest them in a visit at any time of the year.

The club house itself is a large and commodious place, abounding alike in a business-like fitness and a great capacity for the sweet do-nothing. The interior is not yet fully finished, but soon will be. The furniture is neat, durable and appropriate. About $6,000 has been expended thus far by this young club.

There is always a certain romantic interest attaching to the sea or to any large body of water, and no part of Lake Michigan has a more vivid if more melancholy interest than this remote and rarely visited lower end. It is a dangerous locality for vessels, as the great quantity of wreckage and the great number of wrecks along the beach attest. A whole volume of pathetic stories might be gathered from the records of the crippled and stranded drifters whose big bones lie scattered along the shore, or help the importance of the club's vast woodpile. There is a flower garden in the front yard built in the hull of a fishing boat which the boys dug out of the sand and towed down the lake. A heavy window trap, wrenched from its hinges, and bearing a written message nailed on its face, hangs on the wall as one of the ornaments. The vessel Melbourne grounded outside on the bar off Calumet Beach, and the crew sent in this floating message to the members of the club who stood watching her. A man was sent to the nearest telegraph station, and a dispatch brought a tug flying down from Chicago that evening, and thus the Melbourne was saved. Once a large yacht was found on the beach in the morning. Boats put off and discovered the body of a young man lashed fast to it. He was drowned. So, too, it afterward transpired, were his two young companions. The parents of none of the boys were aware that they were out of the city.

The photograph from which the engraving of the club house was made was taken, one muggy morning, by Mr. W. L. Pierce, one of the leading members of the club, and perhaps as ardent a photographer as ever was. It was Mr. Pierce who once had himself let down by a rope, fifty feet or more, in order to get a good view of the Horseshoe Falls of Niagara. He says the suck of the great body of water was such that he almost lost the use of his legs, and was unreservedly the worst scared he ever was in his life.

It was in the early season when I last visited this peculiarly interesting club, and wandered along the sandy beach on which, like a big life-saving station, the homelike club house stands. The ice was still in the lakes and streams, but the air was full of the mysterious suggestions, the sweet melancholy of awakening spring. The year was about to begin anew. In the distance rang the "git a-lan-n-g!" of the busy jay, while under foot in the woods showed the patient face of the first violet. Things were about to begin over again. How good, one could not help thinking, to be privileged to come down here, so singularly close, so peculiarly far from the big city, and see the year begin again. Perhaps for some tired fellow it may mean a great deal more; it may mean a beginning over again of life, and a forgetting of the rapid coming on of the sere and yellow leaf. So now is a good time to see and say good wishes to these preservers of good hope—while the bluejay is hustling as though his soul depended on it, yet while the violet is fresh in the untracked woods. Save us! Gentlemen, let us begin again. The violet and the bluejay have no quarrel, nor do rest and work conflict. E. Hough.

No. 175 Monroe Street.

SNARING AND THE MARKETS.

Editor Forest and Stream:

I can imagine myself meeting your correspondent "Hermit," taking his hand, and with whatever grip my 210lbs. of bone and muscle can possibly command exclaiming, "Put it there." I have had quite an extensive experience (in my younger days) in grouse snaring, thirty years ago. Well do I remember the cold frosty October and November mornings when I have jumped out of bed and without half dressing myself hurried off to these "twitch ups" to find now and then a cottontail rabbit and once in a great while a partridge. I have had thirty to forty snares set and well tended too, and in all my boyhood's snaring for grouse the number caught could be counted on the fingers of my two hands. Lots of rabbits have been found in them, and so they were reset the next fall.

Perhaps some one will say, "Well either you do not understand snaring or else it was a poor game country." Let me see, the locality was southern Massachusetts, Worcester county, which was and now is a fair place for grouse. When twelve years old I commenced—and soon took the knack of—snap shooting the birds in the brush, and rapidly advancing in this method of killing them I well remember one day returning home after a short tramp of perhaps two hours with five partridges in the game bag, more than I could snare in a whole season. What then was the outcome of it? Why, I was a "sportsman," a "true sportsman," I was ready to kick and tear up the snares that the other boys had set, and never from that day to this have I set a snare or trap of any kind for grouse. But I can but remember it, and it is with no pride that I write it; it was a mean, contemptible thing to do, but it was the "ethics" of hunting and "sportsmanship" to tear up the traps and snares that the other boys had made; and why? Well, it was taught to me by a "sportsman" who shot birds for the market and owned two pointer dogs. He learned that the writer was "brush shooting," and "killed a bag full of birds one day," and hired me to shoot with him and his dogs, offering me the magnificent sum of $3 a week through the season, "rain or shine." Yes, $3 a week for a ragged country boy, with the traditional slouch hat, one suspender and sub-post office, which, taken together with a ricketty old muzzleloading shotgun, and the rest of yours truly was about to become a "true sportsman;" kick and tear up snares that farmers and farmers' boys had set upon their own farms and woodlands, and kill our birds in a "sportsmanlike" manner. For this market-shooter I worked for that season and the next, and at the end of the second season I do believe that there was not a partridge left for a radius of two miles from our home. It was seldom that we ever had a shot at them on the ground, for the dogs would point them for us, and they did not lie very close, but often got up wild, and only by the quickest work could we get them, so wild were they; but well now do I remember the number at the end of the first season's shooting, 413 birds. Great Scott! Talk about snares—of course, some of them were woodcock, and a few quail, but the majority of them were grouse, and, although they were shot and killed in a legal and "sportsmanlike" manner, there were fifty grouse destroyed by the use of dogs where there was one caught by snaring.

This man is still living and shooting birds for market every season, and the result is that there are but very few grouse in the seventeen square miles—several of them woodland—that form the township in which he resides. It is nothing uncommon, the farmers in that locality tell me, to have their chickens killed by "bird dogs" that belong in the village, but run loose through the spring and summer. But they also say that the sportsmen are always ready and more than willing to pay for any damage that the dogs do, so they do not find much fault with them. Now it is not that snaring birds is in the interest of game protection that I would claim, but I do believe that, as poor a shot as I am, with my old double-barrel Wm. Moore & Co. and a pair of good pointers, I could exterminate more grouse in "true sportsmanlike" manner, *i. e.*, take every fair wing shot and "ground sluice" them when no one is looking, than any three snarers would, taking the season through.

There is, or at least should be, "reason in all things; and while the writer is a firm friend of game protection, when it really is protection that protects, it makes me tired to hear sportsmen talk of protecting game, making laws to stop the farmer's boy from setting a few snares, etc., etc., and then in the next breath tell about going out and bagging six or eight birds in a single morning—in "true sportsmanlike manner." While I am well aware that every shooter who owns a dog and gun does not do this, yet there are those who do hunt and kill the game, too—more's the pity—who can, and do, kill half the birds shot at, and one of these death-dealing market-shooters using dogs will do more to exterminate the birds than most people are aware of; and while no one attempts to stop his selling the game in market, a great cry goes up against the snarer.

Stop the selling of birds in the market, and then you stop the extermination of game, but as long as game is sold in the market, and will bring in the almighty dollar, just so long will the market-shooter and the much-despised snarer ply his vocation, and just so long will the real, genuine, simon-pure sportsman—who goes afield just for the pleasure and recreation there is in it; the excitement of smelling a little burnt powder, the joyous thrill of now and then seeing a grouse tumble to the crack of his trusty breechloader, and last as well as least a choice morsel for the table—find that there is a scarcity of game, and while he may find plenty of old and half-decayed shells lying around to remind him of the real cause, he is apt to attribute it to ticks, snares, migration, a hard winter, deep snows and crust, and a dozen other causes, he does not once think of the "true sportsmen" that exterminates the game for the few dollars he may pocket. Iron Ramrod.

Somerville, Mass., March 1.

WILDFOWL NOTES.

Towanda, Pa., March 11.—A number of black and fish ducks have wintered in this neighborhood, seeking the open water of the river for feeding and resting grounds. Occasionally one is killed, but generally, owing to the difficulty of reaching them, allowed to rot away on the shore. A man (cannot call him a sportsman) found where a small flock came to feed at midnight in a spring hole among the willows. Two flames of fire from the murderous gun at that hour and half the flock (four birds) were bagged. One flock of wild geese reported going north last week.—Sus. Q. Hannah.

Maple Lake, Minn.—The first geese of the season made their appearance here March 12. Two flocks were seen early in the morning, going north.—E. A. T.

Welland, Ontario, March 13.—A large flock of wild geese passed over Port Robinson to-day, going northward.—E.

Minnesota.—Heron Lake, March 12.—Mallards and pintails came to-day, and if our Legislature wills it I shall be at my favorite sport in a few days. This is the lake *par excellence* for canvasback in springtime, and should the bill pass that is pending before the House, I may bag sixty a day before the week is out.—Rustic.

The Massachusetts Association.—About seventy-five members of the Massachusetts Fish and Game Association partook of the usual monthly dinner at the Hotel Thorndike last Thursday evening. President E. A. Samuels presided. Several solos were contributed by Mr. M. W. Whitney, thereby adding much to the enjoyment of the occasion. Messrs. Thos. H. Hall, Austin A. Martin and Outram Bangs were elected to membership and the following were proposed: Gov. Oliver Ames, Hon. Halsey J. Boardman, Hon. A. H. Rice, Hon. J. F. Dwinelle, Hon. W. S. Gaston, Hon. J. A. Andrew, Hon. J. Q. A. Brackett, Messrs. F. L. Brown, H. K. Leonard, C. A. Reed, C. B. Pratt, C. R. Crane, I. W. Butler, J. E. Hall, B. D. Sweet and F. A. Mudge. This resolution was adopted as a substitute for so much of the resolution adopted at the last meeting as pertained to referring cases of violation of the laws to the State Commissioner for prosecution: "The officers of this Association may, when practicable, refer cases of infringement of laws for the protection of fish and game to the State Fish and Game Commissioners and request them to make prosecution for the Commonwealth as provided by law." It was voted to have a lecture given at an early date, to which the members of the Association should be permitted to bring ladies. It was voted to endeavor to secure the repeal of the law permitting the snaring of quail, partridge, etc.—A. W. Robinson, Sec'y.

Pennsylvania Quail.—Auburn, Susquehanna County, Va., March 11.—"Nom de Plume," of Springville, quotes me correctly in your last issue. I still affirm the report I then made to be correct. I spend much time rambling about the fields and woods as well during "close time" as in the game season, often to the neglect of business and profit, yet have not seen a single quail during the past two years. As to woodcock, but two came under my observation during the past season. One was brought in by the cat in late summer, the other fell to my gun Oct. 23. Surely "Nom de Plume" has been highly favored in the covers so near at hand, and he must be a sportsman possessed of no mean degree of skill to make such a score under adverse circumstances. I will yet give him a chance to "show up" the quail, as but four miles separates us, and I would take a much longer tramp any time for an opportunity of feasting my eyes on a bevy of the little beauties.—Bon Ami.

Oregon.—Monument, Grant County.—I am camped on the north fork of John Day River. This has at one time been a fine game country, but deer are not as plentiful as they used to be; there are a few elk still left in the higher parts of the Blue Mountains near the head of this river. —E. S. C.

Manorville, Long Island, March 17.—Snaring partridges around this part of the island was very extensively practiced this last season.—C.

Camp-Fire Flickerings.

"That reminds me."

263.

MCGINNIS is a noted sportsman. As his name indicates; he is a native of France; and what he does not know about goose hunting is not worth knowing. Year after year, while the flight is in progress, he takes his old muzzleloader (a small cannon) and conceals himself in the willows by the Platte. The birds that he hits invariably drop into the river. Those that fall on the land are scared to death. So long as he remained on *terra firma* he was all right; but on an evil day he purchased a copy of W. B. Leffingwell's "Wild Fowl Shooting," and learned a new wrinkle.

He must have decoys, and the aforementioned muzzleloader not doing its duty, two of Mrs. McG.'s tame fowls are secretly slaughtered, stuffed with hay, a crooked stick giving the proper curve to the neck, and taken to the river. Here a horseshoe tied to the feet of each serves as ballast and a clothes line keeps them from being carried away by the current. Alas! The geese cross the river as before, and alight on the sandbars half a mile away from McGinnis in the bullrushes.

Straightway he posts himself upon the subjects of "blinds." He drives to town, procures a large packing box, takes it home and spends a day in strengthening it and making it watertight. If he had kept the matter to himself we would have been none the wiser; but his boasts of the scores of geese that he was "going to get" led to some private detective work, and there were three heartless scapegraces hidden in the bushes on that December morning when McGinnis and his hired man loaded the box on his flatboat, put in about fifty bricks, and pulled for the sandbars.

The geese were at their feeding grounds, and before their return the shooting-box was in position, weighted down, and Patrick had returned to shore. We imagined that McGinnis was not happy in mind. The Platte is no duck pond, and every now and then a wave would dash over the box, or a cake of ice threaten to break in its sides. We could almost hear the Parisian ejaculations of the occupant, and the air above the blind was of a pale, sulphurous hue. At length the geese returned. They flew low as they approached the bar, and McGinnis, rising, gave them both barrels. One goose dropped to the water, and the rest decided that they were looking for another spot. McGinnis's first shot was his last. Below the river was white with birds, but none came near him. We could see him peer down stream, and then—"He's goin' to float down to 'em, as I'm a sinner," said Dick. Sure enough, one brick after another was pitched out of the box, and the next instant McGinnis's scow was riding proudly on the raging waters of the Platte. It did not hug the shore, but took the center of the stream at a good four-mile rate, and McGinnis, in endeavoring to maintain his equilibrium, forgot geese and everything else. We knew he could not drown, and that the long bridge would stop him, so we rode back to town, and two hours later poor soaked McGinnis, *sans* hat, *sans* gun, *sans* everything, walked up the main street from the south. We were on the lookout for him, and the first words to greet him were, "Hello, Mac! How's goose hunting in a canal boat?" A sickly smile lighted his features as he whispered, "B'ys, Oi'm dhry. Fat'll ye's take to kape it shtill?"

SHOSHONE.

NEBRASKA.

264.

No. 264 is the landlord's story contained in the sketch on another page entitled "September on Big Sandy Bay." It is so good that it ought to go in this corner, but it is all the better for the setting "Cayuga" has given it.

Sea and River Fishing.

THE PROTECTORS AND PIRATES.

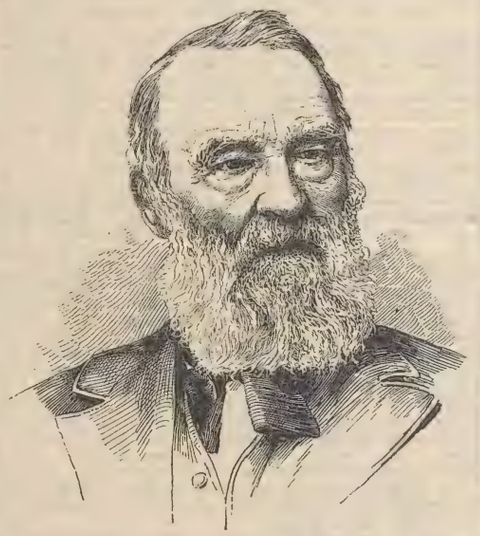
Editor Forest and Stream:

With the approach of spring the thoughts of every angler turn occasionally to the lairs where fish of various kinds have their homes. With these pleasant thoughts come others not so pleasant to the anglers of central New York, who look with disgust upon the ravages of fish thieves under the very eyes of men appointed and paid by the State to prevent such outlawry. We have a grand aggregation of waters, which ought to be the pride of the anglers of the State; but they are practically set apart to the spoliation of men who trample law under foot while they defy the angler. Within an hour's ride you can reach any of these waters from Syracuse; some can be reached within thirty minutes. Within this range is Cayuga Lake, Owasco Lake, Skaneateles Lake, Cazenovia Lake, Oneida Lake, Onondaga Lake, Cross Lake, many small lakes and ponds, the Seneca River, Oneida River, and a large number of trout streams. In a ride of from two to three hours this area of water can be doubled. Every lake, pond and stream is a natural breeder of fish of its kind. In fact it may safely be said that Oneida Lake has no superior anywhere as a fish breeder, and it may be as safely said that nowhere do more pirates abound. All of these waters are constantly subject to the unblushing ravages of law-breakers. During the past winter very large quantities of fish have been taken through the ice and sent to market. As soon as the ice is gone hundreds of nets will be put in operation, and continued through the season. So it is that these waters become so depleted that the angler has to surrender pleasure to the greed of the pirate.

Now, all this outrage and defiance of law is so bold that it is in no sense a secret. So-called agents of the State know better than anybody else of these depredations; but they quiety draw their pay, occasionally capture a net or two, and let the nefarious work go on.

Is it not somewhat anomalous to see the Legislature make appropriations for hatching and breeding fish and at the same time allow its agents, appointed to protect the result of such appropriations, to defeat their object by refusing to support law for the protection of fish? These so-called game protectors are in these parts worse than nothing. Both the Governor and Legislature are wasting the people's money in supporting them.

What is much needed is a chief officer to supervise these agents throughout the State, and make them do their duty or surrender their places to men who will do so. This officer should be a man of high character and willing to serve without compensation, or with such small compensation that every ruffian in the country would not seek the place. Why not place such authority with the Fish Commissioners?



Let the laws be enforced, or repeal at least that part of them that inflicts lazy, indifferent "protectors" upon the public.

ANGLER.

SYRACUSE, March 15.

THE SUNSET CLUB.—II.

"BRETHREN," said the president, after the club was opened in due form, "we have with us to-night Hon. Emery D. Potter, Fish Commissioner of Ohio. I will not follow the 'long time custom' of reviewing the active career of our esteemed friend, but will say for the information of new members that the Judge began his business life by reading law with the late General Dix, of New York. In 1833 was admitted to practice in New York Supreme Court; elected Circuit Judge in 1885; and, in Ohio, was elected to the twenty-seventh Congress in 1845, and in the year of 1848 to the thirtieth Congress, where he was chairman of the standing committee on post-offices; introduced and was instrumental in carrying through the bill reducing postage to the uniform rate of three cents, and was the author of the bill for coinage of the three-cent silver piece. A member of the Lower House of the Ohio Representatives, and in 1873 was elected to the State Senate. There are but few men in the United States who have devoted so many years to the study of ichthyology, and taken greater interest in the propagation of fish, and been the means of introducing the various species in our inland streams. He has always advocated that outdoor exercise was essential to the maintenance of good health, and we mention with the air of a proud fisherman, who, after a day's outing, returns with a well filled creel, that the Judge walked to-night from his home to the club room through a blinding snow storm, although he lacks but a few years of scoring the ripe old age of one hundred. His active mind, bright eye, keen perception and old-time grasp of the hand are eminently characteristic of his love of outdoor exercise, to his indulgence in which he attributes his freedom from many of the aches and pains which afflict mankind. We take pleasure in introducing Hon. Emery D. Potter, State Fish Commissioner of Ohio."

HON. EMERY D. POTTER.

As the veteran rose a long-continued storm of applause greeted him. Hale, hearty and light of foot he stepped to the rostrum, and when the hall was as quiet as a deserted village church, he said, in a clear, distinct voice: "I asked an old sportsman what could be said about health and longevity. He said, 'To be a thorough sportsman comprises all that can be said upon the subject.' I am often asked what has been the cause of my robust health. I can best answer by giving my manner of life from the beginning. From my early childhood I fished in the cold streams of Herkimer and Otsego counties, New York, for the speckled trout, beginning with an alder fish pole, a chalk line and angle worms, and passing through all the gradations of the art up to the rod and reel, with a book of selected flies; and when the small streams were fished out, I went to new fields for better sport. For over fifty years scarcely a summer has passed that I have not spent several weeks, sometimes running into months, on the north shore of Lake Superior among the speckled trout, coasting in an open Mackinac boat, with two Indian voyageurs; coasting from the Soo to Fort William, taking in all the favorite fishing grounds, including the celebrated Nepigon, seldom coming into camp without a well-filled creel of the *Salvelinus fontinalis*. My limited time will not admit of any fish stories, as I am only endeavoring to impress upon the minds of my young friends the means of attaining and preserving vigorous youth, muscular manhood and a green old age; for I can say, without boasting, that I see well, hear well, feed well, digest well, am without any organic impairment, and can keep up with my bird dogs afield from morning till night.

"My exercises have not been confined to the rod and line. For many years before coming to Toledo I hunted the game found in the vicinity of Cooperstown, N. Y., consisting of squirrels, rabbits, partridges and woodcock, but when I came to this city, over fifty-three years ago, large game was in the greatest abundance, so plentiful that I have killed deer in every ward of the city. My profession—for I belong to the legal brotherhood, being the first lawyer that ever hung out a shingle in this city—required close application to office work; but in the fishing season, on every Saturday morning before breakfast, I took my fishing traps and boat, rowed about four miles to the fishing grounds, where I spent the entire day, taking neither food nor liquids of any kind, until my return at night, when a good substantial dinner wound up the day's sport. In the shooting season, with my rifle on my shoulder, on every Saturday I visited the haunts of the deer and wild turkeys, and seldom returned without my game. You may think that without eating or drinking anything, not even water, one would suffer from hunger and thirst, but you, my young friends, try it, and if you are among game, you will not think of eating or drinking. Killing from two to three deer a day was a common occurrence, and one day I walked three miles before breakfast, and before 10 o'clock in the morning I had five deer, three of them bucks that would weigh 200lbs. each, hung up by the heels. My Saturday's respite from office labor I continued for many years. During all these earlier years I abstained entirely from alcoholic or stimulating drinks. Young gentlemen, you don't need stimulants. Nature has provided you with vigor equal to any emergency, and it does not require any quickening by artificial methods."

Here an old deer slayer with frosted beard and locks bleached by the snows of eighty winters, inquired of the speaker as to the age when a man might be allowed to take a little something.

The Judge said: "That depends entirely upon conditions; as long as a man is in good health and can stand fatigue without any diminution of physical force he had better let drink alone. But when from fatigue, after unusual exercise, he begins to feel a letting down, although he may recuperate by rest, yet a little whisky makes him momentarily feel young again, and that pleasure, perhaps, compensates for the depression that succeeds the effect. My experience is, that a moderate stimulant to persons in the down hill of life is not to be condemned. I have often heard old-time ministers of the gospel quote Paul to Timothy as a justification for taking a drop themselves, but I think the text will not bear that interpretation. 'Take a little wine for your often infirmities' was in the nature of a prescription for some organic trouble that Paul knew Timothy to be afflicted with. Whisky, as a medicine, is often prescribed by the best physicians with great benefit. An instance is related of John Brown, of Haddington, the celebrated Scotch divine, and author of 'Brown's Concordance of the Bible.' When traveling from one settlement to another on horseback he was overtaken by a blizzard, and struggling through the drifts of snow was barely able to reach a cottage door, and being assisted to enter, unable to stand, the cotter set to work to brew him a hot punch of good old Scotch whisky and handed it smoking to the old man, and as the fumes of the brew entered his nose, and before tasting it, fell on his knees, raised his hands in the attitude of a prayer and solemnly said, 'Let me give thanks.' I think he was justified. I have already occupied too much of your time. At another time I may give you some of my experiences of forest and stream. Good night, until we meet at Pan Cake Bay among the speckled trout and the lordly *Salmo namaycush*."

"Is the committee ready to report relative to admitting ex-Governor Foster as an honorary member?" said the president.

The chairman arose and said: "Mr. President, we have examined many noted Lake Erie anglers, and have the honor to make the following report: Hon. Charles Foster is one of the most persevering and patient fishermen who ever cast a line in the waters of Lake Erie. It is said, and without contradiction, that he will sit in a boat under the scorching rays of a summer's sun hour after hour watching his bobber, and when a deep-water sauger slowly takes it out of sight, he notes every movement with an expert's stare, and at the proper time gives the scientific jerk and winds his reel as if his life depended upon his efforts to land his fish. We are satisfied that he will be a valuable member, and report favorable."

The president examined the report, which the chairman handed the secretary, and said: "Are there any reasons why the Governor should not be admitted into full fellowship as an honorary member?"

Not a word was spoken for some time. Presently a Chicago member whispered to a Michigan brother, who rose and said: "Mr. President and brethren, we are scientific anglers in every sense of the word; supposed to thoroughly understand the art of angling. We are all tried and true brothers; truthful fishermen; honest men as the world goes. We are satisfied beyond a question of a doubt that Governor Foster never told a fish lie in all his life, and further, that he takes as much pleasure in catching perch and sunfish as he does a 4lbs. bass, and can land them with the same grace. An instance: He was patiently fishing for 3lbs. small-mouth bass on the reefs of the islands of Lake Erie, when some one told him he had a bite. Slowly he took the rod in hand, gave the fish free line, requested the other occupants of the boat to keep quiet, and warned them above everything else not to swear. The fish was a hungry one; on it went for deep water. 'Give him a yank, you got him,' cried his companions. He did, and the forest-covered islands echoed with his merry laughter. 'A monster,' he cried, as he took full possession of the boat. Now to the right, then to the left he played him, and through the excitement, incidental to the occasion, his rod snapped and hand over hand he pulled the gamy monarch of the lake toward the boat. At last, by a quick movement, the noble fish lay at his feet. It weighed three-fourths of a pound, light weight—a yellow perch."

The brethren shook their heads.

"Are there any other remarks upon this case?" said the chair.

"I am not exactly satisfied with the kind of tackle the Governor uses," said a brother from Columbus, O. "His entire outfit will not exceed in value $2.85, and for an ex-representative of the great State of Ohio to fish with such materials, is not in keeping with our laws."

"That is a serious question," said the president, thoughtfully. "But I understand that the Governor has given Hon. Joseph W. Cummings, of Ohio, authority to purchase a complete outfit, the price not to exceed $85. This is done that he might comply with the laws of our club. The application will be laid over until a report can be had from Judge Cummings."

The club adjourned.

J. E. GUNCKEL.

MARYLAND TROUT.—Oakland, March 18.—Trout were jumping and ducks flying on Saturday on my lake, and some of the former got into the boat.—G. W. D.

SAWDUST IN STREAMS.

Editor Forest and Stream:

I have been thinking for a month that I would write you on the disputed question of the injury to trout streams caused by sawdust, but fearing that some one might remark that "fools rush in where angels fear to tread," I have refrained from writing until your article of Feb. 21 on the subject has shown me that you agree with my experience so fully yourself that it is safe for me to venture.

Two of my personal friends, Livingston Stone and Charles Hallock, have sent you letters expressing entirely opposite views, and from his own point of view each is right. It is only a repetition of the old story of the two knights and the silver shield. From a different point of view I can see another complexion, while I also see both of theirs, and from my own experience can arrive at both their conclusions.

Let me explain, without being too prolix, if possible. This village, where I now write, and where I spent the first seventeen years of my life, is situated on a high, gravelly glacial terrace, about 100ft. above the Connecticut River and projecting from the base of a range of hills, of which the first rise may be 300ft. more. This terrace is just a mile long, and is cut off by a trout brook at either end. The brook at the lower end is a very small one, fed by springs in the first range of hills not a quarter of a mile back from the village, but has always held and still holds trout, and on it Mr. Stone established his "Cold Spring Trout Ponds."

The brook at the north end is much larger, and comes plunging down through a deep gorge known as the "Devil's Gully," from a higher terrace, some three miles long and about 100ft. higher than the village. At the head of the "Gully" have been for many years a saw mill and grist mill, and there was 50 years ago a large millpond, now silted up. This pond again was formed by the union of three brooks, one a very short one like the first one mentioned, one perhaps a mile and a half or two miles long, but too small to carry a mill, and the third one much larger, having another sawmill on it about two miles above the first one, and heading some two miles still further back among the hills. Now, "when we were boys," we never thought of fishing in the "big brook," when the sawmills were running; we could not get any trout. They were not killed by the sawdust, but had simply cleared out in disgust, and gone up the two other brooks, where we always found plenty in the spring.

Later in the summer, when the water was low, and the mills were not in operation, they went back to the big brook, and then we went there too, and often got some big ones. I left home in '41 and for the first half dozen years I always had a fortnight's vacation in June, most of which I spent on these and other brooks. After that I saw but little of them for many years. During that time another sawmill was built on the big brook, about intermediate between the two mentioned, and just where the brook came out from the hill on to the upper terrace.

Here at the upper end of the long meadow, above the millpond, was a sluice gate, dividing the stream in time of high water, and sending part of it northward in the channel of another little brook, fed by springs also, which finally pitched down into the meadows at the north end of the upper terrace, about four miles above the village, where there was another old sawmill and pond. This last brook was noted for its big trout. It was very small, except when it got the surplus water from the sluice, but very cold and clear, and had been ditched out most of the way through a nearly level tussocky meadow. On coming home again to live a few years ago, the fever came on me to try my old haunts, and I went to the last-mentioned meadow. I found the old tussocks all filled up with decaying sawdust from the new mill, the stream sluggish and unwholesome, and not a trout could I find in all the three miles to the upper mill, which was gone, as well as the dam and pond, and I made up my mind that the sawdust had in this case exterminated the trout in some way, perhaps by choking their spawning grounds, perhaps by driving them down to the river to seek more congenial habitations.

I tried this brook again last spring, but could find nothing in it but a swarm of yellow-bellied minnows, which I suppose the trout used to feed on in the old days.

The big brook gave me a few trout, but the other two smaller ones not a bite, and my sister, who always has lived here, tells me that both those brooks were fairly dried up a few years since, owing to the cutting down of the old forests at their headwaters.

Now, my conclusions on the matter are this, that in sluggish streams, where the sawdust can settle on the spawning beds, it is sure destruction to the trout; that it does not destroy them mechanically, by getting in their gills, but that they do not like it, and will get away from it, either by hiding under the banks for a time, as in the case of the old intermittent country sawmills, or by deserting the streams, as they have done in the Ammonoosuc's and John's and Israel's rivers, which were once full of them.

In a swift mountain stream like those Mr. Hallock speaks of, where the sawdust cannot settle in beds, and where the mills do not run unceasingly, I have no doubt of their survival, for I have caught many in the "Devil's Gully" aforementioned, and always felt sure of a good one, in old times, in the little pool at the foot of the fall, where the streams from the sawmill and grist-mill wheels came together, but never while the sawmill was running.

I therefore conclude that if sawdust is not in all cases absolutely destructive to trout, it is still very injurious, and that the mill owners should, if possible, be restrained from throwing it into the streams.

These old country sawmills also furnished winter quarters for the trout in their ponds, which were, many of them, long and deep, and were a favorite resort for the big fish in mid-summer, when they found shady retreats under the old stumps and water-soaked crooked logs which usually strewed the bottoms. In this way they helped to counteract the evil effects of the sawdust in the spring.

VON W.

CHARLESTOWN, N. H.

At a meeting of the Chamber of Commerce held at Halifax, Nova Scotia, Feb. 25, the proposed enforcement of the act of 1873 requiring the burning of sawdust was deprecated by the majority of the members present. It was argued that, on account of this act, mill owners had been obliged to close down, and there would be a shortage of 9,000,000 or 10,000,000ft. of lumber this season. Many persons depending on the industry for a livelihood would be driven out of the country for lack of employment. There has been great injury to shipping, the number of vessels required to take away lumber being reduced one-half. It was contended that sawdust does not interfere either with fish or navigation. Most mills are placed at the head of tide waters, and do not, therefore, injure the fish. The following resolution was passed:

Whereas, The department of marine and fisheries have recently issued a notification to the lumbermen of this province, calling their attention to the provision of the statute 36 Vic., chap. 65, entitled "An act for the better protection of navigable streams and rivers," and also to clause 2 of the statute, 31 Vic., chap. 60, "The fisheries act," and intimating that the law would be rigorously enforced; this chamber is of opinion that the full enforcement of the law would be attended with hardship, and in many cases serious loss to the mill owners and others without corresponding good to the interests of the country or of the fisheries; therefore resolved, that this chamber is of opinion that if the word sawdust is eliminated from sec. 14, sub-sec. 2 of the fisheries act of 1868, and from sec. 1 of the amending act of 1873, the public interest will be sufficiently served, and at the same time it will relieve the mill owners of the province from an unnecessary expense and loss; and that a copy of this resolution be forwarded to our members at Ottawa, with a request that they will use their influence with the government to have the desired change made in the law.

TROUT FISHING THROUGH THE ICE.

IT is a pity, but it is probably true, that Maine trout are suffering from fishing through the ice more this season than ever before. The sport—Maine papers call it sport, and it is being followed by lawyers, doctors and even clergymen and statesmen—has had a boom in the wrong season. It would have been far better had the sport never been heard of. But the idea of fishing for trout through the ice has suddenly become popular in that State, and parties from Bangor, from Houlton, from Machias, from Farmington, from Lewiston, and, in fact, from every considerable town or city, have been made up to go a-fishing. The weather has been favorable. The snow is not deep on the ice nor in the woods, and even the more distant ponds and trout lakes have been easily reached. The lumber roads have been followed up, and by guides who are acquainted with the winter haunts of the trout, their seclusion has been invaded. With what results? If newspaper accounts are true, and if verbal reports are true, they have been taken by thousands. From a pond in Somerset county a party took one day last week over 300 trout. At the Katahdin Iron Works a good deal of fishing through the ice has been done, and great numbers of small trout have been destroyed. Hardly a county in the State, where there are trout ponds, has been free from this winter fishing.

The Rangeley Lakes and the ponds adjoining have suffered worse from this winter fishing than I at first had supposed. Large numbers of those noble trout have been taken. Taken by "inhabitants of the State." Yes. The law provides that inhabitants of the State may fish through the ice for trout, after the first day of February each year. But not a soul of those parties that have fitted out from Boston, Providence, Manchester and other cities in New England, has been stopped from fishing through the ice, and that, too, for trout. It is true that these persons have not made a show of trout fishing, except to their friends. "Pickerel" is the term used, but trout have been brought home, outside of the State of Maine. It is a fact, though I am ashamed to say it, that I have been offered one of these trout, and I am not at present a resident of Maine. It was a large one, but I had no use for it. When it comes to eating spent trout in winter, I shall stop complaining in the FOREST AND STREAM and go into the fresh fish busines. Then everything that is a fish will be a fish, whether legally and fairly taken or not.

But this fishing through the ice for trout lacks even the semblance of sport, even if the statutes of Maine do sanction it, after the first day of February. In the first place the trout are not in condition fit for food. They are not sufficiently recuperated from the debilitating condition incident to reproduction. Indeed, it is a fact well known to the guides and the votaries of winter fishing that the holes for fishing through the ice have to be cut in the near vicinity of the best spawning grounds in the lake or pond, and that it is absolutely essential to success in winter fishing, even as long as the ice lasts, that one shall know where the spawning grounds in the lakes and ponds are located. The location of these breeding grounds once known, it is an easy matter to take nearly every large trout in the pond. Indeed the position of the fishing holes on a pond, cut by one acquainted with winter fishing on any particular pond, are "all in a clump." They are just where the trout are, and with live bait it is an easy matter to take every trout in the vicinity, and this means all the trout in the pond. Hence the great numbers in some of the catches reported this winter. But it is all the more a shame. The trout have been shut up in darkness for several months under the ice. They are spent and emaciated from breeding and the lack of food. A glimmer of light through the fishing holes attracts them. A live bait is offered, and the work is done. The lubber on top of the ice hauls the fish out by sheer strength of his arms. The hook is a large one; the line a strong one. There is little ceremony. A jerk, and the noble fish is on the ice. The sport must be fully equal to that of handling the sledge hammer in a hog-killing establishment, only that the hog in this case stands on the ice above instead of being hit over the head by the butcher before the knife is put to his throat. The damage to the trout from such fishing is distressing to contemplate. The lakes and ponds of Maine will show much poorer fishing in summer for the next few years, by reason of what is being done this winter.

Now it looks very much as though the Maine Legislature was about to adjourn, adjourn for two years, without doing anything to remedy this destruction of trout by ice fishing by inhabitants of the State. Indeed it is probable that that body will have adjourned before these lines are scanned by the readers of the FOREST AND STREAM. It is a shame! Maine people expect sportsmen and lovers of the rod and reel to visit them with well lined pocket-books, and to pay heavy bills for entertainment, and the only entertainment they offer is to fish in waters that have been stripped by such fishing as described above. Talk about dynamite! It is as easy to strip a pond of trout with this winter fishing as it would be by the discharge of deadly explosives in summer time. Indeed the extent of the damage of winter fishing would be wider than that of fishing with dynamite. The dynamite paralyzes every fish within a certain number of feet of the explosion, and by quick work the half dead fish are dipped out with nets. If the work is not quickly done some of them escape. Cut a hole through the ice on a pond where the trout have been shut up in total darkness until the first day of February. The gleam of light attracts every trout for a long distance. The poor fish are half starved. The bait is a live one. Result: Every trout is taken within sight of the hole. How far this sight extends no man knows. But all this fishing through the ice on the best trout waters in the world—might be—must go on a couple of years longer, unless such literature as the FOREST AND STREAM shall accomplish much of the work for which it is designed, and make sensible and reasonable men see that fishing through the ice is far from true sport.

SPECIAL.

THE FLY-CASTING TOURNAMENT.

NEW YORK, March 16.—*Editor Forest and Stream:* The National Rod and Reel Association met this day at the laboratory of Mr. E. G. Blackford, to arrange for the coming tournament. Committees of arrangements, etc., were appointed as per inclosed list. It was decided to hold the tournament on Thursday and Friday, May 23 and 24. The rules of last year, having seemed satisfactory to all concerned, were continued in force without making any change. It was decided to raise the funds with which to buy medals in gold, silver and bronze, and to do away with prizes of fishing tackle heretofore so generously given by the trade; and the prize committee was instructed to raise the money, some contributions being immediately made by members present.

G. POEY, Sec'y (P. O. Box 3049).

COMMITTEE OF ARRANGEMENTS.

Capt. William Dunning, Chairman.
Hon. H. P. McGown, Cuttyhunk Club, Massachusetts.
E. G. Blackford, New York Fish Commission.
S. M. Blatchford, Squibnoket Club, Massachusetts.
Dr. E. Bradley, Blooming Grove Park Association, Pennsylvania.
Martin B. Brown, Wa-Wa-Yanda Club.
Henry F. Crosby, Willowemoc Club, New York.
D. W. Cross, Oneida Club, New York.
Francis Endicott, Richmond County Game and Fish Protective Association.
C. B. Evarts, American Fisheries Society.
William C. Harris, St. Lawrence Club, New York.
Dr. James A. Henshall, Black Bass Club, Kentucky.
Thatcher Magoun, Massachusetts Game Protective Society.
C. H. Mallory, Ichthyophagous Club, New York.
Fred Mather, Fly Fishers' Club, London.
J. C. McAndrew, Restigouche Club, New Brunswick.
James L. Vallotton, Pasque Island Club, Massachusetts.
J. S. Van Cleef, Willowemoc Club, New York.
Edward Weston, Greenwood Lake Association, New York.
Col. Locke W. Winchester, Restigouche Club, New York.
Louis S. Wright, Westminster Kennel Club, New York.
H. L. Ziegenfuss, D.D., Poughkeepsie, N. Y.
J. A. Roosevelt, Poughkeepsie, N. Y.
M. D. Eddy, New York.
Hon. Daniel O'Reilly, Brooklyn, N. Y.
Gen. Rodney C. Ward, Brooklyn, N. Y.
Dr. George Trowbridge, New York.
James L. Cornell, Brooklyn, N. Y.
W. L. Andrews, New York.

Committee on Grounds.—Martin B. Brown, Chairman; Francis Endicott and H. P. McGown.

Committee on Prizes.—C. A. Bryan, Chairman; H. P. McGown, C. Van Brunt and Edward Eggert.

The president and secretary being also *ex-officio* members of all committees.

RULES GOVERNING THE CONTESTS.

Rule 1. All persons competing for prizes shall pay an entrance fee in each contest, as follows: Members, two dollars; non-members, five dollars. Memberships may be obtained on the grounds from the secretary.

Rule 2. No one shall be permitted to enter an amateur contest who has ever fished for a living, who has ever been a guide, or has ever been engaged in the manufacture of fishing tackle for sale.

The judges in the different classes shall appoint a member to see that the tackle is at all times during the contests in accordance with the rules and requirements of the association. The judges in any particular class, on appeal, shall have power to decide on all matters relating thereto, and their decision shall be final.

Rule 3. No single-handed fly-rod shall exceed 11ft. 6in. in length, and it shall be used with a single hand.

Rule 4. In single-handed fly-casting any style of reel or line may be used. A leader or casting line of single gut not less than 8ft. in length will be required, to which three flies, one stretcher and two droppers shall be attached.

Rule 5. No allowance of distance shall be made for difference in length of rods; but in the contests with light rods of five ounces and under, an allowance of one-half ounce will be made in favor of such rods as have solid reel seats.

Rule 6. Persons entering these contests shall draw lots to determine the order in which they will cast, and must be ready to cast when called upon by the judges.

Rule 7. Each contestant will be allowed ten minutes in which to cast for distance, and will then stand aside until called in his turn to cast for accuracy. In casting for distance each contestant shall inform the judges of the contest when he intends to begin to compete. His time allowance of ten minutes shall then begin to run and shall continue to run without interruption until its expiration, or until the contestant voluntarily withdraws from the stand. Should, however, the contestant's rod break, time to replace the broken joint shall be given him. No allowance of time shall be made to any contestant for any other reason whatever, it being the intent and purpose of this rule that each contestant shall abide by his own accidents, except as herein specified.

Rule 8. The distance shall be measured by a line with marked buoys stretched on the water, said line to be measured and verified at least once each day of the tournament by two or more officers to be designated by the president or secretary. A mark shall be made on the stand from which the buoy line shall be measured, and the caster may stand with his toes touching this mark, but may not advance beyond it. Should he step back of it, unless directed to do so by the judges, the loss in distance shall be his.

Rule 9. The stretcher-fly must remain at the end of the casting line in all casts. The others are not deemed so important.

Rule 10. In casting for accuracy each contestant shall be allowed twenty casts at an object in or on the water, 40ft. distant from him. The distance at which the stretcher fly shall fall from the mark shall be noted for each cast. These distances shall be added together and divided by twenty. Forty points shall be allowed to him whose averaged aggregate is the lowest. The other contestants shall be awarded lower scores in accordance with their comparative excellence.

Rule 11. The ultimate scores of the various contestants shall be determined as follows: To the distance in feet each has been adjudged to have cast shall be added the scores assigned for accuracy, and prizes shall be awarded in accordance with this aggregate.

Rule 12. To prevent fouling the measuring line and accidents to spectators, in the fly-casting contests the points of all fly-hooks shall be broken off below the barb.

Rule 13. In the absence of an appointed judge the president or secretary shall fill the vacancy.

Rule 14. Salmon Fly-Casting.—The foregoing rules shall govern where applicable. Rods may be used with both hands, and only one fly shall be required. Accuracy shall be contested for at a mark 60ft. distant from the caster.

Rule 15. Black Bass Minnow Casting.—All general rules which

do not conflict with the following special rules shall govern: No rod shall be more than 10ft. in length; any reel may be used, but all casts must be made from the reel. Lines shall not be of less caliber than No. 6 (letter H.) braided silk, nor No. 1 seagrass, or corresponding sizes of other materials, and be of uniform size throughout. The weight of the sinker shall not exceed ½oz., to be furnished by the contestants. In casting, but a single hand shall be used. Each contestant shall be allowed five casts for distance, the average of them to count, and five casts for accuracy. Casts for accuracy to be made at a mark or stake, distant 60ft. In casting for accuracy the distance at which the sinker shall fall from the mark shall be noted at each cast. These distances shall be added together and divided by five. Forty points shall be allowed to him whose averaged aggregate is the lowest. The other contestants shall be awarded lower scores in accordance with their comparative excellence.

Rule 16. Heavy Bass Casting.—Rods shall not exceed 9ft. in length and may be used with both hands. Any reel may be used, but the line shall be of linen not of less caliber than the trade No. 9, with twelve threads throughout its entire length. The casts shall be made from the reel with sinkers not to exceed 2½oz., to be furnished by the contestant. Each contestant will be allowed five casts. His casts shall be measured, added and divided by five, and the result shall constitute his score. No allowance will be made to any contestant for the overrunning or breaking of his line, but the line may be doubled next to the sinker.

Rule 17. Light Bass Casting.—Same rules as in heavy bass casting to apply, except that the weight of the sinker is not to exceed 1½oz., to be furnished by the contestant, and any line of uniform caliber may be used.

SOME MISSOURI BASS.—St. Louis, Mo., March 16.—Four of the largest Oswego or large-mouthed black bass ever seen by anglers of this city were shown on the floor of 'change one day during the week by Mr. J. W. Peters. They were caught at Cottonwood Lake, Pemiscot county, this State, about a week ago. One of the fish weighed 12lbs., another 11lbs. 10oz., and the other two a little over 10lbs. The largest measured from end of upper lip to end of tail. 25¾in.; circumference at thickest part, 18½in.; tail expanded, 9in. The weights and measurements were made oath to by Capt. H. C. West, who measured the fish in the presence of Mr. D. J. Blanke. Not long since the same gentlemen who brought the above bass to this city had a 4lb. croppie, which it is said was also the largest ever seen by anybody in this city. Cottonwood Lake is a large inland river slough, which, when the Mississippi River is high, is flooded from the river, and is stocked at such times from the bountiful supply contained in the "Father of Waters." At this season of the year it has no connection with the river. It is now clear, and angling is said to be at its best right now at the lake.—UNSER FRITZ.

BARLETT'S.—The famous old establishment in the Adirondacks, known to so many trout fishermen as Bartlett's, has been acquired by a club. The hotel, together with all the land on both sides of the Saranac River for a distance of half a mile from the foot of the Upper Saranac Lake, has been recently purchased by a syndicate composed of R. D. Douglass, Benjamin Douglass, Jr., of R. G. Dun & Co.; J. J. Broome, E. A. Cruikshank, C. G. Alford and Wm. Riker, Jr. At a preliminary meeting for the organization of the club, the following were made members in addition to the original purchasers: Theodore Fitch, S. H. Fitch, Charles Rood, Dr. J. R. Romeyn, of Keeseville, N. Y.; Clarence Rood, of Buffalo, N. Y.; J. L. Munn, Surrogate of Essex county, N. J., and Thomas P. Fisk.

FISH IN OYSTER SHELLS.—Mr. Evan Lyons, of Georgetown, D. C., recently found in a fresh oyster shell a small fish which was barely alive. The oysters were bought at a wharf in Washington three or four days previous to opening them. The oyster had evidently been eaten by the fish, the shell being empty and held together by the hinge alone. The fish is a small blenny (*Chasmodes bosquianus*). It is not uncommon to find this species and also the little goby (*Gobiosoma bosci*), and even the toad fish (*Batrachus tau*) in dead oyster shells; but here was apparently a case in which the fish merely sought shelter and was forced to devour its host through hunger.

MESSRS. ABBIE & IMBRIE have published a large new catalogue of their fishing goods. The volume (for in bulk it certainly deserves to be called such) contains very carefully-prepared illustrations, showing nearly everything in *fac simile*; the extraordinary number and excellence of the engravings render its pages invaluable for reference, and hours may be profitably spent in a study of them. We take it that the annual growth of this firm's catalogue is a index of the growth of the fishing interest in this country, with which the No. 18 Vesey street establishment appears to be bound to keep itself abreast. The catalogue is sent on receipt of 25 cents.

ICE FISHING AT BUFFALO, N. Y.—Owing to the open winter the season of ice fishing has been a brief one. The local fishermen did not get out on the lake until almost the 1st of February. The fish taken were mostly blue pike and yellow perch, with a few yellow pike. I saw one of the latter that weighed 12¼lbs., probably the best fish of the season. The best catches seem to have been made near the city, but some men have gone daily as far as Point Albino, twelve miles up the lake. The fish are all taken with hand lines and those contrivances called "tip-ups," minnow being the bait.—E. P. B.

FROG CHOWDER.—Bring two quarts of milk to the boiling point. Put in two good sized boiled potatoes sliced up and two onions also sliced. Add four hard boiled eggs finely cut up and the hindlegs of thirty-six frogs. Boil until the meat comes off the bones, then take the chowder off the fire. Add pepper, salt and butter to suit the taste. Break crackers into the chowder when about to serve. The quantity will be sufficient for six hungry men. This is said to be one of the most delicious triumphs of culinary art.

MIGRATION OF MULLET.—Jan. 21, 1889, Mr. Willard Nye, Jr., shot a red-breasted merganser, two miles above Swansboro and about five miles up the White Oak River, North Carolina. In the gullet of the duck he found a mullet 10in. long by actual measurement and another one about 6in. long. The fishermen had not caught any mullets and did not know of their presence. In North Carolina it is quite the thing to shoot your mullet on the wing.

HON. W. W. THOMAS, JR., the newly appointed Minister to Sweden and Norway, is an enthusiastic angler, and when he formerly filled the same mission, he sent the FOREST AND STREAM some racy accounts of salmon angling in Sweden. We may have the pleasure of hearing from him again.

Fishculture.

OREGON FISH COMMISSION.

THE first and second annual reports of the State Board of Fish Commissioners of Oregon for 1887 and 1888 have recently been published. During 1887 serious difficulties were encountered in enforcing the law prescribing a close time for the salmon fishing, and the law became almost a dead letter. The salmon run was late, no eggs were obtained until near the close of September, and, because of a freshet in the Clackamas, few were taken after Nov. 10. One million five hundred thousand eggs were secured, of which ninety per cent. were hatched. The fry absorb the yolk sac in from five to seven weeks.

The spring pack of salmon on the Columbia River in 1888 is placed at 354,000 cases, and the fall pack 25,000. The spring pack was 94,000 cases less than in 1886 in spite of increased gear and a longer fishing season. The streams of Oregon south of the Columbia yielded about 100,000 cases, the largest pack ever made on them. The value of the Columbia River and the Oregon pack was about $2,500,000. The salmon canners disbursed nearly $1,700,000 at home, and the revenue to the State is estimated at $30,000 annually. The weight of fresh salmon consumed and shipped East is calculated at 2,000,000lbs. yearly. The number of salmon taken from the Columbia in 1887 is estimated to be 1,200,000, of which 500,000 were from Oregon streams. The total pack of the Pacific coast is placed at 787,000 cases. The canning property of Oregon is valued at $500,000, and the fishing gear at $700,000. "For propagating purposes the Commissioners think a longer close time in the spring would be better, for this reason, the salmon that come early have a better chance of reaching the headwaters, where they can be taken for artificial hatching, or can hatch naturally, while the late salmon often ripen before reaching the spawning grounds, and consequently are an entire loss so far as increasing the supply." The funds for the hatchery being insufficient the canners on the Columbia contributed $2,090 toward its maintenance.

Twenty-nine of the forty canneries on the Columbia begun operations early in April, 1888, and closed July 31, in accordance with the law.

The scarcity of fish caused high prices, yet neither the fishermen nor the canners were benefited thereby. The Commissioners recommend the building of a few hatching stations, to increase the supply of salmon and reduce prices. Experience shows that greater profits will be realized by all concerned. The greater part of the packers and fishermen being aware that the salmon industry needs protection, observed the law very well during 1888. If the law prohibited the common carriers in the State from receiving and transporting fresh salmon during the close months of March, August and September it could be more easily enforced. Some difficulty arises from the fact that the law does not specify the different kinds of fish included under the name of salmon; consequently several species are caught during the close times and the claim is made that they are not salmon. The Commissioners recommend that the throwing of sawdust into the Columbia River or its tributaries be prohibited.

As salmon suffer greatly from the attacks of seals and sea lions the destruction of these animals is urged. It is said that a seal will eat or destroy from 8 to 10 adult salmon daily and a sea lion twice as many. The shelldrake and the cormorant eat large numbers of little salmon, and their extermination should be encouraged by giving small bounties for their scalps.

A longer close time in the spring, from March 1 to April 15 should be fixed.

An account is given of the methods of fishing and the different streams fished; the time of the run of the different salmon is stated. One reprehensible practice at Yaquina is the seining of large quantities of young unmarketable salmon along with flounders and herring, and leaving them on the shore to die.

In the spring of 1887 Mr. R. D. Hume built a cannery at Ellensburg, on Rogue River. His spring pack of that year was about 3,500 cases, and the supply of fish was abundant then in all the streams.

During the summer he built a small hatchery in connection with the cannery, and obtained about 100,000 salmon eggs, which yielded 50,000 young salmon. He has continued his operations, except for a year or two, planting from 50,000 to 150,000 young fish annually, and has probably deposited 1,500,000 in 1888. His pack has increased steadily, and for the spring of 1888 it was nearly 12,000 cases. In the meantime the salmon have decreased greatly in numbers in all other streams of the coast during the same period.

The Clackamas station was turned over to the U. S. Fish Commission July 1, 1888, and thus the expense to the State is lessened and the results largely increased.

More than one-half of the entire catch of salmon in Oregon was shipped East. The total pack on the Pacific coast for 1888 is shown in the following table:

Where packed.	No. of cases.	Value.
Columbia River	372,000	2,434,200
Streams wholly in Oregon	90,000	483,800
Washington Territory	75,000	375,000
California	65.000	390,000
Alaska	400,000	2,200,000
Total	1,002,000	5,883,000
British Columbia	170,000	935,000
Grand total	1,172,000	6,818,000

Shad are reported as becoming plentiful in the Columbia; smelts are caught in vast numbers in February, and millions of pounds of sturgeon are shipped to Eastern markets annually. Salmon trout and brook trout are so abundant that they eat up the eggs and young of the salmon, and the Commissioners hope that the anglers who come from towns and cities will exterminate the trout very soon.

CALICO BASS IN FRANCE.

M. EMILE BERTRAND has recently sent to the fishculture establishment of the Zoölogical Garden of Acclimatization a number of American silver perch, or calico bass, *Pomoxys sparoides*, reared in a pond belonging to him in the vicinity of Versailles.

The reproduction of this species in 1888 was very considerable, for not only the three-year-old fishes, but those born in 1887, have yielded an enormous number of eggs, from which young bass were developed. The three-year-old fish living in M. Bertrand's pond are now about 7⅛in. long and 2¾in. deep.

The first spawning fish were imported directly from America. M. Bertrand had twenty-five of them. Only two males and a number of females survived the fatigue of the voyage.

The spawning of the first year, 1887, yielded more than 500 fry, some of which were given to various members of the Acclimatization Society, others were sold. The flesh of the calico bass strongly resembles that of our European perch [*Perca fluviatilis*].

After the spawning of 1888 M. Bertrand estimated that he had many thousands of calico bass. At the spawning season more than a hundred nests have been observed, which were placed in water 8in. deep. Evidently this species loves heat. The localities most sought after for nests were the stone steps descending into the pond. The water being shallow the steps receive the sun's rays, retaining the heat to the advantage of the fishes. The adult fish does not fear the cold.

M. Bertrand desired to learn whether the calico bass would thrive in impure water. He placed a number of the young in a little pool which received waters full of impurities and of which the temperature rose to above 77 degrees Fahrenheit. In spite of these unfavorable conditions the bass have prospered and increased rapidly. Individuals which were four-fifths of an inch in April, when they were placed in the pool, measured 3½in. in the following August.

The calico bass will be an excellent addition to our waters, for not only is it very hardy but also very fertile; besides, its rapid growth and the good quality of its flesh make it an altogether desirable species. This fish will be very serviceable as food for the Salmonidæ on account of its remarkable fecundity. Its introduction into waters already stocked will cause no inconvenience, for, although it is predaceous, the calico bass has a mouth so small that it can seize only little animals, worms, small crustaceans, etc.

M. Bertrand, desirous of propagating this very interesting species, placed again this year at the disposal of the members of the National Acclimatization Society some of the young. These fry will be delivered about the month of April; it is important that persons wishing to obtain them should write without delay.—*M. Gilbert Duclos, in Revue des Sciences Naturelles Appliquées, Paris, Jan. 5, 1889, p. 12.*

TROUT CULTURE.—The Howietoun Fishery, in issuing the price list for season 1888-89, records one of the coldest summers experienced since the commencement of the fishery. Yearlings are fully three weeks later than usual. The rearing season, however, has been exceptionally successful, and fully one hundred and fifty thousand yearlings and twenty-five thousand two year-olds are ready for delivery. A salmon hatched from ova obtained from the Forth District Board in December, 1880, and reared in the ponds, having spawned three seasons, was found in the first week of November this year to be clean. It weighed just under three pounds, was very silvery, with about thirty jet black star-like spots. The flesh cut pink, and the flavor was that of a fish a week in fresh water. This salmon had been fed exclusively on clams (*Pecten*) and was a fair specimen of those still alive at Howietoun of the same spawning. The smolts and grilse which have been bred from these fish are growing more rapidly than their parents, and we hope to show that although the first generation of artificially bred landlocked salmon are usually dwarfed, yet their progeny may attain to the size of Loch Leven trout, viz.: 6 to 10lbs. weight. The American landlocked salmon (*S. sebago*) have not yet spawned, but a few of the rainbow trout (*S. iridens*) spawned in April, and the fry are thriving; the largest *iridens* weighed, when three years old, between three and four pounds. The crosses between salmon and trout, and between trout and salmon, are growing at the average rate of Loch Leven trout at Howietoun. The experiments in interbreeding these will be continued this season.—*Thomas Winder in Hardwicke's Science-Gossip, February, 1889.*

The Kennel.

FIXTURES.

DOG SHOWS.

March 26 to 29, 1889.—First Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. George H. Hill, Superintendent, 34 Monroe street, Chicago, Ill.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

PHILADELPHIA DOG SHOW.

THE Philadelphia Kennel Club announces that its premium list will be issued this week for the seventh annual bench show, which takes place in that city on April 16, 17, 18 and 19. Entries for this show will close on April 6, the Saturday following the Boston show. The premium list we are assured is a most complete one, and in addition to the money prizes there are a number of valuable specials. The club secretary states that when the list is issued exhibitors will agree with him that the list of specials has never been equaled.

The slight delay in issuing the premium list was owing to the desire of the committee to make up a full slate of judges, and they have succeeded in doing so. Their object was to afford exhibitors a change of officials, not an easy matter considering that Philadelphia was the last in a long list of fixtures, but this has been attained, as the following list shows: Mastiffs, Mr. R. Exley; St. Bernards, Newfoundlands, Great Danes, greyhounds, deerhounds, Italian greyhounds, poodles and miscellaneous, Mr. James Watson; setters, all breeds, Mr. Percy C. Ohl; pointers, Mr. J. H. Phelan; spaniels, Mr. S. R. Hemingway; collies, Dr. A. S. Gray; bulldogs, bull-terriers, black and tan and toy terriers, Mr. J. Deville; basset-hounds and dachshunde, Mr. Cornelius Stevenson; fox-terriers, Mr. W. Rutherfurd; pugs and toy spaniels, Dr. M. H. Cryer; Irish, Skye, Yorkshire and "any other breed" terriers, Mr. W. P. Sanderson; beagles, Mr. F. D. Hallett.

WORCESTER DOG SHOW.

WORCESTER, March 18.—*Editor Forest and Stream:* Since our last letter we have received a large number of special prizes among which is a silver cup for the best American-bred St. Bernard. We now have a very large list of specials, every breed being provided with one or more. We have added to our premium list $10 for the best kennel of cocker spaniels and the same for field spaniels. We are much gratified at the large number of entries already received, and from all appearances we predict the largest show this season excepting New York and Boston.

The club also offer a bronze medal for the best stud dog shown with two of his get in the following classes: St. Bernard, mastiff, deerhound, greyhound, pointer, English, Irish and Gordon setters, cocker spaniel, field spaniel, beagle, collie, bulldog, bull-terrier, fox-terrier and pug.

A friend of the club has just offered $10 for the best bull-terrier dog or bitch, and $5 for the best pug, dog or bitch. The spaniel puppy class has been changed so as to read, $5, first prize; $3, second prize; medal, third prize.

A friend of the club offers $5 for the best Gordon setter dog which has never won a prize previous to closing of entries of our show, and $5 for best Gordon setter bitch under same conditions. Entries close March 25. No dogs will be received before April 8, at 7 P. M., or after 8 A. M., April 9. FRED. W. WHITE, of Bench Show Committee.

UTICA DOG SHOW.

THIS little affair was the second annual exhibition of the Fort Schuyler Kennel Club and it was held on the 12th, 13th, 14th and 15th inst., in Mechanics' Hall, Utica. The hall is not at all well adapted for a dog show. The location can hardly be called fashionable, the building and the entrance have not a very taking appearance, and to make matters worse, the hall, which is on the third floor, has been used for cheap concerts, dancing and so on. No wonder then that the better class of people boycotted the exhibition, or that the attendance was very largely composed of the rougher element. Those who did come to the show seemed to take but little interest in the exhibits. In fact, it was quite clear to everybody that a large majority of the visitors were there to see Professor Parker's performing dogs and not to study the dukes of dogdom. The professor's audience was largely composed of children and we regret to say that many of these were decidedly lacking in quality and good manners. Fortunately they cleared out when the last fence of the professor's dog steeplechase had been knocked down by a clown poodle. Nobody missed them, and the tired dogs were again given a chance to hear their own more musical voices.

Notwithstanding that entries were accepted up to Saturday, the 9th inst., they were very light and the quality in many of the classes was poor. There was room for 400 to 500 dogs. The exact number on the benches Wednesday afternoon was 160. Of these the deerhounds, pointers, setters, collies, bulldogs and fox-terriers showed a decided falling off in quantity and quality. Mr. Thayer's splendid kennel was not represented, and we missed the faces of nearly all the men who may be considered the bone and sinew of dog shows in this country. A Chicago paper attributes the scarcity of entries at the shows to other than the real cause. Does anybody suppose that Mr. Thayer's dogs were not entered because "both exhibitors and dogs had already endured two shows in two consecutive weeks?" Mr. Thayer could, if he had wished, have entered twenty-five dogs, and good ones too, without showing one of the team he sent to New York and Troy. That exhibitors have had to "endure" much during these past few weeks cannot be denied. For further particulars we refer the reader to our comments on the judging of fox-terriers at New York and Albany. A man who will silently "endure" such judging as that knows nothing about dogs; he should get out of the fancy. To support shows that encourage such palpably unjust and ignorant decisions would be equivalent to driving a knife into the very bowels of the dog interests of this country, and for this reason alone good dog men have made up their minds to "endure" no more. So modestly, feelingly and pathetically does the Chicago reporter explain away the falling off in the entries at Albany that if we did not know him to be unconscious of the facts and the truth we might have believed him in a position to account for the very small number of dogs shown since Troy. Mr. Tallman was again a judge and superintendent. It is not probable that he will again fill the two offices. Exhibitors are opposed to the principle, and dog show managers are beginning to realize that dog shows without exhibitors are rather tame things.

Spratts did the benching and feeding; their work, as usual, was of the best. Mr. Tallman was courteous and attentive to his charge. The management was good. It is no fault of ours that we are unable to give an exhaustive and critical report. We could not find the dogs to criticise.

MASTIFFS—(MR. MORTIMER).

The challenge class for dogs and bitches brought out Minting and Wacouta Nap; the last-named has no business in company with the Melrose crack, and was beaten by many points. Moses, the other entry in the challenge class, betook himself to the open class, where there was actually no competition, and of course took the prize. Mastiff breeders will do well to remember that this dog has won a number of prizes which never would have fallen to his share if he had been shown under good judges of the breed. Sears' Monarch and Agrippa were absent from this class. We stated in our dispatch from the Albany show that the mastiffs were badly judged. The judge was evidently of our opinion, for when Boss Lady Clare and Pharoah Queen came before him at this show, he reversed his decision at Albany and placed Boss Lady Clare over Pharoah Queen. Both dogs were in the same condition as when they were shown at Albany. We are quite satisfied if we can correct blunders before they have had a chance to do much harm, as in this case, and we hope that when Sears' Monarch and Moses are again brought before this judge he will give the prize to Monarch. It is only by giving the prizes to the best that dogs can be improved. Lady Coleus and Lady Phyllis, winners at New York, were first and second here, the Boss Lady Clare third and Pharoah Queen vhc. The other vhc. in the class, Ilford Claudia, is too long in face, large in ears, crooked in front, decidedly weak in right pastern, bad in feet and not good behind.

ST. BERNARDS—(MR. MORTIMER).

Barry II. was alone in the challenge class for rough-coated dogs, and the bitch class contained the well known winners Miranda and Gemma I. We stated in our report of the Troy show that Miss Whitney was wrong in placing Gemma I. over Miranda. Here Miranda was placed first and Gemma I. second. Ben Lomond, in the open class for rough-coated dogs, towered over Mount Sion III. and beat him by very many points. These dogs were at Troy. In the bitch class the order was the same as at Troy, Saffron first, Recluse second and Queen third. Ruth, third at Albany, was vhc., and Mayflower, a decidedly worse specimen than Ruth, was also given vhc. She is snipy, crooked in front, low, wrong in coat, bad in eye, defective in ears; in fact she is not a show bitch. Mercedes, c., is wrong in markings, small in feet and plain in head. Bernaline II., second in the puppy class at Albany, was the only puppy shown here. Rigi, Daphne, Lola and Apollona were the only smooth coats shown, with the exception of Prince Wentworth, shown in the puppy class. This dog was removed shortly after the judging and we did not see him. The entries in these classes, like those in the mastiff classes, have been the round of the shows and it would be a waste of space to criticise them again. With the exception of Daphne, whose blood needs looking after, all were in fairly good condition.

NEWFOUNDLANDS—(MR. MORTIMER).

Meadowthorpe Prince George outclassed his two competitors, Carlo and Prince II. Carlo is a big dog, with a passable head, average legs and a fairly good body. He is all wrong in eyes and has a short curly coat. Prince II., that took third prize, is decidedly better in coat than Carlo, but his long, characterless head will always seal his fate.

COLLIES—(MR. MORTIMER).

With the exception of Scot's Jack, third in the open class for dogs, there was nothing new in these classes, in fact only nine dogs were shown in the four classes provided. This new dog, Scot's Jack, is a son of Dublin Scot and Effie Dean II. He is heavy and coarse in head, does not get his ears up, is wrong in shoulders, not perfectly straight in front, too straight behind, does not move very well and has a rather short brush. His coat, while long, is not of correct texture. He has plenty of bone, stands over lots of ground, has good feet, and nothwithstanding his many defects shows some character, but very little quality. The blunder of placing Metchley Surprise over Jakyr Dean was repeated in the bitch class. We have seen it written by the judge that Jakyr Dean is not so good in head as Metchley Surprise, and that she is not in good condition. One bitch is in as good condition as the other and we do not hesitate to state that the first time that they are brought before a competent judge of the breed Jakyr Dean will win, and win easily.

DEERHOUNDS—(MR. MORTIMER).

Only one entry in the three classes that were provided. Olga that took first held the same position at New York.

GREYHOUNDS—(MR. MORTIMER).

All the entries in these classes have been recently described. In the regular classes they were properly placed, but in awarding the special to Highland Chief over Cassandra and Balkis the judge clearly showed that he is not at home with the breed. Between Balkis and Highland Chief there is little to choose; close examination shows Balkis to be the better dog. Cassandra, however, is better than either of them and should have won. She beats Highland Chief in muzzle, skull, eyes, shoulders, legs, feet and in bend of hocks. In our opinion of the relative merits of these three dogs we are indorsed by the owner, who values Cassandra at $500, Balkis at $350 and Highland Chief at $250. It took the judge exactly one minute to judge this special. It would probably have taken us a half hour, in which time we would have been positively certain that Cassandra was a handsome winner.

POINTERS—(MR. TALLMAN).

There were four entries in the challenge classes. Queen Bow took the only prize. In the class for large size dogs Bang, Sachem and Victor the Blue Stocking, shown at Albany, were the only competitors. Bang and Blue Stocking are not in show condition, and we would have turned the last named out of the ring without a card. Bang, too, is not at present fit for the show bench. When this stout-looking son of Bang and Luna is at his best he can give points and a beating to Sachem and Victor the Blue Stocking. Golden Rod was the only exhibit in the bitch class. Her skin was looking somewhat better than at Albany, but she is far from being in show condition, and we would have withheld the prize. Only two faced the judge in the light-weight dog class, these were Forest King, third at Troy, and Bing, a rather weedy, flat-sided and light-eyed son of Naso of Kippen. Wanda, first in bitches, and the only pointer in the class, was second at Albany. There were no puppies shown.

ENGLISH SETTERS—(MR. TALLMAN).

Here there were only nine entries in four classes, and, with the exception of Zach and Eph, first and second in the puppy class, and Pride of Dixie II., second in the open dog class, all are well known to our readers. Pride of Dixie II. is a rather coarse white, black and tan by Pride of Dixie. Defects: Skull too heavy, muzzle well formed, yet having the appearance of being slightly weak—this is owing to the heavy proportions of the skull—eyes showing the white and having a wrong expression, forelegs badly set, knees showing weakness, feet not first-class, loin not nicely turned, coat a bit wooly and not straight enough, does not stand well in front. In other respects he will do. Zach is a big, strong, coarse puppy, with rather plain head and bad eyes. He may make a field dog, but the show bench is not for him. Eph is all wrong in head, has short wide ears and does not stand straight in front; he cannot possibly develop into a show dog. Blarney, Laura B., Dick Swiveller, Desmond II., Kenmore, Cora B. and Lou III., winners in the Irish setter classes, have all been described. Simon, vhc. in the open class for dogs, is a simple-looking dog without a pedigree. He is very plain and coarse in head, light in eyes, not quite straight in front and wrong in set of ears. We thought him lucky, but, as it has become the fashion to give all dogs shown a card, he had with the others an equal right to notice. Madge Glencho, third in the bitch class, is not even in color, her head is too flat—it should be very much higher between the ears. In stop and in muzzle below the eyes she is also defective, and her ears are all wrong in carriage. She shows some throatiness, is too heavy in shoulders, rather flat in ribs, not just right in knees nor perfectly straight in front and would do with more power behind the hips. Notwithstanding all these defects she is a broody-looking specimen that shows some quality. Fan, vhc. in this class, is coarse in head, throaty, underhung, light in eyes and not quite first-class in color. She is, however, a fairly well built one. The only puppy shown was second at Albany. Four Gordons were shown in the three classes provided. These were Little Boy, Don, Leo B. and Becky Sharp. We need only say of them that they were in good condition.

SPANIELS—(MR. MORTIMER).

With the exception of a few of the puppies there was nothing new in these classes. Hornell Fancy, that was second in the class for cocker bitches of any other color than black, is growing very houndy in head and her excessive wrinkle is not a cocker attribute. Lady of Learning, that was third, is a better specimen. Hornet had a rather easy win in the puppy class, but the judge went all wrong when he placed Fanny Stubbs, third prize, over Marko, vhc. Fanny Stubbs has a collie head and will never be a prize winner under a judge of this breed. Marko is better in head and body, and equally as good in legs and feet. Patsy O'Connor and Captain Muldoon, both well-known Irish water spaniels, were the only entries.

FOXHOUNDS—(MR. MORTIMER).

Here there was only one entry—a lathy, crooked-legged specimen that is also lacking in coat and brush.

BEAGLES—(MR. MORTIMER).

There were two entries in the challenge class, Little Duke and Bounce. The latter of course won, but it seems to us that Little Duke is a decidedly better specimen. Better in head, better in size and truer to type. The open class for dogs was fairly slaughtered. Storm, first prize, is owned by the Somerset Kennels. How any man can measure this dog so as to make him stand under 15in. is something we must leave to the owner of elastic tape to explain. He stands fully 15½in., has a very plain head and is of harrier type. Royal Krueger, that was second, should have been a very easy winner. Racer, Jr., and Racket II. are also better specimens. Belle of Woodbrook, that was first in bitches, is not nearly as good a specimen as Cloud, that was second. Both were described in the Albany report. Baby W., third prize, is wrong before the eyes and has chorea. Old Betty, that was vhc., is truer to type than anything in the class, but she moves badly behind. Kate W., who took the reserve, is wrong in coat and brush, rather long cast and not quite straight in front. Ardsley Boy, winner in the puppy class at Albany, was again first here. Kathleen W., the only other entry in the class, is long-cast and gets her brush up too high.

BULLDOGS—(MR. MORTIMER).

Two were shown in the four classes provided. Rabagas, in good condition, won well from Lion, who has gone all to pieces since he changed ownership. Both dogs are well known.

TERRIERS—(MR. MORTIMER).

The challenge class for bull-terriers contained only one, the mangy Lady Tarquin, that was handled by the lucky Phebus, who is manager of the Somerset Kennels. She should have been sent out of the ring without notice. In the open class for dogs The Earl, that is well known, won very easily, and second was given to Spivens, that has a tan ear, rather full cheek, and short, lippy muzzle. His tail had been faked and he should have been disqualified. Dauntless, the only puppy shown, is light before the eyes, not quite right in knees and coarse in stern. Her ears have been badly cropped, and we fear that she will never get them up. In the class for black and tan dogs Buffalo General and Sir Wallace, that were first and second at Albany, held the same positions here. Only one bitch, Meersbrook Maiden, was shown. She was given first and special for the breed, a decision which will never be indorsed by those who have any knowledge of the breed. Her great English record won her the prize. She has twenty firsts and seconds in England to her credit, and as no English judge would ever award prizes to a black and tan and white, black and tan terrier, it is positively certain that the bitch was faked when she was shown in England. She has a large white spot on her breast, and, as every one who understands the breed is aware, this is a disqualifying point. For the benefit of the judge and others who are not posted on the breed, we quote the following from "The Book of the Dog": "The smallest spot of white is an absolute disqualification, so particular notice must be taken to see that no dishonest staining has taken place. The chest is by far the most likely place for it to appear." "Stonehenge" says: "The color and markings (value 25) are in this breed—which is now essentially a fancy dog—important. No other color than black and tan or red is permissible; the least speck of white is fatal to winning chances, and it is in richness, contrast and correct distribution of these that excellence consists." The owner of Buffalo General, that was first in the dog class, should have put in a protest and claimed the special prize.

Fox-terriers were not a good lot. Lucifer, first in the challenge class for dogs and bitches, being the only really high-class specimen shown. Veronese, Blemton Trump and Shepherd Lad, first, second and third in the open dog class, have been recently described. Blemton Brilliant, that was first in the puppy class at Philadelphia last year, was alone in her class. She is still faulty before the eyes, not good in coat, light in bone and not quite right in front. She is a merry, showy bitch that will do some winning when the cracks are not shown. Vignette, first in the puppy class, is sheepish in head, has large, badly carried ears and is all wrong in coat. In addition to these defects she is rather light in bone and undersized. Blemton Trump, second prize, was vhc. at Albany. He is a better terrier than Vignette and should have won. Dennis, Breda Tiny and Breda Jim held the same positions in the Irish class as they did at Albany; and Kirkella, first at Albany, was the only Skye shown.

TOY DOGS—(MR. MORTIMER).

With the exception of the third prize winner in the open class for pug dogs there was nothing new. This dog, Koko, is much too long in muzzle, not quite black in nose, deficient in carriage of ears, light in color of eyes, straight in hocks, white in nails, rather long-cast and decidedly too large. Dr. Cryer as usual captured nearly all the prizes with his well-known team. Rocsus and King Pippin, whose faces are familiar to all who attend the shows, were the only toy spaniels shown, and Cupid was the only Italian greyhound.

MISCELLANEOUS—(MR. MORTIMER).

Here the judging was sensational in the extreme. First was given to Sir Lucifer, the well-known bobtail sheepdog. He is shedding and we have never seen him so badly shown as on this occasion. Flora, that is said to be a Great Dane, was given an equal second with George, a Dalmatian. The placing of these dogs over Cotswold Jocko was as great a blunder as we have ever seen committed. Jocko is one of the best wire-haired terriers in this country, whereas neither George nor Flora would take a commended card in fairly good company. Flora is not a show dog in any one point. She is very wide in front, out at the elbows, crooked in legs, throaty, wretchedly bad behind, has a short ringtail, is wrong in head and eyes and is undersized. George is plain in head, wrong in carriage of ears, throaty, light in bone, shallow in body, not first-class in loin and quarters, only moderate in feet, and has white head and muzzle and black ears. Surely a Dalmatian with these defects should not be placed over a fairly good specimen of any breed. The mistake of placing that bad Bedlington, Punch, over Cotswold Jocko was again repeated.

Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—1st, E. H. Moore's Minting; 2d, St. Joe Kennels' Wacouta Nap.—OPEN—*Dogs:* 1st and special, C. C. Cook's Moses. *Bitches:* 1st and special, 2d and very high com., E. H. Moore's Lady Coleus, Lady Phyllis and Ilford Claudia; 3d, C. Porter, Jr.'s Boss Lady Clare. Very high com., C. C. Cook's Pharoah Queen. Kennel prize, E. H. Moore.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—*Dog:* 1st, W. H. Ehrich's Barry II. *Bitches:* 1st, E. H. Moore's Miranda; 2d, Hospice Kennels' Gemma I.—OPEN—*Dogs:* 1st, E. H. Moore's Ben Lomond; 2d, Mrs. J. M. Nicholson's Mount Sion III.; 3d, withheld. *Bitches:* 1st and 2d, E. H. Moore's Saffron and Recluse; 3d, J. & A. Marshall's Queen. Very high com. (two) and com., J. W. Dunlop's Mayflower, Ruth and Mercedes *Puppies:* 1st and two specials, C. C. Davis's Bernaline II.—SMOOTH-COATED—CHALLENGE—*Dog:* 1st and special, J. W. Dunlop's Rigi. *Bitch:* 1st and special, Hospice Kennels' Daphne.—OPEN—*Dogs:* Absent. *Bitches:* 1st, Keystone Kennels' Lola; 2d, J. Kevan's Apollona. *Puppies:* 1st and two specials, J. W. Dunlop's Prince Wentworth. Kennel prize, E. H. Moore.

NEWFOUNDLANDS.—1st and special, J. & A. Marshall's Meadowthorpe Prince George; 2d, J. F. Lewis's Carlo; 3d, D. A. Carter & Son's Prince II.

COLLIES.—CHALLENGE—1st and Collie Club medal, Chestnut Hill Kennels' Scotilla; 2d, W. D. Hughes's Bonnie Brae.—OPEN—*Dogs:* 1st and Collie Club special, J. Watson's Clipper; 2d, Chestnut Hill Kennels' Roslyn; 3d, Miss Jennie Cackett's Scot's Jack. *Bitches:* 1st and 2d, Chestnut Hill Kennels' Metchley Surprise and Jakyr Dean; 3d, Dr. H. S. Quinn's Collie Belle. *Puppies:* 1st, Chestnut Hill Kennels' Jakyr Dean.

DEERHOUNDS.—1st, G. S. Page's Olga.

GREYHOUNDS.—CHALLENGE—*Dog:* 1st, H. W. Huntington's Balkis. *Bitch:* 1st, H. W. Huntington's Cassandra.—OPEN—*Dogs:* 1st and special, H. W. Huntington's Highland Chief; 2d, Dr. G. Stanton's Fleetwood; 3d, Hornell-Harmony Kennels' Hazelhurst. *Bitches:* 1st and 2d, Hornell-Harmony Kennels' Harmony and Lady Olivia. *Puppies:* 1st and special, Hornell-Harmony Kennels' Fannie M. Kennel prize, Hornell-Harmony Kennels.

POINTERS.—CHALLENGE—*Dog:* Absent. *Bitch:* 1st, Columbus Kennels' Queen Bow.—OPEN—LARGE—*Dogs:* 1st and 3d, Bryn Mawr Kennels' Bang and Victor the Blue Stocking; 2d, Chestnut Hill Kennels' Sachem. *Bitches:* 1st and special, Bryn Mawr Kennels' Golden Rod.—SMALL—*Dogs:* 1st, J. & A. Marshall's Forest King; 2d, Bryn Mawr Kennels' Bing. *Bitches:* 1st, Stratford Kennels' Wanda; 2d and 3d, withheld. *Puppies:* Absent. Kennel prize, Bryn Mawr Kennels. Largest number of entries, R. E. Westlake.

ENGLISH SETTERS.—CHALLENGE.—1st, F. Leonard's Royal Prince II.—OPEN—*Dogs:* 1st, Mt. Washington Kennels' Lindo; 2d, E. W. Hubbard's Pride of Dixie II. *Bitches:* 1st and special, Mt. Washington Kennels' Zona; 2d, Peet & Lyons's Chautauqua Belle; 3d, Columbus Kennels' Pearl Bondhu. *Puppies:* 1st and special and 2d, Dr. J. H. Glass's Zach and Eph.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, E. W. Clark, Jr.'s Blarney. *Bitches:* 1st, Kildare Kennels' Laura B.—OPEN—*Dogs:* 1st, W. C. Hudson's Kenmore; 2d, C. T. Thompson's Desmond II.; 3d, P. Gamblos's Dick Swiveller. Very high com., J. Owen's Simon. *Bitches:* 1st, Columbus Kennels' Lou III.; 2d and very high com., W. C. Hudson's Cora B. and Fan; 3d, W. W. Kendall's Madge Glencho. *Puppies:* 1st, W. C. Hudson's Rex. Kennel prize, W. C. Hudson.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st and special, S. G. Dixon's Little Boy; 2d, W. E. Rothermel's Don.—OPEN—*Dogs:* 1st, H. C. Biddle's Leo B. *Bitches:* 1st, J. L. Campbell's Becky Sharp.

FIELD SPANIELS.—CHALLENGE—1st, Oldham & Willey's Newton Abbot Laddie.—OPEN—*Dogs:* 1st, Oldham & Willey's Glencairn; 2d, Woodstock Spaniel Kennels' Bridford Gladys.

COCKER SPANIELS.—CHALLENGE—1st, Oldham & Willey's Miss Obo II.; 2d, American Cocker Kennels' Doc.—OPEN—BLACK—1st, Oldham & Willey's Dolly Obo; 2d, American Cocker Kennels' Hornet; 3d, Hornell-Harmony Kennels' Hornell Martha. Very high com., Woodstock Spaniel Kennels' Giffee.—OTHER THAN BLACK—*Dogs:* 1st, Hornell-Harmony Kennels' Hornell Dick. *Bitches:* 1st and 2d, Hornell-Harmony Kennels' Hornell Velda and Hornell Fancy; 3d, Oldham & Willey's Lady of Learning.

Puppies: 1st, American Cocker Kennels' Hornet; 2d, Hornell-Harmony Kennels' Hornell Gypsey; 3d and local special and very high com., J. E. Weston's Fanny Stubbs and Maroo. Kennel prize, Oldham & Willey.

IRISH WATER SPANIELS.—1st and special, J. R. Daniels's Patsy O'Connor; 2d, Hornell-Harmony Kennels' Capt. Muldoon.

FOXHOUNDS.—1st and special, Hornell-Harmony Kennels' Pride of Hornell.

BEAGLES.—CHALLENGE—1st and special, Somerset Kennels' Bounce; 2d, Ardsley Kennels' Little Duke.—OPEN—*Dogs:* 1st, Somerset Kennels' Storm; 2d and very high com., Harmony Kennels' Royal Krueger and Ross W.; 3d, Ardsley Kennels' Racer, Jr. Very high com., J. Lewis's Racket II. *Bitches:* 1st and 2d, Somerset Kennels' Belle of Woodbrook and Cloud; 3d, reserve and very high com., Hornell-Harmony Kennels' Baby W., Kate W. and Betty. High com., J. Lewis's Banner Queen. *Puppies:* 1st and special, Ardsley Kennels' Ardsley Boy; 2d, Hornell-Harmony Kennels' Kathleen W. Kennel prize, Somerset Kennels.

BASSET HOUNDS.—1st and special, C. Porter, Jr.'s Babette.

BULLDOGS.—1st, G. Raper' Rabagas; 2d, W. J. Comstock's Lion. *Puppies:* Absent.

BULL-TERRIERS.—CHALLENGE—1st, Sunnyside Kennels' Lady Tarquin.—OPEN—*Dogs:* Sunnyde Kennels' The Earl; 2d, V. J. Nye's Spivens. *Bitches:* 1st and special, F. F. Dole's Royal Rose; 2d, W. F. Hayes's Lucky. *Puppies:* 1st, F. F. Dole's Dauntless.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, A. W. Smith's Buffalo General; 2d, Keystone Kennels' Sir Wallace. *Bitches:* 1st and special, Rochelle Kennels' Meersbrook Maiden.

FOX-TERRIERS.—CHALLENGE—1st, Blemton Kennels' Lucifer.—OPEN—*Dogs:* 1st, F. Hoey's Veronese; 2d, Blemton Kennels' Blemton Trump; 3d, J. H. Shepherd's Shepherd Lad. High com., D. G. Booth's Trap. *Bitches:* 1st, Blemton Kennels' Blemton Brilliant. *Puppies:* 1st, F. Hoey's Vignette; 2d, Blemton Kennels' Blemtom Trumps. High com., D. G. Booth's Trap.

IRISH TERRIERS.—1st, J. F. McFadden's Dennis; 2d and 3d, Chestnut Hill Kennels' Breda Tiney and Breda Jim.

SKYE TERRIERS.—1st, Oldham & Willey's Kirkella.

PUGS.—CHALLENGE—1st and special, Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st and 2d, Dr. M. H. Cryer's Bob Ivy and Othello; 3d, G. J. Young's Koko. *Bitches:* 1st, G. Bell's Rustic Queen; 2d, Dr. M. H. Cryer's Vic. *Puppies:* 1st and special, Dr. M. H. Cryer's Bob Ivy. Kennel prize, Dr. M. H. Cryer.

TOY SPANIELS.—1st and special and 2d, W. W. Phillips's Rosetius and King Pippin.

ITALIAN GREYHOUNDS.—1st and special, Miss Edith Van Bureu's Cupid.

MISCELLANEOUS.—1st and special, C. Rosser's bob-tailed sheepdog Sir Lucifer; equal 2d, F. Morris's Dalmatian George and Max Le'man's great Dane Flora. Very high com., Kensington Kennels' Bedlington terrier Punch. High com., F. F. Dole's wire-haired fox-terrier Cotswold Jocko. Special for largest entry, Hornell-Harmony Kennels. Dog from greatest distance, Rabagas.

KEEPING UP WITH THE PROCESSION.

Editor Forest and Stream:

I arrived here Monday. On Tuesday, just after a Reunert lunch, I was enjoying the delightful flavor of a Rosa Perfecta, when who should walk in upon me but the great Gordon champion, Harry Malcolm. After a friendly greeting (as we like each other), he informed me that he had come to take me out for a drive, and to show me Malcolm's Whip and his kennel companions; that I was a subject that he could not subdue, but that he could convince me of the very superior merit of his dogs. I very readily accepted his kind invitation. So after acquiring a drink of "Monticello best" off we started for Mr. Malcolm's stable, where we found his mare, Lady, ready in the shafts to receive us. We drove to his residence and our party was reinforced by the addition of Malcolm's Whip, Gypsy, and two youngsters, in color all black and tan.

Lady's head was turned up St. Charles avenue, and for about four miles, good gracious, how we flew! We passed everything, athletic men, beautiful, charming ladies, churches and saloons. All alike, they had no attractions (except momentary and passing) for us. There was a great raise in Baltimore real estate the while, for it just fairly flew over our heads. I would now and again see a streak of black and tan going like a flash, while Malcolm would say, "That's a Gordon there." These dogs certainly have nimble feet and show great speed, for they were all with us when we pulled up, just to give Lady a drink, and while this was being attended to we alighted and went into what I learned was a Maryland milk stand, for upon our entrance two glasses of fresh Maryland milk were placed upon the counter, which we drank. The milk was fresh, but it had a peculiar flavor—I thought I detected a trace of nutmeg.

Lady having drank her water and we our milk, we again started off for a two-mile dash. The same four black and tan flashes or streaks could now and again be seen. At the end of the two miles was another milk stand. Malcolm said Lady was thirsty, so we again stopped to give her a drink. We were also supplied with two more glasses of Maryland milk; it was fresh and had the nutmeg.

We again dashed off for another spurt of a mile; I could yet see the four black and tan streaks, when Lady clearly gave signs of wanting more water, and another milk stand just then appearing, we pulled up. Lady was watered and we, as usual, were milked. I could not only detect the nutmeg, but discerned it floating in a kind of Gordon-colored specks on the surface.

We again pulled out for another dash, and Lady and the dogs were going so fast that I could now and again see eight black and tan streaks. While we were trying to count the dogs we ran right up to another milk stand. I don't think Lady was thirsty, but the man who was in the habit of shaking the milk was a friend of Malcolm, so we stopped. The milk was quite fresh and the nutmeg flavor so grateful to us that I think we drank two glasses each, after which Lady seemed to develop greater speed, and we were going so fast that we often could distinctly see sixteen flashes of black and tan. Lady was now going about a mile in 2:40 and the dogs usually ahead.

After about a three mile spin we again pulled up at another milk stand. And talk about milk, fresh milk, clover milk, etc., etc., why the milk we got at this stand *was* milk. This man is a friend of Malcolm and he is now a friend of mine. He feeds his cows as cows should be fed. He buys nothing but the best of cows. Every cow he owns must possess a good moral character. He employs a beautiful maiden, one who took the prize for beauty at a Dime Musuem. This maiden feeds and milks the cows. The cow while being milked and fed gazes on the bewitching beauty and form of the maiden; becomes enchanted, and this effect Malcolm and I found from experience extends to the milk, and from the milk to us. The cows are fed on clover tips, dipped in sugar-house molasses, and for drink they are given strained honey flavored with peach brandy. This man said he could not make any butter, that his milk was so sweet that you might churn it for weeks and yet it would not sour. When he said this Malcolm and I drank two more glasses of milk and by this time we were both full (of milk) and quite high, being in a milky way.

We again started off, Lady going yet faster. We could both of us see flashes and streaks of black and tan, hundreds of them. Malcolm said the Gordons were there.

While we were going at this lightning speed we flushed a bevy of quail, and the dogs gave chase and actually caught every quail before it reached the ground. I have seen greyhounds chase the hare, but to see these dogs keep up with flying quail, and when the quail became so tired and exhausted that they could fly no longer, and then to see the dogs catch them as they came to earth is a sight I never expect to witness again. Malcolm says when he gets the Gordon name firmly settled that he is going to try and breed them with wings and use them for falconry.

Lady was going so fast that we did not stop to get the quail, but went on for two or three miles more, when we came to another stand. Lady wanted a drink and slacked up. At this place the keeper insulted us. He offered us a drink of whisky. Malcolm and I, when we are coming home, are prohibitionists. However, the man apologized, and to oblige him we did take a small drink. This place was near the city.

We then drove to the kennels, and I saw Mr. Malcolm put in eighty-four dogs. They were all of one color, and you could not tell one from the other. When we got them all in he shut the door and pulled up the sign, which is a board about six feet long, and on it I read, in well-painted letters:

"AMERICAN GORDON SETTERS."
A name with any other rose
Would smell as sweet,
These dogs, with any other name
Would have as nimble feet.

If any of my friends own or know the location of a milk route, my address is Jersey City. PESHALL.

BALTIMORE, March 14.

THE SUPER-SENSE OF ANIMALS.

Editor Forest and Stream:

In 1884 I was located in St. Louis, and on several occasions had observed a fine St. Bernard dog stalking with dignity up Chestnut street. He was owned by a lawyer named Jacko, on Third street, who regularly sent him on errands to his home. On one occasion I saw him coming up the street with a basket full of something, probably meat, and at his heels was a small "cur of low degree," which was persistently snapping at him, as if endeavoring to get him to drop his charge, when the little dog could sail in for a division of the contents. The large dog stopped twice on the block, turned round and looked at his tormentor, and resumed his pace until he reached me, when, looking up into my face with an expression that almost said "Please mind this for a moment," he laid the basket at my feet, turned and with one bound had the cur by the neck, shook him most unmercifully, rolled him in the gutter and dropped him. The cur took very little time in getting out of sight, not even stopping to shake himself. The St. Bernard then picked up his basket and with a satisfied air went on his way. J. D. J.

NEW YORK.

Editor Forest and Stream:

Seeing frequent instances of the intelligence of dogs prompts me to send the following:

A prominent club man of Philadelphia frequently imbibes too freely, and on such occasions his friends tie a handkerchief to his St. Bernard's collar and by the man holding on the dog leads him safely home, and actually successfully resists his owner's efforts to stop in saloons on the way.

My wife was followed a few days ago (while going through a new house) by our bull-terrier pup and by a collie dog. Mug, the pup, became frantic when he was unable to climb a high step; the collie was deeply troubled, but in a few moments lifted Mug up the step by the nape of his neck.

For a number of years my father made Western trips of several weeks duration. His dog Jack would invariably meet him at the station on his return. The mystery to us was how the dog could tell of his arrival, unless, indeed, he understoad our talk of the day before. ALLEGHANY.

ST. BERNARD CLUB.

AT the meeting of the Board of Governors, held on Monday, March 11, at the Hoffman House, New York, the following candidates were elected to membership: G. R. Sawtelle, Malden, Mass.; Chas. T. Barney, New York; Martin L. Storer, Amsterdam, N. Y.; Jas. T. Hall, Philadelphia; W. F. Tilden, South Framingham, Mass.

The request on the part of the Worcester Kennel Club for a club special, to be donated to its first show, which will be held the week after the Boston show, was not granted on the ground that the list of specials offered by the club is to be considered as closed for this year.

The New England Kennel Club, in its premium list for the coming Boston show, offers less liberal premiums for the smooth-coated St. Bernards than for the rough-coated, thus favoring the latter to the detriment of the former. This action came up for discussion, and as in the interest of the breed the St. Bernard Club considers it its duty to protest against any such unwarranted discrimination, the secretary was instructed to communicate with the Boston people for the purpose of having the two varieties placed on an equal footing.

DOG TALK.

A VISITOR at the Albany dog show sends us the following: "The feature of the day on Friday was the rejudging of the Irish setter bitch class. The owner of the winner of second prize was dissatisfied with the award, and requested Mr. Mason to give his opinion in the case. Mr. Mason took in the situation and refused to act in so important a matter unless in conjunction with other judges. This was agreeable, and Messrs. David Baillie and German Hopkins were selected, and the three winners in the class were brought into the judges' ring and the triumvirate proceeded to business. All are practical men, and they at once agreed that the dogs were in need of exercise, and they were sent round the ring at speed until their handlers were all of a lather; then came a brief examination and more exercise was ordered. After another heart-breaking race the judges settled down to work. A critical examination satisfied Mr. Baillie that the first prize winner was entitled to the place. Mr. Hopkins put on a wise look and decided that the winner of second was just about good enough for the blue ribbon, with the others nowhere. Mr. Mason went it for the under dog, and quoted seven and a half pages from 'Our Prize Dogs' in support of his choice. This not only had the effect of making him more sure that he had got them right, but it also confirmed both of the others in their respective opinions, and a long discussion ended by each of the three seizing a blue ribbon and giving it to his favorite, greatly to the delight of the handlers, who one and all feared from the many adverse criticisms that at least two of the three had bestowed upon each dog, that the prizes they had already won would be withheld and all of the dogs be relegated to the unnoticed division."

The Hempstead Coursing Club has published an elaborate pamphlet entitled "The Hempstead Coursing Club's Side of the Question," in reply to the criticisms on its practice of killing hares with fox-terriers and to the action of the Society for the Prevention of Cruelty to Animals. The pamphlet is largely taken up with reports of rabbit coursing taken from the English papers, to show that the practice is an approved British sport; there are extracts from various American papers criticising the S. F. P. C. A. for its action in the matter. Greyhound coursing is described as a kindred sport; and numerous authorities are quoted to prove that rabbit killing in the Hempstead style is more free from cruelty than some other modes of killing wild animals.

The Fleet View Pointer Kennel, owned by Mr. Robert Leslie, of Lynn, Mass., and the Reading Pointer Kennel, owned by Messrs. E. B. Eames and C. E. Davis, of Reading, Mass., have consolidated under the name of the Fleet View and Reading Pointer Kennel.

Score one for the London *Truth* on this: "Here is the Duke of Westminster patronizing, and Mrs. Bancroft, Miss Ellen Terry, and Mr. George Grossmith getting up an entertainment for starving dogs, while the Lord Mayor is collecting thousands of pounds for starving Chinamen! Why, in the name of sacred common sense, does not the Lord Mayor collect the starving dogs and send them off to the starving Chinamen (who would like nothing better), while the generous artists could give their services and the Mansion House subscribers their money for the benefit of the starving Englishmen?"

Mr. C. J. Peshall will soon "revel in the halls of the Montezumas." We understand that he goes to Mexico as the invited guest of Mr. Robert Garrett, and as a member of the S. P. C. A. Society in the interest of the canine inhabitants of that benighted country. He will take a supply of the Seven Sutherland Sisters' champion compound hair restorer for the purpose of ameliorating the condition of the Mexican hairless dog by covering its nakedness with a much needed coat of hair.

The Chestnut Hill Kennel has purchased the latest sensation in English collie circles—Maney Trefoil. This dog beat The Squire and Metchley Wonder at the recent club show. If the portrait of him published in the *Stock-Keeper* recently is a good likeness, he is a rare good one.

The premium list of the dog show of the Pacific Kennel Club, to be held at San Francisco, May 22 to 25, provides for 104 classes, with prizes of $10, $5 and diplomas. Mr. Wm. Graham, of Belfast, Ireland, will judge all classes.

Owing to a misprint of numbers in the catalogue of the recent New York dog show the mastiff bitch puppy Tigress was published as winner of second prize. The prize was awarded to F. T. Underhill's Edda.

There will be a meeting of the associate members of the American Kennel Club at Mechanic's Hall, Boston, on Tuesday evening, April 3, at 8 o'clock, for the purpose of organization.

Mr. Geo. E. Poyneer, of Williamsburg, Ia., has become one of the proprietors of the Chesapeake Kennel, at Malvern, Ia., and will devote his time to the breeding of Chesapeake Bay dogs.

The Irish setter dog Kenmore has been reinstated.

MASTIFF MEASUREMENTS.—Saybrook, Conn., March 16.—*Editor Forest and Stream:* Some weeks ago you called for measurements of mastiff puppies. I herewith give you a description of my mastiff bitch puppy Eureka. She is not for sale. I think her very remarkable, for size especially: Eureka (A.K.R. 6700), whelped May 20, 1888; never exhibited: very light silver fawn, very short fine coat, jet black mask and ears, and weighs over 135lbs. in light flesh; is fed but once each day, and has not an ounce of flesh to spare. I could readily put 15lbs. additional on her. Exact height under standard 29½in. at shoulder, girth of body 38in., around loins 30in., forearm 11¼in., below elbow 10in., skull in front of ears 23½in., muzzle 14⅝in., from end of nose to stop 3⅛in., stop to occiput 8⅛in.; total length from nose to end of tail 74in. The stop is very marked. She is very long bodied and of heavy stocky build, very active, with bindlegs corresponding in size and strength to front ones; hocks well bent. I consider her decidedly above the usual size and a pretty good all around bitch.—JAMES H. DAY, JR.

PEDIGREE OF DU VERNAT'S LION.—*Editor Forest and Stream:* I do not think the above pedigree can be ascertained in this country; I have had it sent me once or twice, and it is an inextricable tangle. It bears every evidence of being honest, but jumbled in copying at some time. Nichols's Captain evidently has a share in it, but is probably misplaced in the pedigree. It should be straightened out, as the dog was of considerable merit. If any one interested in the pedigree will call at the Cunard office in Boston, and ascertain who the party was that exported the dog to Mr. Du Vernat and give me the address of this party, I think I can work it out in time. My recollection is that Mr. Du Vernat told me that the Cunard agent in Liverpool sent him the dog, and that a pedigree "as long as your arm" was sent with him. I have no doubt that the Corsair that became famous, both here and in England, by reason of his curiously bogus pedigree (which "the official, sir," was caught on) was really by Du Vernat's Lion ex Dr. Sawtelle's Venus.—W. WADE, (Hulton, Pa., March 15).

MARYLAND KENNEL CLUB.—Baltimore, Md., March 16.—*Editor Forest and Stream:* At a meeting of the Maryland Kennel Club, held on Wednesday, March 6, the following officers were elected for the ensuing year: Harry Malcolm, Pres.; Sherlock Swann, Vice-Pres.; W. Stewart Diffenderffer, Treas.; James E. Wilkinson, Sec.; Robert Ward, D.V.S., Veterinary Surgeon; Alexander Brown, Jr., Delegate to the American Kennel Club, and the following board of governors: Alexander Brown, B. Holly Smith, J. Olney Norris, J. Edward Duker, Gilmor Hoffman, James Thompson and Sherlock Swann. It is hoped, and definite arrangements have been made, to give a show here in September in connection with the annual exhibition of the Maryland Agricultural Society.—JAMES E. WILKINSON, Secretary.

THE ROCHESTER SHOW.—*Special to Forest and Stream.*—Rochester, N. Y., March 20.—The show which opened here yesterday is a decided improvement on Utica. There are over 300 entries, and several of the best kennels are represented. Pointers and English setters are again very weak classes. Washington Rink, where the show is held, is a most excellent building for the purpose and all the arrangements are of the best. The attendance is large and the better class of people are patronizing the exhibition. Judging of all classes except beagles was completed yesterday and these were judged this morning by Mr. Glover.

CHICAGO DOG SHOW.—Chicago, March 16.—*Editor Forest and Stream:* Since the publication of your last issue the following additions have been made to our premium list: Class 71, challenge dogs and bitches, cocker spaniels; has been divided, and now stands: Class 71, challenge dogs; Class 71½, challenge bitches. A special of $10 cash is offered for the best King Charles spaniel in the show.—GEO. H. HILL, Superintendent.

BLEMTON GINGERSNAP.—Red Hook, March 16.—*Editor Forest and Stream:* In your prize list of the New York show you credit my fox-terrier bitch Blemton Gingersnap with winning he. in class 132. It should be my Maizeland Festive. They were sent to the show in a double traveling box, and the man who took them out and benched them got their numbers changed.—LAWRENCE TIMPSON.

PHILADELPHIA DOG SHOW.—Philadelphia, March 14.—*Editor Forest and Stream:* The time for closing of entries for the next show of the Philadelphia Kennel Club has been reconsidered, and will be April 6 and not April 1. The officers of the club are: Ezra Comfort, Pres.; Charles T. Thompson, Treas.; and Francis S. Brown, 608 Chestnut street, Philadelphia, Sec.—FRANCIS S. BROWN.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Champion Roanoke. By S. W. Everitt, Lewiston, N. C., for black, white and tan English setter dog, whelped March 9, 1889, by Brush (Coin—Beauty) out of Lottie B. (Count Rake II.—Grace).

Mollie Bawn. By Jas. A. Whitten, Portland, Me., for white bull-terrier bitch, whelped Oct. 11, 1888, by Milo out of Gipsy (Bruise—Nell).

Wrangler. By W. G. Lawrence, Dunmore, Pa., for white and tan beagle dog, whelped Sept. 2, 1888, by Bannerman (A.K.R. 1709) out of Blossom (A.K.R. 5711).

Keith. By McEwen & Gibson, Byron, Ont., for black and tan collie bitch, whelped Jan. 2, 1888, by champion Scotilla (champion Dublin Scot—Flurry II.) out of Bonnie Knowe (Red Gauntlet—Brenda).

Murray and Bonnie Bell. By McEwen & Gibson, Byron, Ont., for sable and white collie dog and black, white and tan bitch, whelped December, 1888, by Gilderoy (champion Charlemagne—Hasty) out of Jeanette (champion Chieftain—Nettie).

Marlborough. By F. B. Zimmer, Gloversville, N. Y., for fawn, black points, mastiff dog, whelped March 9, 1889, by Boss (A.K.R. 2218) out of Lillie (A.K.R. 2981).

Ruebon Glue, Lord Chumley, Naddy and Pearl of Pekin. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pugs, two dogs and two bitches, whelped March 1, 1889, by Boycott (A.K.R. 6137) out of East Lake Virgie (Bradford Ruby—Puss B.).

The Rock and The Rye. By Dr. W. A. Strother, Lynchburg, Va., for black, white and tan English setter dog and bitch, whelped Jan. 10, 1889, by Rebel, Jr. (Roderigo—Bo Peep) out of Rhea (Dashing Rover—Leah).

Lamprey Kennels. By Thos. Bennan, New Market, N. H., for his kennels.

Grammercy Kennels. By N. D. Mann, 316 East Thirtieth street, New York, for his kennels of St. Bernards.

NAMES CHANGED.

Kent II. to Lord Kent. By Miss E. L. Fuller, Albany, N. Y., for white and tawny St. Bernard dog, whelped July 11, 1888 (A.K.R. 6733).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Mollie Stark—Alonzo. Seymour Van Santvoord's (Troy, N. Y.) mastiff bitch Molly Stark (A.K.R. 6225) to E. H. Moore's Alonzo (Orlando—Lady Canute), March 7.

Lillian—Barry. Nahmke Kennels' (East Patchogue, L. I.) St. Bernard bitch Lillian (Leo—Fan) to their Barry (Monarque—Juliet), Feb. 22.

Stray Shot—Gene. Nahmke Kennels' (East Patchogue, L. I.) English setter bitch Stray Shot (Gogo—Calico) to T. M. Aldrich's Gene (Druid—Ruby), March 9.

Cora of Wetheral—Rockingham. F. Windholz's (New York) English setter bitch Cora of Wetheral (Sir Alister—Mena) to his Rockingham (Belthus—Bess), March 9.

Countess Amelia—Count Howard. P. H. Gotzian's (Forest Lake, Minn.) English setter bitch Countess Amelia (Lug Dhu—Pickles II.) to F. Windholz's Count Howard (Sir Alister—Mena), March 7.

Mollie Bawn—Desmond II. Chas. T. Thompson's (Philadelphia, Pa.) Irish setter bitch Mollie Bawn (Glencho—Dunphy's Biddy) to his Desmond II. (Frisco—Grouse II.), Jan. 11.

Madge Glencho—Desmond II. W. W. Kendal's (Philadelphia, Pa.) Irish setter bitch Madge Glencho (Glench—Lorna Doone) to Chas. T. Thompson's Desmond II. (Frisco—Grouse II.), Jan. 23.

Lady Fawn—Desmond II. S. H. Marshall's (St. Paul, Minn.) Irish setter bitch Lady Fawn (Elcho—Noreen) to Chas. T. Thompson's Desmond II. (Frisco—Grouse II.), Jan. 17.

Lorraine—Desmond II. W. W. Sweeney's (Chandon, O.) Irish setter bitch Lorraine (Elcho—Noreen) to Chas. T. Thompson's Desmond II. (Frisco—Grouse II.), March 1.

Bissell—Fitzhugh Lee. J. M. Fronefield, Jr.'s (Wayne, Pa.) beagle bitch Bissell (champion Bannerman—Pet) to W. S. Clark's champion Fitzhugh Lee (Lee—Juliet), Feb. 20.

Orpha—Red Gauntlet. Jas. Watson's (Philadelphia, Pa.) collie bitch Orpha (Bounce—Clipsetta) to McEwen & Gibson's Red Gauntlet (champion Charlemagne—Hasty), March 6.

Bonnie Scot—Bonnie Dunkeld. McEwen & Gibson's (Byron, Ont.) collie bitch Bonnie Scot (champion Dublin Scot—Madge) to their Bonnie Dunkeld (Highlander—Electric), Feb. 2.

Floss—Mack. E. Indicott's (East Longmeadow, Mass.) pointer bitch Floss (Nan—Blitzen) to Dr. L. Corcoran's Mack (Ned—Gipsey), March 7.

Tidy—Douglass II. Wm. Korbs's (Cincinnati, O.) pug bitch Tidy to Eberhart Pug Kennels' Douglass II. (A.K.R. 4661), March 9.

June—Boycott. W. S. Marx's (Cincinnati, O.) pug bitch June to Eberhart Pug Kennels' Boycott (A.K.R. 6137), Jan. 21.

Queenie—Douglass II. M. L. Jackson's (Greensburg, Ind.) pug bitch Queenie to Eberhart Pug Kennels' Douglass II. (A.K.R. 4661), Dec. 15.

East Lake Virgie—Boycott. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch East Lake Virgie (Bradford Ruby—Puss B.) to their Boycott (A.K.R. 6137), Jan. 3.

Phœbe D.—Rockingham. L. E. Libby's (North Epping, N. H.) St. Bernard bitch Phœbe D. (A.K.R. 5775) to Geo. Q. Dow's Rockingham (A.K.R. 4278), March 11.

Daisy Foreman—Warwick Albert. G. W. Neal's (New Haven, Conn.) English setter bitch Daisy Foreman (Foreman—Jolly Nell) to Warwick Kennels' Warwick Albert (Royal Albert—Maida), March 13.

Vesper II.—Nat Goodwin. Thos. Blyth's (Peale, Pa.) English setter bitch Vesper II. (Pembroke—Vesper) to I. N. Cochran's Nat Goodwin (Roderigo—Bo Peep), March 7.

Black Pearl—Warwick Obo. Park City Cocker Kennels' (Bridgeport, Conn.) cocker spaniel bitch Black Pearl (Dandy W.—Miss Nance) to their Warwick Obo (Obo, Jr.—Black Garrie), March 8.

Whisper—Bradford Harry. M. H. Daley's (Bangor, Me.) Yorkshire terrier bitch Whisper (Bradford Harry—Belva) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), March 12.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

THE U. S. CARTRIDGE CO., Lowell, Mass., have received the following letter from Mr. L. S. Carter, winner of 25 out of 25 live birds at Cincinnati, Sept. 8, and who won 18 out of 20 at the shoot Sept. 9, winning the American Field Championship Cup:

"RAMMOND, Ill., Oct. 8, 1888.

"*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I have found no shells that can come up to yours, and think your strong primer Climax paper shells superior to Eley's. I used your shells at all the shoots this season, and had no trouble with any of them. They are more durable, crimp better, and for wood and Schultze powder they are superior to any I have yet found. (Signed) L. S. CARTER, Now Champion Live Bird Shot of the World."—*Adv.*

PEEKSKILL, N. Y., Oct. 10, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I am filling orders every day for Schultze and American Wood Powder, using your Climax shells, and they are dandies I assure you. In fact *they are the best.*
—*Adv.* (Signed), W. H. PIERCE.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, March 16.—The Massachusetts Rifle Association held its regular shoot to-day, but found very unfavorable weather conditions for good scores, a high wind blowing from 1 to 2 o'clock. Mr. Lee's 88 and 87 under such conditions were very fine. The gold medal in the 20-shot rest match was won by Mr. Monroe, and the gold champion medal by Mr. Lee. Following are the best scores made to-day:

20-shot Rest Match, 200yds.

WILMINGTON, Del., March 18.—Monday was the first really pleasant Monday since before Christmas, and as Monday has generally become recognized as riflemen's day in Wilmington, Del., the pleasant weather was hailed as a welcome change by local riflemen. The gratification was more complete from the fact that the recent stormy weather prevented their usual weekly indulgence in the pastime, so that those who gathered at Healdmoor Rifle Range were prepared for a good long afternoon of exciting sport. The military marksmen's monthly badge was won by Private Lunt, of Company H, New Castle, and C. Fehrenbach was the winner of the beginners' monthly badge. The matches were well attended, and the scores were as follows, standard American target:

Revolver Match, 50yds.

H Darlington	8	7	8	6	10	7	9	10	6	10	—81
H Simpson	6	6	10	6	8	10	10	6	7	8	—77

March 1	9	5	6	6	6	10	10	7	6	4	—69

NEWARK, N. J., March 18.—The tournament of the United Amateur clubs goes on apace and some fine gallery work is the result. The standing of the clubs is as follows:

	Shot.	Won.	Lost.	Average.
Monroe	10	8	2	1,036⅘
Oakland	11	9	2	1,030
Excelsior	9	6	3	1,029⅘
Howard	10	5	5	1,010⅘
Lakeside	10	4	6	983⅗
Annie Oakley	10	2	8	937⅘
Columbia	10	1	9	909⅘

The fifteen highest individual averages are:

	Matches	Shot.	Average
Otto Krauss, Excelsior Club	7		113
F C Dietz, Howard	7		109⅐
Gus Wideman, Monroe	10		108⅘
Henry Snyder, Monroe	9		107⅘
L Mathes, Oakland	11		107⅑
Wm R Raab, Monroe	9		107⅘
John Bayer, Oakland	11		106⅑
Albert Hagel, Lakeside	10		105⅗
Wm Connors, Annie Oakley	9		106⅘
F Schmidt, Excelsior	8		106
Dan Erskine, Monroe	9		105⅘
W E Coe, Columbia	6		105⅘
F A Hall, Monroe	10		105
J Burger, Excelsior	9		105
E Wurtzbach, Excelsior	9		104⅘

The highest ten scores are:

F A Hall, Monroe	117	F Schmidt, Oakland	114
Otto Krauss, Excelsior	116	F Smith, Excelsior	114
F C Dietz, Howard	114	E Flocke, Excelsior	114
L Mather, Oakland	114	Wm R Raab, Monroe	113
E Wurtzbach, Excelsior	114	Wm Schaller, Oakland	113

OWENSVILLE, Ind., March 12.—The Owensville Ballard Rifle Team, six members, met on range to-day. J. Montgomery won the medal. Match at 10 standards, 200yds. off-hand, shot under national rules, gold medal prizes:

J Montgomery	7	7	4	8	5	10	10	7	7	9	—74
	9	5	8	6	8	10	8	9	10	6	—79
R Speck	5	8	8	9	7	10	4	8	6	6	—71
W Gentry	10	5	8	6	6	9	4	6	8	6	—68
W Roberts	6	7	7	8	8	5	7	4	8	7	—67
J Daugherty	6	4	9	5	7	5	9	5	5	10	—65
G Daugherty	4	9	6	6	6	5	6	4	6	6	—58

March 8.—J. Montgomery made the following scores, 200yds., off-hand, wind 1½ points from 9 o'clock quarter:

J Montgomery	9	7	6	10	7	9	8	7	8	6	—77
	7	9	7	8	10	9	8	8	8	7	—81
	9	7	9	9	8	8	9	7	9	8	—81

CANADIAN RIFLEMEN.—AURORA, March 9.—A rifle match was shot to-day between the Aurora and Bradford teams over the range of the latter, in which Aurora won by 15 points.

Aurora.		Bradford.	
R Mosley	87	C Medcalf	82
W Machell	83	D Neilly	78
D Eade	74	James Neilly	78
C Lyons	73	G Simons	70
E Braund	71	Joe Neilly	81
J C B Johns	70	N A St Clair	68
H Ross	67	R Neilly	62
C Crockett	65	J Dolittle	59
A Neilly	55	W Holmes	55
M Fleury	54—699	John Neilly	51—684

AGINCOURT, March 9.—A rifle match was shot here to-day between the Highland Creek and Scarboro rifle associations, 10 men on a side, which resulted in favor of the Scarboro team by 7 points. The match was a very closely contested one throughout, and, although a heavy snow storm prevailed during the entire match, the score was fair. Following is the score out of a possible 25 at each range. Position standing at 100yds., and any position at 200yds. with head to target:

Scarboro.	100yds.	200yds.	Tl.	Highland Creek.	100yds.	200yds.	Tl.
S Reunie	23	23	46	J Chester	17	23	40
J Davison	13	22	35	W Chester	16	23	39
T Hood	18	20	38	C D Closson	11	20	31
J Walton	19	22	41	Q Morrish	19	21	40

E Mohrstadt	9	5	10	6	10	6	7	9	6	8	—76
A E Bengel	0	7	6	6	7	9	9	6	5	10	—74
M Summerfield	6	6	9	7	8	7	9	4	9	4	—74
W Mackwitz	10	9	7	8	7	9	4	7	9	4	—74
J A Lee	8	7	6	8	9	9	5	7	7	6	—72
W Hettel	5	7	9	5	8	4	6	8	6	7	—65
L H Rose	6	9	8	4	7	9	6	8	5	0	—62

UNSER FRITZ.

PHILADELPHIA, March 14.—With a stiff breeze from 9 o'clock, the members of the Hartranft Rifle Club faced the targets at Frankford, and some very good scores were the results of the day's practice at 200yds., off-hand, standard American targets. Military rifles had an allowance of 4 points:

E Travis	7	8	10	8	10	10	7	10	8	8	—86
J J Mountjoy	4	9	8	10	10	9	6	8	9	6	—74

BROOKLYN, March 14.—The Brooklyn Rifle Club, Capt. Henry Holzer, had a great time of it to-night celebrating the 25th anniversary of the foundation of the society. Secretary L. H. Dufft read a poem especially written and composed for the occasion by Mr. Henry Faust, who is well known among the Germans of South Brooklyn as their Gowanus poet laureate. After this the act of distribution and presentation of prizes of recognition, in the shape of gold-headed canes and diplomas to some of the oldest members of the organization, took place. Lieut. John Kolle stepped forward and called the names of John Feitner, Sr., and L. H. Dufft, the latter celebrating at the same time his twenty-fifth anniversary and jubiles as secretary of the rifle club. Lieut. Kolle, after a short and appropriate address, presented Messrs. Feitner and Dufft with elegant gold-headed canes, while beautiful diplomas were distributed to the following surviving founders of the club: Messrs. M. Matthey, L. H. Dufft, John Feitner, Herman Broer, Caspar Fretz, Michael Venzel, Christian Neilson and Paul Gsaenger. The veteran riflemen were congratulated by ex-Captain Braun. It was about 12 o'clock when a procession of ladies, dressed in gala style, marched into the ballroom and ascended the stage, carrying a most elegant present to be dedicated to the rifle club. When the covers that surrounded it were removed, the ladies unfurled a rich and beautiful silk banner, which evoked loud expressions of astonishment and surprise. The banner itself is a masterpiece of the art of embroidery. It measures five by seven feet. The one side of it shows on a navy blue field the American eagle, with wide-spread wings, and the coat of arms, embraced by a wreath of oak leaves and laurels in green silk. Above these insignia the inscription "Brooklyn Rifle Club" is embroidered in colors of various shades, while underneath the wreath the words are continued: "Organized March 14, 1863." The reverse side of the banner bears on a white silk field in its center a pair of rifles, on one side of which is a stand of German colors and on the other a stand of American colors. Above the centerfield the inscription stands: "Dedicated by the Ladies of the Brooklyn Rifle Club," and beneath the words: "At the twenty-fifth anniversary." All the embroidery is done in fine silk and natural colors, and the banner is surrounded by genuine gold fringe.

LEXINGTON, Va., March 8.—A duel with pistols was fought here this afternoon by two young society swells, Warwick C. White and H. Starkey. White selected Pete Williams as his second, and Starkey named John Doss as his representative. The principals and seconds at once left town, and in a secluded place in the suburbs, marked off thirty paces. The principals faced each other armed with Colt's .32cal., seven-shot duelling pistols, and at a signal began firing. The pistols were emptied without result. Seven more shots were fired by each principal without effect. At this stage of the affair it began to look as if neither of the aggrieved youths could hit a flock of barns. The pistols were charged for the third time. The last seven rounds were fired in rapid succession, and when the smoke cleared away it was found that one ball had passed through White's hat, and the coat of Starkey showed a bullet mark. Forty-two shots were fired in all. At the conclusion the principals stepped forward, shook hands and became friends.

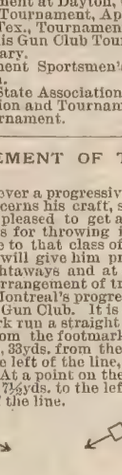
"GO AS YOU PLEASE MATCH.—F. W. Hofele has issued the following challenge to G. Zimmerman of this city, who won the whole week match at the recent German Fair: "To shoot a match with thirty-eight or any caliber, three-pound-pull trigger rifle, at a 200 or 500yds. range target, at either Morrisania or Creedmoor. The one who shall make or score the largest number of bullseyes, shots or points, between the hours of 1 and 6 o'clock on the afternoon of the day which shall be decided upon for the match, shall be declared the winner of the match. The loser of the match is to forfeit and pay for a champagne dinner, the same to be given to twenty-five persons, ten of whom shall be invited by the loser, and the other fifteen persons to be invited by the winner, and in addition to the above, the loser to forfeit to the winner the sum of $100. The match to take place on or before the expiration of thirty days from March 15, 1889. The contestant who shall not appear on the day of the contest shall be declared loser of the match

MONTREAL, March 14.—The annual meeting of the Montreal Gun Club was held this evening. The annual report showed the club to be in a flourishing condition, and the draft of the programme for the coming year promises some capital sport. The election of officers for the ensuing year being proceeded with resulted as follows: Pres., A. Ramsay; Vice-Pres., George Boultie; Sec., A. Burke; Capt., W. McCaw; Committee, E. A. Cowley, J. Paton, A. W. Stevenson, H. W. Atwater and R. J. Tooke.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.



FIXTURES.

March 26 to 27.—Tournament at Dayton, O.
Omaha, Neb., Gun Club Tournament, April 16, 17 and 18.
April 30.—San Antonio, Tex., Tournament. Open to all comers.
May 21 to 23.—Minneapolis Gun Club Tournament, Minneapolis, Minn. James Pye, Secretary.
June.—Annual Tournament Sportsmen's Association of the Northwest, Tacoma, Wash.
June 3 to 7.—New York State Association for the Protection of Fish and Game, Convention and Tournament, Albany, N. Y.
June.—Kansas City Tournament.

ARRANGEMENT OF TRAPS.

Editor Forest and Stream:

The true sportsman is over a progressive man and always interested in that which concerns his craft, so I feel sure that most of your readers will be pleased to get a description of a new system of arranging traps for throwing inanimate targets, one that will be of great value to that class of sportsmen who shoot ducks over decoys, as it will give him practice at cross flights, both right and left, straightaways and at dropping and quartering incomers. This new arrangement of traps is one of Mr. R. J. Tooke's, who is one of Montreal's progressive sportsmen and a member of the Montreal Gun Club. It is as follows: From the shooter's stand or footmark run a straight line out into the field, and on this line, 18yds. from the footmark, No. 1 trap is placed; then at a point on the line, 33yds. from the footmark, No. 2 trap is set 7½yds. square to the left of the line, and No. 3 trap 7½yds. to the right of the line. At a point on the line, 40yds. from the footmark, No. 4 trap is set 7½yds. to the left of the line, and No. 5 trap 7½yds. to the right of the line.

No. 1 trap is set to throw a straightaway target; No. 2 trap, a low swift target square to the right, and No. 3 trap, a low swift target square to the left, these resembling the cross flight of ducks as they swing over the decoys. Then No. 4 trap is set to throw an incoming quartering target to the right, so as to cross over trap No. 3. No. 5 trap is set to throw an incoming target quartering to the left, so as to cross over No. 2 trap. The incomers will at no point be nearer than about 32yds. to the shooter, and at that point will be dropping, so as to be nearly like the flight of ducks as they pitch into the decoys. I give diagrams to better explain the position of traps. If desired, another trap can be placed on the line so as to give a direct incomer. It can be placed out so far as to allow the target to drop in front of the shooter, or set closer in so as to throw the target over the shooter, when it should be fired at before it crosses the line of the footmark.

I would advise all trap-shooters to give Mr. Tooke's system a trial; but, gentlemen, don't expect to make big scores at first. We will wager our friend, the invincible "A1," a bottle of Uncle Ben's native that he cannot make at the first trial a clean score nor within 10 per cent. of it. Uncle Ben's wine is the pure "juice of the grape," though he says every time that he opens a bottle, "I allow no one, sir, to drink my wine, sir, unless he is forty years of age, sir."

I expect, Mr. Editor, that this manuscript will spread dismay in your office, as it is written on the cars, jolting along north of Lake Superior, through a white-robed country of rock and stunted dead timber on one hand, and ice-covered waters on the other. Little here at present to tempt the sportsman, but a few months will change the aspect somewhat and will bring the lively and nimble skeeter and trout to the front.

As I have my pencil in I may as well be hung for a buck sheep as for an ewe lamb; so I'll say something about the Dominion Gun Club Alliance. The Alliance is now in working order, and we expect soon to have all the gun clubs enrolled, as well as a large individual membership. Several important additions have been added to the old standard rules on trap-shooting—one a penalty for dropping shots, another relating to team shooting, *noms de plume*, etc.

A large amount of interest is being manifested here over what is known as the Adam Brown pigeon bill. This bill is to stop pigeon shooting, and, in fact, to prevent the killing of any kind of animals for sport. It may possibly be worked through the House to meet its sure death in the Senate. STANSTEAD.

ON THE CARS, Ontario, March 8.

TRAP CHAT.

A MATCH has been made between Wm. Lever, of Elizabeth, N. J., and Mose Myers, of East Newark, N. J., with conditions as follows: Fifty single live birds to be shot from 5 traps, at 30yds. rise, under modified Hurlingham rules, with the exception that the use of one barrel only is to be allowed, for $100 a side, $25 forfeit posted with Johnny Erb. Race to come off on Thursday, March 28, at 12 M. sharp, so as to be finished before the Smith-Manitz match is called.

Secretaries of gun clubs will oblige us and insure prompt publication of scores if they will send in their reports at the earliest dates practicable. We receive every week scores too late for insertion, and in almost every case the report might have been sent in two or three days earlier.

NEBRASKA TOURNAMENT.—The fifteenth annual tournament of the Nebraska State Sportsmen's Association will be held at Norfolk in May next; exact date and programme will be announced later. Five thousand live pigeons guaranteed by the North Nebraska Sportsmen's Association, and artificial targets enough to afford unlimited sport for all who may attend. Shooters will be classified according to record, so that all will have a fair chance and amateurs will not be compelled to compete with professionals. A number of the best shots in the United States will be present, and the best tournament ever held by the association is expected. J. B. Barnes, President; B. F. Locke, Secretary, Norfolk, Neb.

SAN ANTONIO, Tex., March 15.—Preparations are being made to hold a grand shoot in the city on April 10. The match will take place at San Pedro Springs and is open to all comers. The conditions will be 20 live pigeons, 31yds. rise, from five ground traps, Hurlingham rules, with use of both barrels. The prize list includes: 1. Contents of Lexington livery stable and business, valued at $2,000. 2. Cash, $100. 3. Cash, $50. 4. Cash, $30. 5. Pair thoroughbred pointer pups, valued at $50. 6. Thoroughbred pointer pup. 7. Cash, $20, for the poorest score made. The entrance fee will be $35, all entries to be made by April 1.

DAYTON, O., March 16.—Seven hundred live pigeons are in the coops, and 300 more are to be purchased for a two days' tourney here on the 27th and 28th of this month. It is not to be a pay affair, but is just gotten up for pleasure of the shooters, free for all spectators, but bushwhacking around the outskirts is to be prevented by the police. On the same day there will probably be a team match, standard targets, Keenan and Heikes against Bandle and Ed Cain.

NEW YORK SUBURBAN GROUNDS.—Claremont, N. J., March 9.—Sweepstakes at 10 birds, 50 cents entry, ties div. First sweep:

Richards wins on shoot-off.

TORONTO, March 14.—The telegraphic shooting match, between teams of the Stanley Gun Club of this city, and the Ridgetown Gun Club, took place this afternoon. The Stanleys shot on McDowall & Co.'s grounds, and were refereed by Mr. J. Townson, while the Ridgetown men shot on their own grounds, and were refereed by their president. The teams consisted of 10 men each, the conditions being one screened trap, birds thrown at three different angles, 18yds. rise. The scores are as follows:

Ridgetown.		Stanleys.	
Laing	19	J Rice	19
Sparham	19	W McDowall	16
H Scone	19	C G Winchell	15
Malloy	18	T Sawden, Sr	15
Thorlee	18	G Morley	15
W Scone	17	T Bennett	14
O Scone	17	T Sawden, Jr	13
Carlton	16	T Mitchell	10
Pruth	14	W Heatherington	8
Leith	11—168	S McClure	7—131

The following sweeps were then shot here:

Sweep No 1, 15 birds, 3 prizes:

Bennett	12	Winchell	7
McDowall	9	Heatherington	7
Townson	9	Mitchell	6
Morley	9		

McDowall and Townson divided second and third.

Sweep No. 2, same conditions:

Bennett	12	Winchell	7
Townson	9	Heatherington	7
McDowall	7		

McDowall won third money.

Sweep No. 3, 12 birds, 2 prizes:

Townson	9	Johnston	7
Winchell	7	Bennett	5
Heatherington	7	McClure	5

Winchell won second money.

JAMAICA, L. I., March 12.—At the annual meeting of the Jamaica, L. I., Rod and Rifle Club, held this evening, George H. Creed, Tax Receiver of Jamaica, who has been president of the club for the past fourteen years, declined the office. Theodore Rogers was elected President; George W. Damon, Correspondent; Samuel S. Aymar, Secretary and Treasurer, and John M. Crane, John H. Sutpin, John Flemming, Joseph Bernhardt, William S. Coggswell and George Hicks, Executive Committee.

CORRY, Pa., March 7.—The Corry Gun Club held their weekly shoot at keystones, under keystone rules. Laurie won the gold medal, Blydenburg the silver, Starbird the leather.

KEYSTONE.

THE UNKNOWN GUN CLUB.—March 14.—The members of the Unknown Gun Club turned out very strong in number yesterday for the third monthly shoot of the season, at Dexter's Park. Over 30 shooters were ready to go to the traps, but on finding that there were scarcely enough birds to supply the demand some of them dropped out. As it was the 26 competitors for the medal were enabled to shoot at but six birds each, instead of seven, the usual number. The shooting all through was good, considering that only one barrel was allowed:

PINE IRON WORKS, Pa., Feb. 23.—This was the ninth match for badge of the Pine Gun Club. It was very stormy and cold. Match at clay-pigeons. Ligowsky trap, 18yds. rise, National rules:

J T Romig	0100010000—2	M T Romig	0000010000—1
J N Boughter	1011111010—7	S H Schaefer	0110010101—5
R B Eagle	1101110110—7	W Barton	1011000 —3

Ties for first miss and out: Boughter 3, Eagle 2. A match was shot at Athol Feb. 14. J. Newhart was going to have a live pigeon match for a bull that weighs 2,300lbs.; but when the gunners came he had not one bird; then they shot two sweepstakes, clay-pigeons, 1 trap, 18yds.:

J Nettles	1111110111—9	Bell	1011111111—9
J Hill	0111111111—9	Carver	1111100110—7
F Ulmer	1110001100—5	Bachtel	0011111100—6
Buckwalter	1111011111—9		

Tie miss and out: Nettles 5, Hill 4, Buckwalter 4, Bell 2. Second match:

J Nettles	11001—3	Bell	11111—5
Buckwalter	11001—3	Carver	11111—4

WATSON'S PARK, Grand Crossing, Ill., March 12.—Match at 50 tame live pigeons, 5 traps, 30yds. rise, 80yds. boundary, shot under Illinois State rules, prize $100:

Wm P Mussey	1101110212002000112110222122122012122012122102122—40

Wilcox (29)	0011022120200221 — 9	* 12-gauge, under 8lbs.	

RAVELRIGG.

WOODSIDE, L. I., March 12.—The enthusiasm of the members of the North Side Gun Club, of Long Island, remains unabated. The fine weather brought a large number of our members to the score at the club grounds, Train's Meadows, to participate in the twelfth and last monthly average shoot for the year. Lively and strong birds were furnished by Mr. M. Bouden. Five prizes were awarded to the five members having made the best average score for the year, not less than eight shots to count. Conditions of the shoot: Seven live birds each, 5 King's ground traps, handicap rise, 80yds. bound, no back bound, club rules. Appended is the score of the day:

Winholz (28yds)	1111111—7	Bussell (26)	1011110—5
Eberhardt (28)	1111111—7	Manning (27)	1111001—5
Siems (26)	0111110—5	Blanch (22)	1100110—4
Wahlen (26)	1111010—5	Bolding (21)	1101000—3
Bohmcke (24)	1001010—3	Byers (25)	0101100—3
Lyon (26)	1110101—5	Heinkes (26)	1111060—4
Cr Meyer (24)	1010010—3	Grau (24)	1110100—4
Shand (24)	0111001—4	Duryea (28)	1111110—6

Ties for first, 30yds.: Winholz, 101—2; Eberhardt, 011—2. Second tie: Windholz, 111—3; Eberhardt, 01—1. Average score for the year and awarding of prizes: A. Duryea, first prize, gold badge, killed 49 birds in 8 shots; A. Eberhardt, second, $20, 55 birds in 10 shots; M. C. Manning, third, $15, 43 birds in 8 shots; L. Helmken, fourth, $10, 42 birds in 8 shots; J. Winholz, fifth, $5, 57 birds in 11 shots.—AUGUST H. EBERHARDT, Secretary.

KEOKUK, Iowa, March 15.—C. W. Budd, of Des Moines, Iowa, J. R. Stice, of Jacksonville, Ill., shot at 100 live pigeons on Friday, at Keokuk, Iowa, for the championship of America and a purse of $500. Budd won by a score of 96 to 88. The race wash shot under Hurlingham rules, 30yds. rise and 80yds. boundary. The contestants used both barrels in many instances where it was not necessary, in order to make the kills certain. Budd killed 49 birds out of the first 50.

THE WILLIMANTIC ROD AND GUN CLUB, March 14, elected the following officers: Joel W. Webb, President. Homer E. Remington, Vice-President. James H. Ross, Secretary. Arthur B. Carpenter, Treasurer. Jerome B. Baldwin, Captain.

HEDDEN AGAINST LEVER.—On Thursday, March 14, Erb's Park, at Newark, N. J., was the scene of a contest at live birds between C. M. Hedden, of Newark, N. J., and Wm. Lever, of Elizabeth, N. J. Some weeks ago a match was made by these parties to shoot at 50 single live birds at 30yds. rise, modified Hurlingham rules, for $50 a side. The first meeting resulted in a tie with 35 birds killed, and on Thursday last this tie was shot off. The weather conditions were favorable to a good score. The air was clear as a bell, and with no wind to speak of, was just cool enough to be bracing. The birds were an exceptionally good lot and it required a considerable degree of skill to stop their rapid flight. The usual crowd of onlookers were present and those who were on the right side managed to pick up a few dollars at odds of $10 to $8 and $10 to $6 on Hedden, who as will be seen from this was a strong favorite. Milt. Lindsley was chosen referee. Below are the scores made:

C M Hedden....2121020111112120211120122222221012111212322—41
Wm Lever....1022111121220101210121002000120121221221112001012—38

Some sweeps were also shot with results as follows. Sweep at 4 live birds, $2 entrance, 28yds. rise; Hedden 30yds.:

Class	1111—4	Byram	1011—3
Castle	1011—3	Tee Kay	1101—3
Leddy	0111—3	Hedden	1110—3

First won by Class alone. Tie for second shot off in next sweep and divided by Castle and Leddy.

Second sweep, same as No. 1:

Class	101—3	Hedden	0111—3
Castle	110—3	Green	0110—2
Leddy	1111—4	Collins	1010—2
Byram	0000—0	C Smith	0111—3
Tee Kay	0011—2	Lindsley	1011—3

Leddy won first alone; second shot off and divided by Class, Hedden and Lindsley; third shot off and divided by Tee Kay and Collins.

KANSAS CITY TOURNAMENT.—St. Louis, Mo., March 16.—Kansas City sportsmen promise a grand entertainment for the visiting brother sportsmen at the State tournament in June. The shoot is to be held in the park used by the local ball team. Ten thousand live birds have been contracted for, and they of necessity must be good strong birds, because they will be sprung from ground traps. Eleven shoots are down for the five days, all, with the exception of the State medal for teams of four, and the St. Louis Gun Club medal, are to be open to the world. On the last day there will be a 25-bird shoot with $25 entrance. Some of the shoots are use of one barrel only, but the majority use of two. A committee was appointed to call upon merchants to solicit special prizes; and has secured many valuable and handsome donations. A large attendance will be certain. Considerable interest is manifesting itself among the sportsmen throughout the State. Kansas City alone will furnish nearly thirty-five active participants, which with the visitors that it is expected will be on hand will swell the entries to fully seventy-five. Nothing will be left undone by the Kansas City sportsmen that will in any way hinder the amusement of the visiting trap shots.—UNSER FRITZ.

DAYTON, O., March 11.—Considerable interest attached to two trap shoots to-day as it is the first since the Dayton Kennel Club adopted the standard traps and targets for all contests. Conditions of both matches to-day were 100 birds each, 3 traps, 16yds. rise. The first was between Rolla O. Hikes and Walter Keenan, with this result:

Keenan	1111111111111111111111111111001111111111101111
	1111111111011101101111111101111111111111111111—93
Heikes	1111111111111111111111111111111111101101111111
	1111111001101111111111011100111111111110011—90

The wind at times when the last 50 birds were being shot grew stiff and caused some uncertainty. After Keenan had been declared the winner, William Pratchett and Andrew Mumma shot their match, same conditions, the score standing, Pratchett 82, Mumma 79. The Kennel Club has limited membership in the trap team of shooters to 50, and that is about full. Traps will be set next week at Oakwood, to remain in position until Nov. 1.—A. B.

BROOKLYN, March 13.—The monthly shoot of the Parkway Rod and Gun Club of the Twenty-sixth Ward was held this afternoon in the meadows adjoining the "Old Mill." Dave Van Wycklend won the diamond badge. The following is the score:

James Bernet	1111111—7	R Pbister	1111111—7
H J Selover	1111001—5	Geo Schiellein	1001100—3
Lee Helgans	1111100—5	C L Madison	0011110—4
Wm Levens	1010011—4	D S Van Wycklen	1111111—7
A Lehmann	1001011—4	Louis Moller	1010111—5
M Meyer	1101000—3	Henry Van Wycklen	1001100—3
H Steinheuser	1111000—4		

Scorer, Henry Moulton; referee, Joseph Ochs. Van Wycklen won the tie, killing 3 birds straight.

WELLINGTON, Mass., March 16.—The two dozen gunners who faced the traps at the grounds of the Wellington club to-day found it difficult to make first-class scores, owing to the strong north wind, which greatly increased the flight of the birds. In the match for the silver cup, H. G. Wheeler won with 13 out of 15. In this match the following scores were made: Baxter 8, Conant 9, Chapin 9, Leon 8, Lang 12, Reese 7, Schaefer 10, Wheeler 13, Bradstreet 8, North 6, Bond 11, Stone 4, Webster 11, Warren 10, Swift 9, Stanton 11, Chase 10, Lee 11, Nichols 9. In the merchandise match the following scores were made: Bradbury 7, Baxter 9, Stanton 10, Chapin 9, Leon 7, Lang 8, Reese 11, Schaefer 6, Wheeler 8, Bradstreet 9, North 9, Bond 13, Stone 9, Webster 10, Warren 7, Bennett 9, Snow 8, Moore 6. Sweepstakes followed.

BOSTON, March 13.—To-day saw a large attendance at the range of the Boston Gun Club at Wellington, and notwithstanding the high wind some fine scores were made. The first prize winners were: Five bluerocks, Leon; 10 bluerocks, Piper and Reese; 5 bluerocks, Darling; 5 Macombers, Kirkwood, Leon and Williams; 5 pigeons, Darling; 3 pair Peorias, Leon and Piper; 6 Peorias, Bowker, Frye, White and Brown; 10 pigeons, Eames, Chase, Wild and Conant; 10 Peorias, Tuttle; 6 pigeons, Connors and Whitcomb; 5 Macombers, Eames and Pray. In the match these scores were made: Edwards 14, Whitcomb 14, Leon 17, Piper 18, Pray 13, Bowker 15, White 19, Darling 11, Wild 13, Brown 15, Kirkwood 18, Eames 21, North 17, Frye 11, Chase 13. R. E. Whittle 14, Holmes 10, Tuttle 05, Reese 14, Williams 12, Bill 18, Connel 14, Thomas 12, Sanborn 17. In the 3 man team match at 10 Peorias Edwards, West and Frye made 19, Chase, Reese and Bill 25, North, Leon and Piper 16, Holmes, Eames and Tuttle 26. Williams, Sanborn and Kirkwood 22, Bowker, Pray and Jones 16, Connel, Whitcomb and Thomas 21.

OTTAWA, March 16.—The St. Hubert Gun Club are getting in good shape to meet their Western friends, whom they expect to see in this force for their May 24 tournament. The weather just now is all that could be desired for shooting, and the boys are in high feather. This afternoon they had a good meeting, the following being the scores made:

Sweep at 10 birds each, 18yds. rise, 5 traps:

Dr Martin	10	R G Dalton	7
P Trudeau	8	A H Throop	6
J Deslauriers	7	E King	5
W J Johnstone	7	S White	4

Sweep at 5 doubles; same conditions:

R Dalton	7	A Throop	3
J Deslauriers	7	Dr Martin	3
Ed White	7	Geo White	3
W de Courcy	5	Dr McPhee	2
E King	5	Dr Equis	2
P Trudeau	4		

The club match was then called and twelve faced the score for the contest. This makes the third shoot out of the eight, and several men are close together for first position. Club match, at 20 birds each:

J Deslauriers	18	P Trudeau	13
R Dalton	17	G White	12
A Throop	16	Dr Martin	12
E White (1 start)	16	W de Courcy (6 start)	11
Dr Equis (1 start)	15	S White (2 start)	10
W Johnstone	13	Ed King (3 start)	10

LAKEWOOD, O., March 16.—The Locksley Gun Club held their regular shoot for the club badge to-day, on their grounds at Lakewood, O. The badge was won by Albert Hall, with a score of 18 out of a possible 20. 20 standards were the conditions, at 16yds. The scores follow:

A Bye	18	J C Andrews	18
J H Bye	17	A Jenks	12
A M Hall	16	J A Day	11
T C Hall	14	R Beckley	11

RED BANK, N. J., March 15.—The Riverside Gun and Rifle Club held a shoot on their grounds in Middletown this afternoon. The wind blew hard but the scores were excellent. Edmund Throckmorton and William T. Conover won first money by killing 8 birds apiece out of 9. Capt. George Coley and Melville Cornwell won second money, Dr. Edwin Field third, and A. Whymer fourth. In a sweepstakes match between Dr. Field, Cornwell and Charlie Noble, Cornwell won by killing 3 birds out of 4.

NEW YORK.—Jim Pilkinton, the well-known oarsman, and Miss Annie Oakley will shoot 20 birds each against Arthur Ditmar and Thos. Jakes for a gold medal, on Saturday, March 23, on the Bronx River Gun Club grounds, West Farms station.

CINCINNATI, March 16.—The attendance at the Bandle—Carver shoot here to-day was very large, even for this trap-loving town, not less than 3,500 being present. The birds were good and swift, and Carver was in fine shooting trim, and crowded at everything on the earth about him and the sky above him, though the weather was extra fine. Mr. Taylor was the referee, and made a very good one. Bandle was in good form, but he had a hard one to meet, and slipped away just one bird short on an excellent score. Bandle shot an excellent race—a winning one ordinarily—but the general opinion was that he resorted to his second barrel in case of a miss with the first too hastily. It must be said for him though that he did not lack nerve, and shot as coolly throughout as did his experienced opponent, and when Carver endeavored to rattle him by his constant talk he only smiled and chewed a bit harder on his chewing gum. The race was a very even one from the start to the finish, and on that account, with Dr. Carver's constant complaints and kicking, was interesting. Some $6,000 was wagered on the result. Bandle's coacher will protest the match on two decisions—one, a bird shot by Carver was shot while on the ground, missing it with his first and killing it with his second, scoring a dead bird; whereas, according to Rule 13, Hurlinghom, it should have been "no bird," and the shooter be compelled to fire at another. Another, a bird bit hard with both barrels, lighting on the boundary post fence, it is claimed was struck by outsiders (scouts), causing it to fall in bounds; scored a lost bird. Another bird of Carver's, that he himself acknowledged he missed with both barrels, lit on one of the spectator's shoulders and closed his wings, the spectator in question standing on a bench, making his shoulder height some nine feet from the ground, the spectator himself gathering the bird and handing it to the regularly-appointed gatherer. Bandle and his friends endeavored to personally arrange with him another similar match for $500 to $1,000 a side, to be shot either here or in Kansas City, but he refused unless Bandle would use a 7½lb. gun.

One hundred birds, Hurlingham rules, 30yds. rise, fence boundary, for a purse of $500.

Dr Carver	1111102111211012112—18
	1222121111121112012 2—19

	1221110121212111111—19
	1212222121111221201—19
	1o1111111201c211222—17—90

2 denotes use of second barrel.
o denotes fell dead out of bounds.

Referee, Ed Taylor. Puller, A. C. Dick. Official scorer, Wick.

Of course there was the usual sequence to a Carver match. His gun was seized by the sheriff, only in this case there were three sheriffs and but one gun. Just as the match closed Carver took his gun apart and laid it down. Just as he did three men rushed for it. They were the constables. Notwithstanding Johnson weighs 300lbs., he got there first and attached the barrels of the gun. Before he could seize anything else constables Rebold and Meyers attached the stock of the gun and all of the Doctor's cartridges.

BERGEN POINT.—Teams of five men each, representing the New York Suburban Shooting Grounds Association and the New Jersey Athletic Club, shot the first of a series of matches Saturday afternoon at Bergen Point. The New York team was victorious. Each man had 20 clay-pigeons, sprung from three traps at 18 and 18yds. rise. There was a strong northwest wind blowing. Seventy-two out of 100 were broken by the visiting team, who were: Chas. Richards, M. Medora, Treadwell Richards, W. J. Simpson and Chas. Latham. Mr. Medora made the highest individual score, 18 breaks and 2 misses. Three of his associates broke 17 each. The New Jersey Athletic Club team were George S. Virden, Bayard T. Kissam, Richard Sunderman, J. D. Berdan, and Howard Cook. Fifty were broken and 50 were missed by that team. Sunderman did best, breaking 12. Alfred P. Vredenburgh umpired and Elmer E. Bigoney was scorer. Next Saturday afternoon the second match will be contested at Clairmont. Six members of the New Jersey Athletic Club contested the eighth match Saturday afternoon for the club cup. Bayard T. Kissam and Richard Sunderman tied for first place, breaking 11 out of 15. Mr. Sanderman won the shoot-off and the match. There will be four more shoots for the cup. Following is the record of winners to date: B. T. Kissam 4 times, R. Sunderman 2, G. S. Virden 1, J. D. Berdan 1. In a match for an order given the Gun Club on a sporting house for goods there were 10 entries. Howard Cook won, breaking 13 out of 15.

BROOKLYN, March 13.—The New York German Gun Club of New York held its first shoot of the year at Dexter Park, on the Jamaica plank road, this afternoon. The chief event of the day was the sweepstakes at 10 live birds, for the club medal. Long Island rules governed this contest, 10 of the club members participating. The birds supplied were a fair set, some of them being strong drivers. The number of incoming birds was proportionately greater than at any of the club's shoots last year, and the scores made were consequently not as good as expected. P. Hassinger and J. Schlicht tied for first place, both killing 9 straight, but missing the last bird. In the shoot-off at 3 birds each, miss and out, both missed the first bird, Hassinger also missing the second one, while Schlicht killed his and won the medal. The following events were three sweepstakes, two at live birds and one at bluerocks, the club members being divided into two teams of five men each. Honors were even, each team winning one sweepstake at live birds.

The Coney Island Rod and Gun Club held its regular monthly shoot at Woodlawn Park, Gravesend, this afternoon. The birds were as good a lot as was ever seen on the grounds: 28 of the men took part in the shoot for the Blattmacher medal at 7 live birds each. E. Magnus, 28yds., and F. Pfaender, 27yds., killed 7 straight, Magnus winning the medal on shoot-off. Miss Annie Oakley, who was present, tried her skill during the match and managed to kill five birds, but missed two. A three-cornered match between Messrs. F. Lanzer, J. Schliemann and F. Pfaender, 25yds. rise, 7 birds each, $25 a man, was won by Mr. Lanzer on 5 birds.

March 15.—Many marksmen of New York and Brooklyn attended the shoot of the Unknown Gun Club at Dexter Park, Long Island, this afternoon. The chief event of the shoot came off under these conditions: 1 barrel only, gun below the elbow, 6 birds each, ties for first, second and third prizes to be shot off at 3 birds, then miss and out. Beside the three money prizes put up for the winners, the first man should also receive the club badge, and keep it for one month. The birds were a tolerably fair lot, with some strong drivers among them, but also a lot of sleepers. Twenty-five shooters competed, two of them, H. Lee (23yds.) and G. Haas (25yds.), tying for first place on 6 birds straight. On the shoot off Mr. Lee defeated his opponent, killing 3 birds, while Mr. Haas had a blank score. H. Knebel, Jr., 27yds., F. Haas, 25yds., C. Plate, 26yds., K. Hopkins, 23yds., and C. Detlefsen, 26yds., tied for second place on 5 birds. Mr. Knebel was the only one who killed 3 birds, and took second prize. Eight members, Boyle, 22yds., Von Staden, 23yds., Vroome, 25yds., Chichester, 25yds., Muller, 25yds., Monsees, 26yds., J. Cahill, 23yds., and Hubbell 26yds., killed 4 out of 6 birds. Messrs. Vroome and Hubbell tied again on 3 birds straight, and the shoot off in this tie was the most exciting and interesting event of the tournament. Mr. Vroome killed 9 birds in rapid succession, and Mr. Hubbell kept up his end by killing 8 birds straight, but, missing the 9th one, the prize fell to Mr. Vroome. President Henry Knebel of the Unknown Gun Club acted as referee, and Mr. R. Stillwell as scorer.

KANSAS CITY, Mo., March 15.—The Forester Gun Club held its initial shoot at Exposition Park to-day. The amateurs did remarkably well at an average lot of pigeons. Most of the members shoot 12-gauge guns and get the 2yds. handicap, the 10-bores standing at 30yds. Some of the younger shots appeared late, and had to shoot their birds off straight, which was too much for their nerves. Mr. Drury Underwood was referee, and Mr. W. V. Reiger scorer. Owing to the exertions of these two veterans none of the bystanders were killed. It required their constant attention to keep the shooters from loading their guns before going to the score, and from turning a loaded barrel at the crowd after killing a bird. However, they fell into the correct habits toward the last, and shot cleverly. The score was as follows at 10 birds:

Alderson	1111111110—9	Scarritt	1010111101—8
Chapman	1110111111—9	Hoover	1110010111—7
North	0110101101—6	Schmelzer	0111111101—8
Wood	0111111011—8	Graham	0101111011—7
Van Brunt	1011101111—8	Firth	1101111011—8
Western	1111111101—9	Sears	0001010111—5
Gregory	0110*11'0—5	Marrimer	0010001111—5
Dickinson	0101111010—6	Brumback	0000010100—2

The club will hold its live bird medal shoot the first Saturday in each month. Mr. Elliot has not completed his arrangements for inanimate targets, and the date for that event has not been fixed.

NEWARK, N. J.—The pigeon shooting match between Charles Smith and August Manitz, which was set for March 21, a Erb's grounds, Newark, has been postponed until March 28. Over $2,000 has been wagered on the result.

EATON SPORTSMEN'S CLUB, EATON, N.Y.—Shoot for badge, 18yds.:

Richardson	11111011111111—14	Briggs	01111011111010—10
Short	11010011111111—12	Bell	10111110111000— 9
Curtis	01111011011111—12	Hamlin	10000010010000— 4

Second Match:

Briggs	1011010011—6	Richardson	11101011011—7
Curtis	1100110111—7	Bell	10010111111—7

Ties on 7, Curtis 3, Richardson 5, Bell 10.

NILES GUN CLUB.—At the annual meeting of the Niles (O.) Gun Club the following officers were elected for the ensuing year: President, T. A. Winfield; Vice-President, W. Cramer; Treasurer, John Naylor; Secretary, W. B. Ward; Captain, James O'Connel. This club is now thoroughly organized and equipped, and expect to do some good work during the coming season.

Canoeing.

ABOUT THE LOWER BAY IN A SINGLEHANDER.

[Concluded from page 165.]

RUNNING into the Horseshoe Cove behind the steamboat dock, the crew, drawing on a pair of wading boots, stepped overboard, when the water had sufficiently shoaled, and went ashore to hunt up information about snipe and see about getting some dinner cooked among the baymen, who here live in old boats or wrecks and gain a living mainly catching softshell crabs, clams, eels and "sisie" for the hotels further down or for the New York market. Looking up an old acquaintance, the crew was fortunate in finding him at "home," and soon one of his boys was cooking us a dinner of fried soft crabs and stewed eels, while as an appetizer we were eating the most delicious clams as fast as Capt. Sandy could open them, having raided the Useful's stores for the necessary Milwaukee, lemons, crackers and tobacco. Of that dinner the justice Passaic and the crew did it, it is unnecessary to enlarge on. Suffice it to say that its memory still lingers with the crew most vividly; but then we were very hungry, and that may account in part for our appreciation of it.

We heard that there had been some snipe on the beach, but that the flight had been a poor one, and more birds were expected daily. One of Capt. Sandy's youngsters, noticing Passaic's fish hawk, volunteered the information that it was against the law of Monmouth county to shoot or have in possession one of them under a penalty of some $5 or $10, half of which went to the informer; but offered to compromise with him for $1. This Passaic finally agreed to do on condition that Sandy, Jr., would skin it.

Running down the beach to Spermaceti Cove we anchored close to shore, and taking our guns and decoys we placed them and improvised a blind on the beach. Small flights of ox-eyes gave us the only shots we had, and although very small they were fat. The mosquitoes becoming rampant, we went on board as soon as possible, had a cup of chocolate and a biscuit, and getting up the tent and mosquito netting, enjoyed a cigar before turning in, as everything denoted a good flight for the morning.

How delicious is the sense of freedom which we experience when we get away from the busy chatter of the civilized haunts of man, to enjoy a well-earned vacation in the bosom of Mother Nature, and what a delicious exhilaration pervades us when we think we do not have to appear at the office to-morrow or next day, and we do not care a picayune how the markets go. Certain it is no telegram can reach us here.

Looking aloft at the liquid light beaming down on us from a firmament of stars, and lulled by the lapping sounds of the phosphorescent tide against our hull, we finish our smoke, and, drawing our blankets loosely around us, we are soon asleep.

Next morning before sunrise we are up, and after a hasty cup of coffee and a biscuit or two, are ashore with guns and decoys. We were rewarded, however, with but poor success; three yellowlegs and quite a number of the little oxeyes was the bag. About 10 o'clock, as our ice was failing, we got under way for the steamboat dock, where we were able, by some diplomacy and small silver, to replenish our stock of that useful article. Giving our snipe to Sandy's boy, with instructions to cook them for us for dinner, we went up to the Government dock, below which we had heard there was good fishing. Using soft and shedder crab for bait, we soon had some nice weakfish running, as high as 2½lbs. each, but were greatly tortured by a small fish about 9in. long called a blowfish. This fish, on being rubbed on the belly, inflates itself with air until its diameter is about the same as its length, being, in fact, a perfectly inflated ball, which can be used as a football. It is presumable that when attacked in the water by larger fish it inflates itself with water and thus from its size and form, coupled with tough skin, is impregnable to the attacks of ordinary fish.

Feeling hungry we, with a pleasant S.W. breeze, make back to find dinner ready and waiting. Again we have the delicious clam as an appetizer, followed by fried fish and baked snipe. After dinner, there being no prospect for snipe, we anchor off the mouth of a small salt-water creek tributary to the Horseshoe Cove, and are soon engaged in taking fair-sized weakfish. Soon bluefish are struck, and many hooks are lost by the fierce biting of these fish, who instantly part the gut snell—nothing short of wire will hold them. At once the fish stop biting, and for the cause we have not far to seek, for not two boat lengths away is seen the dorsal fin of the dreaded shark. In this instance, however, he is only five or six feet long, and, therefore, presumably not a man-eater, although it is doubtful if Passaic or the crew could be induced to take a taste just at the moment. Although there have been accidents from shark bite in the vicinity of New York, yet they are extremely rare, considering the abundance of these predatory fish; this immunity is, no doubt, owing to the abundance of fish food, such as the menhaden and more or less offal always to be found on the water in the neighborhood of a large city. I think the former is the correct hypothesis, as the crew spoke of seeing a number of sharks in Barnegat Bay during the previous summer preying on small weakfish; and notably one over 10ft. in length, an effort to capture whom was made, but the line was not strong enough and the fish got away. It is his intention to have a try at the sharks again in that locality during the coming summer, when the catch may be duly chronicled.

On again going ashore Capt. Sandy informed us that he had heard from a bunkerman, *i. e.*, a sloop employed in catching menhaden, that on the previous day there had been quite a flight of snipe at Great Kills, on Staten Island, on the salt marshes there. It was with some difficulty that Passaic was induced to join the crew in going there, as he wanted to be put ashore at Port Monmouth, and either walk or go by rail back to Keyport or Cheesequake, the truth being, as the crew believes, that he was lonesome for his canoe. He finally consented, however, and a quick start was made.

The wind being southerly and somewhat light the spinaker was added to topsail, and fair way was made, the best of the ebb tide favoring, in fact, so good was our progress, that we began to pick up a cat of some 20ft. in length, and finally passed her. She was a veritable sandbagger from Pleasure Bay, and a fast boat in her weather; had the wind been abeam or forward of it she would have left us in short order, but we enjoyed our victory while we could; in a courtly and condescending way we passed the time of day, remarking on the beauty of their craft, for she was a beautiful boat of her kind. She shortly hauled her wind and stood back, when she showed to much better advantage. Had we tackled her she would have much more than turned the tables on us.

The day had been very sultry, and now to the northward heavy, dark clouds began to collect in indication of a thunderstorm if nothing more. As the southerly wind still held out, we carried our light sails, keeping an eye to leeward. We had about reached the buoy on Old Orchard Shoal when it became evident that what was coming would be with us shortly, so spinaker was taken in and put below, then followed topsail, then mainsail was close reefed, jib taken in and snugly furled, the heavy folding anchor gotten up from below, and canvas cover laid tightly over cockpit. All this was done quickly and in good season, and the only thing the crew regretted was that he did not have time to reef the bowsprit. A white line of seething water was observed leaving the Staten Island shore, down came our sail now not much larger than a handkerchief, a few stops put in it, and over went the heavy Chester anchor. Whew! how it did blow and hail. But lie at anchor we could not, the tide setting broadside to the wind kicked up such a sea as to make it impossible for us to hold on deck. Passaic got seasick, and the crew did not feel any too comfortable. The thunder and lightning were incessant and terrific, the atmosphere so full of ozone that the effect on the nostrils was similar to that produced by a powerful Holt's electrical machine in operation. Passaic's hair, although quite wet, on the hand being passed over it stood on end. To get below was now impracticable, as she was rolling her cockpit under at every plunge. It becoming unbearable the crew crawled forward and pulled up the anchor, or tried to, but it was only after passing the line back to Passaic that he was enabled by his help to break it out. Taking the anchor rope to the mast and letting the anchor drag over the starboard bow, she made good weather of it, all things considered, and we began to feel more comfortable. The wind all this time was blowing with hurricane force—but what is the need of describing a severe summer squall; all of those who will care to read this have no doubt experienced them under the same circumstances time out of mind.

While we made leeway very fast, we knew that with a strong flood tide there was no danger of drifting out to sea; so we let her drift. The wind was about N.N.W., and the anchor acting as a drag from the mast kept her head about two to three points to westward of it. We found our overhang of some 3ft. of great assistance in enabling us to ride the seas, on which, of course, we were driven stern foremost. Had we had a chopped off stern we would have been continually under water. Had we shown a rag of sail we would have been blown over, or it would have been blown away, the former most probable, however. Wet and cold, notwithstanding rubber coats, and with buckets of hailstones on deck, we noticed a slight moderation in the wind with thankfulness. The anchor was let go and we brought up in about 25ft. of water.

The wind now switched around to the west and again blew violently, after a time moderating a little. We made up our minds we had to fetch somewhere shortly, as it was getting dark, so getting our anchor and putting on the close-reefed mainsail with dropped peak, boom and sail well topped up, we made up our minds to try for Great Kills. If any of your readers think that Raritan Bay cannot kick up somewhat of a sea against a westerly gale I think they would have altered their opinion had they been with us, besides proving very useful to us as ballast. The dusting we got was to be remembered, we being about as much under water as on top of it, but the fact that we had some 700lbs. of lead stowed along the keel inside, well fastened down, and knowing no water could get inside, gave us that confidence in our craft which her good behavior warranted. "Up with your helm quick, bear away!" shouts Passaic, as in the fading light an oyster float is seen dead ahead with the sea making a clean breach over it. A close shave and no mistake, and now we pass adrift some distance apart two fine clinker-built oyster skiffs full of water. The wind now falls rapidly, and with a good whole sail breeze from the S.W. we make Great Kills as darkness sets in. Running well inside of the point we come to anchor in a bight of the beach. How tired, wet, hungry and a little ill-tempered only those who have had a similar experience can comfortably imagine.

After sampling the Useful's medical stores, more peace of body and mind reigns. Quoth Passaic, "Paregorically speaking, this bottle should be labeled, 'After the patient has been well shaken, a wineglassful occasionally in a little sweetened water or Apollinaris, as preferred, or until the desired effect is produced.'" After donning dry clothes the tent and mosquito bar were put up and our cushions and blankets proved quite dry. A fire was kindled on the beach, some fish fried, and after a hasty supper we turned in—oh, so tired.

Next morning it was broad daylight when we awoke, a shot or two heard in the distance hurried us, and eating almost anything we could lay hands on, we put sail on the boat and ran up to the meadows on the east of the Kills. Taking guns and decoys, we made our way to some small ponds in the distance, reaching which we put up a bunch of upland plover, getting five out of four barrels. Hastily putting out the decoys we spent the morning battling with mosquitoes and getting an occasional shot, vowing that we would never again attempt to do any shooting until the mosquitoes had retired for the season. Passaic could stand it no longer, so shouldering guns and decoys we march back to our boat with quite a bunch of willet, yellowlegs and plover.

Passaic being anxious to get back, dinner was eaten at a hotel in the neighborhood, a fishermen's resort, and with a S.W. wind we proceeded across the bay to Cheesequake, the ebb tide enabling us to lee-bow the tide, so that we almost laid our course. There taking Passaic's canoe in tow we proceed up the Staten Island Sound, and at 8 o'clock were home at the crew's house, Passaic going home on the ensuing Sunday morning in his canoe. Thus happily ended one of several cruises the crew has taken in small craft in waters contiguous to New York. RICHMOND.

CHANGES IN RACING RULES.

THUS far but three canoeists have come forward to express their opinion on the matters in which all are deeply interested. It will be a substantial aid to the regatta committee if canoeists will give their opinions in as few words as possible, of the desirability of the proposed changes. It is not necessary that the name should be published as long as it is sent us as a guarantee of good faith, and we hope to hear from the racing men in particular.

Editor Forest and Stream:

After reading the only answer to Mr. Edwards's letter requesting the opinion of canoeists regarding the advisability of ruling out hiking seats, standing sails or cockpit centerboards, I feel as though we are passing through a critical period of canoe development without giving it the attention it deserves, and that, as Mr. Edwards suggests, some change should be made in the rules. It remains with the regatta committee to introduce rules and conditions to our racing programme, and these rules determine the type of canoe. Still until now no committee has taken such decided action in this direction, as we have reason to believe the '89 committee will, and notwithstanding the fact that but one answer to Mr. Edwards's letter has been published, there is a very strong feeling in favor of such changes as they propose by many of the members of our Atlantic Division.

That the only object of the Association is the holding of a yearly meet, at which its members may have a few weeks' enjoyment, seems hardly possible, probably the real reason of its existence is that by its influence on canoeing it may so guide developments that a seaworthy, useful and safe craft will be the result.

To effect this the founders of the Association deemed it advisable not only to restrict dimensions of hull and in cases the area of sail, but details as well. That restrictive legislation should stop with conditions existing at the time of organization is not the policy of the Association, to wit, "one man one canoe rule," and therefore there seems to be no reason why some action should not be taken at the present time to meet existing conditions. Standing rig, hiking seats, diminutive cockpits, boards projecting high above deck, and hulls so cut away that they are useless for anything but racing have been gradually making their appearance, the rules remaining unchanged notwithstanding. It must be petent to all that in the absence of action to meet present conditions, the result will be an entirely new classification in which we will find cruisers or all-around canoes in one category, and racers, or the so-called machines, in another. In fact, this distinction has already appeared in the Atlantic Division and Passaic River programmes.

It is no longer a question between "pot-bellied boiler plate cruisers" and well-kept canoes, but is now a question of the very life of the canoe itself; for boats can and do enter the races today that are capable of carrying the crew only on deck, boats in which it is impossible to sit, and which must be run ashore to lower sail. Even now by a glance at a canoe one can instantly classify it as cruiser or racer, and if this is true to-day, what may we not expect in the course of a few seasons more if we are given full rein and seek only speed? That these evils will cure themselves seems doubtful, that they have a depressing effect on canoeing can hardly be questioned, and while, of course, it is better not to so fence in the sport that nothing can be done without always consulting a mass of rules, still it seems as though some action should be taken immediately to prevent the breach between racer and cruiser from widening, especially as by wise rules the distinction can be abolished even at this late day.

In answering Mr. Edwards's letter I desire to say that it seems as though no harm could come to the Association or canoeing from the adoption of rules doing away with the sliding seat and standing sails, but that such rules would be of inestimable benefit to canoeing. The extension of that excellent rule, "one man, one canoe," so that it would include "one suit of sails," would be beneficial in that it would help keep the canoe complete in itself instead of having a wardrobe filled with sails on shore to which the canoeist must run at each change of weather.

LINCOLN B. PALMER.

Editor Forest and Stream:

My views on the points raised by the chairman of the regatta committee are briefly as follows: The sliding seat is no more objectionable than a fixed seat which projects beyond the side of the canoe; but, as pointed out by Mr. Edwards, both must, under the existing rules, be measured in as beam. That being the case I am quite willing to let the seat slide.

I have not yet seen the circular saw centerboard and I shall therefore say nothing on that subject other than to urge that the rule aimed at it should be drawn with great care. To rule that the centerboard shall not project above the coaming would to my mind be unfair to the ordinary open canoe 11 or 12in. deep. Would it not be fairer to fix the maximum width for the plate? Or to limit the height above the bottom to which the board may extend when drawn up?

I favor the adoption of the one-rig rule. It would I think tend more to the development of the best all-around sail than would the abolition of the standing rig, which is putting it strongly.

TORONTO, March 11. COLIN FRASER.

CANOEING AND BOATING IN THE NORTH-WEST TERRITORY.

Editor Forest and Stream:

I send the following as it may interest your numerous Canadian and American readers to know what clubs there are at the town of Qu'Appelle, Assa., Northwest Territories of Canada.

Qu'Appelle town is three hundred and twenty-three miles east of Winnipeg, and is the center of the most important farming district south of the South Saskatchewan River in the Territories. The Canadian Pacific Railroad has a station in the center of the town. The Fort Qu'Appelle lakes are eighteen miles north of it. In the spring and first portion of the summer a canoeist can travel from the lakes to Hudson Bay. The corporation has made a good road from the town to the lakes. At the lakes there are a very good hotel, post office and telegraph office and some stores. There are very good fish in the Lakes. On Oct. 9, 1888, at Fort Qu'Appelle, by the lakes, was formed the first boating and canoeing club in Assiniboia, it has started under peculiarly favorable circumstances; the Hon., the Minister of the Interior of the Dominion, and the Hon., the Lieutenant Governor of the Territories, kindly acting as patrons, our Commodore, S. C. Elkington, and Vice-Commodore, Robt. S. Smith, being well known Canadian amateur boatmen. The genial and obliging W. E. Crosbie being secretary pro tem. is almost a guarantee that the club will be a great success. The squadron consists of seven boats, besides rowing boats and canoes. A number of boats and canoes have been ordered to be built.

The club and boat house is on Echo Lake, one of the largest of the six lakes, being about five miles long by a mile and a half wide. The lakes together are about twenty-five miles long. The club boasts of a steam launch. The colors of the club are dark blue and white, and the flag a white Maltese cross on blue ground. We number fifty-three or four members. All members of Canadian, American and British regular organized amateur boating and canoeing clubs not resident at Qu'Appelle are admissible as privileged members during a period of one week on being introduced by a member.

The town boasts of a fox-hunting club called the "Qu'Appelle Hunt" with a membership of nearly fifty, although only organized this year; the pack, though small, ten couples of foxhounds, is good. The kennels are on the estate of the master, H. Peck. The Governor is our patron. Arthur H. B. Sperling, who is a great nimrod and John, is the secretary; few riders can pass our secretary on the hunting field.

A cricket club, Secretary R. Dundas Strong, B.A.; this club won four matches, lost two last season. A base ball club just organized, Col. W. E. Warner, secretary. A tobogganing club, Secretary J. H. McCaul, and a curling club, Secretary R. Dundas Strong. A snowshoe club will probably be organized shortly.

LEO.

THE NEW R. C. C. RULES.

Editor Forest and Stream:

In your issue of Jan. 21 I notice a letter from "Nautilus," in which he more than once alludes to a paragraph that appeared in this journal of the 22d inst., with which paragraph he says he is very much disgusted. The words in question were simply as to the new rules, and are these in particular: "The spirit of the new rules was to bar any of the Yankee flying machines." There is nothing in this particularly that should disgust any one, seeing that the gentleman who proposed these rules himself said that the present state of things was getting to great extremes in America, and that our own rules as they stood were too lax, and there was nothing to prevent a man building a mere machine that would race and nothing else, who would walk away with everything and discourage genuine sport. In effect this was his address: In effect, it was the fear of this kind of thing—these extreme machines—which led the A.C.A. committee to pass a resolution asking that these extreme things should be discouraged. It was this state of things that led you, in your capacity as a journalist, to criticise and to point out the evils thereof; and it was only as touching these extreme and outrageous impracticable appliances that the words were penned, and not in any sense inhospitably or discourteously intended toward American canoeists personally, who would meet with as hearty a welcome in the columns of the *Canoeist*, and from all connected with it, as they would from any votary of the sport in the kingdom. "Nautilus" not excepted. Probably his remarks were penned before I was honored with an interview with him when the whole matter was discussed. Your own comments I have not seen, and beg you to accept my disclaimer of any spirit or intention of partisanship.

T. H. HOLDING, Editor *Canoeist and Model Yachtsman.*

PASSAIC RIVER CRUISE.

AT a meeting of the delegates from the Passaic River clubs held at Library Hall, Newark, on Saturday, March 16, the following clubs were represented, Paterson, Passaic, Rutherford, Arlington, Orange, Ianthe, Essex, Bayonne and New Jersey Athletic Club.

Mr. Irving V. Dorland of the Arlington C. C. was elected chairman and Mr. Richard Hobart, Ianthe C. C., secretary, for the ensuing year.

It was decided not to hold an '89 Fourth of July meet, but to cruise around Staten Island and about the Lower Bay on Decoration Day and the Friday and Saturday following.

It is proposed to go in camp on Newark Bay on the night of May 29, leaving camp on the first of the ebb, about 9 o'clock the following morning (Decoration Day), and putting in at Amboy about 2 P. M. for dinner, after which a few races may be held. Friday and Saturday morning will be spent cruising about the Lower Bay and the run up to New York will be made on the Saturday afternoon flood tide, the return to the Passaic being made the following day.

This cruise has been arranged in the hope of having many canoeists from neighboring waters join with the Passaic canoeists, and also with a view of making it possible for those who cannot get away from business on Friday and Saturday morning to still be able to enjoy its pleasures, as they can return by train from Amboy on Thursday night or Friday morning, leaving their canoes at Amboy, and by taking the Saturday noon train from New York catch up with the main body during the afternoon, all making the run with the tide to New York together.

HARRISBURG C. C.—The fourth annual meeting of the Harrisburg C. C., held on March 7, was a most enthusiastic and enjoyable affair. The following officers were elected to serve for the ensuing season: Com., Ed. B. Flickinger; Vice-Com., T. Frank Newby; Pres., J. Elton Whiteside; Sec., Mart. W. Fager; Treas., Ed. R. Dasher. The club has better prospects than ever before, and is composed entirely of active canoeists. Some sailing has been done this winter, but the majority of the small craft are waiting for spring. Maps of Chesapeake Bay, on the scale of ¾in. to the mile, have been secured, and plans are being laid for another trip down that water, which cruise will be the full length of the bay. A paddling trip from Williamsport home will also be made during the summer.

TIPPY C. C.—The annual meeting of the Tippy Canoe Club was held on the 14th inst., and Messrs. David H. Crane, William M. Dunham and James B. Keogh were re-elected to the offices of Captain, Mate and Purser, respectively. Owing to the increasing shallowness of the present harbor a change of location has been deemed advisable, and the "Tippys" will be at home to their friends after the first of May in new quarters at the foot of Thirty-seventh street, Chicago.

A. C. A. MEMBERSHIP.—Eastern Division: Oscar B. Ireland, Springfield, Mass.; Norris S. Lippit, Norwich, Conn. Atlantic Division: Chas. B. Haag, Philadelphia, Pa.; Harry M. Kreamer, Camden, N. J.; Milnor Morris, Jeanesville, Pa.; Arthur Hurst, Wm. S. Elliott, Herbert P. Allen, New York. Central Division: Chas. M. Nichols and E. E. Eddy, Jamestown, N. Y.

NEWBURGH C. & B. A.—The annual meeting of the Newburgh Canoe and Boating Association was held at the boat house on March 5, the following officers being elected: Com., Jas. T. Van Dalfsen; Vice-Com., Chas. L. Williams; Captain, Harry A. Marvel; Purser, Geo. C. Smith; Wm. K. Leech member Executive Committee, Robert Johnston member Finance Committee. The affairs of the club are in a flourishing condition, membership roll full and the outlook for the coming year promising.

OAKLAND C. C.—The Oakland C. C. of California is now busy afloat, racing and cruising being in order. A three days' outing was arranged in connection with the Corinthian Y. C. for Feb. 22, 23 and 24. Com. Blow is still at the head of the Pacific canoe fleet.

TANNING TENTS AND SAILS.—I want to tan a suit of sails, a canoe tent and a shore tent this season, and I neither know how to do it nor anybody who can do it for me. Will the FOREST AND STREAM or some person who does know, come to my relief, and by so doing greatly oblige—RETAW.

RICHMOND.—Will "Richmond" please send his address to his office? We have a letter for him.

Yachting.

THE CRUISE OF THE ORINDA.

BY W. H. WINSLOW, M.D.

EUREKA! I've done it! I have made the cruise that I have longed to make ever since I was a boy. All along the coast, closely, in and out, straight ahead, zig-zag and sinuous from glorious Boston to fair Eastport and Campo Bello; the border of Maine, the bulwark of New Brunswick. I have carried the flag of the South Boston Yacht Club further east than any other member, and snapped its swallow-tail signal under the ramparts of colonial authority, the mighty cliffs of Grand Menan, and I am proud of it. Now, with blizzard and snow outside, toasting my shins before a natural gas fire in my library, away so far from the sea I love so well, I will try and tell the small-yacht sailors all about it, so that they may be inspired to give their maritime experiences in return through our common log-book, the FOREST AND STREAM. What should we do these long winters without it?

The Pilgrim was not large enough for such a lover of deep water as I am, and I sold her in '87, after making two seasons' cruises from Boston to Mt. Desert, which were duly chronicled in this journal. The sale was made just as I was getting ready for another cruise, and, as I had not time to build, I made a trip upon the lakes with others at the helm.

Last winter was devoted to correspondence about and preparation of plans; the keel of the Orinda was laid in May, and I hoisted my flags and put her in commission on Aug. 15, 1888, my birthday. There was a race of our club on that date. We left the club float at 9 A.M., sailed around the Commodore's boat on the flagship Frolic, dipped our colors, and were greeted by loud cheers from friends on board and a gun fired by the fair hands of Mrs. Fuller. Thus was my new craft introduced to the fleet and warmly welcomed by kind and sympathetic yachtsmen. Williams, the builder, was as pleased as a monkey with a stick of candy, and I felt repaid by one hour's sail for all the worries and vexatious delays consequent upon getting a new yacht ready for sea.

The Orinda, the incomparable, was designed and built to meet certain requirements: I wished the greatest speed compatible with perfect safety, thorough sea-going qualities and the maximum of comfort on deck and below, and I got them.

The designs, published in the FOREST AND STREAM of Jan 17 and 24, were made by E. L. Williams, of South Boston, but other expert brains were mixed with his to insure perfection in minor details. The length over all is 37ft.; l.w.l., 28ft.; extreme beam, 9ft. 3in.; beam at l.w.l., 8ft. 9in.; draft, 6ft. 6in.; least freeboard, 2ft. 4in.; long overhang: clipper bow; steering well, 2ft. 6in. by 2ft. 1in., and 1ft. deep; cabin, 13ft. long, 5ft. 3in high under beams, and 6ft. 6in to 7ft. under skylight and companionway; widest floor, 28in.; forecastle, 10ft. long and roomy, and skylight and companionway, 10ft. long and 2ft. 6in. wide. The deck is flush, with ample space for a fourteen step promenade from bitts and windlass to quarter bitts, and the handling of sails between the skylight and the 4in. high bulwarks and rail. The bulwarks run to nothing aft and the oak rail crosses upon the timber. The clipper bow runs in a graceful curve and terminates in a gilded eagle's head. It gives large and useful space forward of the bitts for the handling of anchors and sails and adds much to the *chic* appearance of the yacht, while it is of inestimable advantage, supporting the bowsprit, clearing the seas, lessening the pitching, and chiseling the eye out of the wind. The long graceful overhang aft and the artistic lines of the run support the stern, hinder boarding seas, drag no dead water, leave a mark as of a knife blade astern, and furnish safe standing room for handling the mainsail.

The iron keel weighs 9,876lbs., and 2,000lbs. of pig lead are stowed away under the floor. The keel is well rockered, the sternpost rakes strongly, the frame is oak, strengthened each side by three stringers of hard pine running the whole length, and a dozen iron floor plates bolted through keel and timbers in the usual manner. The planking is of equal width and runs the whole length without a butt. It is smooth as a smelt, and certainly no prettier job was ever seen anywhere. The planksheer, in two strips bolted together, is hard pine, as are the bulwarks, surmounted by an oiled and polished oak rail. The pine deck was laid straight; the skylight, companionway and forward hatch are of stained cherry.

The parts above the planksheer are left bright and oil finished; the bottom and about two planks above the waterline are covered with Estes copper paint; the sides are painted black, and a gold band is gilded in a groove cut in a graceful curve considerably below the planksheer. This breaks up the high sides into several bands and makes the yacht look very long and rakish.

The mast is 35ft. from the deck to the hounds; masthead, 5ft.; housing topmast, 21ft.; boom, 31ft.; gaff, 21ft.; bowsprit outboard, 13ft. 6in.; spinaker boom, 30ft., and topsail yard, 15ft. The rig is full American cutter: the jib is set flying.

The cabin transoms form seats and lockers; there is a partial bulkhead dividing cabin into two parts, separated amidships by a portière; the forward part has two built-in berths with drawers and an open locker beneath each; the after part is the sitting room and has two iron hammock nets, which turn up against the side during the day and leave some locker room below them. A bulkhead separates the cabin from the run, having a door behind the steps. A door in forward bulkhead leads to the forecastle. This has a dish closet, storage closet, water tank, ice chest, gasoline stove and a bunk with drawer and locker beneath. A little batch opens upon the port side forward of the stove. The water tank and gasoline tank are filled from openings in the deck. The bilge pump is upon port side, near the companionway, and the steering is done by tiller. A 10ft. cedar tender proved large enough for five men and was towed astern, davits not being permissible.

There were suitable and comfortable accommodations for five persons, and power in the rig and sail area to go where we wished in any weather, so I engaged a good all-round man, invited three friends to make the cruise, and began the work of outfitting. Oh, the trouble of getting every little thing finished just right in a new yacht; sheet brass under windlass levers, anchors and crotch feet, mousings upon the hooks, kinks out of ropes, all gear rove clear and properly, chafing gear fitted, squeezed out putty scraped off and paint renewed, light-boards for the shrouds, ringbolts and staples for lashing things, the topmast so it will house easily, the spinaker boom secured from swaying, saying nothing about the thousand and one things necessary for the comfort and pleasure of those who are to live entirely on board for weeks together. But the personal luggage was all distributed in racks, lockers and drawers, the supplies packed in handy places, the tanks filled with water at the club house, and we believed we were in condition to go to the uttermost parts of the world if there was any necessity for it.

By night on August 17 Orinda lay off City Point, surrounded by a flotilla of more than a hundred yachts; the night was calm, clear and pleasant; the lights of vessels and the great city sparkled across the inky tide that was heaving like the breast of a hysterical woman, and shouts, laughter, song and instrumental music were in the air till after midnight. Occasionally a gray sail would cross the bow or sweep past the beam, the helmsman silent and alert, a man getting the anchor ready, or standing with a boathook to grasp the buoy of a private mooring. We talked and smoked and enjoyed the summer night till the dew fell heavily and warned us of our next day's duty. At 5 o'clock there was a shout and bustle aboard the Prince Karl, and she was soon underway for Marblehead, where a great race was announced for 1 P. M., Aug. 18. Then Optic, Breeze, Raven, Good Luck and others went by us like birds along the surface of the water, and I took off my big coat, called my sailor man Meringue to get breakfast, and made such a racket with broom, water and ropes, washing down, that my three landsmen awoke, smelt the coffee and turned out together.

They were individuals of rare qualities, as different in character as possible, and we represented commerce, journalism, law and medicine, a pretty tolerable combination of talents for mutual instruction and occasional contention. Jerry represented commerce, Noir journalism, Olie law, and myself aquatics and medicine. There were inquiries below for the wash basin, soap, towels and water, and one by one my friends appeared in deshabille, loaded with toilet appurtenances, and made elaborate toilets that would have disgusted Mr. Kunhardt, and even made me smile. This ante-prandial business was kept up pretty well all the trip, but I noticed that there was less and less attention paid to the looking-glass and soap, and it was asserted by the observant advocate that breakfast was partaken of on several occasions by one member of the mess without any morning ablutions or arrangement of his bangs.

After we had cleared away the table, folded its legs and tucked it up beneath the deck and buttons, movables were secured and all hands turned to and made sail. The 100lb. anchor stuck strongly in the Boston mud, but our little windlass broke it out, it was soon stowed on deck and we started down the bay under mainsail, gafftopsail, staysail and large jib. Here I wish to remark that a little windlass on a yacht is not much in the way, and when it is wanted it is wanted badly. I was advised not to get one, but to rely upon the throat halliards to pull up a refractory anchor, but I remembered the times we had strained our backs and been greatly delayed trying to break out the Pilgrim's fukes, and I was obstinate enough to disregard advice and dollars and cents, when such an unseamanlike proposition was made to unhook gear to start an anchor out, and drift at the mercy of the sea and wind until the halliards had been hooked again and the mainsail hoisted. Away with such folly and foolish advisers. Such work may do in light weather with plenty of room, but never on board of a vessel that is to take her chances anywhere along the coast of New England. Had Orinda depended upon such a method she would have been crippled in collisions or smashed upon the rocks a dozen times during the past season. Nothing is more important aboard a cruising yacht than to keep all the gear in proper shape at all times, ready to make sail suddenly by day or night.

We ran down to Marblehead in two hours, and met the racers coming out around the point. There were forty or more white-winged beauties flying along over the courses, some upon one tack, some upon the other, and some reaching and running for marks and stakeboats, and we came by the wind and sped along with the leaders toward Egg Rock. It was a lovely day for a race, the sea moderate, the sun shining, the wind westerly and steady enough to make us take in the gafftopsail, while some craft dragged their rails under over the course, and others flew under single reefs. None of our crew were seasick, as I had expected they might be, and the exhibition of so many beautiful yachts exemplifying every point of sailing, the exquisite scenery along the shore from Nahant to Marblehead, the champagny wind, the flying spray and the graceful heel and dainty dashing of the waves away from Orinda's bow, excited the liveliest interest and enthusiasm of my inland friends, and gave them an insight into genuine yachting.

While in the midst of the race a large sloop worked along our lee, and I heard a shout from her: "Keep a good full; I am going to set sail." I recognized Stebbins, the great yacht photographer of Boston, standing with lock-string in hand behind his single-gun battery, and responded: "All right." In a minute he shouted: "I've got you!" and the deed was done. Olie had taken a commanding position by the lee shrouds as if he were about to launch a torrent of forensic eloquence at an unsympathetic jury; Noir seated himself upon the cable coil behind him in the shadow, as if to report the speech; Jerry twisted his neck to look under the boom from his prone position on the windward side, a disposition of his massive frame which I had confidentially informed him was *en règle*, proper form, for racing yachtsmen, particularly Harvard students in penitentiary striped undergarments and nakedness; Meringue was braced against the quarter bitts holding the main sheet by one turn to let it go in the squalls, a cowardly trick he had learned in the centerboards and skimming dishes from which I could not argue him, because he had never been shipmate on a cutter before, and knew not her gentle and playful careenings and her staunch uprisings in the heaviest weather, and I—well, I had business on hand to watch the yacht and work the tiller, and could not smirk at the camera, and had to submit to its detective accuracy in delineating my suspenders over my old flannel shirt.

The ingenuity of Stebbins is remarkable, and the faithfulness of our photograph of Orinda, flying along in considerable sea at the rate of eight knots an hour, is attested by minor details, the flags standing out like boards with their emblems as distinct as if lithographed, and the boat caught half out of the water as it made a jump after the taffrail. One thing puzzled me. There were legs of trousers behind the staysail. I knew there were no clothes drying forward, all our crew were accounted for, no one could have boarded us over the bow for a picture and then hidden his trunk behind the sail. But there were legs that could not be accounted for by any paraphernalia of the ship or any shadows. Had a ghost taken charge of the forecastle for a time? I had not seen one, but then ghosts may be invisible to the eye and yet visible to Stebbins's camera. I grew nervous in reflecting upon the phenomenon, and annoyed that I could not account for it, but I was so oppressed by my labors in seething Boston while outfitting, and so busy afterward on the cruise that I did not clothe the ghost till lately. The pants were on a man, Captain Hutchinson, of the Optic, whose yacht had preceded him, and whom I had invited to go down with us instead of by train, as he had intended. He is a very modest fellow, and when he found our pictures were to be taken he had considerately placed himself behind the staysail and forgotten all about his legs. I shall cherish those legs as a souvenir of him, because I feel greatly relieved that they did not belong to an uncanny body.

There were several heavy puffs and the sky looked wild, but the race went on beautifully and soon every craft was heading for port, where the judge's boat lay off the Corinthian Y. C. house. We ran to the right of the fleet and anchored in midchannel to be handy to the stores, and watched the finish with keen delight. The harbor was crowded with pleasure boats and sandwiched a great multitude, who occupied the two club houses and their lawns and landings and every available place along shore; a band was playing at one of the hotels, and the sky was flecked by rainbows of bunting upon the vessels and buildings. The row-boats, sailboats, steamers small and large, and arriving racers loaded with joyous and noisy excursionists, or quiet yachtsmen attending strictly to business, made the pretty harbor full of sights and scenes as varied as a kaleidoscope, and equal in point of interest to anything short of an international contest. The racers and followers were soon at anchor, the great fleet folded up its wings, supper was disposed of, and then the decks were covered with the happy yachtsmen and their friends to listen and contribute to the songs and instrumental music, the stories, shouts and general joyfulness of the occasion, while the fireworks on shore paled the moonlight and added numerous and brilliant hued stars to the constellations in the heavens.

The fun, noi e and splendor were kept up till midnight, when Bedlam broke loose as the clock was striking; horns, bells, whistles, bugles and drums made a din that awoke early sleepers; this was followed by a sharp contest of baseball, to judge by the language used upon a dozen craft, in which every directing, warning, urging, approving and victorious expression used in the national game was shouted in the quick tone of the ball field, and peals of laughter greeted the invisible make-believes frequently. Then it became quieter, as the idea of it being Sabbath Day came to one and another, or they ceased from exhaustion or sleepiness, but for awhile occasional shouts, horn blasts and laughter broke the night into periods and pierced the ears of the lighter sleepers. Such was the finish of the gala day and the end of one of the most successful races of the Corinthian Y. C. of Marblehead.

[TO BE CONTINUED.]

THE NEW YORK Y. R. A.

THOSE who were really interested in the success of the latest effort to unite the smaller clubs about New York will be disappointed to learn that the organization just formed has already come to an untimely end so far as yachting at large is concerned, being wrecked at its second meeting on the shoals and sandspit of mean length. With dozens of clubs and hundreds of small yachts about New York, there is every need for a strong association, and every chance to make it a success under an intelligent and progressive management that should look to the improvement and extension of yachting rather than to the protection of an obsolete style of boat. Unfortunately this view has not prevailed in the new organization, but it has gone backward some twenty years or so and adopted the obsolete and exploded rule of mean length. The originators of the scheme, as well as many of the principal clubs interested, were in favor of modern ideas and rules that would allow the entry of modern boats, but unfortunately the cry for "simplicity" was too loud, the men who did not know what plus means and did not want to know, were in the majority, and the result is that the failure of the scheme is only a matter of time. As an insignificant local union of sandbag clubs it may struggle along for a time, but no permanent success can be hoped for with such an adherence to old-time methods. It would seem that a look at any of the modern yachts, at Volunteer, Thistle, Katrina, Baboon, Sea Fox, Chiquita, Chispa, or many beautiful new craft beside which the old boats look so boxy, would be enough to prove the impossibility of setting up a rule directly opposed to these boats. The efforts of designers and owners the world over have for some time been directed toward the production of beautiful as well as fast yachts, but now this ambitious young organization steps in with its little measure and says that the clipper stem, graceful sheer and shapely counter must go, and that designers must take for their models the garbage scow, the car float and the canal boat. It is easy to say what the result will be, that no man who owns a modern boat or who cares in the least for appearance will have any use for such an association. After adopting a rule in which length from forward side of stem to after side of stern is added to length on waterline and the sum divided by two, a sop was thrown to the opposition by a rule which allowed shifting ballast only in open boats. The allowance of crew is one man to every 3ft. in open boats and one to every 5ft. in cabin boats. A burgee, blue ground with a white star in center, with three radiating red bars was also adopted. A meeting will be held on March 29 at which the subject of classification will be considered.

MEASUREMENT AND CLASSIFICATION.

IN commenting on the article in the FOREST AND STREAM of Jan. 31, the *Field* speaks as follows, after quoting a part of the article in question:

"On this side of the Atlantic we are satisfied with the Y. R. A. version of the length and sail area rule, and although we have not ascertained what the full development under it will be like, it is satisfactory to know that the new boats building this year for any given rating have a little more length and a little more displacement than those of last year had. Thus, while the length and weight have been added to, the sail area has been diminished, the tendency clearly being to drive a maximum of weight with a minimum of power. This simply means that a better sea-going craft, with superior accommodation, is being produced; and no one will deny that the present 10-rater, the outcome of the new rule, is a more desirable sort of craft than the old 5-tonner; and so is the 20-rater than the 10-tonner.

"But the effect of the new rule also reveals the important fact that the naval architect can proceed in a more intelligent manner in designing. Under the present rule, in making a design he could never separate the three factors of success, and say how much was due to superior model, to superior length and to superior sail area. Under the present rule, the model or design is necessarily the all-important factor, and it is, above all thing, gratifying to know that designers are already discovering, by the aid of improvements in modeling, that greater displacements are possible for any given sail spread.

"The writer in FOREST AND STREAM, in recommending the change in the New York rule, appears to overlook the fact that the Seawanhaka Yacht Club rule is much harder on sail. The rules compare as follows for a given rating:

* * * * * *

"In the table just given, the effect of the proposed reversal of the New York Y. C. rule is shown by No. 4 example. The effect of the change would be to make the rule operate on relative increase or decrease in length or sail pretty much as the Y. R. A. rule does, but the rule would be a trifle easier on length. The 'sailing length' rule, which would be identical with the Y. R. A. rule, is $\sqrt[3]{\text{Length} \times \text{sail area}}$, as shown by No. 5 example. This is a very much simpler form than any of the length and sail area rules yet proposed or in use in this country or in America, and should the Y. R. A. time scale undergo revision when the allotted seven years have expired, it would be perhaps well to adopt a 'sailing length' in place of the rather awkward 10 rating, 15 rating, etc., which is variously referred as '10 sail tons,' '10 tons rating,' '10 tons sail area rule,' etc. The rule in principle, in its effects and tendencies, would be exactly the same, only instead of dividing the product of $L \times S$, the cube root would be taken from a table of cubes. In place of the 2½ rater we should have 25ft. (sailing length) class; for 5 rater, 30ft; for 10 rater, 40ft.; for 20 rater, 50ft.; for 40 rater, 65ft.; and for 60 rater, 75ft. or 80ft. However, so far as British yachtsmen are concerned, they can go on with the 'rater' and 'rating' nomenclature, and perhaps by the time 1894 arrives we may have become used to the terms, and even regard them with as much affection as we did 'tons' for so many years."

We do not reproduce the table, as it would be of little interest to our readers; the American rules are compared under the British system, and the result is of little value, as it would be impossible so to combine the two in practice. For instance, no one would build a 40-footer with but 625ft. of sail, or even 1,200ft., so it is of little use considering such suppositious craft. What the *Field* says as to the influence of the Y. R. A. rule and the advantages it offers to the designer is of more importance. In criticising the New York rule we alluded to the fact that the S. C. Y. C. rule was heavier on sail; but even the latter rule, as now applied, would permit an exaggerated sail plan, and at the same time would encourage but one type of boat.

The system of measurement and classification in one, as used by the Y. R. A., has lately attracted a good deal of attention here, and yachtsmen are inclined to look on it with greater favor than at first. Of course, the awkward term "rating" is not well understood and would never become popular here; but, as shown above, the same system can easily be adapted to American customs. The Y. R. A. rule is $\frac{\text{Length} \times \text{Sail}}{6{,}000} = \text{Rating}$, the latter being in a way equivalent to the old tonnage, the 20 rating class including the old 10-tonners, the 10 rating the old 5-tonners, etc. To apply the same idea to American yachts the formula would be changed to $\sqrt[3]{L \times S} = \text{corrected length}$. In the present 40-foot class, in which the extreme length on l.w.l. must not exceed 40ft., time is allowed on corrected length by the formula $\frac{\sqrt[3]{2L} + S}{3} = \text{corrected length}$. By the other method the limit of the class, instead of being 40ft. l.w.l., would be, for instance, 49ft. corrected length. This would give a choice of the following lengths, with a lessened sail area as the length increased. The sail area for the same lengths under the present Y. R. A. rule for 20 rating class is given in the third column.

	Sail in Square Feet.	
L.W.L.	Proposed Rule.	Y.R.A. Rule.
40	2941	3000
41	2869	2925
42	2801	2854
43	2736	2790
44	2674	2727
45	2 14	2666
46	2557	2608
47	2503	2553
48	2450	2500

In this way the existing 40-footers would be allowed to carry more sail than they now carry; Chiquita's measurement is 2900ft. by E. Y. C. rule; but a large choice of dimensions would be allowed, and on such as 45ft. l.w.l. and 2,614ft. of sail a very fine boat could be had at a cost but little if any in excess of such craft as the new ones of this year. The best boat yet built under the Y. R. A. rule, the 20-rater Vreda, is 46ft. l.w.l., 10ft. beam, 8ft. draft, and carried 2,600sq. ft. Such a yacht can be built in England under $6,000, or, allowing for difference in cost between the two countries, she would cost no more than Chispa, Mariquita or the other new ones, and would be of better material, fastenings and finish. The objection that is so often urged against complicated rules would entirely disappear in this case, a table similar to the above being prepared for each class. It may be calculated in twenty minutes, and then, the length being known, the owner can adapt his sail plan to the limit allowed in the table, thus avoiding all calculation on his part.

There has not yet been sufficient racing and building under this rule to afford a final conclusion as to its merits, but it is at least worthy of a careful observation during the coming season, together with the leading American rules, as there will be plenty of racing and many new boats on both sides of the water.

In a private letter on the subject Mr. G. L. Watson writes as follows: "I feel, along with many others, both on this and the other side, that your present rule is leading into a most undesirable type of boat, very like our Solent length classes; probably the very worst type of yacht that ever floated on these or any other waters. In my evidence before the Y. R. A. Council some two years ago, when examined as to the advisability of adopting the American rule, I then pointed out its tendency, and was afraid, indeed, that the proposed rule (which has now been adopted) would lead to too broad a type of boat. I do not know now, however, that my fears have been, or are likely to be, realized in this respect, unless, perhaps, in the large classes. Whatever rule is adopted it must be a *rating* rule, *i. e.*, the yachts must be *classed* by their ultimate rating, not by length. This is really the only safe check on sail, as, were our rule not a rating rule, *it would pay, and pay splendidly*, to build a boat the extreme length of the class, and then overspar her, allowing time for the extra sail. As it is just now, however, we can only get sail at the expense of length, and this keeps our sail plans in moderation. We have had only two years' experience with this rule, but the successful boats carry a sail area equal to the square of 110 to 120 per cent. of load line."

There has been some apprehension among yachtsmen that the present active discussion of the measurement question boded a change of the rules at once, but such a course would be so obviously unwise at this late date that there is no danger of its being followed. It is possible that in the New York Y. C. some changes of detail may yet be made, but no radical disturbance of the rule, such as would seriously interfere with boats now building, is at all probable. At the same time the matter cannot be too fully ventilated and kept alive during the racing season, with a view to some intelligent action, if any change at all shall be proved necessary, at the close of the season.

BOSTON YACHT AGENCY.—We have received the new catalogue and sail list of the Boston Yacht Agency, containing a full list of yachts of all kinds for sale. The firm has every facility for their yacht building and brokerage business, being associated with the building yard of Mr. W. K. Pryor. They are prepared to furnish designs or to build to order, and also to supply all yachting requisites.

THE NEW YACHTS.

THE open winter and warm weather thus far in March have been a boon to builders, and the work is generally well advanced, both in New York and Boston. Many of the new boats will be in commission as soon as the old fleet, and the season promises to begin unusually early. At Salem the two McVey boats, the 40, Helen, and the 30, yet unnamed, are progressing rapidly, the former being joined and caulked, with decks laid. Wilson, of Boston, has completed her sails, her tanks and ironwork are ready, and Capt. Harry Randle is at work on her rigging. She will have a Scotch windlass, one of Reid's patterns, and her bowsprit will house. Capt. Crocker, it is said, will sail her this season. The 30 is being planked and her deck frame is in. At Lawley's Merlin, Col. Forbes's big schooner, is painted outside; Mariquita is planked, Verena is painted, white above water, while her joiner work is going in. She will have a cabin trunk like Nymph. Nanon is completed, Lotowana has been laid down, and the Boggs launch is in frame. The Ford steamer, at the Atlantic works, will be launched in a week or ten days. The other builders about Boston are hard at work on the small craft we have previously noticed. Williams's second mosquito craft is 21ft. over all, 16ft. l.w.l., with cutter rig; mainsail 275ft., staysail 52ft., jib 87ft., and spinaker 246ft. At Newcastle, Me., a 30ft. yacht is building by A. P. Gamage for Thos. Scanlon. She will be 35ft. on deck, 28ft. l.w.l., 11ft. beam and 5ft. 2in. draft. At Bay Ridge Chispa is ready for launching, and will go overboard about April 1. Her standing rigging is in place, the most noticable feature being a jibstay set flying. The head of the stay is set up with a halliard, while the foot is hauled out by the ordinary jib outhaul. The jib is hanked to the stay, so that it is like the ordinary sloop jib, but in shifting jibs the stay and jib together are run in and another jib hanked on. How the plan will work in practice remains to be seen, it adds to the weight at the masthead, where it is certainly not needed. At Ayres's yard a handsome triple expansion engine has been placed in Mr. Mayfield's launch, the work of Riley and Cowley. Mr. Ayres will build a 50ft. launch for Rev. John Aspinwall, to be propelled by an Ofeldt engine. The yacht is intended for high speed. A number of launches are now ready for their engines in the lower story of Sawyer's sail loft, which has been lately inclosed. The Kathleen is now planked outside, deck laid and the hatches in place. The joiner work is ready to go in; California redwood for bulkheads and fittings. The mast and boom are now hollowed out. The boat has created more excitement along shore than any craft yet built from Gowanus to Fort Hamilton. The popular verdict is that she will not hold together long enough to launch her, and not an old salt could be found who would start across to Staten Island in her. It is hard to see on what such an opinion is based; the frame and planking are strong and specially well tied together, the lead keel is carried on a stout keelson across the throats of the floors, and the shelf and clamp are of good proportions. The deck frame is quite heavy, 2¼×2¼ yellow pine, and well kneed off, with iron knees abreast of mast and runners. The deck itself is quite light, an inner skin of cedar and an outer one of pine, with canvas between. The yacht will steer with a tiller and her bowsprit will house. The keel for the 40, a fine casting of 13 to 15 tons, was turned over last week and the stem and sternpost set up. The outline is the same as Kathleen—a long overhang forward, a knuckle just below the waterline, thence running down at an angle to the deepest point, near the heel of sternpost. The latter has quite a rake. The counter, already framed in the shop, is very long and fine; the horn timbers and frames being of hackmatack. The whole framework is quite light, but well bound together. The frames for the yacht are of steel angles, with steamed oak between. Mr. Ayres is doing good work on the centerboard boat for Mr. Ogden, which is now nearly planked. Mr. Ofeldt is busy in a part of the shop building several of his engines and boilers. . . . At Pollon's the old sloop Wizard has been replanked, with a new stern. The Smith 40 will soon be laid down. Her dimensions are 38ft. beam and 9ft. draft. . . . At Pamrapo, Mr. McGehan has built a jib and mainsail boat for Newark, 22ft. 9in. long and 9ft. 4in. beam.

At Piepgrass's yard, City Island, the 53ft. yawl is ready for final painting outside, the deck work and hatch coamings are in, and the cabin joiner work is completed. Just astern of her the new Tomahawk is set up, the frame being complete and the garboard on. In sheer plan she much resembles an old-fashioned meat chopper, a curve from stem to stern. There is no forefoot, and aft the keel rockers up considerably. The frames are 1¾×1¾ in angle iron. The big schooner is nearly planked. Her three strakes of plating on, and is going ahead quite rapidly. Her inclosed deck work is well advanced in the joiner shop. Mr. Grinnell's schooner, Quickstep, is plated and caulked and the deck partly laid. The cabin house is of thin steel on the sides. The centerboard runs up to the top of the house, while in the Constellation it stops at the floorbeams. The spars are nearly ready for the yawl and both the schooners, while the new 75ft. hollow boom for Titania is sawn in half and hollowed out. Titania and Katrina are both being scraped clean from planksheer to keel. At Hawkins's yard the Adelaide is nearly completed, and her appearance has been greatly improved by the added length at the ends. The new Barrett wheel is in place, and she will soon be ready for launching. She has been recristened, but there is a fine old chestnutty flavor about the name, Marguerite, no less than six other yachts about New York and Boston now claiming the same name.

THE CRUISE OF THE LEONA.

Editor Forest and Stream:

"We had some fine shooting near Body Island Light before leaving for Manteo. It is partly your fault [the writer] that we have staid so long hunting for the yellow girl who carries so many scalps hanging to her belt, but have failed to find her although we have scoured the island pretty well. Left Jarvisburg, which is just above the mouth of North River, at 10 A. M., Jan. 7, wind N.W., ran to Roanoke Island, arriving at 2 P. M.; 30 miles. Thence to Manteo, which is a splendid harbor for small craft. Roanoke Island is about 12 miles long by 2½ wide, and has a population of about 1,500. The majority of the people here make a living by fishing. There is some very good farm land here, but most of it is low and swampy. What is most needed is a steamboat to run between here and Elizabeth City. Nags Head, a great summer resort, is just across Roanoke Island on the beach, and a steamer to touch there would be a great convenience. There are five stores here in Manteo, one kept by J. S. Evans is as fine a store as you will find in any country town in the North. All transportation, including the mails, is by sailing craft. By the way, they have some boats here that are used for shad fishing that beat anything sailing I ever saw, and a head wind is their best hold, and they are not afraid to sail them either; they will stay in a blow as long as the larger vessels. Most of the mails are carried in these boats; they carry a low sprit sail, no main, and a jib that hooks in the stem, they also carry a topsail which is rigged on a spar hauled up the mast, the foot of the spar hooks into an eye-bolt half way down the mast. The topsail is furled aloft and worked the same as the after reefing gear on our tuckups. The topsail has a spar on the foot and the sheets are on the outer end of it. To set this sail slack the gear and haul down the sheets, which are made fast in the stern of the boat. These boats range from 20 to 27ft. long, by 7ft. beam.

"Left Manteo Feb. 2, 12 M., wind light S., ran to Bodies Island Light, arriving at 2 P. M.; distance 12 miles; had to take a pilot. The main trouble in navigating these sounds is the many shoals; there is plenty of water, but it is spread out too thin. There are many places on the east side where, with boots on, you can wade out four miles from shore and not get your feet wet."

The legend of the dusky maiden, alluded to by Captain Lutes, that is supposed to be seen at the full of the moon, prowling around Roanoke Island in a dugout with sailormen's scalps hanging from her belt, is looked upon by the matter-of-fact captain as rather Poe-y and Dismal Swamp-ish. After leaving the noble Chesapeake Bay astern every darky's cabin on or near the waters that fringe the coast line has a skeleton in it with a blood-curdling history, so to speak. "Yes, befo' de wah." The strange, weird, mythical stories, as related by these superstitious people, are both ludicrous and thrilling.

One dark and threatening night the Leona ran for a harbor, and was prevented from running over a woman (as dark as the night itself) who was swimming across the stream with her children in tow, by her timely warning of "Hard, dar, a hen coop." The captain having learned that hen coop meant port and water barrel starboard, quickly downed helm and the catastrophe was averted. He had taken the amphibious brood for a school of 'gators. As this incident happened since the "wah" it will probably not be given a place in Southern lore.

Homeward bound. Several months have passed since the Leona left us for the South, the new and ever-changing scenes inspired her crew with a longing to go further and see more, and so the interest never lagged, even time was made to cater to their pleasure, and now on their return they hasten by places no longer imaginative or idealistic. The thought of home and friends increases with every mile of water left behind as the little ship is driven to her best speed. The Leona arrived at Norfolk on March 8, where she will in all probability be sold to the party that made the bid for her when bound South. A cruise in broad, unknown waters with a genial companion and a staunch little boat is full of pleasing anticipations, and when we return we feel the better for it and have learned something.

March 10. The crew of the Leona arrived here (Cooper's Point) to-day by rail, having sold the yacht at Norfolk, as I supposed when I bade them good bye five months ago. Capt. Lutes had not been well for some time. Now he is as tough as a pine knot and is 21lbs. heavier. Mate Whiting is as bright and as lively as a cricket. They speak enthusiastically of their trip, and advise others to go and do likewise. R. G. W.

THE RACING PROSPECTS.

THE coming season is certain to be not only an early one, but a very lively one as well, and the clubs are now planning races for all classes, but in particular for the 40 and 30ft. boats. The Seawanhaka C. Y. C. has provided liberally for these craft in June, and now the Corinthian Y. C. of Marblehead is arranging a programme for some lively racing later in the season. The Eastern Y. C. Cup, presented last year by Com. W. F. Weld and won by Chiquita, is to be raced for four times this season, under the C. Y. C. management, the races to take place off Marblehead in August, after the New York Y. C. cruise, probably on four successive days, so that the visiting yachts can enter. If any more cups are needed at the same time it is not likely that the Eastern Y. C. will be backward in providing them. Besides the Weld cup two others have been presented by members of the C. Y. C. for the the 30 and 27ft. classes. The conditions are as follows:

Corinthian Y. C. of Marblehead.—Midsummer series, 1889, cup races for sloops and cutters of the 40, 30 and 27ft. classes. There will be four consecutive days of racing. The dates will be fixed in the latter part of August, at a time which will permit of the yachts reaching Marblehead after the close of the New York Y.C. cruise.

Eastern Y. C. Cup for 40-footers.—This cup was offered by Com. William F. Weld, of the Eastern Y. C., and placed in charge of the regatta committee of the Corinthia Y. C., to be raced for under the sailing rules of the Eastern Y. C. The value of the cup is $250.

Corinthian Y. C. cup for 30-footers.—This cup, of the value of $125, offered by a member of the club, will be raced for under the sailing rules of the Corinthian Y. C.

Corinthian Y. C. cup.—For sloops and cutters 21ft. and less than 27ft. waterline.

This cup, of the value of $100, offered by a member of the club, and open to competition for members of the club only, will be raced for under the sailing rules of the Corinthian Y. C.

The series of four races will be sailed in any event, and the name of each yacht winning a race will be inscribed upon the cup. The yacht winning the greatest number of races will own the cup. In case of a tie in any class there will be a sail-off between the yachts tied.

Courses.—All courses will be open sea courses, off Marblehead, and free from tides or shoals.

Crews.—By the rules of the Eastern Y. C., yachts in the 40-foot class may carry one man for each four feet of racing measurement. Yachts in the 30-foot class may carry six men, and in the 27-foot class, five men. Yachts in the 30-foot and 27-foot classes may carry one paid man, but must be steered by an amateur.

George A. Stewart, Chairman, 50 State street, Boston. Frank W. Chandler, William P. Fowler, John B. Paine, Harry P. Benson, Regatta Committee C. Y. C.

This series of races is apt to attract all the 30 and 40ft. boats between New York and Cape Ann, making a fleet such as has never before been seen in America. Already the Boston boats are casting an eye toward New York, and Rosalind, Saracen and Marguerite are arranging a cruise in company from Boston to New York early in June, to enter the S. C. Y. C. races. If Mignon and the new McVey 30 can accompany them this will make a fleet of 5, to which must be added the New York fleet, Kathleen, Arab, Tom Boy, perhaps the new boat at Mumm's and some of the older boats, making a very respectable fleet, both in number and quality.

CLUB ELECTIONS.

Williamsburgh Y. C.—Com., Henry Roth; Vice-Com., John Clifford; Port Captain, Wm. Rexter; President, Frank D. Thorne; Sec'y, Albert C. Ostheimer; Asst. Sec'y, John A. McElroy; Treas., Chas. N. Gerard; Meas., John Kurtz; Judge Advocate, Samuel S. Free; Trustees, Edward Clark, W. P. Morrissey, M.D., Edward Zoble, R. Trowbridge, P. Monahan; Regatta Committee, J. Whittaker, Theodore Ferris, J. Homert, W. Vogt, Harry Broden; Stewart, Wm. Beyer.

New Haven Y. C.—Com., C. Cooper Clark; Vice-Com., A. H. Seymour; Rear-Com., W. A. Harris; Sec'y, W. S. Cooke; Treas., Robert Foote.

Newark Y. C.—Com., Wm. Murray; Vice-Com., David Coburn; Cor. Sec'y, Frank Long; Fin. Sec'y, Thos. Luff; Treas., E. M. Grover; Meas., Wm. Humpage; Trustees, Lysander Wright, Hardy Bush and Hugh Cochrane.

Canarsie Y. C.—Com., Dr. Wm. H. De Long; Vice-Com., Daniel J. Brinsley; Treas., Frederick A. Reid; Sec'y, C. E. L. Hinrichs; Ex. Com., F. J. Kallenbach, John Ives, Israel Fischer, A. H. Ackerman and P. Ketchum.

Essex Y. C. of Newark.—Com., B. J. McGrath; Vice-Com., W. J. Walker; Rear-Com., P. McKeon; Fleet Captain, W. E. Wicklehaus; Sec'y, W. C. Rothe; Treas., W. B Garrison; Fin. Sec'y, J. A. S. Leonard; Fleet Surgeon, H. P. Pfeiffer; Trustees, W. H. Helberle, Chas. Vetter and E. Goldsmith.

MONATIQUOT Y. C.—The annual meeting of the Monatiquot Y. C. was held on Jan. 14, the following officers being elected: Com., Edmund S. Hunt; Vice-Com., Edward F. Linton; Fleet Captain, Lemuel A. Hayward; Treas., Dana Smith; Sec., Amos W. Blanchard, Weymouth, Mass. Regatta Com., T. D. Bagley, chairman; C. G. Sheppard, C. F. Colby, R. G. Hunt, Dana Smith, H. J. Shaw, Nath. F. Hunt, L. W. Morrison. Membership Com., N. F. T. Hunt, E. B. Glover, A. L. Spinney, Henry Gardner, A. W. Blanchard. House Com., J. F. Sheppard, E. C. Pierce, A. J. Shaw. The club has about 35 yachts, ranging in length from 16ft. to 28ft., among them some of the cracks of their class in Boston harbor, as for instance White Fawn, Moondyne, Posy, Secret, Folly, Echo, Eureka, Diadem, Queen Mab, Flora Lee, Rocket, Peri, Mirage, etc. A better list of flyers than the above it is hard to find. The club is in a prosperous condition, with 135 members and 10 lately added, with other applications in hand. The regatta com. reported a balance of $47 from last year's appropriation. A proposal to raise the dues from $3 to $5 was lost. Messrs. Henry Gardner, C. G. Sheppard and A. J. Shaw were appointed a committee to revise the by-laws. At a meeting on Feb. 11 the regatta committee were instructed to confer with a committee of the Quincy Y. C. in regard to a union open regatta. Com. Hunt, Sec. Blanchard and Mr. Bagley were appointed delegates to the New England Y. R. A. Monthly meetings will be held on the second Monday of each month during the season.

AN OFFICIAL MEASURER FOR THE LARGE CLUBS.—A good scheme has been set on foot by the Larchmont Y.C., through proposals to the Seawanhaka, Atlantic and Corinthian clubs, for the appointment of an official measurer, who shall measure the yachts of all the clubs, giving a certificate of the measurement covering all the various rules, thus saving much trouble and expense to owners whose yachts must be measured separately in each of the five clubs. Such a plan would be an improvement in every way, and though it is now put forward without any effort to that end, it would pave the way more than anything else for a common system of measurement.

NEW YACHT CLUBS.—The Bayswater Y. C. was lately organized at Far Rockaway with a membership of 76. The officers are: Com., Geo. A. Bouker; Vice-Com., E. H. Mott; Sec., B. J. Banklefson; Treas., C. O. Bouker; Meas., C. F. Beeken. A new club, named the Rambler, Y. C., has lately been organized at Fort Hamilton, New York Bay. The officers are: Com., C. Barry; Vice-Com., W. Cooke; Rear Com., M. Walsh; Fleet Capt., P. Mandell; Sec., T. J. Flanagan; Treas., E. Chandler; Fin. Sec., J. Barry; Fleet Surgeon, Dr. P. Scorr; Trustees, W. Doran, J. Hayes, W. Maher, F. Collins, F. McGuire.

A NEW STEERING APPARATUS.—A patent has lately been granted to Mr. Rock Grignon, of Hughton, Mich., for a steering gear for towing. In addition to the ordinary rudder head and chains a tiller is fitted in the bow to which the steering chains are led. The towline is led from the bitts over this tiller and through an eye on the fore end of the tiller, so that any sheering of the boat at once tends to correct itself. The tille may be so adjusted as to cause the tow to follow to one side of the wake of the vessel towing her.

ALARM.—The old schooner yacht Alarm, built in 1834 by J. C. Van Deusen for A. C. Kingsland, has been sold by her late owners, Handren and Robbins, to Daniel Keller, of Clifton, Staten Island, to be broken up at the latter place. She was purchased only a year ago by her present owners and thoroughly refitted, but proved even too slow to beat the Dauntless, hence her untimely end.

SMALL LAUNCHES FOR CRUISING.—Detroit, Mich., March 13.—*Editor Forest and Stream:* I noticed in your issue of March 7 the description of "A. C. F.'s" cruise in the steam launch Electra. I should be pleased to hear from "A. C. F." in regard to the cost of such a boat. I am contemplating building a launch, and think that one similar in construction would suit my idea of a nice, comfortable launch. If "A. C. F." does not object, I should be pleased to see in your next issue the cost of his boat.—J. I. M.

SHACKAMAXON Y. C.—The annual meeting of the Shackamaxon Y. C. was held at their club house, foot of Shackamaxon street, on March 4. The following officers were elected for the ensuing year: Com., Henry S. Anderson; Vice-Com., Wm. Kirk; Treas., Chas. F. Baker; Financial Sec., Robt. Archer; Recording Sec., John M. Archer; Trustees—Milton Thompson, George S. Anderson, Thos. Field; Meas., Fred Anderson. The club has 25 yachts enrolled in the fleet and a membership of over 100.

YACHT RACING CALENDAR.—Messrs. Horace Cox & Co. have lately issued under the above title a reprint of all the reports of matches, and important yachting and canoeing news published in the *Field* during the past year in the form of a square octavo volume in flexible covers. The book is very convenient for reference, and takes the place of the official register formerly issued by the Y. R. A.

EARLY RACES.—On Fast Day the Mosquito Fleet Y. C. of Boston will sail its first regatta of the season off City Point, starting at 10 A. M. The classes are 13 to 15ft., and under 18ft. At 2:30 P. M. the Savin Hill Y. C. will hold a regatta for the same boats and under the same conditions over the club course.

DEATH OF MR. JAMES E. SMITH.—Mr. James E. Smith, the well-known yacht builder of Nyack, N. Y., died on March 15 at the age of 60 years. Mr. Smith built the Gracie, Tidal Wave, Republic, Madeline, Brunhilde, and many other yachts. His son, John P. Smith, will continue the business.

ATLANTIC Y. C.—A very extensive scheme of improvement was proposed at the last meeting of the Atlantic Y. C., including larger grounds and new buildings, giving every convenience to the members.

COLUMBIA Y. C.—The twenty-second annual regatta of the Columbia Y. C. will be sailed on June 18 over a course from 88th street to Yonkers and return. The annual meeting of the club will be held on April 27.

SEAWANHAKA COR. Y. C.—The lecture next Saturday night will be on the treatment and handling of racing sails, with a description of a new sea-going rig for schooner yachts, by Mr. Gilbert H. Wilson.

CHANGES OF OWNERSHIP.—Meteor, schr., has been sold by the executors of the late Trenor L. Park to P. R. Van Nostrand for $4,500. . . Belle L., steam yacht, has been sold by D. A. Loring to H. L. Terrill for $5,000.

NEW FORTY-FOOTERS.—It is rumored that Gen. Paine will build a 40-footer for the season, and also that Messrs. Adams, owners of Baboon, will have a 40-footer from Watson's designs.

SAPPHIRE, steam yacht, is reported as sold by Mr. John Stetson to Mr. A. D. Spreckles, of San Francisco, for $40,000.

CRUISING.—The steam yachts Electra, Cora and Oneida are now ready, the two latter will sail soon for the South.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. A. D., Philadelphia.—The address is Cleveland, O.

E. R., Cleveland, Ohio. We cannot refer you to any report such as you ask for.

C. S. T., New York.—The three keels would have little more resistance than one alone.

J. B. R., Raccoon Ford, Va.—We will publish the lines of a very good skiff next week.

V. C., Brinkley, Ark.—Address the *Illustrated Kennel Magazine*, 1 Cockbridge street, Leeds, Eng.

H. RENDELL, St. John's, Newfoundland.—The turnbuckles may be had of Frank Wheeler, Meriden, Conn.

J. O. C., Fitchburg, Mass.—We cannot prescribe for your dog without a full description of her symptoms.

A. H. E.—To join the New York State Asso iation apply to the secretary, H. B. Derby, 348 Broadway, Albany, N. Y.

A. B. D., Sandusky, Ohio.—We know of no patent on the method mentioned; it has been described in print and generally used for some time.

J. C., Albany, N. Y.—There is no breed of dogs with webbed feet. The Newfoundland has flat, wide-spreading feet, and like all breeds, with more or less of membrane between the toes.

E. B. W., Houlton, Me.—"Points for Judging," for sale at this office, will give you the information wanted. A well-bred field spaniel should carry his tail not higher than level with his back.

O. H., Narcoossee, Fla.—The ears will probably come all right in the course of a few weeks. The price varies so much with different parties that it is impossible to say what is a proper charge.

J. M., Marlboro, Mass.—Imported Ringwood was by Lord De Freyne's Ranter and out of Earl of Lewe's Beauty (Riot—Countess). Thorn was by Victor (Rattler—Lady Bird II.) and out of Lucy (Juno—Old Bess).

F. M. F., Lost Nation, Iowa.—You will find the lines of a very handy skiff in the FOREST AND STREAM, Vol. 25, p. 226. We know of no book on the use of such boats, but can furnish a book on racing and shell boat rowing.

PARTS OF SHARPS RIFLE.—If "W. H. G" will send a letter to Captain Kingman, Inspector of Rifle Practice, Fourth Regiment, C.N.G., Bridgeport, Conn., I think he will be able to get the parts of Sharps rifle which he wants. Capt. Kingman was formerly employed by the Sharps Co., and I have heard him say that he had a number of trimmings on hand.—W. H.

A. R., Hoboken, N. J.—I know of about 400 acres of land, partly meadow and partly high land, in Moonachie swamps, adjoining the Hackensack River. Good bags of ducks and snipe have been taken there every season; it is also a good place to put out quail and rabbits. Can be leased for a term of years at a reasonable rent. What steps would you advise me to take toward establishing a gun and fishing club? Ans. Work it up among your friends or advertise in our columns for others to join you.

WEST JERSEY GUN CLUB.—Will you kindly inform us the distinction between an amateur and a professional shot. Where is the line drawn? Does shooting for sweepstakes or for money prizes offered by a club constitute a professional? Ans. Shooting for sweepstakes or money prizes does not constitute one a professional. The line between an "amateur" and a "professional" shooter is not clearly defined. We should call a professional one who shoots for or shares in gate money. See our issue of Jan. 10 on this point.

H. M., JR., Sandusky, O.—The Ohio wildfowl law provides that "no person shall on any place catch, kill or injure, or pursue with such intent, any wild duck, except between the first day of September and the fifteenth day of December, inclusive, or upon any bog, estuary, marsh, mud flat or river, or any cover to which wildfowl resort, by the aid of any swivel or punt gun or any other gun than a common shoulder gun, or with or by the aid of any artificial light, or with the aid of or from any sinkboat or battery, or with any trap or net, kill or wound, or catch or pursue with such intent, any wild goose or brant or wild duck or any other waterfowl, or destroy or disturb the eggs or nests of any birds named in this section, excepting in the waters of Lake Erie and the estuaries and bays thereof; no person shall in any place catch or kill or injure, or pursue with such intent, any wild duck on Sunday, Monday or Tuesday of any week, between the first day of September and the fifteenth day of December of any year; provided, that nothing herein shall be construed to authorize the catching or killing, or pursuing with such intent, any wild duck on Sunday."

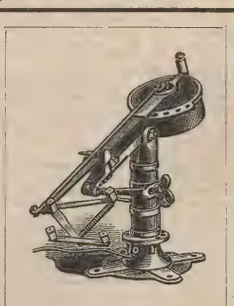
HUNTER'S PATENT
Safe & Rapid Loader.



Pat. April 17, 1888. Pat. April 17, 1888. Pat. May 29, 1888.

The Collins Gun Company, of Omaha, Nebraska (the oldest and largest gun house in the West), writes: "We will be only too pleased to allow you to use our name as reference, and would say that we have tried every loader that has been placed on the market, and without any hesitation pronounce your machine the only machine yet that we have ever seen that is worth anything for our use, to wit, loading wood, Schultze or black powder for trap or game shooting."

Mr Curtis Wright, a well-known club man of Connersville, Ind, says: "The loader is at hand, and more than meets my expectations. It is a beautiful piece of mechanism, and perfect in every way; it is made for both strength and convenience, and cannot fail to take the lead in the market, as no one could ask anything better. The shooting fraternity owe you a vote of thanks for getting out so complete an article."

A number of other references on application.

The CRIMPER is also sold separate. Will crimp at least three shells to any other crimping one. Also clips shells any length—caps and decaps. Prices and full description address,

FOR SALE BY

Forest and Stream Publishing Co.,

318 BROADWAY, NEW YORK.

Yachts and Canoes For Sale.

Cruising Yacht For Sale or Charter.

The owner of a well-known yacht, 47ft. long, 14ft. beam, 6ft. draft, perfectly fitted out for the comfort and accommodation of four to six persons in the cabin, and three men in forecastle, patent w. c. and all modern improvements, will sell or charter her at a reasonable price on account of important business engagements preventing his leaving the port during the summer months. The yacht is built upon a beautiful model, has two rigs, can be sailed as a sloop, when she is very fast, or as a yawl for cruising. She was built during the winter of 1886, of best of material, under the personal supervision of the owner, and is a staunch and excellent sea boat, well suited for cruising in the gulf of St. Lawrence, and has been so employed, where capital sea trout and other fishing can be enjoyed, and salmon may be included, seal and white porpoise hunting, duck and shore bird shooting. This is an opportunity seldom offered. Address P. O. Box 1081, Quebec City, Can. Satisfactory references in New York or elsewhere given and required.

FOR SALE.—CUTTER YACHT GYPSY, 24ft over all, 20ft. l.w.l., beam extreme 6ft. 2in., draft extreme 4ft. 6in., 1,200lbs. iron on keel, 5,000lbs. inside; complete cruising outfit; boat and fittings in perfect condition.
J. L. WICKES, Box 369, Bordentown, N. J.

Canoe For Sale.

Address Box 1016, Hartford, Conn.

YACHT CAPTAIN.—A COMPETENT MAN desires a berth for the coming season. Sail or steam. Address YACHT CAPTAIN, care of Forest and Stream office.

BYLES CANOE, 14×30, MAHOGANY DECK, deck tiller, foot gear, two sails, paddle, etc. All in good condition. Price $60. F. B. C., P. O. Box 959, New York.

FOR SALE.—THE MIDGE, OIL BURNING cruising steam launch, length 28ft., as good as new. For full particulars address HUGH L. WILLOUGHBY, 506 S. 41st st., Philadelphia, Pa.

Yachts and Canoes Wanted.

WANTED.—A SECOND-HAND SAILING OR paddling canoe. Address Lock Box 68, P. C. Canoe Club, Princeton, N. J.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

A TROUT SUPPLEMENT.

OUR next issue will have a four-page supplement, devoted to the "Salmon and Trout of North America." It will be illustrated with thirty figures of the several species. The text of the descriptions has been prepared by Dr. Bean; and the paper will be so complete that its value will be immediately recognized. There will be several other papers on trout and trout fishing, and the number will be in every way a fitting recognition of the opening of the trout season on April 1st in some of the States, and an anticipation of the opening elsewhere.

FLORIDA REFORM.

IF any corner of the United States is in need of the regenerating influences of a wide-awake game protective association it is the peninsula of Florida. That land is heathen, if we are to estimate by the way the natives have down there of killing deer in spring heavy with young. To the innate brutality of the natives—for it is only innate brutality that would sanction this spring deer killing—add the mania to kill that has taken possession of so many hundreds of Northern tourists. Wanton and outrageous slaughter, purely for the sake of killing, has been the rule. Men with repeating rifles and "scatter-guns" have year after year blazed away from the decks of river steamers, killing the inhabitants of water, earth and air—wounding and killing and never stopping to gather the spoil. Fishermen have gone down from the North, caught huge strings of fish for count, exhibited them to admiring crowds in hotel halls, and then turned them over to the servants, to be dumped on the compost heap. Burly negroes have given their days and nights to the lazy work of shooting small birds and birds of plume to gratify the debased taste of plumage-bedecked women. In a score of disreputable ways which might here be enumerated, the savage and senseless warfare against animate nature has been waged year in and out.

There is much satisfaction in the news which comes to us that an association has been formed to undertake a reform in this thing. It is known as the Florida Field Sports Association, organized at Tarpon Springs last week, with Col. J. E. Hart, of Jacksonville, the active president, the Duke of Sutherland the honorary president, Gen. J. B. Wall, Capt. D. E. Maxwell, Mr. D. H. Elliott and Gov. A. P. K. Safford, vice-presidents, and Mr. J. M. Murphy, of Anclote, secretary. Among the members are Gov. Fleming, Judge Mitchell, Gen. Fisher, of Pennsylvania, and others of the North.

The movement has been set in motion not a day too soon. It will encounter the opposition of apathy and hostility, but every right-minded citizen of Florida and every Northern sportsman who visits the State for fish or game will bid it all speed. One strong source of strength will be found in the active support of the Jacksonville *Times-Union*, which is a power in the State and heartily sympathizes with the movement.

PRACTICAL FOREST RESTORATION.—IV.

IN the last paper we gave some hints upon the selection of a sight, and in the present paper conclude the outline of a practical scheme of forest restoration.

Time of sowing. The natural season for sowing the seed of any tree is the season at which the seed or fruit ripens and falls. Seed which ripens in summer will germinate at once, and the young trees secure such a hold of the soil that practically a year would be lost by delaying the sowing until the following spring. As regards seed which falls in late autumn, it is generally a matter of indifference whether it is sown at once or in the following spring. If sown at once it lies dormant in the soil until the spring; but trees sometimes ripen their seed earlier or later than their normal time, and seed collected late in the summer or early in the fall should not be sown at once, as it might possibly germinate, but wants strength to live through the winter. Seed reserved for spring sowing should be cleaned, dried and kept in a dry, wholesome atmosphere.

Preparation of the seed beds. If it is decided to make the nursery in an opening in a forest covered with a good carpet of leaves, mark out a strip or strips about 6ft. wide, draw off all the light covering of undecomposed leaves from the center to either side of the strip, dig up the soil to 4 or 6in. in depth, pulverize and level it off, then draw shallow trenches across the bed at intervals of about a foot, drop the seed in lavishly, cover with an inch of soil, or less for small seed, and when the whole strip is sown, strew the surface leaf mold over it again, covering lightly for spring sowings, but heavily for a protecting mulching for fall sowing.

Always sow in lines, and do not let the seed spread more than 2 or 3in. wide in the lines. The plants would grow just as well if the seed were sown broadcast, but they are much more conveniently handled if it is sown in lines.

If it is desired to raise nursery stock outside the forest, and under conditions common to open country, richly manured farm land should not be selected for the purpose. The most suitable soil is newly broken grass land, or partly exhausted arable land, brought into condition by a dressing of leaf or other vegetable mold. The plot selected should be plowed at least a foot deep, turned over three or four times with the plow, and thoroughly pulverized; and, unless there is good natural drainage, the plot must be trenched to fully a foot in depth, and at intervals of not more than six feet. Seedling trees do best when they are planted in loose soil on a ridge with an abundant supply of water in the trench, which, percolating upward by capillary attraction, affords the plants an abundant food supply, without stagnating about the roots, and cutting off the necessary supply of air, as is apt to occur when trees are planted in stiff soil without provision for drainage, and the soil tightly compacted by water, percolating downward from the surface, and stagnating about their roots.

As soon as the cotyledons, that is the first leaves, show above ground, or earlier if more convenient, cut a lot of bushes or light branches, and lay them over the seed beds to temper the rays of the sun, or arrange in any way to shade the plants in their earliest stages.

The ground being worked to a good depth, as suggested, and thoroughly pulverized, will retain moisture a long time, and plants grown in the open will, under those conditions, soon acquire the hardihood necessary to stand exposure to the sun.

The methods above prescribed are suitable to either coniferous or deciduous trees, bearing in mind only that very light seed, like poplar seed for instance, must be very lightly covered.

On the method of sowing above prescribed a hundred to a hundred and twenty-five thousand plants may be raised in a nursery an eighth of an acre in area. The plants thus raised require to be taken up and transplanted the following spring. The soil should be cut away in front of the rows, so that the spade or hoe being inserted behind them, the plants may be dug out attached to the clod, which should be raised and dropped gently to make it crumble and let free the plants, without injuring the fine thread-like rootlets which branch from the main root.

Plants from the seedling bed may be used at once for planting up bare spots in the forest, provided such plots have a true forest floor, and be not already stocked with self-sown seedlings; and in favorable conditions they may be planted singly; but if seedlings from the seed bed are used for planting in open ground, it is preferable to plant them in clusters of from two to five plants.

More generally the plants are transplanted in the nursery, in which case pine and other seedlings of equally slow growth may be set out singly, in lines nine or ten inches apart, the plants being about seven or eight inches apart in the lines, under which arrangement from fifty to sixty thousand plants may be grown on an acre of ground. This transplanting is a work of no difficulty, but it is only the experienced who can get good results with economy of labor.

Plants of the second year once transplanted are good strong plants, which will do very well if planted out under favorable conditions, but it is well to keep at least a portion of the stock in the nursery another year, transplanting it a second time at distances of a foot apart each way, and the following spring there will be plants fit to set out anywhere.

It may occur to some that it would be a saving of labor to transplant at a foot apart from the seed bed, and leave the transplants two years to develop, but the results will be very different. The plant transplanted every year will have a dense tuft of small rootlets, at no great depth from the surface, while the plant which remains two years in the same place will develop the main root and send it deep down into the soil, involving a great deal more labor in removing and transplanting it.

With these nursery-raised plants, blanks in the forest may be filled up or plantations planted, as may be desired.

SNAP SHOTS.

IT is urged by some of the members of kennel clubs that the growth of the associate membership of the American Kennel Club will be at the expense of the strength of local clubs. The contention is that if an individual joins the A. K. C., paying his annual $5 fee there, he will not be ready to put his hand into his pocket for the support of his home club. In this way the home clubs will dwindle and fall away; there will be fewer local exhibitions, and dog shows will be confined to two or three of the large cities. We do not share this opinion. Dog shows—in cities or towns—have always been promoted by individuals who thought that they could make something out of the shows; they will be given on precisely the same lines in the future, whether or not the promoters are associate members of the American Kennel Club.

C. P. Kunhardt left this port on Tuesday of last week on the steamship Conserva, bound for Samana, San Domingo. The Conserva had been fitted out by him as a man-of-war, and he was taking her down to deliver her to the purchasers. On Sunday a vessel from the south reported having passed wreckage, which was thought by some to have been that of the Conserva. Later arrivals have brought word of similar observations by other vessels, and the finding of the Conserva's life boats gives strong confirmation of the fear that the ship may have been sunk by a collision with some other craft unknown. The details, however, are so meagre and the information is so slight that later advices may prove this apprehension of the Conserva's fate to be unfounded; and we are not utterly precluded from entertaining the hope that Mr. Kunhardt may have reached his destination in safety.

We publish to-day the new shooting rules of the American Shooting Association. They have been carefully framed and adopted only after mature deliberation on the several points involved. The officers of the Association express the hope that these new rules will be so generally adopted that their purpose of insuring uniformity of shooting conditions shall be attained.

The Sportsman Tourist.

"Sam Lovel's Camps." By R. E. Robinson. Price $1.

CURRITUCK DUCKS IN FEBRUARY.

LATE in February we start for our favorite shooting grounds, the Currituck Inlet Club. This club property, situated on the east side of the sound, about four miles southeast of Knott's Island, is bounded on the east by the Atlantic Ocean and on the west by Currituck Sound. It takes the name from old Currituck Inlet, which only sixty years ago was a navigable stream, and large vessels from New York and other ports went into the sound for cargos of Indian corn, sweet potatoes, cotton and other kinds of produce that still grow on the fertile banks of the west side. Wm. H. Vanderbilt was perhaps one among the last who sailed a vessel into this inlet. He had a cargo of gunpowder, molasses, rum, candles, straw hats and firecrackers, and returned to New York by the same route with a cargo of mocking-birds, tobacco, Indian corn, cotton, sweet potatoes and beeswax.

There were not many good ducks at Currituck then, only a few whitewings and gray coots, old squaws and other salt-water birds of little value; for the water in the sound was salt, and wild celery did not cover the bottom then as now. But the natives began to fight for the fishing privilege, which was valuable at that time, and a voice from on high commanded a large sandhill, which stood directly on the north of the inlet, to move southward and fill it up, and from that time to the present there has always been a plenty of delicious canvasbacks, redheads, black ducks, mallards, greenwing, and bluewing teal, widgeons, sprigtails, blackheads, bluebill, ruddy (or butterball), spoonbill, gadwall, and in fact every good eating duck of America. Strange to relate, just where the deepest channel was then, now stands the highest sandhill, and near this sandhill stands our club house.

Having made all necessary arrangements for the comfort of the inner as well as outer man, but especially the former, George, Will and Josh board the train for Virginia Beach. After a pleasant ride of little less than an hour we hear the roar of the ocean, the whistle sounds and we are landed at the Princess Anne, one of the finest hotels on the Southern coast. Here we are met by Ned with his bay team Rhoda and Minnie, and we are told the tide is just right for a delightful drive, so we are anxious to be off. Packing on our trunks, bundles and baskets, we bid farwell to some friends who have accompanied us this far and start southward for our distant home by the sea. There is little to be seen, save an occasional wreck, which causes one to feel grave for the moment, for the stranding of these ships has launched into eternity many a soul, without giving them much time for preparation. No game is seen for the next ten miles, but the beach is fine, the air bracing, and Rhoda and Minnie, and Ned for a driver, with four feet of persuasive hemp, are taking us along at a lively gait. When we pass the Little Island Club the scene changes. On our right, less than a quarter of a mile away, may be seen thousands of white brant and swan sitting on the flats. Just above this large flock of game soared an eagle, with years so many that his head was very white. At one moment he seemed to scale the skies, at the next poised ready to strike, but the game, while sweet and juicy, was too large, and he got no meat from that flock. Further on we see more game and are sorely tempted, but this is Sunday, and Will had promised his mother, so we didn't shoot.

Arriving at No. 5 Station we rest our team and lunch. Capt. Payne of this station is a jolly good fellow, and in exactly five minutes had a boiling cup of coffee before us, which was speedily made away with. Finishing our little repast we went to the telephone and informed Wm. Henry what we wanted for dinner. Then after a pleasant drive of four hours we reach the club, and find a smoking hot dinner awaiting us. After dinner we fill our pipes, go to the landing where our gunning skiffs are kept, and see that all is ready for the first day's business. Here we were again sorely tempted, for near the bank in easy range sat a dozen sprigs, but George said no, "For," said he, "do you remember that on the 10th of September last, I would not let you break the Sabbath, and the result was three hundred and twenty-five golden plover, yellowlegs and other bay birds with two guns the next day?" Returning to the house we have another pipe, and seek our beds of swansdown, and are soon lost in slumber. But our sleep was short, for when the moon got over the sandhills and looked down into the creeks near by, the geese and swan kept up such a lively chat while they destroyed the celery (where it was not safe for them to come in the day time), we could not sleep.

At 5 A. M. Wm. Henry calls. We have finished breakfast at 6 o'clock. Donning our shooting outfit, including long rubber boots and rubber clothing, which are indispensable, we go to the landing, wade out to our boats, which are laden with all the implements of destruction, and set off for the day's sport. We hoist our leg-of-mutton sails and are soon lost to each other for the day. George took his lucky choice (for we always draw for choice) and went to Skinner's Point. Will had second choice and went after swan. Josh had third, which was last choice, and went into the pond after black ducks. This was a poor day for ducks, being calm and rainy. Ducks never fly in such weather of their own choice, and move only when frightened up by some passing boat. The results were for George 3 sprigtails, 7 teal, 2 widgeon, 1 mallard and 4 black ducks. Will did not get any swan; it was too calm, but joined Josh in the marshes, after wasting the best part of the day, and they together brought in a bag of 12 good ducks. We dine on a pair of fat sprigs, and at the surprising hour of 8 are sound asleep.

Tuesday was a better day, and we start early. Will has better luck and bags 9 sprigtails, 11 teal, 3 gadwalls and 1 black duck. Josh gets 7 black ducks, 4 widgeon, 9 teal, 3 sprigs, 6 mallards, 1 ruddy and 1 dipper. George had hard luck. The ducks did not fly around his corner. He brought in 2 sprigs and 2 black ducks, but he had a fine string of 15 black bass, which compared favorably with the best. George is a fine shooter. We have seen a flock of 8 yellowlegs go down to his decoys, and not one left to tell the tale of the luckless eight. Had we not seen this shot and been told by him that the W. in his name was for Washington, we should have doubted the shooting of these bass.

Wednesday is a good day for ducks, and we are awake very early. George says it was insomnia, but Will hinted it might be conscience. At any rate we breakfast at six on five pair of black ducks, and are off at once. The blinds are soon reached and the decoys placed in a position to make them appear as lifelike as possible, for at this season of the year ducks have all finished their education. William Henry takes George in the box, and the boat is hardly concealed, when here they come. A flock of ten greenwing teal swoop down to the decoys. Bang! bang! from George's 12-gauge with No. 8 shot, and five teal lie dead on the water, three with the first barrel and two responded to the second. Will went to Walker's Point and was bringing down sprigs and teal right and left with unerring aim. Josh had taken his No. 3 and gone to Walker's Creek, where he had seen a flock of 500 black ducks feeding in the morning, but alas! they did not return, or that is the story he told us.

Josh is an enthusiastic gunner and good fellow to have along at times. He never gets discouraged and is always hopeful. But he shoots better when we all gather around the fireside at night and compare notes, talk over the good and bad shots of the day and trot our horses at an impossible speed.

At seven we meet again and count up. George had killed 14 teal, 11 sprigs, 4 black ducks, 6 widgeons and 2 swans. Will had 9 teal, 4 sprigs, 10 black ducks, 1 gadwall and 1 widgeon. Josh brought up at the rear with 7 black ducks, 1 teal, 10 sprigs and 1 swan.

Thursday.—It was getting toward the end of our sojourn, and our bag was growing heavy, so we slept late. We breakfasted at eight this time, and at first thought we would not go out. The tide was low and wind from the wrong quarter. We usually shoot English snipe in mild weather, and only go for ducks when the wind and water is favorable, amusing ourselves in various ways at the club house when calm; but the wind now begins to breeze from the right direction, and we start for our points. Will leads this time and is proud of his bag of 14 sprigtails, 8 black ducks, 2 teal and a ruddy. George and Josh would not show up, but they did not get "skunked," for there is no need of one ever being skunked at Currituck if one can shoot at all. Will is a very industrious hunter. He sleeps well and consequently shoots well; for it requires a steady nerve to be a fine shot, and nothing will so steady one's nerves as a good sound sleep. After one of these naps he can stand and look on when a man is doing hard work with more nerve and real pleasure than any man who visits the club.

On returning to our lodgings we find Ned ready for an early start the next morning. We have a pleasant drive of four miles to the Princess Anne; make the 2 o'clock train for Norfolk, which lands us at 3, where we find our ever watchful friend, Obediah Taylor, with his team for our baggage and game. We spend about an hour delivering game to our friends, then we are driven to our respective homes, a little wearied in body, but much refreshed in mind. We shall meet again on April the first, when we expect some fine English snipe, yellowleg and plover shooting.

Natural History.

FIVE DAYS A SAVAGE.—II.

NOTES OF A HUNTER-NATURALIST IN THE NORTHWEST.

I AWOKE the next morning quite suddenly, about 3 o'clock. It seemed as if something were about the tent. I got out and seeing nothing examined the ground, and found that a pair of deer had come within 30ft. of my fire, and then apparently scenting me had bounded off alarmed. I at once took up the trail and followed easily where the tide was out as they crossed the flat, but I lost it on the rocks beyond and did not see either of the deer.

It was quite light by this time, as day begins to break early in these latitudes at this season. I found the birds stirring and soon had enough for breakfast. I skinned them by the camp-fire and roasted them over the embers. These, with some bread left from yesterday, made me a fair meal. I then took the boat, and crossing the bay, made once more for the banks, where I collected more fossils; and as the tide ran out, I boated round among the rocks, spearing some large crabs with a stick, and digging a few clams like a Kloochman or squaw, with the aid of a sharp piece of board.

Going to camp again, I sat down on a stump, and with a log for a table, prepared and labeled my bird skins. Having wrapped them up and placed them in the sun to dry, I took my gun and proceeded on foot to where I had seen the hut of a squaw-man, across the island. I had no water, and in fact the only thing that would contain water was the tin pail which was used to bail out the boat, and this was leaky. Water I must have, and food if obtainable.

Well, at the cabin was a bright half-breed boy, who said they had plenty of water. And so they had. But it was of the vilest kind. However, I drank what I could and filled my pail. They had nothing in the house to eat except what was in the pot boiling, and the bread which was baking in the frying pan on the fire. The squaw told me in broken English that her "ole man" had gone fishing, that they might give me something to eat when he got in. It was then 1 o'clock. I waited an hour, amusing myself by watching the children, who came in one by one and stared at me, until I began to think there were a score. Asking her how many there were, she counted them over several times in her mind, and said she believed there were seven or eight. I told her not to trouble herself, as such problems in mathematics required a great amount of mental exertion, and it might incapacitate her for the effort necessary to the stirring of the soup. I could also see that if there were only seven, the dinner was none too large, and if there were eight, I should necessarily deprive some growing infant of its proper nourishment. Consequently, as my only chance seemed to be in waiting for the fish, and as I remembered the old proverb about fishermen's luck, I bethought me of the crabs lying in my boat. And shouldering my gun, and taking my water pail and a pinch of salt, I managed to shoot a duck, and this with the crabs made me, at 3 P. M., a comfortable meal.

All day I had in my mind the oyster catchers we saw the day before, and as a slight favorable breeze springs up about 4 o'clock I break camp, and making everything snug on the boat, start out on the ebb tide for the two lone rocks, eight miles away across the gulf.

It is a beautiful evening, and the little boat, propelled by wind and tide, glides merrily along toward the rocks for half an hour. Then the wind dies down and I have to take the oars. Bracing myself to the work, I pull steadily on, until I find I am in a strong side current and am making leeway very fast. This I try to stem, but with only partial success, as the tide runs very swiftly now; and finally, finding it impossible to reach the rock, I turn the bow toward Waldron Island. Between this island and old Orcas the tide is running furiously. Through all these clashing waves and rolling whirlpools I slowly fight my way, and by a supreme effort force my boat on the lower end of Waldron beach. Drawing her up, I look back upon the tide rushing and boiling like a mighty river toward the pass. All this has been slow work, and it is now 9 o'clock. Here again things are ready at my hand. I build a big fire and moor my boat with a long line. Too tired to do more I roll myself in my blankets, my feet to the fire on the beach sand. What care I for a downy couch to-night, lying here on the hard beach sand? With the salt breeze blowing by, I fall asleep as quickly and peacefully as a little child, and the full moon rolling grandly overhead, looks sadly down as she has looked for ages on the sleep of the sons of men.

EDWARD HOWE FORBUSH.

BLACKBIRD AND HOUSE-SNAKE.

ONE bright morning last summer I was walking out in the country near town, looking for anything I could find, and seeing what I could in the bird line, when I was surprised to hear a great noise of birds chattering and crying as if under excitement, blended with cries of fear and distress. On coming nearer to the noise I saw a large number of birds; there must have been at least one hundred of all kinds on and about a certain tree. Some were flying to and some from the tree, those flying away were bringing more birds with them. There were sparrows, bluebirds, Baltimore orioles, robins, nuthatches, several woodpeckers, redbirds, bluejays, and many smaller birds, but only one blackbird, a very large one. And what struck me as peculiar was the attitude of this blackbird. He seemed to be fighting something, as he would throw forward his feathers and raise his wings, then strike at something very seriously, while the other birds would utter cries of encouragement and rage.

I watched them for some time, wondering what it could all mean, when something dropped at my feet. Looking down I saw a house-snake about 18in. long. It started up the tree and I killed it with a stone. As soon as the snake fell all the birds began flying about as if congratulating each other on their victory, and it really seemed that their cries were changed to joy.

Curious to know more I climbed the tree, when the birds, instead of flying, as might be supposed, fluttered around me as if to scare me away. In a fork of the tree where the fight had taken place I found a sparrow's nest with five young ones, which the snake was after. Their parents, not feeling able to cope with the enemy, had undoubtedly gone for help. The blackbird was the champion and did all of the fighting, while the other birds did the "talking." This seemed very strange to me. He would attack his foe fiercely until tired, then retire a few feet, and then begin again, thus fighting alone for the young of a bird of an entirely different species. I sat and wondered whether these birds had selected him as their protector, or had he taken the battle upon himself? He certainly fought well.

E. L. DAY.

BUCKHANNON, West Virginia.

HIBERNATION OF FROGS.—During the winter a few years ago a gentleman had occasion to furnish a large number of living frogs to schools and colleges in and around Boston. He accidentally discovered a spring hole in which frogs had hibernated and visited the place from time to time for his supplies. The water bubbled up among a lot of boulders in a wooded tract not far from a brook. The margin of the spring hole was formed by sods, which were frozen hard, and beneath which were excavations wherein the frogs had massed themselves like herrings in a barrel, and so stiff with cold that they could scarcely move. In this spring, which was not more than 5ft. across, he found more than 3,000 frogs, taking them out as orders were received during the winter. At the present time frogs hibernate in the same place, but not in such large numbers, because the boulders have been removed. A very few (only three or four) of them were bull frogs (*Rana catesbiana*), the rest were pickerel frogs (*Rana halecina*), so called because they are commonly used in Massachusetts as bait for pickerel. About 100 small salamanders were seen in the same inclosure.

WHEEL ANIMALCULES.—At its 139th regular meeting, held on the evening of March 23, the Biological Society of Washington passed a pleasant hour listening to Dr. W. H. Seaman's review of the literature of the wheel animalcules and looking at lantern slides thrown on the screen to represent some of the characteristic forms assumed by these lowly organisms. More than a thousand species of these rotifers are described—nerveless and carrying their masticatory apparatus in the stomach—but of these only about sixty are males. Mr. C. L. Hopkins defined the terms hybrid and cross as applied to animals and plants. Mr. W. H. Dall presented an interesting account of the reproductive organs in certain limpets from great depths of the ocean, having recently discovered a small intromittent organ near one of the cephalic tentacles.

INTRODUCED BIRDS.—The supplementary edition of the A. O. U. Check List, just out, gives this list of foreign species of birds, which have been introduced into the United States and are now known to breed in the wild state: English pheasant (*Phasianus colchicus* Linn.), ring pheasant (*P. torquatus* Gmel.), green pheasant (*P. versicolor* Vieille), silver pheasant (*Euplocomus nycthemerus* Linn.), golden pheasant (*Chrysolophus pictus* [Linn.]), black grouse (*Tetrao tetrix* Linn.), European goldfinch (*Carduelis carduelis* [Linn.]), English sparrow (*Passer domesticus* [Linn.]), European tree sparrow (*P. montanus* [Linn.]), skylark (?) (*Alauda arvensis* Linn.).

WOODCOCK IN ELECTRIC LIGHTS.—Lockport, N. Y., March 23.—On Wednesday last I had brought to me a woodcock that had flown into an electric light and was killed. It was in good condition for a long flight, weighing only 4½oz. This seems early for woodcock to come, but for the past ten days male robins and bluebirds have been common. I have not seen a female of either species yet. Song sparrows and bronze grackles have also arrived. —J. L. DAVISON.

CHECK LIST OF NORTH AMERICAN BIRDS According to the Canons of Nomenclature of the American Ornithologists' Union. Abridged edition, revised. This is the supplement provided for at the Sixth Congress of the A. O. U. It notes the eliminations and changes in nomenclature thus far found necessary since the publication of the Check List. It may be obtained from Mr. L. S. Foster, 35 Pine street, New York.

CHARLESTOWN, N. H., March 23.—Connecticut River clear from ice this morning, as against April 11 in '87 and '88. No freshet, river barely full. Robins and bluebirds arrived this week. Sap running freely. Regular early spring despite the muskrats and goosebones.—VON W.

Game Bag and Gun.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

THE WAR IN CALIFORNIA.

SAN FRANCISCO, March 4.—*Editor Forest and Stream:* A battle is now being waged between the patrician and plebian gunners of this State, which has already aroused so much ill feeling that neither party to the dispute would hesitate much about turning its guns upon the other.

The patricians, by which term we characterize those wealthy members of the fraternity who belong to the shooting clubs, have leased pretty well all the marshes and overflowed lands around the bay, which continue to be frequented by ducks, and as a matter of course want to monopolize all the shooting. Their more plebian, or, at any rate, less wealthy brother sportsmen, who do not belong to the clubs, are stigmatized as pot-hunters, poachers, scoundrels, villains, etc., and every effort is made to drive them off the marshes by threats of prosecution, which have been generally effective; the clerk or business man out for his sport on Sundays and holidays may be of opinion that he is not trespassing, but when the parties threatening him are wealthy and organized, and loudly assert that he is, he realizes that they may annoy him by vexatious suits for which he has no certain remedy, and allows himself to be driven off the grounds; but there are others made of sterner stuff, who are much better posted on the legal merits of the question, and decline to be intimidated, and the clubmen gnash their teeth in impotent rage, for, for the most part their leased lands are not inclosed within the meaning of the act, and they have learnt by experience that all effort at prosecution for trespass, although it may be made the means of harassing the poacher, must inevitably break down. The lands are in no case fenced in on the river side.

While the fire was smouldering, the club men have been trying what wealth and influence would do in the Legislature. They have made a strong bid for the monopoly of all the shooting in the State: they have secured all the best marshes on lease; they have expended considerable sums on the erection of club houses and boat houses, and in the purchase of boats and all the paraphernalia of rich men's shooting outfits, and now plebian poachers thrust themselves upon them as if they had no exclusive rights. They cannot well fence on the river side of their reservations, and they want to have the river declared a natural and legal boundary, and trespass within that boundary a misdemeanor. To this end they have been trying to steer a little bill through the State Legislature making it a misdemeanor to enter on the uninclosed land of another for shooting, fishing, etc. Section 2 of this bill runs as follows:

SEC. 2. Every person who willfully enters upon the uninclosed land of another for the purpose of hunting or shooting or fishing, or who discharges firearms or lights camp-fires thereon, without first having obtained permission of the owner, occupant, or lessee of said land, is guilty of a misdemeanor; provided, however, that said owner, occupant, or lessee shall have marked out and defined the boundaries of said uninclosed land by erecting, placing and posting thereon, at a distance apart of not more than 500ft., a written or printed notice with the name of the owner, or occupant, or lessee appended thereto, containing a warning to the effect that shooting, or hunting, or fishing, or the discharging of firearms, or lighting of camp-fires, or all or either of such acts are prohibited or not allowed thereon; and provided further, that said owner, occupant or lessee shall erect, place and post a like notice upon at least every fifty acres of said land contained within the boundaries so marked and defined. Said notice shall be placed and posted upon some conspicuous thing or object upon said land.

The wording of the bill was very cleverly devised to secure the support of the country members, but it failed to do so to any considerable extent, and on being referred to the Senate Committee on Fish and Game, was unanimously reported against.

Both parties to the dispute are now more savage than ever. It must, of course, be conceded that whether leases intended to confer a practical monopoly of the shooting were granted in the public interests or not, and although the lessees paid almost nothing for the valued concession, it was a legal transaction entered into by the people's representatives in their public capacity, and must be respected within the provisions of the law; but the kernel of the situation lies in the fact that the principal marshes are intersected by navigable sloughs and creeks, which cannot be closed to the public. The public right extends to 60ft. beyond the river's bank on either side, and legally speaking, the river itself extends as far on either side as a flat-bottom boat can be navigated, and as the river will sometimes rise high enough to render a considerable area of the marsh navigable, some of our lawyers assert that no right of property can exist in these marshes until, and unless, they be redeemed from the encroachments of the rivers, and that while it is competent to the State to lease its high and dry lands for club houses, etc., with shooting rights over the adjoining marshes, it cannot confer any exclusive right of entrance upon marshes liable to overflow by the waters of a public highway, and as a matter of course no exclusive right to shoot over it under any existing law. The privilege of shooting over these marshes, as conceded in the lease, is said by lawyers of some ability to be of no value except as a declaration of a common right.

Hitherto the clubs by their wealth and organization, and the assertion of rights supposed to have legal sanction, have had very little difficulty in keeping the plebs off the leased lands. Standing solid against individual sportsmen of narrow means, and backed by a body of paid pushers and guides, ready to eject the asserted trespasser *vi et armis*, or to arrest him for trespass, the intruders have had the good horse sense to see that the odds are all against them, and although the clubmen and their servants have no cause of action, they have might on their side, and such a coloring of right as probably would relieve them from the charge of acting in bad faith.

At the same time the law is clear that there can be no trespass where there is no fence, and that although three sides of a plot of land be inclosed, there can be no trespass by encroachment on the fourth side, if that is open from a public highway. The club men know that this is the law, and in sending their servants to intimidate armed men without sanction of law, they are said by a very able lawyer, who has taken up the plebs' side of the case, to be guilty of provoking to a breach of the peace, and to be legally responsible for any blood that may be shed in consequence; for even if the clubmen and their servants should be held on their trial to have acted in good faith, and in the belief that they were legally entitled to eject or arrest the asserted trespasser, such holding, although it exonerate them for liability from consequences, does not debar the asserted trespasser from the right of self-defense, nor render him responsible for any blood which it may be necessary to shed in the exercise of that right of self-defense.

But the clubmen are not even contented with the assertion of their supposed rights, they want to put a stop to shooting on the rivers, creeks and unleased marshes, or rather they want to monopolize these too under cover of their leases.

They would like to give the birds a rest on Sunday, and on that day the city overflows into the marshes, gunners coming by the hundred and harassing the birds until they are so wild that the clubman can't get a shot at them on Monday. And not only on Sunday, but from Monday morning to Saturday night the clubmen complain that their shooting is spoiled by the plebs. "These d——d pot-hunters," they say, "get up early and drive the ducks into the middle of the open ponds, where there is no getting at them, or they shoot at a covey and cause it to swerve from its line of flight," etc., etc. In fact the poor clubman, who frequently finds it pretty hard to make a bag, even with the assistance of his keeper or guide, must sometimes submit to the annoyance of seeing some keen and successful sportsman navigating the slough and dropping his birds right and left. He wants to be left in undisturbed possession of the shooting, that he may pursue it with dignity and ease; in fact he wants the earth, and is very much in earnest about it, too. What he paid for his share of the shooting rights does not amount to much, but what he has paid for his share of the club outlay for building and expenses, and perhaps what he has lost at poker to the club members makes duck shooting the most expensive diversion he ever engaged in, and he thinks it very hard that he should be disturbed in his enjoyment of it by a lot of plebian poachers. "If you can't get a law to keep these d——d fellows out of the marshes after you've got a lease of them, what's the blawsted country coming to, anyway?"

Now, that's just what the boys want to know, too. They go out upon the public State waterways and engage in duck shooting, when along come a couple of keepers and threaten to arrest them unless they quit immediately. They have passed over no fence, seen no evidence that the land or marsh or water they are on is private, but they are one or two isolated and poor men, to contend against the organization of wealthy bodies of clubmen, willing to spend money to harass the intruders upon their sacred privacy by forms of law.

The attempt to smuggle a vicious act through the Legislature has at last aroused the boys to the necessity of action. Organization must be met by organization. The clubmen must be fought with their own weapon. If any keeper attempt to intimidate any man into quitting the shooting grounds, or arrest any man on charge of trespass, the members of the club must be proceeded against individually for inciting to false arrest, or to a breach of the peace, as the case may be. Charges will be sworn against them, and they will be arrested at the club grounds, at their homes, or at their places of business wherever they may be. They have endeavored to make the forms of law an engine of oppression, and now the measure they have meted out to others is to be meted out to them.

All this is not set forth in the programme of the sportsman's association only organized a few days ago. The chief object of the organization was to assert a right to the overflow lands on behalf of the general public. What the committee don't know about law there are lawyers ready to enlighten them on. One of the fraternity at least has the matter under advisement, and is prepared to indicate an aggressive course of action, provided only the hot-headed ones will recognize that whatever is done must be in conformity with the law. "What we want," he said, "is to let the clubmen exceed their lawful authority by unwarranted interference with any members of our organization, and then come down upon them. As for our wanting money to defend our members from their prosecutions, we will give them so much law on the first occasion they give us, by cross actions for malicious prosecution, criminal intimidation, conspiracy, etc., that they will have no stomach to invoke the law a second time."

These leases of the duck lands have now been in vogue for seven or eight years. By what system of jobbery they were secured without the knowledge of the people, who have an interest in keeping them open for the general good, no one knows, but when I tell you that the great Sonoma marsh of 7,000 acres was pre-empted by one club of sixty men for $120, or $2 each, you may judge of the temper in which our local sportsmen are prepared to allow themselves to be deprived of their prescriptive rights by men who have endeavored to secure a monopoly without giving any valuable consideration for it, and who, finding that they have no monopoly, are endeavoring to assert their claims by effrontery and intimidation.

You may expect to hear from me again when the matter grows interesting, for I guess we shall see some fun before it's all settled. PACIFICATOR.

MAINE AND ITS GAME.

THE defeat of the game bill in the Maine Legislature in the closing hours is not a step in the right direction. The bill was a wholesome one, as has already been pointed out in the FOREST AND STREAM, and it was very free from objectionable features. It did not even open September to the hunting of moose, deer and caribou. It simply made, or proposed to make, the pathway of the dog deer slayer rather difficult of travel; while at the same time it proposed to make it easy for the sportsman, who had honorably killed his game to bring it home. It proposed to prevent the killing of cow moose at any time. It proposed to make it possible for the law to be better enforced, by giving the wardens an interest in the fines. But all this was too much for the disorderly element in Maine. The bill passed the committee with very little opposition. It passed the Senate without difficulty, but at the very last hours of the session it was killed in the House by an amendment in which the Senate would not concur. This was the plan of the enemies of the bill, and it is the second time that the thing has taken place. A similar bill was defeated during the last hours of the session of the Legislature of 1887, in that State. It was defeated in about the same way, after the friends of the bill had gone home, supposing that the bill was safe. Well, the friends of wholesome game protection in that State have learned a lesson. They have found by this second failure that it is not safe to trust their enemies, even when matters look very favorable. But the worst feature of this experience business is that all the time the safety of the game is endangered, and that there is no chance of mending matters for two years. There is no doubt but what the boldness of those who break the existing game laws of that State has increased, especially within a year, and the danger is that all the good work that has been done may be undone. The Commission is crippled for want of means, and the State will not even give the wardens a share in the fines. Nature has been kind to the game this winter. A lack of snow has made the crusting of moose and deer almost an impossiblity, and hence the moose and deer have escaped a great danger which besets them when the deep snow is crusted over. But these crusters are not entirely beaten, even this spring. They have called dogs to their assistance, and there are accounts of the slaughter of whole yards of deer in Aroostook county. From the lumber camps in the vicinity of Upton, in Oxford county, come dark stories of the slaughter of deer. One or two noted hunters have been in camp all winter in the near vicinity of these lumber camps, and their business has been to kill deer. The venison has been sold to the lumbermen, under some other name, it is true. Indians have been dogging moose near the borders of the State, and in some cases they have boldly attempted it far into the settled portions; but these depredations have been promptly met by the game wardens, and in one instance three Indians have been arrested, and forced to plead guilty. Newspaper reports say that they plead guilty to the killing of two moose and nine deer. They paid their fines, and were discharged. Game wardens, the few there are, do excellent work in that State, when they get on the track of law breakers, but the trouble is that there are not enough of them by at least nine-tenths. If the State was willing to hire ten efficient men where it now has one, Maine would soon become the real paradise for fish and game that we so often see mentioned in the guide books. But alas! she is a State noted for good laws, but very poor enforcement. The fish and game laws stand practically as they did before the renowned Legislature of 1888-89 assembled. The game bill was strangled stealthily at the last moment. It was killed when it was too late to array the real good sense of the body on the side of right. SPECIAL.

INDIANA'S NOVEL SCHEME.

Editor Forest and Stream:

Indiana has long had laws prohibiting seining, dynamiting and other modes of destroying fish in lakes and streams, and also laws against shooting game birds out of season and against netting, trapping, etc. But they were constantly violated, until prairie chickens, grouse and partridges have almost entirely disappeared and quail become very scarce. The same is true in regard to fish in our streams. Where once could be found bass, perch, bream, channel cat and other fish in abundance, there are now none, or only an occassional one found. Our General Assembly has lately been in session, and a party of the members were recently taking a trip on one of the Pennsylvania Railroad Companys' branch lines, when the subject of the fish and game laws came up. Mr. Harry Smith, of the J. M. & I. Railway, was in the party, and suggested that the laws were good enough if enforced. In the talk the suggestion was made, that if it was made the duty of road supervisors to see to it that the laws were enforced, it might put a stop to their frequent violations. In this State there is a supervisor for every few miles of road, and the officer consequently knows every man in his district. He also knows where trappers and netters of birds, and seiners and dynamiters of fish would carry on their illegal work. Mr. J. P. Applegate, a member of the Legislature, made a note of the suggestion, and on his return introduced a bill embodying the ideas suggested. It provides a fee of $5 for each prosecution, to be collected from the criminal, and also provides a fine against the supervisor from $5 to $25 for failure to prosecute violators of the law when brought to his notice. This bill was pushed through both houses, and was the last bill signed by the Governor. It is thought that it will provide an efficient and economical way of enforcing the fish and game laws, and is sent you for publication in the hope that States having similar officers may confer police power upon them to arrest and punish violators of their game laws. JAP.

EXMORE, Va., March 18.—This is one of the best places now for wild duck shooting, brant, geese, redhead and black duck, broadbill and other common ducks. There are and have been numbers of people from your city and Philadelphia and Washington shooting all kinds of game. It is a great place for snipe shooting. Numbers of gentlemen come here to shoot spring snipe.—J. W. S.

NAMES AND PORTRAITS OF BIRDS, by Gardon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

CHICAGO AND THE WEST.

CHICAGO, March 14.—Messrs. W. N. Low, R. B. Organ, H. D. Nicholls, Chas. Felton and Wm. P. Mussey, who formed the sportsmen's committee, have returned from their visit to Springfield, but are not saying very much about what they did. A great many shooters here say that if the "three days" law is passed (*i. e.*, the law prohibiting shooting during the first three days of the week) they will not pretend to respect it, believing it an unconstitutional enactment. It would certainly seem to be a very difficult and confusing sort of law to enforce. The outcome of the legislative fight is not yet, and the latter is hotter than any game law measure has ever been made here before. It is surprising how strong and general is the objection to the spring shooting measure. The latter will, therefore, probably be lost. There seems to have been no just compromise effected between the game dealers and the sportsmen. Without such a compromise the best law framed will be worthless. It is not theoretical protection, but practical protection, that saves the birds. Even should spring shooting be left standing, however, it would not be in anywise fair to call our Illinois sportsmen lawless or lacking due respect for game protection. They will favor a practical measure, beyond doubt, and beyond doubt that practical measure will one day be framed. As it is, nobody has ever gone to the bottom of this spring shooting question. It is going to need a lot more thinking, and this our Illinois men are doing, and are going to do for themselves, respecting argument much above mere assertion. I don't know much about this thing myself, but I believe I shall try to get my knowledge among the game dealers rather than among the sportsmen. There are two sides to this question, and we might as well admit that no fair adjustment of these two sides has ever yet been obtained.

March 16.—Bluebirds and robins made their appearance in the outskirts of Chicago March 11. They were very plentiful on the 14th, and have doubtless come to stay. Large strings of lake perch are now being taken on the Government pier. Plenty of ducks were reported by the Cumberland Club last Saturday. Water Valley had good shooting two days before that. Recent scores at Mak-saw-ba Club are: Mr. Roll Organ, 4; Mr. Joe Kinney, 6; Mr. Dicks, 6. Several of the shooters on Mak-saw-ba marsh have doubtless made fair bags, as ducks are reported there now in great plenty. Dispatches from Swan Lake for the past three days report ducks in great abundance on that noted marsh. Mr. Ed. W. Bangs went down to Swan Lake four days ago, and is joined to-night by several others. Telegrams from Charles Camp, Swan Lake, yesterday, to Mr. P. E. Stanley, say: "Plenty of ducks; come and get them quick." English Lake marsh has plenty of water and feed. Mr. John Taylor telegraphs John Gillespie that there are a good many ducks in. Mr. F. A. Allen, of Monmouth Gun Club Ill., went into camp at New Boston, on the Mississippi River, five days ago. Other advices from the Mississippi River say that the stream rose 5½in. three nights ago. If the necessary rise come on the Mississippi and submerge the acorn flats, there will be grand shooting near New Boston as usual. Numerous trap matches have been on hand lately, but the enthusiasm of the boys is now tending duckward. In a few days at most the season will be in full swing. Consequently, everything at present seems very cheerful.

March 20.—Mr. Fred A. Allen, of Monmouth Gun Club, writes from his camp at New Boston, on the Mississippi, under date of March 17: "We have been in camp since the 8th. Water is lower than I have seen it for ten years (in the spring). There has been a big flight of ducks, but none of them stopped on the bay, as there is no place for them to paddle. No water in any of the sloughs or ponds. We are expecting a rise in the river, and if it should come there will be good shooting for a few days. If the ducks come will wire you so you can have a hand in the fun. The wind to-night is northeast and it looks like snow. If you come bring no decoys, as we use live decoys, and have plenty of them for you."

Mr. L. C. Earle, the artist, and Mr. John Gillespie, the gun man, are under the same hospitable invitation. It is devoutly to be wished that the water will rise.

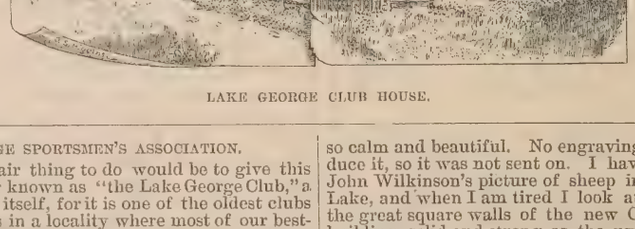
March 21.—A letter from Hutchinson informs me that Mr. Eli Young and the rest of the old crowd of boys I used to know there are now out most of the time on the Arkansas after geese and ducks, which are showing up in pretty fair plenty now. The boys in one pit got forty ducks and fifteen geese last Saturday. Mr. Al. Price killed twenty-three Canadian geese last Thursday on English Lake grounds. On last Saturday he killed fifty ducks. On last Saturday Messrs. Jesse Cummings and R. W. Cox killed sixteen geese and Mr. Barrell killed thirty ducks and two geese. Most of the ducks in the last bag were pintails. Mallards are reported uncommonly shy. Mr. W. W. McFarland is absent at Hennepin Club ground on the Illinois. The best bag he has reported is twenty-two ducks.

March 21.—In the Senate Committee on License and Miscellany to-day it was decided to report favorably a committee bill amending the game law, which is repeated below: It shall be unlawful to destroy wild deer, doe, buck or fawn between Jan. 15 and Sept. 1 of any year; grouse, prairie chicken, quail or woodcock may not be destroyed from Dec. 1 to Aug. 15 of the ensuing year, and wild goose, duck and other wildfowl are to be unmolested from April 1 to Sept. 1. The same committee also decided to favorably report Senator Monahan's bill for the appointment of six instead of three wardens, and Senator Gibbs's bill prohibiting the shooting of wild pigeons at shooting matches.

The season advances. Ducks are now well scattered over the country. Bluebills not up yet. The bulk of the shooting has been at pintails. Charlie Willard killed 41 ducks on English Lake marsh yesterday. Grand Calumet Heights Club men report that on last Saturday the whole lower end of Lake Michigan was full of fowl, and they could be heard flying every way in the fog. Additional reports from New Boston, on the Mississippi, state that the river does not rise. There are thousands of ducks in the middle of the river, but a rise of at least three feet is needed before the flats will be covered so the ducks can be worked to any advantage. It is not thought that this rise will come. A letter from the Undercliff Hotel on Lake Senachwine states that twenty shooters are at that hotel, one had a bag of 32, another of 16, others from 10 down to nothing. The water is low, and plenty of work and wading is necessary. Swan Lake reports no very heavy shooting yet, nor does the Hennepin Club above what is mentioned.

The Mak-saw-bas some days ago planted 1,200lbs. of feed on their marsh, mostly mixed mill feed and refuse. Most of this was put down in Hailstorm and Winchell sloughs and points above the club house.

At a meeting of the Grand Calumet Heights Club last night at the Grand Pacific parlor thirteen new members were added to the lists of the club. E. Hough was elected an honorary member of the club in courtesy to FOREST AND STREAM, and is duly thankful therefor. The Grand Calumet Heights Club now has thirty-two members, there being only eight vacancies left. Its record of a year and a half is surely a good one.



The ice is out of Fox Lake, but no great bags are reported there yet. The ice in the big lakes is breaking up. Muskegon Bay is clear. Navigation will soon open.

E. HOUGH.

SHOOTING CLUBS OF CHICAGO.

XII.—THE LAKE GEORGE, WATER VALLEY AND OTHER CLUBS

IT is now getting well on into the season of the year popularly supposed to be longed for by gentle Annie, and perhaps also by gentle Reader. There remain certain numbers of ducks to be shot, and certain quantities of fish to be taken, and these facts must more or less interfere with continual reading about clubs or continual writing about them. It will be necessary, then, to group a few of the clubs in one general notice, and so suspend regular serial mention for a little while at least. Not that such mention is now in any way complete. The fact is, as fast as one climbs on top of one range of clubs, another sticks up in front of him. There is no end to them. So far as I can see, one might write on and on, into a very delightful old age, and still not be done with his subject. If I might so timidly suggest, Chicago seems to have drawn a full hand of clubs. Certainly this city is a bigger place, and very much more of a sporting center, than most men have any notion of, or than has been hitherto developed by any sportsman's paper, and in view of this fact the only thing to do appears to be to promise an occasional continuance of similar articles—after we have all had a little shooting. In the meantime, what about our trap clubs and fishing clubs, and canoeing clubs and yachting clubs? We have got all those people, and here, too. Nothing in the world that Chicago doesn't have. Need it be repeated that this city lies in so singularly favored a locality that she is by virtue of her locality a natural center for almost every kind of sport. There are the lakes for yachting, the rivers for canoeing, the whole unspeakable paradise for angler, tourist and shooter in the near north; and all about the immediate neighborhood the shooting country which it has lately been sought to describe. There is nothing like it in all the world, nothing approaching the variety, excellence and accessibility of the sportsman's field in this vicinity. To exhaust such a field as a field of investigation seems fairly impossible. The reader would be exhausted first. Reader and writer would better take it leisurely.

LAKE GEORGE CLUB HOUSE.

LAKE GEORGE SPORTSMEN'S ASSOCIATION.

The only really fair thing to do would be to give this organization, better known as "the Lake George Club," a complete article by itself, for it is one of the oldest clubs of the city, and lies in a locality where most of our best-known shooters got their early education. The railway station for Lake George Club is "Whiting's," on the Michigan Southern Railway, whence it is only a trifle over a mile to the club houses, which lie on the banks of Lake George; which lake, as may be seen by reference to the FOREST AND STREAM map of the Calumet region [printed last week], lies fairly in the heart of that vast system of lakes and marshes which formed the early hunting grounds of all the old-timers of Chicago.

Lake George, like Hyde Lake, Sand Lake and Wolf Lake, partakes of the general characteristics of the waters of that section, which seem to have been made expressly for duck-shooting purposes. The main body of water is nearly four and a half miles long by about three-fourths of a mile in width, with a broken and irregular outline. The feed of the main lake is chiefly wild rice and marsh roots and grasses, the shore being nicely fringed with cover of this sort. It is claimed that there is some wild celery in the lake, though I did not see any. There is, however, a good supply of deep-water ducks, redheads, bluebills, and still a few canvasbacks. Marsh ducks are abundant in any decent season, and the mallard shooting is often very fine. In that peculiar strip known as the "cranberry marsh" over in the pines, Fred Egers and Wm. Veders, two years ago, killed 285 mallards in one day. This is not bad for so recent a date or grounds so old and much frequented. This old lake has seen some magnificent shooting in its time, and is as apt to see it again as any of the nearer Calumet country.

In the olden days nearly everybody used to go shooting down on Calumet Lake, Lake George, or somewhere in that vicinity, and Florence Benner's, the Kleinman homestead, and all those old standby places, were as well known to every Chicago shooter as his old dooryard. It was somewhere down along in there that there used to stand a little shanty, which was the home of the nucleus of the Mak-saw-ba Club. Indeed this region seems to have been a breeding place not only for ducks, but for duck clubs. The Grand Calumet Heights Club is a sort of off-shoot of Lake George people, and so is the Water Valley Club. But still the two plain edifices which house the Lake George Club hold their own, and always during the season their sides ring with sounds of jolly cheer. The club boys used to get lodgings at the farmhouses near by; then they leased about five miles of shooting privilege and moved into the two homely but comfortable shooting boxes which now make their hunting quarters. These houses are provided with beds in the upper stories and arranged with commodious fittings in the main rooms below. There is a high walk from the club house about 150yds. long, which leads down to the boat house. The club has about forty boats, the Green Bay model seeming to lead.

There are some old-time shooters in the Lake George Club, and the membership is one of enthusiasts. The club is very strong at the trap, and can turn out a team which make most of them keep moving. Following is the membership of Lake George Club: President, J. W. Sheaban; Vice-President, F. A. Place; Secretary and Treasurer, J. S. Orvis. Members: F. E. Bernard, S. M. Booth, Chas. Bour, Frank Bour, J. P. Card, C. C. Carhart, W. H. Colcord, J. J. Flanders, H. B. Foss, W. W. Foss, C. N. Hale, J. F. Hall, L. M. Hamline, C. N. Holden, E. S. Hunter, A. G. Jaeger, E. E. Lee, R. J. Lewis, Chas. P. Miller, W. P. Mussey, J. S. Orvis, Chas. Parker, L. Paus, Wm. G. Payson, Wm. Perry, J. F. Phillips, F. A. Place, C. H. Root, C. E. Rollins, John Rumsey, J. W. Sheahan, J. A. Stell, J. F. Thacker, R. A. Turtle, George Vannette, Thos. Walker, A. J. White, Jesse Williams, F. W. Wood, C. E. Worthington.

In the above list Chicago readers at least will recognize a plenty of names of the old reliable sort. J. S. Orvis (a brother of the lamented Harry Orvis, that grand fellow who met his death from a gunshot accident received on a hunting trip in Dakota), "Sam" Booth, an old Columet shooter; R. A. Turtle the taxidermist, "Charley" Holden of the wholesole house of Gray, Kingman & Collins, "Billy" Mussy—all the sportsmen around here know these of all the others. So we may pass on to that foster-child of the Lake George Club known as

THE WATER VALLEY CLUB.

The real name of this club is "The Sportsmen's Club of Chicago." It gets its shorter name from its situation directly on the bank of the Kankakee River, at the little water-tank stopping place on the Louisville and New Albany Railway, known as Water Valley. The boys have put a long, low, rakish-looking rough one-story building just at the edge of the bank, and within the toss of a biscuit from the water tank. They don't own any ground, but have a world of vacant marsh above them and below them on the Kankakee, for it must be remembered that we now have dropped away down below Lowell, the railway point of the Cumberland Club, and are now on the Kankakee some distance below that organization. This is in a wooded and beautiful country. Mr. C. N. Holden, the skillful amateur who gave me the photographs of Lake George Club club houses, had no view of the Water Valley club house. He had one picture made by himself, looking out across the river from the house porch, which is a thing worthy to be embodied in a great painting, it is so calm and beautiful. No engraving could justly reproduce it, so it was not sent on. I have placed it by Mr. John Wilkinson's picture of sheep in a wood near Fox Lake, and when I am tired I look at these. A look at the great square walls of the new Chicago Auditorium building, solid and strong as the pyramids, and then a look at these two little pictures of the quiet woods will rest the tiredest man that ever was.

There is great woodduck shooting along this part of the Kankakee in the late summer, and the warm coppices (that strikes me as being a pretty good word) along the river afford good sport at the woodcock in season. Dick Turtle killed thirty-one woodcock in the course of an easy three days' shooting last summer. Then, unfortunately, his favorite dog was killed by the cars on the railroad bridge, and now he doesn't like to hear any one talk about woodcock. Following are the names of the Sportsmen's Club: President, C. N. Holden; Vice President, Frank Barnard; Secretary and Treasurer, Al. W. Carlisle. Members: F. E Barnard, C. A. Orvis, J. S. Orvis, C. N. Holden, A. W. Carlisle, J. F. Phillips, W. W. Foss, R. A. Turtle, J. J. Flanders, J. A. Sharp, Chas. Hadweer, M. McDonald, Jr., A. G. Jaeger, J. F. Eberhart, F. F. Oviatt, W. H. Knight.

Just across the railroad bridge from the Water Valley tank, directly upon the bank of the river, and only a few feet from the railroad track, from which a sidewalk leads out to it, is the plain two-story house of

THE RENSSALAER CLUB.

This club is a small one, its membership belonging mostly in Renssalaer, Indiana. It isn't a Chicago club, but it got in among the Chicago clubs and was rounded up by mistake. So too was

THE DELPHI CLUB.

This organization belongs at Delphi, Indiana. I was told that its membership is not heavy. The building almost touches the railway, is like its two neighbors just above high water, and is elbowed by

THE ROD AND GUN CLUB OF INDIANAPOLIS.

The members of this club, as of the two previous ones, take advantage of their little camp by the river about as much for the purposes of fishing and a general outing as for duck shooting. At any of these houses you can fairly

throw a line out of the back door and catch for breakfast a bass, or may be a bullhead, or leastways a dogfish. The members of these clubs have the privileges of the marsh, which is not preserved in that section of the river. So much may be seen and said for these outside clubs as one passes on toward another Chicago organization.

THE DIANA CLUB.

The membership of this club is German, and the members have their own methods of enjoyment, although these methods would perhaps hardly fall in with the tenets of the duck shooting cult as set forth earlier in these columns. It was midnight of a very dark sort when I reached the diminutive station of Thayer, set down in the sandy oak barren a mile or so beyond Water Valley bridge. It is alleged that there are two or three houses in Thayer, but it being so dark I could not find them. A large and ill-mannered dog, which didn't know the difference between a shooter and a tramp, found me, however. In the course of our conversation a man came up from somewhere or other and for fifty cents offered to show me where the Diana club house was. We walked out through the woods toward the railway bridge and finally got to the club house, where my guide left me. The keeper of the club house, Klein by name, would not let me in the house, although I explained to him that I was an angel unawares, and a mighty cold one, too. He said if I didn't have a letter "von der bresident," the angel business didn't go. I didn't have any letter and did not then know who the president was, as I had run down unexpectedly from the Cumberland Club, and therefore had not obtained credentials. He finally compromised on my assurance that I would leave the place the next morning, if, after a night's sleep, I could not prove that I was not a lightning rod agent. Once in the house, I picked out the best big feather bed I could find and turned in a good deal amused and a little angry at this style of preserved hospitality. It is perhaps, however, justice to Klein to say, that although he surely might have been less gruff, he was doubtless doing what he thought his duty in refusing a stranger entrance. By the rules of the club he is not permitted to keep any but members. Such a rule in such a locality is nonsense in cold weather and at midnight, and not in accordance with good courtesy among sportsmen, and therefore should be made more readily elastic.

Sleeping late, I found the men all gone out on the marsh when I woke at the Diana Club. Bribing a buxom damsel, I got breakfast, and then wandered about the grounds. The club owns only a narrow strip running down to the river, the shooting being done on the free marsh. There is a good-sized boat house, and a number of boats of all sorts were about, some of them fair ones. On the platform about the boat house I saw a number of decoys of a model and coloration sufficient to curdle one's blood. I hired a boy, and together we ran a boat out the channel into the river, and paddled up to Water Valley, on a lovely winter morning and on a river still as glass. The Kankakee at this spot is a mild and lovely stream. "This ain't a wild river, hardly ever," said the boy.

On the train going home were some of the Diana men. They didn't have any ducks, but seemed a rather jolly lot of fellows. As nearly as I can learn, this club is given much to picnicking, to standing in black clothes on the bank of the river and wondering why they can't kill any ducks, and, alas! to occasional turning loose on bluejays and woodpeckers when the ducks refuse to materialize. A good-natured, fun-loving lot of fellows, numerically strong, but not yet having the art of duck shooting down very fine. But may they live long and prosper.

THE KANKAKEE LAND AND CATTLE CO.

The above club is long on name and long on land, but short on membership, and does not want to be any other way. It is a close little corporation of open-handed men. The club has about 5,500 acres of marsh land on the Kankakee, which includes nineteen miles of actual river front. The railway station is Roselawn, Indiana. It was here that Mr. A. Montgomery Ward and Mr. E. C. Cook, the two best known Chicago members of this club, had their singular and lurid experience with the hundred pickerel which leaped into their boat. It is of course known that the agricultural name of this club covers a duck club, pure and simple. The membership is not all in Chicago, but Chicago is their centering point, and it is right to call this one of the Chicago clubs. The following are the members, who certainly form a list of great commercial importance, and who are, more than that, the right sort of sportsmen: Harry Weddicomb, Pres.; A. Montgomery Ward, Vice-Pres.; E. C. Cook, Sec.-Treas. Other members: T. Stewart White, Thos. Friant, Wm. Gilbert, F. W. Cook, Watts De Golyer. Messrs. Weddicomb, Gilbert, Stewart and Friant are all of Grand Rapids, Mich., the latter two gentlemen of the White Lumber Co., and the former of the Grand Rapids Furniture Co. Mr. De Golyer is the forefront of the big Watts De Golyear Co., of Chicago, manufacturers of varnish. It is said to be due to this fact that not one of the members of this club was ever known to tell a plain unvarnished tale. This is especially applicable to Mr. Ward and Mr. Cook, both of which gentlemen, however, are too well known in Chicago for comment. Mr. F. W. Cook is of E. C. Cook & Bro., and I suppose if almost any sportsman will look into his kit, he will find something made by that big hunting outfit firm.

THE BLACK HAWK CLUB, ON KOSHKENONG.

A light jump of a hundred miles or so north of Chicago into the State of Wisconsin brings us to Lake Koshkenong, the first celery lake north of Fox Lake, and perhaps the most wonderful canvasback lake in this vicinity. This is a great shallow sheet of water, and all those who have visited it declare that it has more deep-water ducks on it than can be seen in one body anywhere on the line of migration on this meridian. The shores are pretty much taken up, and this fact, together with the peculiar laws of Wisconsin, renders the shooting at Koshkenong something pretty hard to get at by the lay shooter. The Black Hawk Club is a pretty stiff organization, numbering well on to fifty members, mostly drawn from the very wealthy shooters. There is no shooting at this lake in the spring, and there is, consequently, no attendance now at the club grounds. The fall is the time of glory for Koshkenong, and it makes one's mouth water to think what a rattling lot of information about Western canvasback shooting can be gotten together up there. Until the proper opportunity for complete observation has come, therefore, it will be best to defer mention of this club.

THE NEE-PE-NAUK CLUB.

Chicago, however, is not yet satisfied. We will jump yet another hundred miles northward, and so land in a country which is nigh akin to the absolutely perfect from a sportsman's point of view. This club is on Puckaway (or Pacawa) Lake, up in old Père Marquette's country, and right on the line of the old Indian waterway, between the Great Lakes and the Mississippi River, there being only about two miles of portage necessary between the two systems of streams and lakes. The railway station for the Nee-pe-nauks is Princeton, on the C. & N. W. Railway. This is near the great Northern River, remarkable for its bass fishing. Puckaway Lake is the next of the celery lakes north of Koshkenong. The shooting there is superb, and the fishing in the near country about in summer is something to live for. I suspect that in this club we have got near to the cream of the cream. It is a very select organization, and the list of sixty odd members shows an aggregation which would take the breath of anybody who thinks that the very wealthy and very prominent men don't go shooting and fishing. Gen. Phil. Sheridan was an honorary member of this club before he joined the silent majority. There is so very much of interest attached to this club, both from its location and its composition that it is hard to refrain from writing an article about it now; but since it is really partly a fishing and summer club, and since these features cannot at this season be properly looked into, it will be better to defer the mention of this club, albeit somewhat impatiently.

THE GAYLORD CLUB.

But we are not even yet beyond the reach of Chicago's arms, or beyond the enterprise of Chicago's clubs. Yet another one hundred miles to the north, three hundred miles in all from Chicago to Kirton, Wis., on the "Soo" line, and we reach the railway station for Coleman Lake, the home of the newly-organized "Gaylord Club," so called after the first promoter, Mr. M. M. Gaylord,, who visited that region, fell in love with it, and came back and told his friends. There are big bass in Coleman Lake and big trout in the streams all around, and the ducks are on hand in season in any numbers you want. We are now getting up into the northern logging region. This club adds deer shooting to its sports. There is much of novel interest to be noted about this club, and nothing but the good fishing of the locality, which the club members insist must be seen to be appreciated, prevents full mention of this club right here. Young as this club is, it being only a matter of the last few months, its membership of thirty-five is already full. The memberships were placed at $100 and the annual dues $25. Full particulars in our next whirl at this club.

There are no advices from the Arctic regions showing whether Chicago has any clubs up there or not, and I'm sure I don't know how far south they run. In the country adjacent and allied to Chicago there are numbers of clubs, like the Crown Point Club, of Indiana, or the Monmouth Gun Club, of Monmouth, Ill., which one might almost be forgiven for including in mention of Chicago clubs, so well known are they here. The Crown Point Club is very strong at the trap, and last year broke nearly 40,000 blackbirds, or more than all the Chicago clubs combined. The Monmouth Gun Club is known through its vigorous and persistent opposition to the measure looking toward the abolishing of spring shooting. It is a very strong organization.

The only feeling left to a writer on this subject is one of fear that the field has not been fully covered, for it has kept on extending and extending in a manner that has been an absolute surprise. It is fair to admit at this point, however, that no city in the Union can show a similar group of sportsmen's organizations. Quiet, modest, attending to their own business, and not seeking notoriety, their very existence seems hardly to have been suspected. Seen as they really are, there is no stronger commentary on the tendencies of modern sport. For the men who make them up, they are as good fellows and as genuine sportsmen as ever lived anywhere, and to thank them for their ready courtesy to FOREST AND STREAM would be poor pay for the privilege of having been with them. E. HOUGH.

No. 176 MONROE STREET.

DUCKS AT TWIN LAKES.

MANSON, Ia., March 19.—Duck shooting has been at its height the past two weeks, and some good bags have been made, especially in the neighborhood of the Twin Lakes, southwest of here. The shooting at the lakes was principally at redheads and ring-bill blackheads, with occasionally a shot at green-winged teal. These varieties have decoyed well along the shore, and bags ranging from twenty to seventy a day have been the rule. The writer shot over decoys at the lakes the evening of the 15th and secured eight redheads and six blackheads. A party of five market-hunters have been located there over a week and four of them had been shooting pintail and mallards over decoys in the sloughs two miles back of the lake. They returned at night well loaded with game, and reported the mallards as decoying well. Among their game was a canvasback and two fine Canadian geese. The man who remained to shoot at the lake brought in a bag of thirty-six, among them was a canvasback. Over 1,500 ducks were hanging in a corncrib awaiting shipment. Among them I noticed a few butterball, hooded merganser, redheaded merganser and green-winged teal. Resting on the lake that day were probably 2,000 geese and brant, 50 swans and multitudes of ducks. The weather to-day is bright and clear and future shooting will depend altogether on the weather.

Spring seems to be here in earnest. Robins, meadowlarks, killdeer, blackbirds and others are here in numbers. No jack snipe nor plover have arrived yet.

The shooting this spring, while good, has not been up to the average. The grounds which I shall endeavor to describe in the future more fully have more than a local reputation, and every fall and spring brings sportsmen hundreds of miles to try their skill on the varied shooting here afforded. H. A. K.

DAYTON, Ohio, March 26.—Wild ducks in good sized flocks wintered along the rivers and in the ponds and little lakes of this vicinity. Wild geese are flying over us to the north. Snipe have been feeding in the marshes through this very mild season. Quail have wintered well, and the law has been a perfect protection to them and to wild ducks. Woodcock have come in larger numbers than usual, the advance birds having arrived one week ago, and for a day or two met with chilly reception. Observers have been astonished to find many dead woodcock in the fields, and along the pikes, William Kiefer of the Mad River neighborhood having seen seven near each other, and could find no apparent cause for death. Some of the sportsman advance the theory that as the woodcock come in at night, and flying about thirty feet high, collide with the maze of telegraph wires that string along all of the roads and are thus killed. But this would scarcely account for the dead woodcock that are found in the fields.—A. B.

DELAWARE LICENSE LAW.—*Editor Forest and Stream:* A bill now before the Delaware Legislature, and in the hands of the Senate committee demands by its provisions such radical changes in the game laws of the State that if passed the Delaware Game Protective Association will soon be a thing of the past, in that the power vested in the association to grant licenses to hunt game in the State is to be repealed. A great injustice would be done the Philadelphia and New York sportsmen who are members of the association, and who have so generously contributed, by gifts of money and game, toward stocking our State with the best species of game that are adapted to our soil and climate. Under their management the game laws have been implicitly respected, and our present legislators should not be so ungrateful to the association whose good deeds have been so highly commended by their predecessors.—DEL. A. WARE.

A MONTANA CASE.—Billings, Mont., March 8.—*Editor Forest and Stream:* Before Judge Matheson this week, Henry Brown was on trial for killing game out of season. He pleaded poverty as the cause of the act, but this was not a sufficient excuse, and the Court thereupon fined him $20 and costs. The costs, however, out of sympathy were remitted by the Court and attorneys. Brown was convicted through the efforts of a private citizen of this city, who proposes to report to county officers every case of the kind that comes to his notice. He deserves credit and praise for his zeal and interest in the game laws. The culprit has killed thirteen deer and six antelope since the 15th of December—that is, in the close season. Almost all the deer and antelope were does. The people of this section are waking up to the fact that game must be protected.—ONE WHO RESPECTS THE LAW.

WISCONSIN GAME LEGISLATION.—Lake Koshkonong, Wis., March 21.—*Editor Forest and Stream:* A big fight is going on in the Legislature at Madison over the fish and game bills. Never before have there been so many bills with so much opposition to them. The leading sportsmen throughout the State are working hard to have strict game laws enacted. A bill to prohibit spring shooting, and only allowing shooting in the fall on Tuesdays, Thursdays and Saturdays meets with great opposition with persons who, by their correspondence with the daily papers, one would think are farmers, or persons writing just to have their names come before the public. One of the fish bills makes the open season from May 15 to Jan. 1.—REX.

BERTHOUD, Col., March 19.—The continued dry weather has made spring shooting rather poor, but for the past few days our lakes have been quite full of ducks, mostly redheads. A few nights ago I captured five incomers and to-day a flock of green has been hanging about my field and in the lake. At one time while at work in the field I was within 60yds. of them, and if I had been in possession of my Bonehill for a few seconds I think there would have been at least four less geese to go to the lake. —A. A. K.

LOADING PAPER SHELLS.—I take pleasure in loading my own in preference to the machine-loaded. I use a 12-gauge 7¼lbs. gun, and think 3drs. powder and 1oz. shot enough. I find about ⅛in. wads are necessary to have the shells crimp nicely, and am satisfied the gun recoils more in consequence, with less penetration. I used, some years ago, shells with the conical base, but of late years do not see them advertised. If they are still on the market would like to know where they can be obtained.—SHELL.

MADISON AND CHENANGO COUNTIES, N. Y.—Partridges have wintered well and are seen in fair numbers by woodchoppers. Sherburne, Chenango county, has one of the best fish and game protection societies in this section. The boys are in dead earnest, have stocked the streams and caused the board of supervisors to enact a law prohibiting woodcock and squirrel shooting until Sept. 1.—WING.

PAOLA, Kas., March 22.—Green-winged and blue-winged teal, pintails and mallards, wintered here. Usually ducks are only migratory with us, stopping on our waters for a fortnight in spring and fall, though sometimes they stay longer when, as this winter, there is little ice.—PYRANGA.

NEW YORK GAME LEGISLATION.

[*Special Correspondence Forest and Stream.*]

ALBANY, March 25.—Mr. Savery's bill providing for the protection of fish in Lake Ontario has been passed by the Senate. The Assembly committee on game laws has reported the bills of Messrs. Barton and Treadway.

Senator Walker and Assemblyman Little have introduced a bill prohibiting fishing by nets or anything else than hook and line in the waters of Niagara county, adjoining the Niagara River and Lake Ontario.

Senator Coggeshall and Assemblyman Kimball have introduced the bill that has been here for several years for the appointment of commissioners to codify the game laws.

Mr. Depeyster has introduced a bill in the Assembly amending the general game law of 1879 so as to strike out the words "with the aid of any light or lantern." This is so that wildfowl shall not be killed at night.

Found Out It Was Loaded.

Editor Forest and Stream:

I have had over 500 inquiries for my Patent Safe Cartridge Loading Machine in the three months my advertisement has been in FOREST AND STREAM, and am now behind more than thirty orders. Inquiries come from all through the West and all over the country. I got one from South America. I cannot speak too gratefully for FOREST AND STREAM. GEO. D. HUNTER.

Sea and River Fishing.

A TROUT SUPPLEMENT.

The next issue of the FOREST AND STREAM, *April 4, will have a supplement devoted to trout. It will be profusely illustrated with careful portraits of American Salmonidæ.*

SOME TROUT SEASONS.

THE trout season for 1889 will open in the States named, as follows:

Connecticut.—Trout, April.

Maine.—Landlocked salmon, trout, togue, May 1. (Citizens of the State may catch for own use in February, March and April.) Salmon, April 1.

Vermont.—Trout, landlocked salmon, salmon, longe, April 1.

New Hampshire.—Landlocked or fresh-water salmon, lake trout, brook or speckled trout, May 1. (Lake trout with single hook and line, January, February and April.)

Massachusetts.—Trout, landlocked salmon, lake trout, April 1. Salmon, May 1.

New York.—Speckled trout, brook trout, California trout, April 1. Salmon trout, lake trout, landlocked salmon, April 1 (in Lake George May 1). In the Forest Preserve and for all named, May 1.

New Jersey.—Trout, March 1.

Pennsylvania.—Speckled trout, April 15.

Michigan.—Speckled trout, landlocked salmon, May 1. Grayling, California trout, June 1.

DRUM FISHING AT ANGLESEA.

IT was a day in September, such a day as Shelley would have pictured in immortal verse, for to him the sea was as dear as the voice of one beloved singing alone. It was such a day as the poet calls a marriage of the ocean to the sky, the sea being the bride. Swinburne describes the day I went a fishing in his "Off Shore" thus:

> With music unheard
> In the light of her lips,
> In the life-giving word
> Of the dewfall that drips
> On the grasses of earth, and the wind
> That enkindles the wings of the ships,
> White glories of wings,
> As of seafaring birds
> That flock from the springs
> Of the sunrise in herds,
> With the wind for a herdsman and
> Hasten or halt at the change of his word.

Even such a Sybarite as Swinburne sees God in the ocean blue, whose kingdom is in Heaven and His shrine is the sea. Upon such a day as this any poet of passion would grow eloquent. Only four of us started out from Hereford Inlet, intent on drum. The party consisted of Skipper Hewlett Brown, Assistant Skipper Joe Ludlam, Chas. Stewart, of Philadelphia, and J. M. S., in the cat-rigged yacht J. W. Huyser. We drifted slowly down behind the breaker toward Holly Beach, catching sea robins, sharks and skates in abundance. The sea was full of these abnormal fish, and J. M. S. suggested that we up with the killick and try fresh fields and sea pastures new.

We struck out with a light wind and were rewarded with a dozen small sea bass at Buoy No. 1. But we were after drum, and remembering some lucky days among the noblest game fish that swims the deep sea, near Buoy No. 2, I timidly suggested to "Holy Joe," as we call Captain Ludlam, that we try the waters near the buoy. Hither we sailed. Our bait was corned menhaden, of which we had half a barrel. No sooner had we reached the buoy and begun to drift than I threw my line over with a big menhaden fast to my hook, tied with black thread. In one minute I felt a gentle sucking at my bait, the habit of the channel bass or red drum in biting, and soon the big fish, without my consent first had and obtained, started out for Cape Henlopen with all his might and main. I gave the wild drum 200ft. of line, and as the last of the line payed out I suddenly turned the fish square around and began to haul him in under a pressure of at least 30lbs. Soon the water began to boil, as the immense drum sprang out of the sea and attempted to shake the hook out of his mouth. The drum did not like the outlook and struck out for the bottom of the deep, making a straight wake for Florida. Again I gave him all the line I could spare, and as the fish paused I put the Cuttyhunk line between my teeth and stripped off my overcoat "quick as a cat can wink its eye." Again I hauled in on the cotton-laid twine line and got one more sight at the drum, which showed no abatement of what the Quaker calls his "creaturely activity." I began to get tired and the line burned my fingers, as the fish with renewed vigor struck out at a rate of thirty miles an hour.

"Give me that line," said Holy Joe Ludlam, "and I will show you how to save that fish." J. M. S. replied "This fish is not for Joe." In his anxiety the skipper danced a minuet on the deck. Still I played the angry drum, and Charley Stewart exclaimed, "Well, well! Hoop te doon du! this is what I call *heroic* fishing." The drum was getting weary, so was J. M. S., and he began, by main force, to haul in the fish. "Easy, easy over the stones," said Holy Joe. "Who's a doing this thing?" said J. M. S., and soon the magnificent fish, whose scales shone in the evening sun like the sheen of the minarets of an eastern mosque, turned over on its side, Holy Joe leaned over the side of the yacht and got his nimble fingers in the drum's gills, and with a strong pull flung a 60lbs. drum over the guard rail of the boat, when Charley Stewart gave a wild Comanche yell and danced the "Fisher's Hornpipe" on the low-down deck of the J. W. Huyler, singing the song of "Hooptedoodendu."

This was the first red drum of the Anglesea season, and no sun upon an Easter day was half so fine a sight. The next drum was hooked by Holy Joe himself. The sharks and skates had bitten off all our hooks, save those on two lines, and one of these was an old eelskin-covered squid. Holy Joe was happy; it was his first red drum in two years. The fish fought like a Bengal tiger and took out every foot of his line—three hundred feet. It took him half an hour to get the drum into a condition of *ausgespielt* or *played-outedness*, for this red drum was a cross between the sea-horse and an alligator; but finally he yielded to the inevitable and his red sides shone in the sun as he turned over on his belly.

"Easy now, Skipper Joe," said J. M. S.; "go slow." "Get out, Jim," said Holy Joe, "do you think I can't haul a drum in out of the wet?" J. M. S. replied: "I want you to go slow." Joe reached over the yacht's side and rammed his hand deep into the red gills of the red drum. "Ouch!" he yelled as the drum closed his teeth on his horny hand. Joe let go his "holt" with an unearthly yell, which caused the Philadelphian to plaintively exclaim: "Hooptedudendoo!" Joe slowly endeavored to haul in the drum on the squid, the drum stood the hauling process kindly only a moment, shook his tail, broke the hook, and made one wild dash for liberty. Holy Joe dropped on the deck, "Hooptedudendoo!" shouted Charley Stewart, "may I be permitted to exclaim, this *is* heroic fishing! Well, well!"

Capt. Ludlam was like Francisco di Rimini, "He fished no more that day." J. M. S. bagged two more drum, the three fish weighing 151lbs. 6oz. "Enough is as good as a feast," said Stewart; "let's go home." Home we went to a good dinner at set of sun, with that gifted and genial Boniface-lawyer Alexander Gray, of the Hotel Anglesea. At night we caught eight more drum, and thus ended the biggest day's fishing for red drum ever seen on the beautiful island of Anglesea. As we sailed homeward bound one by one the stars came out into the quiet sky.

In an hour I must bid farewell (for a season, for this, my summer idyl in September, was my last day among the drum) to Capt. Joe, my *Fidus Achates* on the sea, the rarest and quaintest of all the sad sea dogs I've ever known, and say my parting words to Boniface Pickwick, of the Hereford, who never stales with the infinite variety of his antique jokes or in the quality of his salt-water eels.

Sadly I said: "I greet thee, infinite sea, but I must must leave thee, though—

> "'Like the tongue of my country ripples thy waters;
> Like dreams of my childhood seems the glimmer
> On thy wild, wavering, watery realm.'"

It is hail and farewell; for the call of the work-day world is paramount to the joys "the deep, unfathomed caves of ocean bear." Stewart stands waiting on the bow of the Huyser, for he wants to catch a night train, bearing a 60-pound red drum to Brother Rudolph, who doesn't believe there is such a fish on the Atlantic coast.

Later on, as he sits on the cowcatcher of the Mud Hen*, I will hear his farewell "Hooptedundoo" as he waves his tender farewell on the shore with a white silk handkerchief.

As we sail, I long to linger. But it is only one day in life's journey now, as pleasant "as a gentle summer night, when scythes are busy in the headed grass."

Unconsciously, the sound of the sea recalls the words of Mr. Gilfill's love story: "Rich brown locks, passionate love and deep early sorrow, strangely different as they seem from white hair, the apathetic consent and the unexpected acquiescence of old age, are but part of the same life journey, as the bright Italian plains, with the sweet *addio* of these beckoning maidens, are part of the same day's travel that brings us to the other side of the mountain, between the sombre rocky walls and among the guttural voices of the *vallais*." JAS. M. SCOVEL.

*The oldest and wheeziest locomotive in New Jersey.

INDIANA FISH AND FISHING.

Editor Forest and Stream:

The fun is about to begin. The spring opens beautifully, and the festive red-eye, goggle-eye or rock bass is on the wing. Great strings of them were taken out of White River this week. I have taken them as early as March 8. They are a most delightful fish, weighing from 6 or 8oz. to 1lb., though the latter size are scarce in this locality, but plentiful in the lakes. They are about the earliest fish to come and latest to go and are toothsome and long-lived. A string of them is beautiful to behold. From twenty to forty at an outing is a reasonable catch. I prefer their flesh to that of a bass, black or green.

Speaking of bass, they have also shown up, but are as yet scarce, it being a little too early in the season for this greatly prized fish. Last week half a dozen, ranging from 1 to 1½lbs., were taken from a trot line, and one that weighed 3lbs. was caught with rod and line. They are hardly due for a month yet, and then comes their spawning season, when no true fisherman will want to take them. They grow from 4 to 6lbs. in weight and by a great many are thought to be about the sweetest fish that swim, and they are certainly among the gamiest. They take kindly to minnow or crawfish and rise to the fly, although it is only in the last few years that they have been educated up to this. We have a spirited fly-fisherman's club, which last year gave a récherché exhibition and I believe are making preparations for another.

Suckers—black ones at that—are now in their glory. Although a great many turn up their noses at a black sucker, properly prepared for the table, there are few more palatable fish in the spring and fall. They will sometimes weigh 3 to 5lbs. and afford considerable sport in their capture, as they are quite gamy.

Indiana streams are generally well adapted to fishculture if the fish were only protected; but in this we are probably behind all other States in the Union. Our education has been sadly neglected and our streams have been depopulated by the Goth and the Vandal, the Goth represented by the seiner, and the Vandal by the dynamiter, and we have them in disgraceful profusion.

We have good laws enough, but they are not enforced. Neither judges nor grand juries will enforce them, while the farmers as a general thing violate them continually. A farmer thinks it a terrible thing if he cannot be permitted to seine and catch his fish for winter use. If the streams were protected for a few years there would be no scarcity of fish, and we have some of the finest varieties known. The State is very backward and careless in all that concerns fishculture. True it has a Fish Commissioner who is paid the magnificent sum of $300 per year, while $700 per year is appropriated toward protecting the fish and stocking streams, which need no stocking if they are protected. The Fish Commissioner has no more power than the ordinary citizen. His hands are literally tied so that he can do nothing and there was talk this year of abolishing the office. It should have been done unless about $5,000 were appropriated to fish interests. Mr. William Dennis, of Richmond, was appointed Fish Commissioner a few months ago. There is nothing like a hatchery that I know of in the State, indeed there would be no need of one if the fish we have were afforded protection. Indiana needs a grand awakening in regard to fishculture.

INDIANAPOLIS, Indiana, March 16. ENOS B. REED.

FISHING RIGHTS IN PRIVATE WATERS.

Editor Forest and Stream:

In your issue of March 14 you quote with apparent approval the verdict of the Supreme Court in the case of the people of New York against Aden McIntyre, charged with taking ten fish with a net from his own private waters, in and near Cossayuna Lake, Washington county, New York.

In this case there is no question of fact; defendant raises the questions: 1. That by the laws of the State fishing with a net in Cossayuna Lake is not prohibited. 2. That if the Legislature have enacted a law intended to apply to fishing with a net in said lake, such law is unconstitutional, and contrary to the provisions of Sec. 18 of Article I. of the Constitution of this State.

The court in its decision finds, both as a matter of fact and of law, that defendant and other land owners are the absolute owners of the lands and waters of Lake Cossayuna; that is of the waters and the land under the waters; owning it as fully and absolutely as any one can own lands on which there are ponds and streams. But the court decides first in answer to the plea that the act is unconstitutional in its application to private ponds, "That no right of property in defendant has been impaired—his rights of property remain the same as they were before the passage of the act in question."

This involves the decision that although the land and water of the lakes are absolutely private property, the fish are not, although the owners may have stocked and maintained the ponds at their own cost, a decision incompatible with the generally accepted view that the fish in the fish hatcheries of the State or in private hatcheries, or in ponds or tanks are private property. If the fish in the one case are *ferœ naturæ*, so are they in the other, and the objection of the court is not well taken. Fish in a private pond are as much property as deer in a park. But the court in its judgment cites various authorities to show that all property is held subject to those general regulations which are necessary to the common good and general welfare, and that the fact that a statute impairs the value of property does not render it unconstitutional. These decisions were not intended to over-ride or set at naught the limitations of the powers of the Legislature as defined in Sec. 18 of Article I. of the constitution of this State, but simply to qualify it. The Legislature may not pass laws destructive of, or prejudicial to, vested rights, but it may impose such restrictions on the exercise of those rights as may appear desirable for the public interest; it may even pass laws embodying ill-judged and vexatious provisions without infringing the constitution, but to render it constitutional there must be some shadow of plea at least that it is for the public interest, but as laid down in the judgment under review the question at issue is not merely whether the Legislature had the authority to extend the provisions of the fisheries act to private waters, but further, whether they had it in contemplation and intended that its provisions should so apply.

In construing a law the court lays down that it is proper and often necessary to see what was the object to be attained by the law, and what was the intention of the Legislature in passing it, and to this may be added that on the part of the courts it would be an insult to the Legislature to assume that that body would impose any vexatious restrictions upon the free and full exercise of individual rights of property, unless such restrictions were held necessary to the general well being; and here, I think, the court has erred in confining itself to a critical reading of the text of the law instead of considering whether the extension of the prohibition of netting to private waters was presumably necessary to secure the objects for which the law was designed.

The literal rendering of the law is always subject to qualification by considerations of its intent. The literal readings of the act would make its provisions apply to trout or bass in aquaria or glass globes, but in common courtesy to the Legislature we are bound to infer that it never meditated any such vexatious interference with rights of property. It would be competent to that body to prohibit the sale, or exposure of such fish for sale, during the close season, because the absolute interdiction of such sale, or exposure, is a protection against fishing out of season, but to prohibit an individual from taking his own fish out of his own glass globe, tank, pond or lake, in his own way, the right of absolute property in the containing vessel, pond or lake being conceded, cannot be defended on the plea that it is for the common good.

The object which the law aimed at securing was the prevention of the depletion of the waters over which the State holds control in the interests of the public. Fishing with a net in such waters is antagonistic to the objects of the bill, tending to the exhaustion of public wealth.

The exhaustion of private wealth is not a matter about which the State concerns itself; is not, in fact, a proper matter for legislation. Unless it can be contended that the objects of the bill were frustrated, or in danger of being frustrated, by the defendant lifting his fish with a net, the extension of the act to his private fish pond would be unconstitutional, and we are bound to infer that the Legislature did not contemplate any such vexatious interference with private rights of property.

The case of Phelps vs. Racy, cited by the court as a precedent, does not apply. The exposing of game birds for sale in close season was incompatible with the efforts of the Legislature to prevent the taking of those birds during such close season; but no such contention can be set up in the case under notice. It should be carried to the Court of Appeals for review of judgment.

C. F. A.

FLORIDA FISHING.—Many anglers are now in Florida fishing. Mr. W. C. Prime, author of "I Go A-Fishing," and Mr. N. Merrill, a brother of Major H. W. Merrill, are at Ormond, on the Halifax River, fifty miles south of St. Augustine. Mr. Merrill writes, under date of March 17, to his brother: "Yesterday the fishing was good, the trout (weakfish) rising beautifully to the fly. Mr. Prime took some twenty-five by casting; but I killed the largest fish yet taken here this season. My slight tackle was in full strain for some fifteen minutes, as he got under the bridge once."

BURBOT IN ILLINOIS.—We have just learned from Dr. S. P. Bartlett, Fish Commissioner of Illinois, that a burbot (*Lota maculosa*) about 12in. long was taken in the Mississippi River, near Canton, in the latter part of last November. This is the first instance he has known of its occurrence in the Mississippi in his State.

GRANDACOY OR TARPUM.

LAKE CHARLES, La., March 10.—*Editor Forest and Stream:* As usual, when in want of information, I appeal to you. Can you, or any of your readers, tell me anything of a fish called the grand ecore (as nearly as I can write the name from the pronunciation), which is found here in profusion? Some of the fishermen claim it is the tarpon, others deny it; some say it takes the bait freely, others that it is caught, if at all, only by chance. Can some one who has fished for it—if any such there be—tell me the kind of tackle, size of rod, hook and line, best kind of reel, bait, time and manner of fishing, etc., and I'll do as much for you some time. H. P. UFFORD.

[The grandacoy, grand écaille, sabalo, savanilla, silver fish, tarpon or tarpum are some of the names applied to the large silvery herring-like fish which has recently achieved fame among anglers on account of its game qualities, combined with its enormous size and brilliant appearance. FOREST AND STREAM of Dec. 13, 1888, contains a good figure of the tarpum and a description of some of the tackle used in its capture. The writer of the article, "Lancewood," used 5-0 Kirby Limericks on a fifteen-thread line, and landed three tarpum, weighing 128, 135 and 147½lbs. respectively. Another paper is published in FOREST AND STREAM, Dec. 27, 1888. Mullet is used for bait, although the fish feeds upon any small fry that may be convenient. Some anglers use a 10-0 O'Shaughnessy hook and a No. 15 or 18 linen line. Most anglers use a large bass reel. The reel is placed about a foot from the end of the rod; it should hold at least 500ft. of line, as the fish travels like a flash and is prodigiously strong. A bamboo striped bass rod in a single piece, 6 or 7ft. long, is employed, or a split-bamboo of about the same length in two pieces. Snells should be 30 to 36in. long, and the bait should be secured to the hook and snell by means of fine wire. The time for the fishing is on the flood tide. A good deal of activity will be required on the part of the boatman, to keep up with the fish. March and April are the best months for catching this fish with rod and line.]

WIRE LEADERS.

Editor Forest and Stream:

In last week's paper "Lancewood" asks for information about the wire leader. I procured a 9½ft. sample leader from Messrs. Shipley soon after the advertisement appeared, and tried it in fly-fishing for bass last season. It is very pliable, in fact, as much so as gut, and is quite invisible in the water. After making a few casts with it (and it cast very nicely) about one-third of it with fly attached, snapped off, very much as I expected it would. As received by me there was no provision made for more than one fly, and I did not try to attach more than one, so the break was not caused by anything but a kink. I have never used it since, and for practical use the gut leader has little to fear from the wire leader, although it might possibly be better adapted for still-fishing.

HOLLIDAYSBURG, Pa. T. E. D.

Editor Forest and Stream:

In reply to your correspondent's inquiry concerning metal leaders I would say that I have found them unsatisfactory. On account of their attenuation and ductility they are very liable to knot or kink or loop. This weakens them, besides being very annoying. For leaders gut is still in the lead and is *gut* enough. O. O. S.

FREDONIA, N. Y.

Editor Forest and Stream:

In answer to "Lancewood's" query concerning the value of patent wire for leaders, I would beg to say that I tried a few of them last summer and find that they are not pliable enough, are very easily kinked, and when kinked are very easily snapped asunder. If "Lancewood" would order a sample foot or two he would very soon satisfy himself. WHITE MILLER.

DELAWARE, Ont.

SALMON SATIETY.

ONE morning in the summer of 1885, while the Albatross was at St. John's, a pair of fine salmon were seen lying on deck, and near them stood the native who had brought them on board. Some one remarked, "Those are magnificent fish." "Yes," said the native, "doze fish are de kings in Newfoundland; dey are de finest fish we has; but, dare now, you'll git sick of 'em mighty quick. We folks eats cod twenty-one times a week and takes it for lunch, and never gets tired on it; but 'twon't take you long to git tired of eatin' salmon."

We are informed by one who was on the Albatross at the time and who was very fond of salmon that he soon learned to appreciate the force of the fisherman's statement. The ward room table was supplied with an abundance of salmon for about ten days, by which time our informant had become so thoroughly sated that he says he could not look a salmon in the face. He confesses to having obtained in that time a more thorough insight than he ever had before into the meaning of the old story about early Colonial laws which prohibited masters from compelling their apprentices to eat salmon more than three times a week. Trout were eaten by the same authority, on another cruise around the coasts of Newfoundland and Labrador, almost every meal for about a month, and the "hankering for fish" had not decreased.

DECREASE OF SEALS.—Late arrivals at St. John's, Newfoundland, from the Dundee seal fishery report a steady diminution in the number of seals. The fleet is constantly being decreased in size through sales of vessels and losses at sea, and the vacancies are not refilled. The oil is greatly reduced in price, as in the case of whale oil, by the introduction of petroleum products for lubricating and illumination. Some idea of the shrinkage of the industry may be gained from the fact that in 1857 more than 350 vessels were sealing from Newfoundland, while in 1885 the fleet included only twenty steamers and a few sailing vessels. A valuable account of the fishery was published in FOREST AND STREAM, July 2, 1885.

SALMON FISHING IN PUGET SOUND.—Governor Semple of Washington Territory, says of salmon fishing in Puget Sound, which certain anglers have decried as an impossibility or a failure on the Pacific coast: "To troll for them either a sail or rowboat may be used, provided no greater speed than three miles an hour is attained. Pay out about 100ft. of line, and leave half that amount coiled in the boat, so as to be able to let a large fish have a run at the start. Such a precaution will often save your tackle from being broken, for these big fellows are of the same family as the trout, and will not surrender without a hard struggle. They have been known to describe a half circle with 60ft. of line, holding it as tight as a backstay and coming up from astern to a point nearly ahead while the boat was under full headway. They will sometimes suddenly dart away from alongside and go 30 or 40ft. diagonally downward, drawing the line across the keel of the boat with the apparent intention of rasping it in two against the barnacles. It requires great skill and patience to land one, even with the stoutest tackle, for you can never be sure that they will not tear the hook out with a back twist the moment you give them a bit of slack. If they fail in this maneuver they will often get the line caught behind their gills, and then they are an easy prey. In the height of the season great catches are sometimes made. A party of two recently killed twenty-five of these fish in half a day in Tacoma harbor, and landed only two-thirds of those that struck the trolls. The tackle was repeatedly broken by large fish in spite of every precaution, and the party landed with one damaged spoon out of half a dozen that were on board at the start. The catch weighed 200lbs."

PENOBSCOT SALMON.—The last number of the FOREST AND STREAM has an article upon salmon fishing in which it states that the fishing season has set in unusually early, and with a remarkable run of fish, this year, in the Canadian waters. From this we may anticipate an early opening of the season on the Penobscot, and those best acquainted with the habits of the king of fishes look for its appearance here early in April. Last year the first fish were taken April 27, which was the earliest on record. Manager T. F. Allen, of the Penobscot Salmon Club, is getting everything in readiness for business and will have the club house in first-class condition. The telephone wire, that was carried away by the freshet last spring, causing much inconvenience, has been replaced, this time below the dam where the ice or high water cannot affect it. Mr. Allen has laid in a stock of first-class flies, of the best make, adapted to the use of these waters. He also received, recently, as a present from Archibald Mitchell, Esq., of Norwich, Conn., the most enthusiastic and most successful of our visitors from abroad, a box of beautiful flies made by Mr. Mitchell himself, who is an adept to the business and occupies his spare moments in making all that he uses.—*Bangor (Me.) Whig.*

BLACKFORD'S TROUT OPENING.—Mr. E. G. Blackford's exhibition of trout on the opening day, next Monday, April 1, promises to exceed anything in the past. In addition to goodly specimens of all the varieties of trout reared at the State hatcheries, he will have a thousand half-pound live brook trout on exhibition in tanks. We can give no further details of the exhibition to-day, as arrangements are not yet completed, but we hope to be in a position next week to furnish full particulars. The opportunity should be improved for comparing in the flesh the several species, of which accurate drawings will be given in our next issue.

CHAUTAUQUA LAKE.—Com. R. U. Sherman has selected a site for a State hatchery, and the work of stocking this beautiful body of water with muskallonge will be undertaken at once.

Trout Supplement next week.

Fishculture.

CHALEUR BAY PRODUCTS.*

FROM Mr. Mowat's extremely interesting and valuable review of the fisheries of Chaleur Bay we learn that cod banks extend into the bay about sixty miles from its entrance and forty miles seaward. Lobsters are caught on its shores on both sides. Five salmon rivers fall into its north shore, and on the south is the noted Nepisiguit. The Restigouche, with its branches extending north and west 140 miles, furnishing a fresh-water surface of nearly 400 miles on which salmon spawn, is the principal nursery for the salmon caught in the bay. The total catch for 1887 was 1,021,400lbs., distributed as follows:

	Pounds.
Restigouche county	271,700
Gloucester county	386,000
Bonaventure county	203,700
Gaspe county to Ship Head	110,000
Add for anglers' catch	50,000
Total	1,021,400

The entire amount taken in New Brunswick for the same year exceeded the yield of the bay of Chaleur by only 333,600lbs. Nova Scotia and Labrador combined furnished less salmon than the bay of Chaleur. The quantity taken on the north shore of the bay was much smaller than on the south shore, owing, says Mr. Mowat, to the following causes: (1) It has fewer netting stations by about sixty, (2) Quebec netters dare not use traps or pache nets such as are used in New Brunswick, (3) the Quebec netter pays a license of 40cts. per 200lbs. of fish caught, while the New Brunswicker pays 3cts. per fathom of net used. Reliable returns under such circumstances cannot be obtained.

The catch of salmon in Quebec showed an increase of 142,000lbs. The angling scores were small, but the supply of salmon was fair. There was an increase of salmon in New Brunswick of 88,000lbs.

The fishery products of the bay of Chaleur are valued as follows:

Restigouche and Gloucester counties	$792,628
Bonaventure and Port of Gaspé	599,000
Expenses of 200 anglers	50,000
	$1,441,628

nearly equalling British Columbia and Quebec, above Ontario, and more than Prince Edward's Island and Manitoba combined. Of the above amount, the salmon yiels only about $90,000 or $100,000, the cod fishing being the most important, supplemented by the waning lobster industry. A brief historical sketch of the early methods of fishing, the disposition of the catch and the laws governing the fishermen follows. Mr. Mowat recommends the abolition of fixed nets and pickets and the use of gill nets with certain restrictions as to the size of the mesh and the observance of a weekly close time.

*Chaleur Bay and its Products for 1887-'88, with Net and Rod. By John Mowat.

EXPLORATIONS IN GULF OF MEXICO.

THE U. S. Fish Commission schooner Grampus left Key West Feb. 14 to investigate the off-shore grounds in the region between the Tortugas and Cape San Blas, to determine as far as practicable the extent of the banks and the abundance of fish and other animals inhabiting them. Dredgings were made at intervals of ten miles and temperature observations recorded. During the day the small surface net was towed and collected various species of small fish and many crustacea. Flying fish were abundant, also small schools of skipjacks. Two large turtles were seen at the surface. Mr. Conley struck one of them with a harpoon, but the iron did not penetrate. A Portuguese man-of-war was secured.

Feb. 15, between 1 and 2 P. M., while dredging, three red snappers were caught in quick succession; other lines were put out but only one more fish was taken, as the vessel drifted on to soft bottom. The average length of the specimens was 26in.; average weight 13lbs. The stomachs contained one eel-like fish and several small shrimp. One of the fish contained pretty well developed roe. The location of the fishing is north lat. 25° to 25° 01′ west long., 82° 32′ to 82° 40′.

Feb. 16, in north lat. 26° 01′, west long. 82° 52′, while drifting with the dredge out, red snappers were struck. Five lines were immediately put over, and before they reached the bottom every one had a fish on, and some hauled in pairs. The fish continued to bite very greedily for about fifteen minutes, during which time 31 red snappers and 3 groupers were landed on deck. Fishing was stopped because no more were needed. It seemed as if a vessel might have caught a full fare in that place. The average weight of the red snappers was 10lbs.; average length, 24in. The groupers averaged 16lbs.

Feb. 18, Mr. Conley harpooned a spotted porpoise, which was hauled ou deck and a skeleton preserved.

Feb. 19, in north lat. 25° 15′, west long. 82° 39′ 15″, the Grampus "struck" fish, and they appeared to be plentiful for a few minutes; 15 groupers and 3 red snappers were caught. A number of groupers were seen alongside, nearly at the surface. A school of redfish was seen breaking water about a quarter of a mile distant. During the afternoon a large shark and a turtle were seen at the surface near by. Fishermen claim that the presence of turtles indicates good fishing grounds, but the officers of the Grampus cannot agree with them.

The present systematic study of the Gulf is the outgrowth of the preliminary examination by the Albatross in March, 1885, which indicates possibilities of such importance as to lead Capt. J. W. Collins to mention them in the following terms:

"The investigations that were made after leaving Tampa may fairly be considered as probably the most important work done on the cruise in the direction of making researches on the fishing grounds. The region lying between Tampa and the Tortugas, outside of depth of 20 fathoms, has never been resorted to by fishing smacks, and it is certainly questionable if any one knew that red snappers could be taken on the ground we went over. That they are more generally distributed here, in depths of 26 to 27 fathoms, and far more abundant than on the grounds visited by the snapper fishermen of Pensacola, seems clearly established by the result of the researches made.

"In view of the growing demand for red snapper, and the fact that the fish on the old grounds are believed to be more or less depleted and becoming scarcer every year, the importance of this discovery, if it may so be termed, can scarcely be overestimated, since it opens up an additional field of broad proportions that there is good reason to suppose will be profitably worked in the future. Its nearness to Tampa, which has the advantages of an excellent harbor and railroad communication, are features that should not be overlooked, for if the distance from Pensacola is too great to run fish there they can be shipped from the nearer port."

Influenced by this report the schooner Wateska, of Chatham, Mass., in the latter part of 1888, fished forty miles southwest from Egmont Key in the region discovered by the Albatross. The crew of six men averaged about 9,000lbs. of red snappers per week in this locality. The grounds reported by the Grampus are new and within easy reach of railroad communication from Charlotte Harbor.

Feb. 26, in north lat. 25° 23′, west long. 82° 43′, several bonito were caught on troll lines.

Feb. 27, north lat. 25° 24′ 30″, west long. 83° 06′, flying fish were numerous. A school of porpoises was sighted. One bonito was caught.

March 1, north lat. 25° 34′, west long. 83° 28′, two groupers were hauled to the surface. A few flying fish were frequently observed during the day. Two large schools of porpoises were seen.

March 4, at 10 A. M., in Charlotte Harbor, the seine boat joined the Grampus. Dr. Henshall reports a pleasant cruise, and all hands well. The Doctor has made a very large collection of fishes.

March 5, Mr. Hahn took the seine boat to Punta Gorda to supply her with provisions from the Fish Hawk for another cruise of three weeks.

FOREIGN ZOOLOGICAL STATIONS.—Danish Biological Station.—In the estimates for 1889-'90 is an item of $11,502 for the establishment and support of a biological station, which is to be modeled after the "movable station" known for the last few years in Scotland. The cost of the building is calculated at $9,180. Netherlands Zoölogical Station.—The Netherlands Zoölogical Society has determined to begin, during the coming spring, a building for a permanent zoölogical station in Nieuwediep, the most important fishing port of Holland. The structure will cost about $6,750. The lower story will contain the aquaria, laboratory and library; the upper the director's living rooms. The post of director is, with the cousent of the Government, conferred upon its adviser in fishery matters. Dr. P. P. C. Hoek, who is, also, the first secretary of the Zoölogical Society. Dr. Hoek will go to Nieuwediew about Easter. It is hoped that the laboratory will be open in the latter part of the summer.

MICHIGAN FISH COMMISSION.—Mr. John H. Bissell has retired from the Commission at the expiration of his term, and Mr. Hoyt Post, of Detroit, has been appointed in his place. The president of the Commission now is Mr. Herschel Whitaker, of Detroit. An unusually large number of brook trout is being planted this spring, and the distribution is made with the new car, to the great satisfaction of the Commissioners and the parties who receive the fish. The Commissioners believe the purchase of this car to have been one of the best investments they have made.

STUDY OF HERRING MIGRATIONS.—Filip Trybom, who is well-known to Americans, is now the first fishery assistant of the Swedish Government, and is engaged in studying the migrations and spawning habits of the Kattegat herring.—*Deutscher Fischerei-Verein.*

LAFAYETTE, Ind., July 24, 1888.—*United States Cartridge Co., Lowell, Mass.:* DEAR SIRS—I find your Climax paper shot shells excellent and quite equal to Eley's. There is no hang fire or tendency to do so. I intend using your shells in a match next week. I will give them a good boom, as they deserve it.

Yours truly,

—*Adv.* (Signed) W. GRAHAM, Champion English Shot.

The Kennel.

FIXTURES.

DOG SHOWS.

March 26 to 29, 1889.—First Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 3 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. George H. Hill, Superintendent, 34 Monroe street, Chicago, Ill.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club, P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary pro tem., Mill's Building, New York, N. Y.

ROCHESTER DOG SHOW.

IT is our pleasure to chronicle a success for the Rochester Kennel Club's first annual show, which was held in the Washington Rink on the 19th, 20th, 21st and 22d inst. What a refreshing change from the poorly-located and musty-looking music hall at Utica to the clean, well ventilated and equally well located skating rink at Rochester; and what a surprising change in the attendance, and in the appearance and bearing of the visitors. What a change, too, from the one-horse management at Albany to the ample, live and enthusiastic management at Rochester. We do not believe there was an old exhibitor at the last named show but who would pronounce it one of the best managed and most enjoyable shows ever held in this country. True, the entries were rather light and the quality, in the sporting classes especially, not what it might have been; but for sterling management, pleasing effect and quality of patrons the Rochester show will go on record as a model. Here Mr. Tallman was not hampered with judging dogs. His whole time and attention were devoted to his charge; and if anybody needed proof that judging and managing do not go well together he had but to attend Albany and Utica shows and then go to Rochester. The contrast was as distinct as it was pleasing, and nobody that attended the three shows will venture to recommend the cheese-paring system of having one man fill two offices. There was a change—a big one—and everybody and his dog enjoyed it. He must indeed have been a poor apology for a dog man that could not have put in four solid days at Rochester.

Too much praise cannot be given to Mr. Tallman. It was said, early in the season, and not without foundation, that "Billy" was a bit lazy. We can testify to having noticed the same thing at Buffalo. Printers' ink and hard work have made of him a most excellent superintendent. He has "trained on," as the management of this show proves, and we have no fear that well-merited reward will do as it has done in many another case—cause him to lose his form and return to the come-day-go-day God send the next day management of the Buffalo show.

Prominent among the hard workers were Dr. Gray, Mr. Wareham Whitney, Mr. John R. Fanning, Mr. Harry Yates, Mr. Geo. E. Peer and Dr. Albert Drinkwater. These members of the club were busy from early in the morning until after the lights had been turned low, and to their energy must be attributed in a large measure the success of the show.

Mr. Wilmerding and the Westminster Kennel Club entered a number of dogs, but did not send them. This is usually considered a compliment to a club; but it seems to us that a better way of improving a show would be to offer special prizes equivalent in value to the entrance money paid for the absentees. These specials would be a means of drawing out a larger number of entries; and the clubs would not then be put to the unnecessary expense of furnishing empty pens, each of which costs $1.25, and take up as much space as the ones that are occupied. The benching and feeding were intrusted to Spratts "Old Reliable," and of course these important features of the show were in keeping with the excellent management of the other branches.

MASTIFFS—(MR. MORTIMER).

Wacouta Nap, who is very light in flesh and needs rest, had not the ghost of a chance of beating Minting, who is in his usual good form. Credit is due to Minting's handler for the excellent condition in which the crack has been shown since New York. Moses, who has no business in the same class with Minting, was absent. The challenge class for bitches contained no entries, and the open class for dogs was very inferior in point of quality. Elm Place Jumbo, the first prize winner, is not a show dog. Defects: Mask not defined, ears not dark enough, face too long and lacking in volume, more especially in width; head shallow, color of eyes a shade light, ears rather large, underhung to an extent seldom seen, ribs too flat, loin not massive enough, lacks width and power behind, light in bone, knees showing weakness, coat not first-class, lacks wrinkle; a dog of about average size that would not be noticed in a good class. Major Zulu, second prize, like his more fortunate competitor, is a prize winner without being a show dog. Defects: Ears and mask not dark enough, foreface not long, but pinched near the nostrils and not right in lips, skull large in proportion to size of muzzle, but not measuring well, too straight in hocks, would be improved by length of body and general massiveness, lacks size, head not well wrinkled, rather leggy. Elm Place Colonel, vhc.: Shallow in muzzle and not right in lips, flat in cheeks, light in bone, body too short and not massive enough, lacks character, not a show dog. Boy, unnoticed: Muzzle too long and not blunt, light in eyes—a bad head—undersized, not a show dog. Tiger, unnoticed: Muzzle shallow and pointed, head lacking in volume, leggy, light in bone, not a show dog. Major, unnoticed: Long and houndy in head, throaty, flat-sided, weedy, not a show dog. The Lady Coleus, The Lady Phyllis, The Lady Beatrice and Boss Lady Clare, first, second, reserve and vhc. in the corresponding bitch class, have all been recently described. Dora, c.: Large in ears, muzzle not blunt nor short enough, head deficient in girth, not straight in front, wrong in feet, not a show bitch. Ino, c.: Shows pug character, wrong in ears, lips not well placed, lacks in volume of muzzle, not a show bitch, but a decidedly better specimen than Dora. Elm Place Dolly, unnoticed: Long in face, large in ears, light in bone, straight behind, bad in feet, houndy, not a show dog. Lulu Zulu, unnoticed: Long and shallow in face, light in eyes, crooked in front, badly shown, being much too fat, not a show bitch. Only two dog puppies were shown and the prize was withheld. Horace that was given hc. lacks in head properties, is large in ears, out at the elbows and wretchedly bad in legs and feet. We judge it was his pedigree that won him the card, certainly it could not have been merit. There was only one bitch puppy—a bad one. The prize was withheld and she was given vhc. It is not at all probable that she will ever be heard of again as she is not a show bitch and was not entitled to notice. She is wrong in head, big in ears, terribly bad in legs and feet. The special prizes for best mastiff dog and bitch were a gift to Mr. Moore.

ST. BERNARDS—(MISS WHITNEY).

Barry II., who was looking remarkably well considering the knocking about he has had of late, was the only entry in the challenge class for rough-coated dogs, and all we need say of Miranda and Gemma I., the only competitors in the bitch class, is that Gemma I. won and that, for reasons given in our Troy report, we are wholly unable to indorse the decision. The open class for dogs brought out one St. Bernard, the now well-known Ben Lomond, and quite a number of rough-haired dogs. Romeo, the second prize winner, has the following defects: Muzzle lacking in depth and not right in lips; stop not well defined; color of eyes too light; chest too narrow; legs fairly good to the knees where they show slight weakness; back would be improved by more length; moves with a bit of a straddle behind; ribs not well sprung; lacks length over all; correct in other points, but not a show dog. Cato, Jr., vhc., has, I think, been shown in the smooth-coated class. He is wrong at both ends, has too little coat for the rough class and too much for the smooth. Monarch, reserve, will take with him through life the following defects: Muzzle lacking in depth and width; stop not properly defined; ears wrong; expression not correct; not perfectly straight in front; weak in knees; lacks massiveness; has a ring-tail; not a show dog. Jumbo, unnoticed, is entered as "liver and white; date of birth, breeder and pedigree, unknown. Price $50." He is snipy, bad in ears, undersized, short in coat, bad in expression; in fact, a very dear dog at the catalogue price. Mt. Sion III. was absent. The bitch class found Saffron and Recluse well ahead of their two seedy-looking competitors, Hazel Kirke, one of these, was given c. and the owner must have felt happy. She is long in foreface, shallow in head and muzzle, undersized, weedy throughout, wrong in coat; in fact, not a show bitch. Luna, that was also given c., is entered as having won first at Ontario, 1888. There must have been a queer lot of dogs in that class and we thought Miss Whitney in a charitable frame of mind when she gave her a c. The rough-coated class for dog puppies was drawn blank and the three entries in the bitch class were a seedy-looking trio. Vic, first prize, is wrong in muzzle and stop, small in feet, has ring-tail, is not black in nose and has full cheeks. She has good body and coat and is fairly good in bone, but will never, we think, develop into a show dog. Sappho, second prize, has probably won her last prize. She cannot possibly outgrow the following defects: Full, round forehead; bad eyes; no stop; short ring-tail; washy color. Niketa, vhc., lacks in head and is out at elbows. She is not destined to appear as a winner of other prizes.

Three classes were provided for the smooth-coats, of which there were but four entries, with one of them, Rigi, absent. Daphne, as usual, was on hand and took the challenge prize for bitches, and in the open class for dogs Chang, bad in head and too high on the legs, was given second prize, first being withheld for want of merit. This dog was third at Buffalo. Lola, that was second at Troy and second at Albany and Utica, was unopposed in the bitch class. She was fully described in the Troy report.

NEWFOUNDLANDS—(MISS WHITNEY).

There were a couple of black dogs, but no Newfoundlands. Jumbo II. is not bad in head, but his light eyes, heavily coated ears, unsymmetrical frame and wretchedly bad coat should always put him back. He is massive, of more than average size, and has the correct Newfoundland gait. Franklin, second prize, has the following defects: Muzzle pointed; head not high enough; wrong in stop; eyes prominent; ears not lying close; chest very narrow; set of legs not correct; body not massive enough; feet very small—a most serious defect; light in bone; left foreleg having the appearance of being broken at some time; straight stifles and hocks; tail too short and with high carriage; curly in coat; moves badly behind; a small, plain animal, lacking altogether in character. Both prizes should have been withheld.

GREAT DANES—(MISS WHITNEY).

Lady Bess, first at Albany and Troy, is a well known third-rater. On this occasion she won very easily from Nigger, her only competitor. He is a blue mongrel, and shows Esquimaux character. His owner is evidently fond of a dog or he would not catalogue him at $50.

DEERHOUNDS—(MR. MORTIMER).

Here there were four classes, but only one dog. She has been through the circuit and need not be described. A number of admirers of this breed were sorely disappointed that Mr. Thayer's dogs were not entered.

GREYHOUNDS—(MR. MORTIMER).

The challenge honors were defended by Cassandra, the sweet and quality-showing daughter of Debret and Dead Secret. Now that Lancashire Witch and Mother Demdike have been retired, and the gallant Memnon has lost his teeth, Cassandra heads the list of show greyhounds in this country. The open class for dogs had six entries, which were badly judged. First prize was given to Ira, that is not a show dog. Defects: Muzzle cut away just before and below the eyes, and showing weakness all the way to the nose; eyes large and full; ears too large, but well carried; neck heavy; shoulders straight and heavy; chest too wide; ribs not well sprung; very short from hip to stern; slightly tucked up, stands over but little ground; coat not first-class; loin wide but lacking in depth; a dog showing little character or quality and giving one the idea that he is not well bred. Fleetwood, that is well known, should have been first, with Hazelhurst, that is equally well known, second. Zip, hc., is unsound and should not have been noticed; but leaving the disqualifying point out of question he is not a show dog, being coarse in neck, heavy in shoulders, very light in quarters, weak in knees and lacking in substance and power. Thracian, unnoticed, has prick-ears, is light in bone, flat-sided and lathy; in fact, a weed. McDonald, also unnoticed, is crooked in front, bad in feet, all wrong in shoulders and hindquarters, and lacking entirely in substance and general greyhound attributes. Harmony and Lady Olivia were well ahead in a weak class of bitches. It does not take much of a greyhound to beat Lady Olivia, but she was clearly ahead of Maud K. that was hc. The last-named is plain in head, defective in legs and feet, flat-sided, has lost a piece off her tail and shows an absence of quality and greyhound symmetry. Kingston's Blue Belle, unnoticed, is of similar type, and in addition to her numerous structural defects she has a lame hip. Fannie M., that was first at Utica, was the only puppy entered. We predict she will never beat a greyhound.

FOXHOUNDS—(MR. MORTIMER).

Here there were but two entries, Pride of Hornell and Clinch. Pride of Hornell, that took first, was first at Utica. In addition to his crooked legs and lathy body he has bad shoulders and his ribs are not at all well sprung. It does not say very much for the breed when a dog like this can win first and special. Clinch was not on hand when we called to take notes, and we did not see him.

POINTERS—(MR. GLOVER).

The Westminster Kennel Club's dogs being absent left the challenge classes for heavy weights without entries, and the open class for heavy weight dogs brought out a medley lot of nine. Tory White, that was given first, was vhc. in the open class at New York and third in the novice class at the same show. He is a long way removed from high-class form and it needs only a fairly good one to beat him. He has the following defects: Color of eyes too light, neck not clean, set of forelegs not correct, ribs not very well sprung, loin light, hindquarters light, is leggy and too short between the couplings. Killdeer, placed second, is a white and liver of unknown pedigree. This will probably account for the first note we took on him, which is as follows: "Lacks true pointer character." In addition to an absence of something which is easier missed than described, he has the following defects: Lips not well placed, cheeks a trifle prominent, neck not quite clean, yet of good length, set of forelegs not just right, ribs not well sprung, loin flat, not perfectly straight in front, falls away too much from hips to stern, tail docked short and what remains of it very coarse, not of the right type. Duke, vhc.: Shallow in muzzle, hang of ears not correct, flat behind the withers, circus-horse back and loin, light quarters, straight behind, set of legs not quite right, feet not set quite straight, does not move well behind: like the second prize winner he is of unknown pedigree. Don, hc., is quite as good a dog as Duke, but the following defects will prevent him rising much above that class: Muzzle not quite clean near the eyes, throaty, heavy in shoulders, flat and light in loin, too short from the hips back, chest should be deeper, a trifle leggy, docked tail. Sam, unnoticed, is plain in head, throaty, wide in front and lacking in true quality and character. Fritz, another of the unnoticed division, is bad in head, throaty, crooked in front, throws his toes inward, especially when in motion, and is very defective behind the short ribs. Victor the Blue Stocking, whose condition is improving, was given vhc. Sachem and Old Bang were absent. Both of them need rest. Golden Rod, who is improving every day, was first in the corresponding class for bitches. Her skin looks decidedly better than it did a fortnight ago. Flash, that was given a c. card, is not a show bitch. Defects: Throaty; wide in front; stands badly. Westminster Sal, the other entry, was absent. Naso of Kippen, entered in the challenge class for light-weight dogs, was wisely left at home. We shall hope to see this grand little dog with a clean skin and a new jacket at Boston. Queen Fan was alone in the bitch class. How this very ordinary specimen has won her way to the challenge class is one of the many things that would puzzle mortal man to explain. She is wrong in muzzle, eyes, expression, skull, neck, chest, shoulders, legs, set of same, feet, and in addition to these defects is weedy and light in bone. The judge committed a grave error when he placed her over Tory White for the special for best pointer. First in the open class for dogs was given to Forest King, that was fully described in the Troy report. Hickory Staunch, placed second, should have given way to Bing, that was vhc. Bing has improved very much in condition. In the Utica report we called attention to his several defects, but he does not possess nearly so many as Hickory Staunch, and on this occasion was fairly entitled to second place. A full and careful description of Hickory appeared in the Albany report. Stella and Wanda, first and second in bitches, held the same positions at Albany and need not again be described. Devonshire Queen, vhc., barring her ears and neck, was about the best in the class. She was not in show condition. Guenn, hc., is very throaty, does not stand right in front and is faulty behind. Fly, unnoticed, is underhung, wrong in stop and muzzle, and defective in neck. Shot and Belle, the only puppies entered in the two classes that were provided, are white and liver dogs. We will spare the owner the pain of reading our notes on them. Taken altogether the pointers were a very bad lot.

SETTERS—(MR. GLOVER).

As stated in our dispatch from the show, setters were not a good lot. Six classes were provided for English and there were only ten entries all told. The judge took a great deal of pains to arrive at correct decisions, but failed to give satisfaction. We gave all of the dogs a most searching examination and regret that we are unable to indorse the awards. Mr. Glover kindly gave us his reasons for having placed the dogs as he did, and we will now give ours for thinking that he did not get them right. There were no entries in the challenge classes, and the open class brought out an indifferent lot of five, all of which were decorated with a card. Pride of Dixie II. is a rather coarse white, black and tan, by Pride of Dixie. Defects: Skull too heavy, muzzle well formed, yet having the appearance of being slightly weak—this is owing to the heavy proportions of the skull—eyes showing the white and having a wrong expression, forelegs badly set, knees showing weakness, feet not first-class, loin not nicely turned, coat a bit woolly and not straight enough, does not stand well in front. Of these defects, by far the most serious are the dog's legs, feet, position of elbows and set of legs. We felt positively sure that under the judgment of a practical man like Mr. Glover these failings would turn the scales in favor of Lindo. We will describe the Pittsburgh dog very minutely, leaving those of our readers who have not seen the dogs to balance up accounts and take their choice: Muzzle well formed and could only be improved by a little more length, stop a trifle too deep, eyes and ears correct, cheeks not quite clean—they should be flat—neck of good length, but showing some throatiness, spring in ribs would improve his chest, loin flat and rather light, falls too abruptly from hips to stern, hocks would be better if lower and more bent—they do not show weakness—tail too long and not perfect in carriage, good straight forelegs, which are set into the best of feet, coat free from curliness, but rather short; is a trifle leggy. The numerous defects in these dogs show that both of them are a long way removed from high-class form. Lindo has in his favor a very workmanlike appearance, but we have never seen a sporting dog with legs set like Dixie's, that was a high-class field dog. As things now stand Lindo beat Pride of Dixie at New York under Mr. Davidson, and again at Utica under Mr. Tallman, and Pride of Dixie beat Lindo at this show under Mr. Glover. We think that when the last named judge shall have an opportunity to give the dogs another examination he will plump for Lindo. We have a rather good story to tell of Lewis, the handler of Lindo. Mr. Lewis has been incensed over the critical and searching reports on his dogs which have appeared in the FOREST AND STREAM, and as a means of preventing the numerous defects in his exhibits from being brought to public notice in future, he suggested petitioning bench show managers not to permit Mr. —, of FOREST AND STREAM, to take the dogs from the benches for inspection. This brilliant idea occurred to him at Utica, and it quickly had the indorsement of a couple of handlers who showed several mangy dogs at Albany. The petition fell flat, more especially on those who do not care to have valuable dogs benched next to diseased ones; and the Rochester management was thus deprived of the pleasure of scanning the graceful and artistic chirography of these peculiar reformers. As soon as Mr. Glover had knocked out Lindo and Lewis's other dog, Zona, that was second in the bitch class, the petitioner was heard to say in a rather loud tone of voice, "That's all right, wait till to-morrow. Mr. —, of FOREST AND STREAM, will be here. Thank Heaven we have one man left who is not afraid to straighten out this funny judging." We do not think it probable after this that Mr. Lewis will ever attempt to gag the press. The one and only means whereby Mr. Lewis can avert unfavorable criticism is to get some good dogs. Hambrook, vhc., is too full in cheeks, light in eyes, not right in set of legs, not good in hindquarters, and only fair in legs and feet. He is fairly good in shoulders and other points. Glendale, hc., has these defects: Muzzle too fine, ears short, bad eyes and expression, not straight in front, legs not well placed, shoulders heavy, stern not well carried, coarse throughout. Duke, c., light, staring eyes, not good in legs or feet, curly in coat, lathy. He moves well and is better than average in other points. In bitches there were but

three entries, Chautauqua Belle, Zona and Frolic Bondhu, all well known. Zona, placed second, beat Chautauqua Belle at Albany and Utica, but was behind her at New York. When Mr. Tallman placed Zona first at Albany we indorsed the decision, and a very careful re-examination of the two bitches confirms this opinion. There were only two puppies, and Zach, that was first at Utica, took first again here. Star Roy, vhc., is plain in head, straight in hocks, long in stern, and neither right in knees or set of legs. He will not develop into a show dog.

Blarney, Laura B., Desmond II., Dick Swiveller and Lou III., winners in the Irish classes, need not be described. They have been the round of the shows and admirers of the breed are perfectly familiar with their good and bad points. Dennis, hc., in the open class for dogs, is plain in head, straight behind, light in middle, short and open in coat and is not a show dog. "Date of birth, breeder and pedigree unknown." Colonel, unnoticed, is wide and coarse in head, wrong in position of elbows, back at the knees, bad behind and not first-class in coat. Jacko, another of the unnoticed division, lacks in head properties, has short ears, is not good in legs and feet, has a ropy tail, is straight behind and lacks quality throughout. Captain, also unnoticed, is bad at both ends, and the ends commence from the center. Governor Tilden, unnoticed, is a red and white dog, with poor head, sour expression and bad stern. Don, likewise unnoticed, is bad in color and has terrible head and eyes. Barring the first and second winners it was a wretchedly poor class. In bitches Lou III., the Albany winner, although a long way from first-class form, was a very easy winner; but it was a close thing between Meig and Daisy, that was second at Troy, for second honors. Meig finally proved the winner. Her failings are as follows: Skull too heavy; eyes rather light; head not well domed; slightly underhung; throaty; set of legs not correct; knees not very strong and feet too flat; stern too long; expression rather sour; shoulders not first-class. Cossy, hc., is light in color, plain in head, long in stern, wrong in ears and their carriage, light in bone and lacking in power behind. This was a very weak class. The puppy class contained nothing but mongrels in appearance and the prize was rightly withheld. This breed was well judged.

Six Gordons were entered in the five classes provided. These were little Boy, Roxie, Rose, Leo B., Becky Sharp and Vic. Little Boy, Roxie and Leo B. were without competitors, and Becky Sharp and Vic had the open class for bitches to themselves. Here we cannot indorse the decision in favor of Becky Sharp. Both bitches are well known, and it seems to us that Vic is not only better than Becky Sharp but decidedly better.

SPANIELS—(MR. WILMERDING).

The classes for field spaniels contained nothing new, and as usual Messrs. Oldham & Willey took the majority of the prizes. It is no use again criticising dogs whose defects and good points are known to our readers, and in passing the breed without comments we do not think that we are running the risk of being charged with writing a Chicago report.

The cocker classes were well filled, and the quality throughout was decidedly better than average. Every prize but one fell to dogs that have already been fully described The new one was So So, that took first in the class for cocker dogs other that black. He is a puppy showing nice quality, and while not quite right in head is promising in other respects. The old-timers and winners in their respective classes were Doc, Chloe W., Jersey, Dandy W., Dolly Obo, Lacco, Hornell Dick, Hornell Velda, Goldie and Hornet. Ray, vhc. in the open class for black dogs, is light and pointed in muzzle, wrong in coat and sour in expression. He ought to be worth the catalogue price, $5. Ned A., hc. in the same class, is not clean below the eyes, his lips are not well hung, is throaty, leggy, rather long-cast and is not right in coat. Mardo, unnoticed, is a mongrel. Giffee, vhc., is well known. Fashion, vhc. in the corresponding bitch class, is faulty below the eyes, open in coat, leggy and light. Florence Obo, c., is defective in head, more especially in muzzle, and is light in bone. Sheeny, vhc., was not on the bench when we called. Plover, c. in the open class for dogs of any other color than black, is bad in head and eyes, curly in coat and leggy. Ben II. and Smith, that took c. cards in the same class, are not show dogs. The second prize puppy, Fashion, has a head that is rather too much on the field type, is wrong in stifles and hocks, rather light in eyes, leggy and not just right in set of ears. Hornell Gypsey, vhc., was second in the puppy class at Utica. Flip, hc., is altogether wrong in head, eyes and muzzle and is too leggy. Mary Stuart, c., is a decidedly better specimen than Flip. She is not so heavy in bone, but in all other points, more especially in head, she is all over the better cocker. The special for best spaniel of all classes was rightly given to Glencairn, and Messrs. Oldham & Willey were the only ones in the hunt for the kennel prize.

COLLIES—(MR. MORTIMER).

These classes showed a falling of in quality. Scotilla was absent from the challenge class for dogs and the overrated Metchley Surprise and Bonny Brae were alone in the bitch class. Clipper and Roslyn were clearly ahead of their competitors in the open class for dogs. Sir Walter Scott and Roslyn Sensation, the vhc. dogs, are equally well-known. Tyke got the reserve card. He is deficient in coat and bad in ears. Meadowbrook Ben, hc., is bad in head, wrong in legs and feet, undersized and not first-class in body. For reasons stated in the Albany report, we regret very much to see that Mr. Terry has again entered dogs to be judged by Mr. Mortimer. If the judge had sent the dog out of the ring without a card it would not have altered the principle, which we again state is wrong, and which we know is condemned even by staunch friends of the Westminster Kennel Club and the A. K. C. Smoker, unnoticed, has bad head and ears, is soft in coat and straight behind. Don, unnoticed, has short, coarse head, rose-ears and is short and soft in coat. Lad, unnoticed, is wrong in head, ears, shoulders, stifles and hocks. Sailor, unnoticed, is entirely wrong in head and ears. Bitches were a weak class and Jakyr Dean won very easily over the plain-headed, undersized and rather sway-backed Effie Dean II., that was entered "not for competition;" at least so says the catalogue. Ailsa, vhc., a daughter of Eclipse and Meta, although neither first-class in head nor tail, rather soft in coat and with ears not well up, is quite as good as the second prize winner. Jenny Lind, hc., was out of condition. She is fairly good in head, but her ears are rather large and not well carried, her coat at present is too soft and open, feet are not right and loin is too light. Diamond, the only dog puppy shown, will never develop into a show dog; he is wretchedly bad in head and ears. Jakyr Dean was the only bitch puppy shown. The special prize for best collie in the show was given to Metchley Surprise. Clipper and Jakyr Dean are both better specimens.

POODLES—(MR. MORTIMER).

Here there was only one entry, a little, short-headed, yellow-eyed, fluffy coated mongrel. The prize should have been withheld.

BASSET HOUNDS—(MR. GLOVER).

Babette, the Albany, Troy and Utica winner, was the only one shown.

DACHSHUNDE—(MR. GLOVER).

There were four entries in this class, two of which were absent. Jesse and Fred, that were given first and second prizes, are a couple of little black, tan and white mongrels, weak in jaw, flat in skull, wrong in ears, short in body, flat in loin, wrong in crook, lacking in bone and minus every particle of true dachshund character. Here again the prizes should have been withheld.

BEAGLES—(MR. GLOVER).

Mr. Schellhass, who was down to judge these classes as well as bassets and dachshunde, failed to put in an appearance. We understand that Mr. Mortimer was invited to judge the classes and refused. If the Somerset Kennels' dogs are owned in part by a member of the Westminster Kennel Club Mr. Mortimer showed exceedingly good taste in declining. Mr. Glover got through his work in a praiseworthy manner; in fact, his decisions were altogether better received than the awards at either Albany or Utica. Storm, the 15¾in. high winner at Utica, was entered "not for competition" in the challenge class for dogs, leaving Bounce and Little Duke to compete for the $10 prize. We said in our report of the Utica show: "There were two entries in the challenge class, Little Duke and Bounce. The latter of course won, but it seems to us that Little Duke is a decidedly better specimen. Better in head, better in size and truer to type." We have no reason to change this opinion. Here Little Duke won. In the corresponding class for bitches Myrtle beat Twinkle. Both are old winners that have been described time and again. The open class for dogs contained Royal Krueger, Racer, Jr., and Jupiter. Royal Krueger was a very easy winner. In bitches Belle of Woodbrook, that was second to Cloud at Albany, was given precedence on this occasion. It is a close thing between these bitches, but Cloud is so decidedly superior in shoulders, legs and feet that we would have given her first. Baby W. and Kate W., the other competitors in the class, were at Utica. Banner Queen, first in the class for dogs and bitches under 12in., was third at New York and Albany. She is a bad-coated weed and was closely pressed by Yonnie W., that is wrong in muzzle and ears, long-cast and not straight in front. These were the only entries in the class. Ingomar W., that had the dog puppy class to himself, is decidedly better than average in body, legs and feet. He is coarse in head, and not all that could be desired in coat. He was sold to Mr. W. H. Case. Kathleen W., second in the puppy class at Troy, was first here without competition.

BULLDOGS—(MR. MORTIMER).

Rabagas, transferred to the challenge class, was unopposed, and in the open class for dogs Lion made mince-meat of his mongrel-looking competitors. The bitch class contained no entries.

TERRIERS—(MR. MORTIMER).

No challenge class was provided for bull-terriers, but the management generously allowed the mangy Lady Tarquin to compete by herself for what will go on record as a challenge prize. While the bitch is not in the beastly condition she showed at Albany, she was not entitled to notice. In the open class for dogs The Earl in fairly good condition, was well placed first. Count Dick, that was second, has a brindle mark on root of stern, is cheeky, weak before and below the eyes, light in color of eyes, not clean in neck, hardly right in set of legs and neither perfectly straight in front nor right in knees. In body he would be improved by more depth. He carries his tail too high, is leggy, a trifle lippy, not very strong in hocks and does not travel quite right behind. The other entries in the class were pit dogs. Royal Rose and Countess, first and second in the bitch class, are old and well-known winners. Dauntless, not in good condition, was next in order with a vhc. card. This bitch was at Utica. Jessie, a brindle and white, and Maude, a white and brindle, are mongrels. Rose, placed first in the puppy class, should have been ordered out of the ring. While it cannot be fairly said that she had the mange, for the disease was killed, her condition was of the worst. Any one who has seen the back of a badly neglected pig has seen a fac-simile of this bitch's condition. There was a wiry hair stuck here and there, the intermediate space being filled up with scales, and how any man who has the slightest knowledge of dogs or shows could send a bitch in such a state for competition is something that we are at a loss to understand. The dangerous precedent of allowing mangy dogs to compete at shows may have caused the owner to feel that he was justified in placing a dog in such condition on the bench. The showing of mangy dogs, or of dogs that are just cured of the mange, must be stopped. One of our contemporaries is complaining about the severity of our criticisms and at the same time informing its readers that never have so many mangy dogs been seen on the benches as have been shown this year. The way to get rid of the scourge is by stamping it out; and the way to stamp it out is to censure those who exhibit and those who encourage the exhibiting of mangy dogs.

Fox-terriers in the absence of Mr. Thayer's strong kennel were light classes. There were, however, three or four good ones on hand. Lucifer, Rachel, Veronese, Blemton Trump, Blemton Brilliant, Tiara, and in the wire-haired class Cotswold Jocko and Billet are all well known. Raby Signal, vhc., is a new one that has done some winning in England, but not, we think, in very good company. He is a bit cheeky, his ears are too large, not of the best quality and not properly set. In addition to these defects his neck is not quite clean, his feet are not of the best and he might stand truer in front. He is also rather long-cast, light in loin and not perfect in hocks. In other points he is decidedly better than average, and has the appearance of a workman. Blemton Grumbler, vhc., is defective in head, large in ears, open and soft in coat and shows some jowl. Though placed equal with Raby Signal he is not so good a dog. Grover, unnoticed, is bad in head, ears, legs and feet. Dick, also unnoticed, is large in ears, bad in coat, leggy, and wrong in feet and legs—a weed. Hoiden, vhc. in the bitch class, shows some quality, but is too wide in skull and soft in coat for show purposes. Meersbrook Model II., c., is light in bone and weedy, and her head and hindquarters are not of the best. Puppies were a weak lot.

In black and tans Meersbrook Maiden, that should have been disqualified, was again placed over Buffalo General and Sir Wallace. The white spot on her breast, which was not fully developed at New York, is gradually but surely increasing in size, and at present it would be difficult to tell how much of this dog had been faked. The Dandie Dinmont, Border Wang, that is defective in head and hindquarters, was many points ahead of his only competitor. For reasons already given Mr. Mortimer should have refused to judge him. Punch, the only Bedlington shown, was given first. We do not think that he is worth first prize in any class. Dennis, equally well known, was the only Irish terrier shown, and Kirkella and Claymore were the only entries in the class for Skyes. Bones and Judy, the prize winners in the Yorkshire classes, and the only exhibits, are both short in coat and bad in head, body and leg-color. The toy class was empty.

PUGS—(MISS WHITNEY).

In the challenge class for dogs and bitches Bessie was given the prize over Dude. For reasons already stated we prefer Dude. The open class for dogs brought out a new one in Lord Clover. Defects: Foreface not deep enough, forehead too flat, ears too large, eyes rather small, but good in color; a fair head, yet not a first-class one; stands badly in front, feet very defective, tail good in twist, but not carried close, throaty, coat not first-class; a useful second-class dog. Bob Ivy, second prize, is a mere puppy, but when fully developed he will hustle the winner. The youngster is well known. Port, vhc., is too long in foreface, has white nails and is leggy, large and not good in wrinkle. Buzz, vhc., was sent home before we had an opportunity to examine him. Leo II., unnoticed, would stand a better chance of success in a class of mastiff puppies. We won't attempt to guess his weight. We cannot agree with the awards in the bitch class. Rustic Queen, in her present condition, is better than Vic, and What's That, who is equally well known, is as good or better than the winner. Leah A., hc., is long and plain in head, bad in ears, not good in wrinkle and has white nails. Daisy was absent.

OTHER TOY DOGS—(MR. MORTIMER).

Here there were only three entries in the four classes provided. These were Roscius, King Pippin and Cupid. They have all been through the circuit.

MISCELLANEOUS—(MR. MORTIMER).

This was a very weak class. Sir Lucifer and Hornell Rover, that were first and second, are well known to our readers. Love, vhc., is a very ordinary Mexican hairless. Jo Jo, hc., is a bad-coated poodle. Belle S., c., is a bad specimen of the Chesapeake Bay dog; at least she is bad if any of the prominent winners are good; yet all these dogs are considered typical and all are of different type. Peanuckle, catalogued at $2, was entered as a "rough-coated fox chaser." A very dear dog at the money.

Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* 1st and special, E. H. Moore's Minting; 2d, St. Joe Kennels' Waconta Nap. *Bitches:* No entry.—OPEN—*Dogs:* 1st, L. D. Ely's Elm Place Jumbo; 2d, J. G. Wood's Major Zau. Very high com., P. J. Cogswell's Elm Place Colonel. *Bitches:* 1st and special, 2d and very high com., E. H. Moore's The Lady Coleus, The Lady Phyllis and The Lady Beatrice. Reserve, C. Porter, Jr.'s Boss Lady Clare. Com., C. C. Schmitt's Dora and G. Raine's Ino.—PUPPIES—*Dogs:* Prizes withheld. High com., J. W. Whitney's Horace. *Bitches:* Prizes withheld. Very high com., L. D. Ely's Elm Place Countess.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—*Dog:* W. J. Ehrich's Barry II. *Bitch:* Hospice Kennels' Gemma I.—OPEN—*Dogs:* 1st, E. H. Moore's Ben Lomond; 2d, D. Driscoll's Romeo. Reserve, H. B. Olin's Monarch. Very high com., J. M. Gallagher's Cato, Jr. *Bitches:* 1st and special and 2d, E. H. Moore's Saffron and Recluse. Com., D. Driscoll's Hazel Kirke and S. F. Glass's Luna.—PUPPIES—*Dogs:* No entry. *Bitches:* 1st and 2d, D. Driscoll's Vic and Sappho. Very high com., S. F. Glass's Niketa.—SMOOTH-COATED—CHALLENGE—*Dog:* Absent. *Bitch:* Hospice Kennels' Daphne.—OPEN—*Dogs:* 1st, withheld; 2d, A. R. Heilmer's Chang. *Bitches:* 1st, Keystone Kennels' Lola. *Puppies:* No entries.

NEWFOUNDLANDS.—1st, W. Husband's Jumbo II.; 2d, E. H. Chapin's Franklin.

GREAT DANES.—1st, F. W. Fonda, Jr.'s Lady Bess; 2d, J. F. Gallery's Nigger.

DEERHOUNDS.—*Dogs:* No entry. *Bitches:* 1st, G. S. Page's Olga.

GREYHOUNDS.—CHALLENGE—1st, H. W. Huntington's Cassandra.—OPEN—*Dogs:* 1st, Fannie A. Whitney's Ira; 2d, G. Stanton's Fleetwood. Very high com., Hornell-Harmony Kennels' Hazelhurst. High com., J. J. Elter's Zip. *Bitches:* 1st and 2d, Hornell-Harmony Kennels' Harmony and Lady Olivia. High com., J. E. Kingston's Maud K. *Puppies:* 1st, Hornell-Harmony Kennels' Fannie M.

FOXHOUNDS.—1st, Hornell-Harmony Kennels' Pride of Hornell; 2d, F. Jayne's Clinch.

POINTERS.—LARGE—CHALLENGE—Absent.—OPEN—*Dogs:* 1st, F. R. Hitchcock's Tory White; 2d, J. Roche's Killdeer. Very high com., W. S. Kimball's Duke and Bryn Mawr Kennels' Victor the Blue Stocking. High com., C. A. Hayden's Don. *Bitches:* 1st, Bryn Mawr Kennels' Golden Rod; 2d, withheld. Com., W. H. Case's Flash.—SMALL—CHALLENGE—*Dog:* Absent. *Bitch:* 1st and special, T. H. Terry's Queen Fan.—OPEN—*Dogs:* 1st, J. and A. Marshall's Forest King; 2d, E. R. Bellman's Hickory Staunch. Very high com., Bryn Mawr Kennels' Bing. High com., J. Hafner's Fritz. *Bitches:* 1st and very high com., E. R. Bellman's Stella and Devonshire Queen; 2d, R. P. Keasby's Wanda. High com., Dr. G. M. Bond's Guenn. *Puppies:* Withheld.

ENGLISH SETTERS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st and special, E. N. Hubbard's Pride of Dixie II.; 2d, Mt. Washington Kennels' Lindo. Very high com., M. D. Tarba's Hambrook. High com., Dr. E. V. Stoddard's Glen Dale. Com., W. McBride's Duke. *Bitches:* 1st, Peet & Lyon's Chautauqua Belle; 2d, Mt. Washington Kennels' Zona. Very high com., J. P. & W. W. Gray's Frolic Bondhu.—PUPPIES—*Dogs:* 1st, Dr. J. H. Glass's Zach. Very high com., G. McMannis & Co.'s Star Roy. *Bitches:* No entry.

IRISH SETTERS.—CHALLENGE—*Dog:* 1st and special, E. W. Clark's Junius. *Bitch:* 1st, Kildare Kennels' Laura B.—OPEN—*Dogs:* 1st, C. T. Thompson's Desmond II.; 2d, P. Cambios's Dick Swivelier. High com., J. G. Averill's Dennis. *Bitches:* 1st, Columbus Kennels' Lou III.; 2d, J. R. Fanning's Meig. Very high com., F. L. Cheeney's Daisy. High com., D. F. Adams's Cossy.—PUPPIES—*Dogs:* Withheld. *Bitches:* No entry.

GORDON SETTERS.—CHALLENGE—*Dog:* 1st, S. G. Dixon's Little Boy. *Bitch:* 1st, H. S. Smith's Roxie.—OPEN—*Dogs:* 1st and open class special, H. C. Biddle's Leo B. *Bitches:* 1st and open class special, J. A. Campbell's Becky Sharp; 2d, W. S. Hammett's Vic. *Puppies:* No entries.

FIELD SPANIELS.—CHALLENGE—Oldham & Willey's Newton Abbot Laddie.—OPEN—BLACK—*Dogs:* 1st and special and 2d, Oldham & Willey's Glencairn and Newton Abbot Lord. *Bitches:* 1st, Woodstock Spaniel Kennels' Bridford Gladys; 2d, Oldham & Willey's Lady Abbot.—LIVER—*Dogs:* 1st, Oldham & Willey's Newton Abbot Don; 2d, W. T. Payne's Newton Abbot Skipper. *Bitches:* 1st, W. T. Payne's Lady.—ANY OTHER COLOR—*Dogs:* 1st, G. H. Bush's Adonis; 2d, Oldham & Willey's Charlie H. *Bitches:* No entries. Kennel prize, Oldham & Willey.

CLUMBER SPANIELS—Absent.

COCKER SPANIELS.—CHALLENGE—*Dog:* 1st, American Cocker Kennels' Doc. *Bitch:* 1st, Oldham & Willey's Chloe W.—OPEN—BLACK—*Dogs:* 1st, Oldham & Willey's Jersey; 2d, G. H. Bush's Dandy W. Very high com., C. Brueck's Ray and Woodstock Spaniel Kennels' Giffee. High com., G. Ashton's Ned A. *Bitches:* 1st and 2d, Oldham & Willey's Dolly Obo and Lacco. Reserve, American Cocker Kennels' Hornet. Very high com., Hornell-Harmony Kennels' Hornell Martha, Woodstock Spaniel Kennels' Sheeny and G. H. Bush's Fashion. Com., E. P. B. Southworth's Florence Obo.—ANY OTHER COLOR—*Dogs:* 1st, Woodstock Spaniel Kennels' Soso; 2d, Hornell-Harmony Kennels' Hornell Dick. Com., T. J. & J. G. Zimber's Plover, J. O. Hall's Ben II. and R. W. Davis's Smith. *Bitches:* 1st and reserve, Hornell-Harmony Kennels' Hornell Velda and Hornell Fancy; 2d, Oldham & Willey's Goldie. Very high com., G. Bell's Vermillion. High com., Woodstock Spaniel Kennels' Clip. *Puppies:* 1st, American Cocker Kennels' Hornet. Very high com., Hornell-Harmony Kennels' Gypsy and Woodstock Spaniel Kennels' Sheeny. High com., —. Ashton's Flip and A. J. Johnson's Obo J. Com., Dr. A. Drinkwater's Mary Stuart.

IRISH WATER SPANIELS.—1st, J. B. Daniels's Patsy O'Connor; 2d, Hornell-Harmony Kennels' Capt. Muldoon.

COLLIES.—CHALLENGE—*Dogs:* Absent. *Bitches:* 1st and 3 specials, Chestnut Hill Kennels' Metchley Surprise; 2d, W. D. Hughes's Bonnie Brae.—OPEN—*Dogs:* 1st, J. Watson's Clipper; 2d and very high com., Chestnut Hill Kennels' Roslyn and Roslyn Sensation. Reserve, J. A. Haskell's Tyke. Very high com., A. H. Gluck's Sir Walter Scott. High com., T. H. Terry's Meadowbrook Ben. *Bitches:* Chestnut Hill Kennels' Jakyr Dean; 2d and very high com. J. P. & W. W. Gray's Effie Dean II. and Ailsa. High com., A. H. Gluck's Jennie Lind.—PUPPIES—*Dogs:* Prize withheld. High com., Mrs. Ed. A. Pierpont's Diamond. *Bitches:* 1st, Chestnut Hill Kennels' Jakyr Dean.

POODLES.—1st, Mrs. Rosa Vogel's Fido.

BASSET HOUNDS.—1st, C. Porter, Jr.'s Babette.

DACHSHUNDE.—1st and 2d, T. F. Martin's Jessie and Fred.

BEAGLES.—CHALLENGE—*Dogs:* 1st and special, Ardsley Kennels' Little Duke. *Bitches:* 1st, Mrs. F. C. Phœbus's Myrtle.—OPEN—*Dogs:* 1st, Hornell-Harmony Kennels' Royal Krueger; 2d, Ardsley Kennels' Racer, Jr. Very high com., Somerset Kennels' Jupiter. *Bitches:* 1st and 2d, Somerset Kennels' Belle of Woodbrook and Cloud. Very high com. and high com., Hornell-Harmony Kennels' Baby W. and Kate W.—UNDER 12IN.—1st, Lewis Bros.' Banner Queen.—PUPPIES—*Dogs:* 1st, Hornell-Harmony Kennels' Ingomar W. *Bitches:* 1st, Hornell-Harmony Kennels' Kathleen W.

BULLDOGS.—CHALLENGE—G. Raper's Rabagas.—OPEN—*Dogs:* 1st, W. J. Comstock's Lion; 2d, withheld. *Bitches:* No entry.

BULL-TERRIERS.—CHALLENGE—1st, Sunnyside Kennels' Lady Tarquin.—OPEN—*Dogs:* 1st Sunnyside Kennels' The Earl; 2d, W. McDonald's Count Dick. *Bitches:* 1st and very high com., F. F. Dole's Dauntless and Royal Rose; 2d, J. White's Countess. *Puppies:* 1st, A. Gerlock's Rose. Very high com., F. F. Dole's Dauntless. High com., G. T. S. Foote's Trump.

FOX-TERRIERS.—CHALLENGE—*Dogs:* 1st Blemton Ken-

nels' Lucifer. *Bitches:* 1st and special, Blemton Kennels' Rachel.—OPEN—*Dogs:* 1st, F. Hoey's Veronese; 2d, Blemton Kennels' Blemton Trump. Very high com., A. E. Pitts's Raby Signal and W. Whitney's Blemton Grumbler. *Bitches:* 1st and 2d, Blemton Kennels' Blemton Brilliant and Tiara. Very high com., W. Whitney's Hoyden. Com., W. P. Mack's Meersbrook Model II.—WIRE-HAIRED—1st, F. C. Wheeler's Billet; 2d, F. F. Dole's Cotswold Jocko.—PUPPIES—*Dogs:* 1st, Blemton Kennels' Blemton Trump. Reserve, F. Hoey's Landlouper. *Bitches:* 1st, Blemton Kennels' Blemton Marjorem. Reserve, F. Hoey's Literature.

BLACK AND TAN TERRIERS.—1st, Rochelle Kennels' Meersbrook Maiden; 2d, A. W. Smith's Buffalo General. Very high com., Keystone Kennels' Sir Wallace.

SCOTCH TERRIERS.—Absent.

DANDIE DINMONT TERRIERS.—1st, F. R. Hitchcock's Border Wang; 2d, withheld.

BEDLINGTON TERRIERS.—1st, C. Porter, Jr.'s Punch.

IRISH TERRIERS.—1st, J. F. McFadden's Dennis.

SKYE TERRIERS.—1st and 2d, Oldham & Willey's Kirkella and Claymore.

YORKSHIRE TERRIERS.—*Dogs:* 1st, C. E. Morris's Bones. *Bitches:* 1st, G. P. Whitney's Judy.

PUGS.—CHALLENGE—1st and special, Dr. M. H. Cryer's Bessie. —OPEN—*Dogs:* 1st, L. S. Hudson's Lord Clover; 2d and reserve, Dr. M. H. Cryer's Bob Ivy and Othello. Very high com., Martha L. Whitney's Buzz and A. E. Adams's Port. *Bitches:* 1st, Dr. M. H. Cryer's Vic; 2d and reserve, G. Bell's Rustic Queen and What's That. High com., H. Andrews's Leah A. *Puppies:* 1st, Dr. M. H. Cryer's Bob Ivy; 2d, withheld. Kennel prize, Dr. M. H. Cryer.

KING CHARLES SPANIELS.—1st, W. Phillips's Roscius.

BLENHEIM SPANIELS.—1st, W. Phillips's King Pippin.

ITALIAN GREYHOUNDS.—1st, Miss Edith Van Buren's Cupid.

MISCELLANEOUS.—1st, C. Rosser's bobtailed sheepdog Sir Lucifer; 2d, Hornell-Harmony Kennels' harrier Hornell Rover. Very high com., C. Stoffel's Mexican hairless Love. High com., J. Berkley's poodle Jo Jo. Com., J. Schlyer's Chesapeake Bay Belle S.

BLACK AND TAN "AND WHITE."

NEW YORK, March 25.—*Editor Forest and Stream:* At times critics are open to criticism, and the reports in your paper of recent bench shows prove the writer at fault in some instances.

In your issue of Feb. 28 you report the New York show. Meersbrook Maiden, black and tan terrier, who took second in the bitch class, and was placed ahead of a very good one, Buttercup, is found little fault with and mere mention made of a white patch on her breast. Mr. Baillie judged. In your issue of March 21, in the report of the Utica bench show, this bitch is severely criticised on account of this same white spot, which was apparently a "mole hill" in the eyes of your critic at the New York show, but, although actually no larger, has developed into a "mountain" before his sight at Utica, and he calls it a large white spot, and says that everybody who understands the breed is aware that it is a disqualifying point. He also states that this bitch must have been faked to win twenty times in England. How easily she might have been faked here, and your critic's fault-finding changed to praise. He quotes two ancient authorities to indorse his opinions. Mr. Mortimer judged at Utica.

Why did your critic consider the white so lightly at New York and so harshly at Utica? The only reasonable explanation is, that he has been reading up on the points of the black and tan terrier since the New York show. But, does he not know that there is a specialty club in England, devoted to this breed, and that the members of this club, mainly breeders, have adopted a more recent standard than either of those he quoted?

Following is the description of color: "Black and tan as distinct as possible, the tan should be a rich mahogany color. A tan spot over each eye, and another on each cheek, the latter as small as possible; the lips of the upper and lower jaws should be tanned, the tan extending under the jaw to the throat, ending in the shape of the letter V; the inside of the ear is partly tanned; the foreleg is tanned to the knee, with a black patch "thumb mark" between the pastern and the knee; the toes have a distinct black mark running up each, called the "pencil-mark;" the tan on the hindlegs should continue from the penciling on the feet up the inside of the legs to a little below the stifle joint, and the outside of the legs should be perfectly black. There should be tan under the tail and on the vent, but only of such size as to be covered by the tail. In every case the tan should meet the black abruptly."

In the above you will find no mention of white being a disqualification, and it is evidently left to the discretion of the judge, as to how much a dog shall be penalized for this bad marking, which, in spite of all efforts of breeders, will at times appear to impair the excellence of an otherwise fine dog.

Maiden's pedigree is a sufficient guarantee for her breed. She is a black and tan terrier, and no law on earth can disqualify her as such. Judges may severely penalize her, but I don't believe any impartial critic will find fault with her winning, unless placed ahead of a dog that nearly equals her in all respects but the white. The "man that knows it all" will no doubt continue to find fault, but until judges are sufficiently expert to readily discover faking, it will simply induce dishonesty to make much ado about so nearly nothing as is Maiden's white spot.

To correct an error in your columns, I will call attention to your report of the Mexican hairless class at the New York show. Mr. Pierson, who judged this class, was placed in an unfair light. The report said that Me Too was placed equal with Chiquita last year, and that White Wings, who took third last year, was not considered nearly so good a specimen as Chiquita. The fact is, White Wings never met Chiquita in competition before this year. Chiquita was not exhibited in 1888 at the New York show, and Mr. Pierson did not judge the class that year. In 1887, at the New York show, Mr. Pierson placed Me Too and Chiquita equal first, but the dogs were not side by side in the ring. Me Too was locked in his cage. H. T. FOOTE, M.D.

GORDON SETTERS.

Editor Forest and Stream:

The sale of Beaumont, together with the absence of any communication from me during the latter part of the debate on this subject, have induced many to think that my interest in the breed has been dampened, and I have received letters from all parts asking me to reconsider; and it has been a source of pleasure to me to find so many who agree with my views, and although I do not take to myself the credit of renewing the interest in this dog, yet I heartily reciprocate the kindly expressions. And while at present other matters claim attention before my hobby, yet ere long I hope to find leisure to win a few more first prizes.

Now that Dr. J. H. Meyer, of New York, is the owner of champion Beaumont and he is advertised at stud, it will not be out of place for me to just say to my fellow admirers of this breed, that they should remember that the 63½ per cent. style of black and tans has already been tried in England and has been discarded. It became clear that, however beneficial the Irish cross was in improving the tan, the loss in other ways was greater than this gain; further, that the well-formed head, indicating intelligence and scenting powers, needed bone both for symmetry and for the proper and continued exercise of these qualities.

Gordon breeders need not take up the craze for dogs that will get over the greatest distance in half an hour or less; for some day sportsmen will realize that the pent up ambition of a young dog, let loose at a field trial, is a poor criterion of a dog's merit for a sportsman's companion.

I have wandered from my point and must revert to Beaumont and say that being an English as well as an American champion and being the sire of Bang V. and other noted dogs across the water, having a pedigree equal to any outside my kennel, on this, or the other side of the Atlantic, showing all the qualities that should be prized and none of the faults of his 63½ per cent. compeers, being an excellent and thoroughly trained field dog, right in type, character, outline, carriage, and without a prominent fault, can breeders expect to get a better opportunity of recovering or insuring a continuance of the qualities for which the Gordon was once famous?

Perhaps you will kindly mention in the right place that the black spaniel bitch Bridford Negress died on the first day of the New York show and as other dogs in my kennel were sick, none of them were exhibited. I have since been so unfortunate as to lose a litter of twelve Gordons by Beaumont, and I am afraid that many who had spoken to me of pups of this strain, will be disappointed.

I should also mention that the Sussex spaniel bitch Lady is now owned by Mr. W. I. Payne, who is taking a great interest in this breed. EDWIN H. MORRIS.

STAPLETON, N. Y., March 16.

WRONG ENTRIES AT ROCHESTER.

Editor Forest and Stream:

Will you please note that Metchley Surprise was not entitled to entry in the collie challenge class at Rochester, she having won but two first prizes at recognized shows prior to the date of closing the entries, March 6. The bitch Jakyr Dean was also improperly exhibited as a puppy, she being over 12 months of age. This collie has had various dates of birth. She appears in the A. K. C. S. B. as "Jaky Dean" (indexed "Jakey"), whelped March 9, 1887," was entered at Buffalo last fall as "Dean, whelped March 8, 1888," and turns up at New York this year as "Jakyr Dean, whelped March 18, 1888," which statement has been repeated ever since.

On seeing these errors in the Rochester prize list I communicated with Mr. Mitchell Harrison of the Chestnut Hill Kennels, suggesting that a withdrawal of the erroneous entries would probably be preferred by him to a protest from me and consequent disqualification. At that time I was not aware that Jakyr Dean was registered as whelped March 9 (1887 is, of course, a mistake, as Bendigo was not in this country in January, 1887, presumably the puppy's entry as a dog in the stud book is also an error), so my letter was confined to the Rochester entries only.

From Mr. Harrison's reply I quote as follows:

"All I have to say now is that I was under the impression that Jakyr Dean was born March 19, 1888. If I made a mistake it will be rectified. * * * In regard to Surprise not being in the challenge class, I think you will find the Rochester Kennel Club will uphold that win. At any rate, they accepted the entry when made."

Mr. Frank Smith, who was in charge of my dog, tells me he did his best to have a reserve number given for the specials awarded to Surprise, a request made both in my letter to him and a telegram sent to the show secretary. For some reason he could not understand he could get no action on this very reasonable request. The result is that as Metchley Surprise must be disqualified and all her wins are thrown out, the specials go with that decision and must now revert to the donors. Show authorities should always allow a request of this nature. If the protest is overruled, no harm is done, whereas if the protest is sustained and no "reserve" has been given, there is a muddle which cannot be righted after the show is closed. JAS. WATSON.

THE POINTER CLUB.

Editor Forest and Stream:

A meeting of the executive committee of the Pointer Club of America will be held at 12 o'clock Monday, April 8, at the offices of the American Kennel Club, No. 44 Broadway, New York. The object of the meeting is to investigate a charge of fraud made against Mr. B. F. Seitner, published in the FOREST AND STREAM newspaper; also to inquire how Mr. Seitner was enabled to enter dogs in the Philadelphia show of 1885, after the date fixed for the closing of entries, if such was the case. Also to ascertain how and when the letter of said Seitner to one B. F. Lewis, on which the charge of fraud was based, came into possession of the FOREST AND STREAM.

It is the intention of the committee to see that justice is done according to the evidence submitted, and it is but fair to ask a suspension of opinion until the full report is made by the committee. JOHN S. WISE, Pres.,
per GEO. W. LA RUE, Sec'y and Treas.

MARCH 21.

Mr. Chas. Heath, of Newark, N. J., has very generously authorized me to announce his willingness to subscribe one hundred dollars toward a purse to be competed for during the coming fall, in a field trial open to pointers owned by members of the Pointer Club of America. This is a move in the right direction, and the views as well as subscriptions of brother members are earnestly invited.

I would also like an expression from all members as to how the American Field Pointer Cup shall be competed for at coming bench shows. It would seem, from conversation held with several members, that it might be proper to allow competition by entries in the open classes, thus excluding "champions." These are matters on which discussion is invited, in order that all may be pleased and perfect harmony assured. GEO. W. LA RUE, Sec'y and Treas.

SALISBURY'S PEDIGREE.—Mr. Hugh Dalziel writes to an English paper as follows: "I fear I can throw very little light on the question of Salisbury's pedigree, but I can at least correct the crude supposition of your correspondent "A Mastiff Breeder." A little reflection would have shown that gentleman that had I received my information that Salisbury was by Monarch, from Mr. Mason, I would not have written of the dog as Carr's Leo, but as Mason's Salisbury. I made my first acquaintance with Salisbury when he was Mr. Carr's property, and named Leo, at one of the north country shows—Bingley or Keighley, I think—and my information as to his breeding I received from the late Mr. Carr, when attending the show as reporter for the *Field* and *Country*. The last time I remember to have seen Salisbury was at Dundee show, when Mr. Vero Shaw and I judged together. We differed as to the merits of Salisbury and Cardinal, I preferring the former, Mr. Shaw the brindle, and Mr. Rawdon B. Lee being called into the ring as umpire, decided in favor of Salisbury. On account of illness I have not followed the controversy closely, and don't clearly understand what the rumpus is about Salisbury's pedigree, nor do I even know who it is that challenges it. Mr. Mason and I have been friends for a great many years—a dozen at least—and knowing him well as I do, I am certain he is not the man to have a pedigree registered which he did not believe to be true. If anybody questions the pedigree of Salisbury, I want to know why that person did not challenge the pedigree sooner, seeing that it was given in full in the Kennel Club Stud Book for 1880, which implies that the registry was sent in in 1879 when the dog was two years old. Perhaps if "A Mastiff Breeder" will privately, or through your columns, point out to me what the real charge against the published pedigree of Salisbury is, I may by further research help to elucidate facts."

HARES AND COURSING.

MR. M. E. ALLISON, manager of the National Coursing Association of Hutchinson, Kansas, sends in to our Western representative the following additional correspondence upon the coursing question, which contains some points of great interest: "I was not quite ready to tell the public just what we would do this spring until the rabbit question was settled. Now I might say that question is settled. We cannot get the rabbits, and we shall have to postpone our spring meeting. We have enough to insure the meeting, but do not want to sacrifice them. They are now breeding, and there are probably 100 young ones from what I can see of them already in the park, and we do not want to disturb them. I will have 1,000 there by fall. We will probably have a few local match races soon for the purpose of further testing our plans and improvements. We shall experiment until we know our plans are perfect, and this fall hold a rousing meeting that will demonstrate that inclosed meeting is just the thing.

"Since writing you last I have had several letters from California. They have had several drives for our especial benefit, and while they succeeded in getting thousands of rabbits in the corrals, and in one case there were 4,428 killed, they failed to capture a single one alive and uninjured. I have now experimented one year in trying to capture rabbits alive, and have spent about $1,000, and I can safely say that I have not been able to get to exceed twenty-five good ones in that time. I am now convinced that the only way to stock up is to get a few and wait for them to breed. I would give $10 apiece for fifty good ones now, if I could get them in time to hold a spring meeting, as it will be a great disappointment to the Association and the public to know that the meeting is postponed. There was a match arranged between Lowe's White Lips and Luse's Dick's Darling, to come off on our grounds, for a large purse the last of this month, but Luse's bitch got crippled in a front foot and he could not run her. This would have been a grand race, as they are both imported dogs and perhaps the best pair of greyhounds to-day in America, with the odds considerably in favor of Dick's Darling. I think she is the fastest greyhound and the cleverest worker in America by all odds. She will be laid up for several months.

"Reno Belle will whelp about to-morrow, and I expect to get some of the best puppies I ever owned from this litter. They are by Trales; and let me tell you he is a heap better dog than we gave him credit for last fall. He was not in good form then. He is a much better dog in my opinion than Lord Neversettle. The latter is a fine looking dog, but he is too large to handle himself on rabbits. He will weigh almost 100lbs. He ought to make a good big-game dog.

"I see they have organized an Eastern coursing club. I had a letter from Mr. Watson inquiring about how to get jacks, but after my experience I could not give any encouragement. If we are successful in breeding we will be able to furnish them all they want in a year or two, but they will have to pay a good price for them. Dr. Van Hummel told Mr. Huntington they could get all they wanted here for fifty cents apiece. I have advertised all over this country to buy all the young ones I can get this spring and summer. They can probably get the English hare in the East, but I don't believe they are as good for coursing as the western jack. I have bought some young ones already, and expect to get several hundred this sumuer. Some of them are half grown. "M. E. ALLISON."

CENTRAL FIELD TRIAL CLUB.

Editor Forest and Stream:

The Central Field Trial Club will hold their first meeting at Lexington, North Carolina, December 2, 1889, or immediately after the Eastern Field Trials Club have finished their running. The club is in receipt of so many inquiries for information as to rules, etc., that the writer is unable to answer each in detail, hence would like to state through your valued paper, that we are hard at work on the rules and expect to have them completed during the next four weeks, when a copy, together with a full advertisement of our stakes, will be sent to each of the sporting papers for publication. The names of applicants for information are placed on file and a copy of the rules will be mailed them at the earliest moment possible.

For the information of all concerned, state that we will run a setter Derby, also a pointer Derby with first, second and third places in each. The winners will be known as the winners of the first, second and third in the setter Derby, and first, second and third in the pointer Derby, respectively. The two first winners will be compelled to run a heat together and the winner of this heat will be known as the Derby winner and receive an additional stake, which from present indications will make its winning worth about $1,000.

We will also run an all-aged setter stake and an all-aged pointer stake with first, second and third places in each stake. The exact amount of each stake has not yet been fully determined, but none of them will be less than that now offered by the Eastern Field Trials Club, and the aggregate amount, including specials, will not be less than $3,000.

We have received several offers of specials for the winner of the setter Derby, pointer Derby and Derby winner, but as all except the latter were accompanied by conditions, the club has deemed it best not to accept any except the one offered without any other condition than that it should go to the Derby winner.

We hope to be able to offer a breeder's cup for the winner of the setter Derby; also a like cup for the winner of the pointer Derby. The club hopes that the pointer Derby will commend itself to all pointer breeders and that they will show their appreciation by sending a very large number of starters to the trial. The setter breeders have always been stout-hearted and ready to give battle, hence we feel that the only appeal necessary to insure their support is to conduct our trials in such a manner as to insure the best dog (barring its being off or out of condition) being placed at the top.

We assure all that nothing money, experience, competent judges and fair play can do, will be left undone to make our trials an absolute success and render satisfaction to all.

With your kind permission we will, during the next two weeks, send you for publication an outline of our running rules. CENTRAL FIELD TRIAL CLUB,
C. H. Odell, Sec'y pro tem.

MILLS BUILDING, New York.

FOX-TERRIERS AT NEW YORK.—*Editor Forest and Stream:* The reason why I did not call attention to the unjust decision in favor of the Messrs. Rutherfurd's seedy-looking team of fox-terriers at the New York show was this: It was ten thousand dollars to a cent on Mr. Thayer's kennel for this prize; in fact, it did not seem possible for a man who had ever seen a terrier to place the prize elsewhere. I never looked to see if the judge had put down wrong numbers by mistake; and "Belvoir's" letter was the first intimation I received of this very queer business. I had so little faith in his statement that it was not until I had seen a well-known fox-terrier breeder, who was present while the judging was being done, that I could be convinced that the award had actually been made. "Belvoir" says I have never allowed "so unjust an award to go on record without a line of disapproval behind it." If I had believed it possible that a man of even Mr. Belmont's limited experience with dogs could have made such a decision, I would have looked over the numbers; and the records of this journal would now contain the severest criticism ever written on dog show judging.—THE WRITER OF THE FOX-TERRIER REPORT.

PHILADELPHIA DOG SHOW.

THE premium list has made its appearance bearing the deerhound imprint of the club of the Quaker City. We were promised something good there this year, but only half of the strong points were told beforehand. The cash prizes are liberal, but it is in the splendid list of specials that Philadelphia takes rank as the banner show of 1889. The newspapers of that city have each donated silver cups, and the best known business firms also appear in the list. The distribution of these specials has been admirably done, no breed being without one and the more important having two or more.

Entries close on April 6, and the superintendent requests us to draw particular attention to the notice printed in the premium list regarding the space at his disposal. Horticultural Hall is likely to accommodate about 400 dogs, the exact size has not yet been ascertained, and if the number entered exceeds the accommodation the local entries and those from outside will be accepted in the order of their receipt by the club. The prospects are that the local entries will exceed 200 dogs, and it is said that there will be at least 80 spaniels on exhibition. If that is so, then space will be at a premium before all are accommodated. The list of judges was given last week.

DOG TALK.

THE tax upon dogs in France brings into the coffers of the State an annual revenue of something over seven million francs, or little short of one and a half million dollars. The total number of dogs taxed is given at 2,690,209 for the year 1885, the latest official returns published. Of these 688,407 are classed in the first class as dogs kept for pleasure or for sport, and 2,001,802 of the second class, comprising watch dogs, shepherd's dogs, guides of the blind, turnspits, etc., in fact all dogs that have to toil for a livelihood. During 1887 and 1888 the tax is said to have reached eight million francs. The rate ranges from forty cents to a dollar in the several departments, with a general average of sixty cents. In England there is a uniform tax of 7s. 6d. per dog ($1.80).

We are informed that the Central Canada Exhibition Association was petitioned by F. H. F. Mercer, W. B. A. Hill and others to hold a bench show of dogs in connection with their annual fair, to be held at Ottawa in September next, and it was virtually decided that their request would be granted. Before dates could be claimed, however, those of the London Kennel Club were published and proved to be identically the dates on which the Ottawa show would have to have been held. Under the circumstances it was deemed inadvisable to hold a show in Ottawa. It is, we learn, probable that a show will be held in the Canadian capital later on in the year, when it is hoped its promoters will receive liberal encouragement in the way of entries from our crack kennels.

The announcement of the Central Field Trial Club, in another column, will be read with interest by pointer and setter breeders. The organization of the club is not yet perfected, but a meeting will soon be held and everything arranged. The club will undoubtedly be a success and obtain the hearty support of the public. The inaugural meeting will be held at Lexington, N. C., Dec. 2. The locality selected is some 15 miles south of High Point, and is well adapted for the holding of a field trial. Entries for the Derby will close May 15. Application for blanks should be made to the secretary *pro tem.*, Col. C. H. Odell, Mills Building, New York. We hope to be able to publish full particulars next week.

There will be a dog show at Omaha, Neb., April 16 to 19. One of the attractions of the show will be that "puppies will be sold (all kinds) at a discount of ten per cent." The week will be a lively one in Omaha, as in addition to the dog show there will be a big shooting tournament on the same dates, all to wind up on Saturday with a great fox and wolf hunt, to which visitors are pathetically entreated to bring a fox if they have one.

There was a nice little dog show at Charleston, S. C., last week in connection with the inaugural exhibition of the South Carolina Pet and Poultry Association. Over 60 dogs were shown. Mr. J. F. Rackham of East Orange, N. J., judged all classes.

Mr. E. B. Sears, of Melrose, Mass., is in hard luck. His recently imported St. Bernard bitch Lady Aveline is dead from pneumonia, and the fine litter of fifteen from Lady Wellington by Pinlimmon, Jr., have also all died.

Entries for the Eastern Field Trial Club Derby will close May 1. The address of the secretary is W. A. Coster, Saratoga Springs, N. Y.

A dispatch from Worcester states that the date for the closing of entries for the Worcester dog show has been extended to April 2.

Dr. Wm. Jarvis, of Claremont, N. H., has imported an Irish setter bitch from the kennel of Mr. Henry I. Gogarty, Dublin, Ireland.

Boston has 699 entries, quite a falling off from last year, but still enough to make a first-class show. Mr. J. H. Winslow will judge pointers, in place of Mr. Peshall, who is in Mexico.

We are advised that Lynn has 246 entries, and that the quality is excellent.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Romp and Rowett. By Blue Ridge Beagle Kennels, Denver, S. C., for white, black and tan beagle dogs, whelped Oct. 17, 1888, by Dan (Jack—Cromwell's Music) out of Weasel (Thom, A.K.R. 6777—Stribling's Music).

Boston. By Blue Ridge Beagle Kennels, Denver, S. C., for white, black and tan beagle dog, whelped Aug. 11, 1888, by Joe (Riot—Skip) out of Pansy (imported Ringwood—Fairy).

Beauty and Beulah. By Blue Ridge Beagle Kennels, Denver, S. C., for white, black and tan beagle bitches, whelped Aug. 8, 1888, by Banker (champion Rattler—imported Actress) out of Dolly (Riot—Skip).

Frisky. By Blue Ridge Beagle Kennels, Denver, S. C., for white, black and tan beagle bitch, whelped June, 1888, by Thom (A.K.R. 6777) out of Music (Dandy—Beauty).

Miss Nan. By Robt. H. Good, Philadelphia, Pa., for lemon and white pointer bitch, whelped May 2, 1888, by Rapid Don (Vandevort's Don—Nellie Bird) out of Lady Davidson (Duane's Hamlet—Kate IV.).

The Rock and The Rye. By Dr. W. A. Strother, Lynchburg, Va., for black, white and tan English setter dog and bitch, whelped Nov. 5, 1888, by Rebel, Jr. (Roderigo—Bo Peep) out of Rhea (Dashing Rover—Leah). (Date of birth was wrongly given last week.)

Nebo and Lady Nebo. By Mt. Waite Kennels, South Framingham, Mass., for black cocker spaniel dog and bitch, whelped Feb. 8, 1889, by Sancho G. (A.K.R. 6506) out of Frantic (A.K.R. 6281).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Juno—Sears' Monarch. W. A. Power's (Greenwood, Mass.) mastiff bitch Juno to E. B. Sears's Sears' Monarch (Lord Raglan—Dido), Jan. 2.

Bess—Sears' Monarch. F. L. Conant's (Lewiston, Me.) mastiff bitch Bess to E. B. Sears's Sears' Monarch (Lord Raglan—Dido), Jan. 19.

Una—Sears' Monarch. Geo. Whorf's (Medford, Mass.) mastiff bitch Una to E. B. Sears's Sears' Monarch (Lord Raglan—Dido), Jan. 7.

Countess of Dunsmore—Sears' Monarch. E. B. Sears's (Melrose, Mass.) mastiff bitch Countess of Dunsmore (champion Beaufort—Holda) to his Sears' Monarch (Lord Raglan—Dido), Jan. 14.

Royal Cute—Duke of Vernon. L. Gardner's (Mt. Vernon, N. Y.) pointer bitch Royal Cute (Duke Royal—Gala Day) to his Duke of Vernon (Glendale—Spotless), March 4.

Lady Wellington—Pinlimmon, Jr. E. B. Sears's (Melrose, Mass.) rough St. Bernard bitch Lady Wellington (Duke of Wellington—Henly Juno) to his Pinlimmon, Jr. (champion Pinlimmon—Princess Beatrice), Jan. 13.

Mora—Hector. E. B. Sears's (Melrose, Mass.) smooth St. Bernard bitch Mora (Webb's Rex—Nellie) to J. H. Long's Hector (Otto—Lulu), Jan. 10.

Dinah—Clan Warwick. Dr. Quinn's (St. Paul, Minn.) English setter bitch Dinah to The Elms Kennels' Clan Warwick (Phil Warwick—Lassie Bondhu), March 12.

Nora—Paul Gladstone. Field Trial Kennels' (Charlottesville, Va.) English setter bitch Nora (Banks—Marchioness) to S. L. Bogg's Paul Gladstone (Gladstone—Lavellette), March 11.

Belle of Piedmont—Roderigo. Field Trial Kennels' (Charlottesville, Va.) English setter bitch Belle of Piedmont to Memphis & Avent Kennels' Roderigo, March 4.

Woodland Queen—Obo II. Jas. Luckwell's (Woodstock, Ont.) cocker spaniel bitch Woodland Queen (Tippo—Woodstock Queen) to J. P. Willey's champion Obo II., March 11.

Lady Stanley—Black Duke. Geo. Douglas's (Woodstock, Ont.) cocker spaniel bitch Lady Stanley (Robin Red—Fretyie) to Jas. Luckwell's Black Duke (champion Obo II.—Woodland Queen), March 10.

Bonnibel—Jerry. W. T. Payne's (New York) cocker spaniel bitch Bonnibel (Wallace II.—Suzette) to Dr. Beck's Jerry (Othello, A.K.R. 1982), March 10.

Loro—Prince. Mr. Damond's (South Framingham, Mass.) cocker spaniel bitch Loro (A.K.R. 6500) to Mt. Waite Kennels' Prince, March 20.

Senora—Giffee. A. Laidlaw's (Woodstock, Ont.) cocker spaniel bitch Senora (Robin—Devonshire Beauty) to his Giffee (Zeo—Nina), Jan. 23.

Pet Obo—Sancho G. B. F. Manson's (South Framingham, Mass.) cocker spaniel bitch Pet Obo (Shadie—Edith) to Mt. Waite Kennels' Sancho G. (Obo II.—Dido), March 16.

Fancy—Glencairn. A. Laidlaw's (Woodstock, Ont.) field spaniel bitch Fancy (imported Toronto Beau—Gyp) to Oldham & Willey's imported Glencairn (Bracken—Belle), March 26.

Meersbrook Maiden—Buffalo General. H. T. Foote's (New York) black and tan terrier bitch Meersbrook Maiden (Meersbrook Chance—Meersbrook Empress) to A. W. Smith's Buffalo General (Halifax General—Lady Lottie), March 22.

Gipsey Queen—Buffalo General. A. W. Smith's (Buffalo, N. Y.) black and tan terrier bitch Gipsey Queen (Vortigern—Fortune) to his Buffalo General (Halifax General—Lady Lottie), March 23.

Floss—Toons Royal. Chas. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Floss (Dreadnaught—Maggie) to his Toons Royal (Kavanagh's champion Dreadnaught—Hamilton's Tricksy), March 18.

Polly—Toons Royal. Chas. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Polly (Sir Star—Minnie) to his Toons Royal (Kavanagh's champion Dreadnaught—Hamilton's Tricksy), March 17.

Little Sister—Toons Royal. Chas. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Little Sister (Roy—Flora) to his Toons Royal (Kavanagh's champion Dreadnaught—Hamilton's Tricksy), March 10.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Dinah. Blue Ridge Beagle Kennels' (Denver, S. C.) beagle bitch Dinah (Thom, A.K.R. 6777—Lucy Hinton), Feb. 23, five (two dogs), by J. W. Stribling's Thom (A.K.R. 5711).

Blanch McGregor—Prince Charlie. Oak Shade Kennels' (Lee, Mass.) collie bitch Blanch McGregor (Clipper, A.K.R. 2529—Nellie McGregor), March 8, one bitch, by Jas. Watson's Prince Charlie (Sefton—Mavis).

Una. Geo. Whorf's (Medford, Mass.) mastiff bitch Una, March 10, seven dogs, by E. B. Sears's Sears' Monarch (Lord Raglan—Dido).

Fleet. Vernon Kennels' (Mt. Vernon, N. Y.) pointer bitch Fleet (Don Dell—Countess L.), March 17, eight (four dogs), by L. Gardner's Duke of Vernon (Glendale—Spotless).

Mora. Essex Kennels' (Andover, Mass.) St. Bernard bitch Mora (A.K.R. 6148), March 24, twelve (seven dogs), by their Essex (A.K.R. 931).

Lady Wellington. E. B. Sears's (Melrose, Mass.) rough St. Bernard bitch Lady Wellington (Duke of Wellington—Henly Juno), March 14, fifteen (six dogs), by his Pinlimmon, Jr. (champion Pinlimmon—Princess Beatrice); all since dead.

Mildred. Field Trial Kennels' (Charlottesville, Va.) English setter bitch Mildred (Dashing Rover—Muriel), March 13, nine (three dogs), by O. W. Donner's Roi d'Or.

Brownie. Mt. Waite Kennels' (South Framingham, Mass.) cocker spaniel bitch Brownie (Capt. Stubbs—Flossie C.), March 18, eight (five dogs), by their Sancho G. (A.K.R. 6506).

Judic. Jas. Bronsdon's (Milton, Mass.) cocker spaniel bitch Judic (champion Black Pete—Fannie Obo). March 14, seven (four dogs), by Mt. Waite Kennels' Sancho G. (A.K.R. 6506).

Bacchante. H. P. Thompson's (Toronto, Ont.) fox-terrier bitch Bacchante (Bacchanal—Venatrix), March 16, three (one dog), by his Vakeel II. (Vakeel—Venatrix).

Lady. Fred Noble's (Pawtucket, R. I.) Yorkshire terrier bitch Lady (Banks's Royal—Lady), March 10, three dogs, by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Knight of Elms. Liver pointer dog, whelped Dec. 21, 1887, by Sport out of Lady Queen), by The Elms Kennels, Forest Lake, Minn., to M. J. Flynn, Taylor's Falls, Minn.

Rex of Elms. Pointer dog, whelped Dec. 21, 1887, by Sport out of Lady Queen, by The Elms Kennels, Forest Lake, Minn., to Louis Keller, St. Paul, Minn.

Dora. Liver and white pointer bitch, whelped May 15, 1884, by Bang Bang out of champion Rose, by W. T. Payne, New York, to E. R. Bellman, Madison, N. J.

Belle of Bangs. White and black pointer bitch, whelped Feb. 22, 1888, by Bang Bang out of Miss Merrimack, by L. Gardner, Mt. Vernon, N. Y., to Vernon Kennels, same place.

Victor B. Black cocker spaniel dog, whelped Nov. 13, 1887, by Black Pete out of Vida, by F. Bollett, Brooklyn, N. Y., to E. H. Lavery, Waterford, N. Y.

Jeto. Black cocker spaniel dog, whelped Nov. 13, 1887, by Black Pete out of Vida, by F. Bollett, Brooklyn, N. Y., to E. L. Stanton, New York.

Black Pete II. Black cocker spaniel dog, whelped Oct. 26, 1886 (A.K.R. 5682), by A. Laidlaw, Woodstock, Ont., to J. A. Spracklin, same place.

Master Shina—Muggins whelp. Liver cocker spaniel dog, whelped Aug. 11, 1888, by A. Laidlaw, Woodstock, Ont., to Fred G. Cox, Toronto, Ont.

Blackbird and Grouse. Black and light red cocker spaniel dogs, whelped Oct. 5, 1888, by Robin out of Devon Beauty, by A. Laidlaw, Woodstock, Ont., to J. S. Allan, Montreal, Can.

Carlo. Black cocker spaniel dog, whelped Sept. 15, 1888, by Robin out of Woodstock Ada, by A. Laidlaw, Woodstock, Ont., to H. W. Laird, Port Hope, Ont.

Veva. Black cocker spaniel bitch, whelped March 22, 1888, by Master Shina out of Dido, by A. Laidlaw, Woodstock, Ont., to H. W. Laird, Port Hope, Ont.

Devon Beauty. Liver and tan cocker spaniel bitch, whelped November, 1884, by Lad o' Devon out of Dinah, by A. Laidlaw, Woodstock, Ont., to J. A. Spracklin, same place.

Romeo Blue. Black cocker spaniel dog, whelped Sept. 7, 1888, by Robin out of Woodstock Nellie, by A. Laidlaw, Woodstock, Ont., to Black Cocker Kennels, Indianapolis, Ind.

Queen. Black cocker spaniel bitch, whelped July 4, 1888, by Master Shina out of Belle, by A. Laidlaw, Woodstock, Ont., to B. J. Roe, same place.

Young Tippo and Chloe. Black cocker spaniel dog and bitch, whelped Sept. 7, 1888, by Robin out of Woodstock Nellie, by A. Laidlaw, Woodstock, Ont., to H. W. Laird, Port Hope, Ont.

Ben. Black cocker spaniel dog, whelped November, 1887, by Master Shina out of Gipsy II., by A. Laidlaw, Woodstock, Ont., to Mr. Stewart, Philadelphia, Pa.

Red Rover—Woodstock Ruby whelp. Black cocker spaniel dog, whelped Dec. 16, 1888, by A. Laidlaw, Woodstock, Ont., to R. G. Sawtell, same place.

Lad o' Devon—Banting's Bitch whelp. Black cocker spaniel dog, whelped Oct. 14, 1888, by A. Laidlaw, Woodstock, Ont., to R. McEwen, Byron, Ont.

Guess. Liver and tan field spaniel dog, age and pedigree not given, by A. Laidlaw, Woodstock, Ont., to D. M. Baninger, Philadelphia, Pa.

Nil Desperandum. Black field spaniel dog, whelped Nov. 13, 1887, by Black Pete out of Vida, by F. Bollett, Brooklyn, N. Y., to R. C. Cornell, New York.

Newton Abbot Skipper—Bonnibel whelps. Black field spaniel bitches, whelped Aug. 7, 1888, by W. T. Payne, New York, one each to Mr. Burnham, same place, and Jesse B. Riggs, Princeton, N. J.

PRESENTATIONS.

Pearler—Nattia whelp. Black cocker spaniel dog, whelped Feb. 3, 1889, by Mt. Waite Kennels, South Framingham, Mass., to H. C. Bronsdon, Boston, Mass.

Sancho G.—Frantic whelp. Black cocker spaniel dog, whelped Feb. 6, 1889, by Mt. Waite Kennels, South Framingham, Mass., to H. C. Bronsdon, Boston, Mass.

DEATHS.

Lady Aveline. Orange tawny St. Bernard bitch, whelped March 1, 1888 (Nero III.—Bena), owned by E. B. Sears, Melrose, Mass., from pneumonia.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

INQUIRER, Frostburg, Md.—Please let me know through the columns of your valuable paper how long after a bitch first shows signs of coming in heat should the dog be put to her for best results. Ans. About seven days after the first symptoms.

W. E. B., South Dakota.—I have a setter dog about one year old, and the hair has been falling off for three months. Can you send me a receipt of something to stop it? It is not the usual spring shedding. Ans. Give five drops of Fowler's solution of arsenic night and morning for three weeks, and stop for ten days and then begin again. Give the medicine in the food.

S. B. C., Jersey City.—A Newfoundland puppy, 4 months old, is troubled with mange. I have used a lotion mentioned in a former issue of your paper (quicklime, sulphur and water), and have also used Fowler's arsenic, but the puppy does not seem to get any better. He eats well and to all appearances is all right. I have fed him, so far, on rice pudding and a mush made of Indian meal, but as yet I have given him no meat. There are two spots on his back, each of them nearly as big as a small saucer, and the hair on his face seems to be coming out in spots. Ans. Keep his bowels regular with one teaspoon of syrup of buckthorn every morning. Give 3 drops of the arsenic night and morning in the food, and use the following ointment once daily, first washing with castile soap and warm water and then drying. Rub the ointment gently into the skin:

R Ung. zinc oxid	ʒ iss
Ung. diachylon	ʒ ss

Mix. External.

J. R., Almonte, N. Y.—An explanation of the following would greatly oblige: I have a hound, 3 years old. A year ago last winter he had distemper (severe), recovered, but when he gets up after lying down he will shake his head for three or four minutes at a time, as though there was something in his ears; but there is nothing wrong with ears that I can see (evidently not canker). What is the cause, and how can it be cured? Last fall he did not shake his head at all. It was only after coming from the bush and getting into decent condition again that he commenced again. Ans. You had better go on the supposition that it is canker. Wash the ears out as well as you can, and drop a little of the following into them night and morning:

R Bromo chloral	ʒ i
Tr. opii	ʒ i
Aq. qs. ad	ʒ ii

Mix. External.

A. T. D., Camden.—I have an Irish setter bitch, fourteen months old, a nice, healthy animal. Had distemper last summer and recovered nicely. I sent her South to be broken last October. Previously to sending her down I took her out in the country and would shoot down small birds before her; she did not at all shy but seemed to take pleasure in it. I have no reason to think that the man to whom I sent her treated her harshly. She works beautifully on quail, is staunch, a good nose and a good ranger; if you throw a quail out she retrieves it proudly, and carries it any distance without ruffling a feather, but when you pick up a gun she becomes timid, and either tries to get away or crouches at your feet. Ans. She seems gun shy. You can only cure this by care and patience. Get her used to the gun first, and then begin by firing light charges, gradually increasing them. Give ten drops of tincture of nux vomica night and morning in a little water.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. B. S.—See our angling columns for Pennsylvania season.

T. G. B. & SONS, New York.—We cannot give you the required information.

VAN, Urbana, O.—Can a dog without a pedigree win at a bench show? Ans. Yes.

T. E. L., Bristol, Pa.—An advertisement of your Sharps rifle would probably bring you a purchaser.

W. J. G., Philadelphia, Pa.—Little has been done by the yacht clubs, but the matter has been taken in hand by the Legislatures of several States with a view toward organizing State naval reserves.

SUBSCRIBER, Albany, N. Y.—A dog winning first prize in a bad class may not be as good as one winning a commended card in a good class. In neither case would the win prove that the animal was a "show dog."

J. S. F., Jasper, Ala.—A, B and C shoot a sweepstakes match under National Gun Club rules at 4 single bluerocks each, with first and second moneys. A and B score 4 each and C 1. To decide the tie between A and B they shoot "miss and out" and A shoots B out. Who get first and second moneys? Ans. A takes first money and C second money. Under the rules of class shooting A and B have no interest whatever in second money.

R. W., Philadelphia.—I have imported several hundred edible frogs. To my disappointment I find that the little captives seem to eat nothing of whatever I have put before them. They have lived now for over five weeks apparently without any substantial food. I have tried to feed them on different kinds of fresh raw meat, different green vegetables, some malt husks (brewers' mash), bread, crackers and insects. Some we keep in large wicker baskets, with green moss and sufficient fresh water; others in a wooden tub with a few inches of water. Ans. Frogs hibernate in the winter and eat nothing from about October to April, varying, of course, with the climate. They cannot be reared in baskets, but must be placed in a pond or shallow ditch, where they can obtain insects, such as larvæ of the dragon fly, grasshoppers, flies, beetles, etc. There is no work on frog culture known to us.

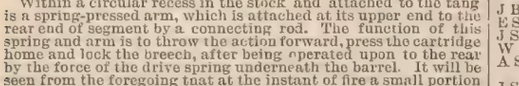
J. L. V., Tarrytown, N. Y.—East of this village we have several good trout brooks. The Mill Stream is the largest and considered the best and for several years back parties living near this stream have been in the habit of drawing or setting nets, more particularly in the vicinity of the County House at East Tarrytown. As I understand it the law is very plain on this subject. We find that parties living over there are owners of these nets and at times of the day when anglers are absent from the stream set the nets. It is almost impossible to catch them at it, most of us anglers are known to them. We have had published in our weekly paper and in circular form the laws governing this subject, but to no purpose; and our game constables are of little good, taking no interest in the matter at all. What is to be done? Ans. Write to Chief Fish and Game Protector Drew, Albany, N. Y., give him all the information you can and ask him to put the district protector on the case.

FUR, FIN AND FEATHER, Queensboro.—1. Has the natural history of the sea otter ever been published yet? Where can I get it? Chas. Hallock says in "Our New Alaska" that its fur is valued at from $90 to $200. Is this its value in the Alaska or New York market? 3. What is the value of the Canadian otter in New York? 4. Can raw fur be sent to the United States free of duty? Ans. 1. The only satisfactory account of the sea otter is by Henry W. Elliott, in Section V., Volume 2 of the Fishery Industries of the United States, just published by the U. S. Fish Commission. 2. The natives in Alaska receive the following prices for sea otter skins: Pups $1 to $10, ordinary $40, prime $75, extra prime $150. The highest authentic price paid for the skin of a sea otter was $650 received at one of the annual sales of the Hudson's Bay Company in London. The value in New York is $75 to $150, according to beauty. 3. Canadian otter in New York market $12 for average skins of prime quality. 4. Raw furs are admitted free of duty.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SELF-LOADING SMALL ARMS.



CHICAGO, March 3.—*Editor Forest and Stream:* While on a recent pilgrimage in the interests of the trade up in Wisconsin, I incidentally learned that in a little backwoods town adjacent to the pine forests, which are even yet inhabited by many of the larger game animals, as bear, deer, etc., was to be found a novelty in the shape of a gun.

Now, if there is anything dearer to a sportsman's heart than a good spot to spend his annual vacation it is a gun—a good gun. That a new gun could emanate from a locality where the practical use of guns is the rule seemed possible; but as we are accustomed to look to the Nutmeg State for the superior articles of that kind, it appeared to your correspondent highly impropable that one of the latter kind could be found up there in the woods. Upon inquiry it was learned that the little city of Neillsville was the home of the man who was known as the "gun man," "gun crank," "doctor gun," "a son of a gun," and other pleasant cognomens of a like nature. Dr. H. A. Pitcher, the gentleman referred to, is the inventor of what he terms an automatic repeating rifle. Trusting the following description will prove interesting to your many readers, I take the liberty of inclosing it, and will add that the Doctor has a gun now built which performs all he claims for it, as the many who have been favored by seeing it shoot can testify.

The principle upon which the power is obtained was intimated to the inventor many years ago by the manner in which the old cap lock would throw the hammer cocked by the escape of gas through the tube, and which first suggested the possibility of this power being utilized for the purpose of replacing a cartridge. This has been accomplished, and the gun which loads itself is an established fact. The gun now made is a rifle, and uses the Bullard .38-45 cartridge. It has a barrel and magazine 26in. long. The magazine is on top, the drive tube underneath the barrel. Within the drive tube is a cylinder in which is placed a moderately tight-fitting piston. Behind the piston is a small hole or vent extending through and communicating with the bore of the barrel. At the front end of the piston within the drive tube is a spiral spring. A drive rod passing backward into the lock is attached to the front end of the piston. The drive rod when carried forward to its fullest extent engages with a tumbler, which is pivoted within the front end of the curved piece underneath the breech bolt and which is called the segment.

Within a circular recess in the stock and attached to the tang is a spring-pressed arm, which is attached at its upper end to the rear end of segment by a connecting rod. The function of this spring and arm is to throw the action forward, press the cartridge home and lock the breech, after being operated upon to the rear by the force of the drive spring underneath the barrel. It will be seen from the foregoing that at the instant of fire a small portion of gas passes through the vent into the cylinder at the rear of the piston, throws the piston and drive rod forward and compresses the drive spring, which instantly re-acts together with the drive rod which engages the tumbler, presses the segment and bolt to the rear until the tumbler reaches the rear end of the friction slide, when it slips off. The spring and arm in the rear then press the segment and bolt forward again, carrying the cartridge in front, lock the bolt and release the firing pin and trigger, and the gun may be again fired.

The gun is first loaded by grasping the lug or finger knob which passes through and works in a curved slot in the right hand side plate so that the gun may be used as an ordinary repeater, *i. e.*, by shutting off the vent, which is accomplished as follows: A screw is fixed into the frame at right angles across the vent, a hole is drilled through the screw to correspond with the vent. A short arm is formed upon the head of the screw and points to an indexed circle upon the outside of frame. At one extreme of the indexed portion is the letter *O*, open, at the opposite extreme the letter *C*, closed, so that, as before stated, the gun may be used

automatically or otherwise, as desired, by simply turning the valve screw with the thumb. A pin or screw is placed at each extreme of the indexed portion to prevent the valve being turned further than is necessary, so that no harm is done in either case. The cartridges are fed in from the magazine at the top, the last cartridge lying directly upon the breech bolt and between the transfers or carriers, and is driven downward and held in a path to the barrel in a way not easily explained. The exploded shell is thrown through a slot in the left hand side plate. The advantage of thus disposing of the shells is obvious in an arm of this kind and avoids the projection of the shell upward in front of the eye when sighting.

The supposed awkwardness of the magazine on top of the barrel is more than offset by the ease with which the sights are lined with the eye and the lessened drop consequently required in the stock. This is a feature commended by all sportsmen who have seen the gun. Perhaps the two points of greatest interest, and briefly stated as follows, are those of safety and manner of handling to avoid firing more than one shot. That the gun as now made has all the elements of safety to as great and perhaps a greater degree than in any firearm yet made will I think be admitted upon a careful study of the manner in which the firing pin and sear are operated. That the sportsman who gets rattled will fire this gun more times than is desired is quite probable, but he will soon learn that but one quick distinct pull is sufficient for one shot.

To answer all the queries which will occur to the reader in this article is quite impossible. I will, however, concisely state a few of them. The explosion don't load the gun, but imparts the requisite power to the drive spring which does. The peculiar form of the piston is not fully explained here. Suffice it to say powder crusts do not form to any considerable extent, and the gun has been fired one hundred times without cleaning the piston part of it. The gun which is a first gun is necessarily crude, but is capable of better finish and proportions. The principle is equally well adapted to a shot as a rifle. Nitro powders have been used to considerable extent. The ultimate practical value of the gun is largely at this time a matter of conjecture. It will occur to the mind of the reader, however, the possibilities of getting "doubles," and in bird shooting of getting away with the whole flock. In certain branches of military service it will undoubtedly find a place. The doctor is to be congratulated for the perseverance which he has exhibited and success he has achieved, after two years of patient experimenting. C. H. G.

WILMINGTON, Del., March 19.—The charming weather this afternoon was a great inducement to spend a half day in the open air, and the adopted riflemen who gathered at Healdmoor Rifle Range for their regular weekly sport found the day was all that could be desired for rifle shooting, and in spite of a southeast wind, which at times was a little troublesome, the scores were very good. There was general raising of individual records all along the line. H. Darlington especially making a fine jump on his revolver record. The scores are as follows, standard American target:

Revolver Match, 50yds., Smith & Wesson, .32-44.

H Darlington	10	9	7	10	9	8	8	8	10	10—89
E J Darlington	7	8	10	10	10	8	7	7	10	6—83
J P Taylor	6	7	5	8	8	9	9	6	8	8—89
H Simpson	9	7	7	5	9	4	6	5	8	6—66

W S Darlington	7	10	10	6	5	6	8	8	9	10—80

OWENSVILLE, Ind., March 9.—The Owensville Ballard rifle team made the following scores to-day, wind two points from 9 o'clock and variable, standard targets, 200yds. off-hand, National rules, gold medal. J. Montgomery won gold medal.

J Montgomery	10	5	10	9	7	9	4	5	7	6—72
W Gentry	7	8	7	5	10	7	6	5	7	8—70
W Roberts	9	6	8	9	9	5	9	6	9	8—69
J Daugherty	10	6	4	3	4	7	7	6	7	9—63
P Stone	4	5	4	5	8	5	10	5	5	4—55

BOSTON, March 23.—The pleasant weather brought out a large crowd of rifle shooters to-day at the Massachusetts rifle range, and all of the matches were well patronized, some good scores being made, especially by Messrs. Munroe and Fellows. The wind was light from 7 to 9 o'clock, Mr. Davis won the gold medal in the 20-shot rest match and Mr. Leo won the champion gold medal. Following are the best scores finished to-day:

20 shot Rest Match.

C H Davis	12	11	8	12	12	8	12	10	10	10
	8	9	9	10	0	11	9	12	11	10—203

500yds. Military Match.

S P Ringfield	5545455445—46

SAN FRANCISCO, March 17.—Despite the threatening aspect of the weather, a large number of target shooters assembled at the Shell Mound shooting range to-day, and from their comfortable shelter rained lead at the defenseless targets all day long. Several important shoots were held, notably the one between C. Carr's and J. E. Klein's teams of crack pistol shots. This match was shot at 50yds., 20 shots to the man, at an American field target, and though no trophy was represented the result was eagerly looked for by admirers of this kind of sport. Each team consisted of five of San Francisco's best shots. The result was as follows. First team, C. Carr captain:

C Carr	7	6	10	10	7	7	10	9	10	9
	9	8	7	10	10	10	10	8	10	8—175
Col Brown	10	4	8	9	10	9	6	9	9	7
	9	7	9	5	10	9	7	7	8	6—158
J Short	8	7	9	5	8	4	7	5	5	10
	8	4	10	10	8	9	6	6	9	8—146
P D Linville	10	6	7	10	10	8	8	8	8	8
	8	9	8	6	9	9	9	7	7	6—161
H Carr	9	9	8	10	8	7	8	8	7	9
	9	6	6	7	9	7	9	10	7	10—163—803

Second team, J. E. Klein, captain:

J E Klein	10	7	8	10	9	6	9	10	8	10
	10	8	10	8	8	8	8	9	6	10—172
S Carr	7	9	7	10	9	9	9	9	10	10

The Bay City Rifle Club team, numbering 10 men, who won the gold medal from a team composed of United States Army riflemen in September last, held a shoot to-day to decide the perpetual ownership of the trophy. The match was shot under the National Rifle Association rules, guns under 10lbs., 3lb. pull, 200yds., and resulted in a victory for Edward Hovey, with 240 points out of a possible 360. Following are the three best scores:

Hovey	7	9	8	6	7	6	7	6	7	10
	10	8	8	10	9	8	9	6	7	8
	7	9	9	8	9	10	10	10	7	7—240

	8	8	7	8	10	9	6	8	6	9—229
Klein	6	10	10	7	6	9	7	6	9	8
	9	6	8	6	6	8	7	8	7	7
	9	7	8	8	7	8	9	8	10	8—229

ST. LOUIS, Mo., March 23.—There was not a very large attendance at the last shoot of the St. Louis Pistol Club, owing to the fact that the duck season is now in full blast in this part of the country, and many of the members were away. Mr. Bauer came to the front with a splendid 87: .22cal. Stevens gallery pistol, 20yds., standard American target:

W. Bauer	8	10	10	8	7	8	10	10	9	7—87

SAN FRANCISCO, CAL.—At a recent meeting of the San Francisco Schuetzen Verein the following officers were elected to serve during the ensuing year: Pres., Otto W. Lilkendey; Vice-Pres., August Browning; Rec. Sec., C. Hildebrandt; Fin. Sec., A. Bahrs; Treas., John Horstmann; Shooting Masters, John Plath and Kaufman Wertheimer. Trustees, Alexander Gerdes, H. F. Maas, Henry Schroeder. Military Officers: Capt., John F. Bolts; First Lieut., Louis Haake; Second Lieut., William Schmadeke; Third Lieut., John Maugels; Fourth Lieut., George G. Bahrs; Ord. Sergt., Robert Gerhow; Color Bearer, Hy. Koster; Company Guide, Henry Perien.

NEW YORK.—Gus Zimmerman, who won the week's shoot at the recent German Hospital fair here, has accepted F. W. Hoefele's challenge to shoot a match from 100 to 200 shots a side at the Morrisania Schuetzen Park. Preliminaries will soon be settled.

THE TEAM FOR ENGLAND.—The Boston newspapers say that matters relating to the trip of the Massachusetts volunteer militia rifle team to England are progressing rapidly. The leading business men have taken hold of the project with enthusiasm, and it is understood that already about one-third of the necessary funds have been subscribed privately. The team will leave home with probably the strongest backing by representative business men of the State in its history. The first public acknowledgment of subscriptions will be made by Treasurer Potter this week. So much pressure has been brought to bear upon Mr. Potter and Major Frost, the team captain, by officers and members of the M. V. M., to be allowed to subscribe, that it has about been decided to permit each company and field and staff to contribute a small sum, more as a token of good will and appreciation of past work done, than with the idea of securing any large amount. If this should be decided on, due notice will be sent to all interested. The team will probably compete with the First Royal Berkshire regiment, the London rifle brigade, the Middlesex county team and the South London team, previous to the matches at Wimbledon. A match is practically arranged with the fine shooting team of the Honorable Artillery Company of London, which has a score or more of the best rifle shots who visit Wimbledon. Competitions for three, and possibly four, members of the team will be held, commencing about April 30, and will be open to any member of the militia in service March 1. Distances, 200, 500 and 600yds. Each competition will be held in a different locality, that the competitors may have no advantage in shooting entirely upon home ranges. Positions will probably be off-hand at 200yds., any position at 500 and 600yds., but are subject to change. As near as can now be judged full team practice will begin the first week in May. The ten men who have been selected are already in practice, with good results. With a solid six weeks in the range previous to full team work, the team should be in the pink of condition when they sail for Europe. It is understood that a leading business gentleman of Boston and an ex-officer of the United States Army, who is an enthusiastic believer in the prowess of the Massachusetts men, has agreed to give the team a trip to Paris if they are successful in their matches on English soil.

WALLA WALLA, Wash.—Messrs. Z. K. Straight and A. W. du Bray recently shot an all-around match here, the match was as follows: 25 shots with any .44cal. revolver, factory ammunition, off-hand, 50yds., Creedmoor target; 25 shots, any rifle, globe peep-sights, 100yds., off-hand, Creedmoor target; 15 fast pigeons: English-American rules, 5 ground traps, 30yds. rise; 5 pairs, 21yds. rise; 15 Peoria blackbirds, Peoria rules, 2 traps, screened, 10yds. apart; 5 pairs, same conditions. The match commenced with the pistol shooting and was won by du Bray by 103 to 94 points. On the rifle score both men tied on 119 points. The 15 live birds score stood, du Bray 13, Straight 10. On 5 pairs live birds du Bray 6, Straight 5. On 15 single Peorias, Straight 14, du Bray 10. On 5 pairs, Straight 8, du Bray 9, giving the match to du Bray by 16 points. Both contestants used 12-gauge Parker guns and Chamberlin shells, loaded with Schultze powder. The Peoria birds were thrown over 50yds. and at medium height. Both men had been practicing at pistol and rifle shooting in cloudy heavy weather and as the sun shone as brightly as in July the pistol and rifle scores were low, as it was some time before they could locate the bullseye. The rifles were Winchester, single shot, .32-20-115, and both pistols of Smith & Wesson make.

THE ENGLISH MAGAZINE ARM.—The new magazine rifle has been adopted with complete unanimity, and will soon be turned out with great rapidity. The trials of the weapon in India have been in all respects satisfactory. A compressed powder is now used which gives good results, and with which the rifle (which is to be sighted for 2,800yds.) may be used up to 500yds. without raising the backsight. But a new powder is being experimented upon by which it is expected that the power of the rifle will be increased. Major Stanhope concluded his description of the new weapon by expressing the hearty thanks of the War Office to the Small Arms Committee, presided over by General Philip Smith, "who brought so much ability and perseverance to the task of choosing a magazine rifle, a difficult work which had been performed with perfect fairness toward all inventors, and which had produced a rifle which promised the most satisfactory results."—*Vol. Ser. Gaz.*

NEWARK, N. J., March 25.—The 200-yard section of the Our Own Rifle Club met on Thursday evening to discuss plans for the coming season's work. No definite plans were arranged, but the sentiment of the members seemed to be unanimous in favor of affiliating with the Newark Shooting Society, although retaining the form of a separate section. The chairman appointed C. Mink, Jr., F. A. Freisenhner and Fred B. Lante a committee to confer with the directors of the shooting society and endeavor to arrange for the joining of the members in a body. The 200-yard section will comprise from twenty to twenty-five men, all of whom will be enthusiastic shooters. This number will greatly strengthen the active force of the shooting society. A special meeting of the section will be held on Thursday evening, March 28, when the committee will report.

NEWARK, N. J.—The tournament of the United Amateur Clubs has now but two more weeks to run, and the Monroe and Oakland teams are tied for first place, with one match each to shoot. If both clubs win their matches the tie will be decided by a series of three matches. The highest club scores to date are: Monroe 1,092, Oakland 1,080, Columbia 1,062, Howard 1,061, Excelsior 1,058, Annie Oakley 1,017, Lakeside 1,016.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

FIXTURES.

March 26 to 27.—Tournament at Dayton, O.
Omaha, Neb., Gun Club Tournament, April 16, 17 and 18.
April 17 and 18.—Norwich, Conn., Shooting Club Tournament. E. W. Yerrington, President.
April 30.—San Antonio, Tex., Tournament. Open to all comers.
May 21 to 23.—Minneapolis Gun Club Tournament, Minneapolis, Minn. James Pye, Secretary.
South Side Gun Club Tournament, Milwaukee, Wis., May 29, 30 and 31. C. W. Milbraith, Secretary.
June.—Annual Tournament Sportsmen's Association of the Northwest, Tacoma, Wash.
June 3 to 7.—New York State Association for the Protection of Fish and Game. Convention and Tournament, Albany, N. Y.
June.—Kansas City Tournament.

NEW YORK SUBURBAN GROUNDS.

CLAREMONT, N. J., March 23.—To-day was the banner Saturday so far this year. The crowd of shooters was large and enthusiastic, and matches ran along with enjoyable haste. Ties divided. The scores ran:

No. 1, extra, 10 birds, 50 cents entry, Keystone rules:

KEOKUK, Ia.—In the recent Budd-Stice match here Stice lost 12 and killed 88 out of the 100, using second barrel 55 times. Budd lost 6 and killed 94 out of the 100, using second barrel 49 times. Stice used a Parker hammerless, 7½lbs. in weight, with American wood powder part of the time in both barrels and Budd used a Smith hammerless, 7½lbs. in weight, American wood powder in both barrels. Budd used the Climax shell with extra strong primer. Dr. Henry, of Jacksonville, Ill., was referee, and W. B. Hauworth, of Quincy, and Al Runge, of Burlington, were judges. L. L. Heywood, of Kahoka, Ed Smith, of Carthage, Ill., and Sumner Bisbee, of Keokuk, were official scorers. J. B. Worthen, of Warsaw, was trap announcer. The contestants pulled traps for each other.

RENOVO GUN CLUB.—Renovo, Pa., March 25.—On March 7 a club was organized here under the name of the Renovo Gun Club and elected the following officers for the ensuing year: Pres., Dr. C. S. Beck; Vice-Pres., Horace G. Hanna; Sec'y-Treas., J. J. Wentzel. The club is organized for the advancement of its members in the art of wing shooting.—R. T. POWER.

EATON SPORTSMEN'S CLUB, Eaton, N. Y., March 23.—Shoot for badge:

MINNEAPOLIS TOURNAMENT.

MINNEAPOLIS, Minn., March 23.—*Editor Forest and Stream:* Yesterday the Minneapolis Gun Club gave its first monthly one-day tournament, and it was a grand success, 34 shooters being present. The day was all that could be desired, being as bright and sunny as in June. Part of the shooting was good and part very poor, as the scores will show. There was no wind. The birds flew nicely, and there was absolutely no excuse except lack of practice during the winter. Peoria blackbirds and traps were used. The alleged "Keystone system," which has been in use here over five years, was used, and of course gave good satisfaction. Everything moved lively under President Low Harrison's directions. The live-bird contest interfered somewhat, and the fourth event had to be omitted. The following visiting sportsmen were present: J. H. Balsom, Hudson, Wis.; Hon. R. M. Anderson, Stillwater, Minn.; H. Jones, Atwater, Minn.; Harry Jewell H. Robinson, Wabasha, Minn., besides Forbes Cummings, Skinner, "Catamaran," Pfister, Wann ("Chantler"), "Riley" and others. Two members of the club shot at 25 live birds, 5 ground traps, 30yds. rise, use of both barrels, $25 a side:

Elliott	0111001011011110101011111—18
Babcock	1111110110111101101101111—20

Event No. 1, 10 single peorias, $1 entrance. Moneys subdivided 60 and 40 per cent., each subdivision divided 50, 30 and 20. The system is not liked, and will be abandoned for the old style, 40, 30, 20, 10. Score:

*Murphy	1011101101—7	*Riley	1111101111— 9
*Beck	1111011011—8	*Forbes	1111111111—10

CLASSIFICATION.

AS the season is fast approaching when amateur trap shooters blossom forth and the old ones, held over from last season, again show up (with their trusty and only guns that can shoot), we would offer a few suggestions of advice before one of the best outdoor sports dwindles into nothingness after a few shoots in the spring.

The desire is still alive in all shooters to attend the meets, but none of them can get over the idea of shooting when they are outclassed, which they soon find out, and the charm of their first efforts in the spring at trap shooting soon wears off and only a few of the best shots are left.

Handicapping has been discussed before, and although many are in favor of it, it does not fill the wants, as expert shots catch a bird all the way from 10 to 15yds. closer to the trap than an amateur, and the setting back that many yards would not alter the matter.

After the State Trap Shooters' Association had been organized for about a year, its first annual meeting was called at South Lyons, April 20, 1887, when every sportsman in the State was invited to attend and give his ideas for the betterment of that organization. Vincent Kindler, of this city, a member of the Association almost from the start, saw that there was a rupture in its ranks at that time, and if something was not done right off it would ultimately result in its downfall. This was clique shooting, or in other words, a party of good shooters could syndicate and carry off all the prizes by tieing in the various scores and thus beating out the poor shots on the shoot-off. He sent a letter to that meeting which conveyed his ideas of remedying that evil, as he was unable to attend, but his advice was never acted upon. For the benefit of those making a start this spring we publish it, hoping that they will profit by it and keep this outdoor sport alive this season, as to the man owning a gun there is nothing compared to it. Following is the letter:

To the Officers and Committee of the State Trap Shooters' Association:

DEAR BROTHER SHOOTERS—Not having the pleasure to be with you personally, and believing that it is desirable to have the views of as many members as possible on points that are of importance to the success and prosperity of our association, I take the liberty to call your attention to what I consider the most important question to shooters generally—that is, that we prove to them that we intend to be fair to every class of shooters, whether it be the brother that hardly ever can get half his birds or the expert that more often can get his nine (9) or ten (10) straight. At present there seems to be a suspicion floating around that some of our expert brothers make low scores too often.

If it is the intention of this Association to have class shooting and to show that we mean fair play to every class of skill at the trap, I would respectfully offer the following as my cure for regulating this evil:

1. I would divide the shooters as follows: Those that break 80 per cent. and over to be first class; those that break 70 per cent. and under 80 to be second class; those that break 60 per cent. and under 70 to be third class; those that break less than 60 per cent. to be fourth class.

2. I would not handicap in the regular score, but in shooting off ties would classify as follows: First class to shoot at 3 birds, second class 4, third class 5, fourth class 6.

Thus, for instance, if a first and fourth class shot would each break 5 out of 10, in the shoot-off the fourth class would have 6 birds to the experts' 3 to even up matters, and would necessitate the latter's breaking all of his birds if the former only secured half of his to win.

I believe this would be fair to all classes of shooters, and sincerely hope something of this kind will be done, so as to make it agreeable to all parties that attend our tournaments.—*Saginaw (Mich.) News.*

LARCHMONT GUN CLUB, March 23.—Matches to-day were the finest ever held under the auspices of the club. The weather was simply perfect, and consequently there was an extra large attendance. There were three prize matches for valuable trophies. The first event was for the Davis cup, a handsome silver-beaten urn, 6in. high, suitably inscribed. The cup was offered by M. V. B. Davis, and was to be given to the marksman winning two matches. Com. C. H. Colt had won one contest and F. A. Potts another. There were seven entries in to-day's match. Each contestant was allowed 2 shots at 5 birds, those tieing to pass out on a miss. Handicaps of 1, 2, 3 and 4ft. were given. The match resulted as follows:

C H Colt (28)	010 —1	J N Winslow (28)	0110 —2
A Taylor (29)	11110—4	F A Potts (26)	11111—5
F A Potts (26)	1011 —3	H Durant (25)	100 —1
C H Colt (28)	11110—4		

R. H. Henderson referee. By making 5 out of a possible 5 Mr. Potts became the owner of the cup, and he celebrated his victory by filling the silver urn with champagne and inviting each of the company to drink. The second event was also a handicap, three birds, ties, miss and out. The prize of this match was given by the club, and an entrance fee of $5 was charged. It was a very heavy silver and bronze cigar box, filled with the choicest Reinas. There were 11 entries and the following scores were made:

Alexander Taylor, Jr (29)	011—3	J N Winslow (28)	010—1
H Durant (25)	110—2	C H Colt (28)	100—1
F A Potts (27)	111—3	A Thompson (25)	111—3
T Thompson (25)	011—2	S Peabody (22)	111—3
C H Colt (28)	110—2	N S Simpkins (28)	111—3
H Durant (25)	100—1		

This tied Taylor, Potts, Thompson, Simpkins and Peabody. Taylor missed his fourth bird and was out. Potts lost his sixth bird and was dropped. Thompson wounded his seventh bird, but it succeeded in getting outside the lines, where the dogs dispatched it. Peabody lost his eighth rise, and Simpkins, by making eight consecutive birds, won the match and the silver cigar box. The Reinas he distributed among the spectators.

The next event, 3 birds, ties, miss and out, was also a handicap, and an entrance fee of $5 was charged. The prize, offered by the club, was a beautifully-designed silver claret jug. In this event there were 13 entries, and the score stood as follows:

Alexander Taylor (29)	100—1	A Thompson (25)	111—3
N S Simpkins (29)	101—2	C H Colt (28)	110—2
A Thompson (25)	00 —0	H Durant (25)	00 —0
F H Colt (28)	101—2	S Peabody (25)	101—2
H Durant (25)	100—1	A Taylor, Jr (29)	10 —1
F A Potts (27)	010—1	N S Simpkins (29)	111—3
J N Winslow (28)	101—2		

This tied Messrs. Thompson and Simpkins, each having killed all of their 3 birds. Thompson lost his fourth rise and Simpkins, by dropping his, won the trophy. The weather was so delightful and every condition for the sport so favorable that 6 sweepstake matches were arranged, entry $5. In these each contestant shot twice at 5 birds, ties miss and out. In the first Messrs. Thompson and Taylor tied, with 4 out of 5 birds good. Thompson missed and Taylor dropped the sixth rise, and consequently Taylor won. The second match was won by Mr. C. H. Colt, with 5 straight good birds. The third was won by Mr. A. Taylor, Jr., who killed 4 out of 5 birds. Messrs. Taylor and Potts tied in the fourth, each with 5 dead birds. Mr. Potts won on the shoot off. In the fifth Messrs. Durant and Potts both killed 5 straight. On the shoot off Durant missed his eighth bird; Potts killed his rise and won. In the sixth and last Messrs. Simpkins, Chapman and Durant each brought down their 5 birds. Chapman missed the sixth. Durant did not miss until he had brought down 9, missing the tenth. Simpkins made 10 straight and won. On Saturday next the club will have some more matches.

OTTAWA, March 21.—The outline programme of events proposed for the second annual Queen's Birthday tournament of the St. Hubert Gun Club will be in the following shape. There will be in cash $250: May 24, first day—No. 1—Opening sweep, $2 each, 20 birds; open to members of regular gun clubs. Prizes divided as per number of entries. No. 2—First prize, Governor-General Lord Lansdowne's silver cup and $50 cash; open to teams of five members of a regularly organized club. Second prize—Silver cup presented by the members of the Ottawa and St. Hubert clubs and $30 cash. Third prize—Twenty-five pounds Caribou powder and $20 cash. Fourth prize—2,500 shells, value $15. Fifth prize—Five bags shot, value $10. No. 3—Sweep; same as No. 1. Second day, May 25—No. 1. Individual match—Prize $250, divided into 15 prizes. Entrance $2; 20 birds each. No. 2. Team match of teams of three—All representatives of any one club. Entrance $5 per team. Money divided as per number of teams. No. 3. Sweeps—Same as Nos. 1 and 3 of first day. N. B.—A ladies' or mercantile match will be opened and run closely each day. Nine birds; entrance 50 cents, including birds.

NEW JERSEY MATCHES.—W. Lever and Mose Myer will shoot a match at 50 live birds each on Thursday, March 28, at Erb's, Newark. The conditions will be one barrel only and the stake $100 a side. Though Myer was at one time the equal of any man in the State, he is now entirely out of practice. The Manitz-Smith 50-bird match will take place at the same place on the same day and should prove the most interesting contest of the two.

STICE.—The illness of Stice has compelled an indefinite postponement of the Stice—Carver match which was set down for March 23, at Grand Crossing, near Chicago.

AMERICAN SHOOTING ASSOCIATION RULES.

FOR LIVE BIRD SHOOTING.

Single Birds.

RULE 1. *Referee.*—Sec. 1. A referee shall be appointed, whose decision shall be final in all tournament or sweepstake shooting.

Sec. 2.—In individual matches a referee, scorer and pullers may be agreed upon and named by the contestants.

RULE 2. *Appeals.*—Sec. 1. In all matches other than tournament or sweepstake, appeals from the referee's decision will be decided by the Association's Court of Appeals.

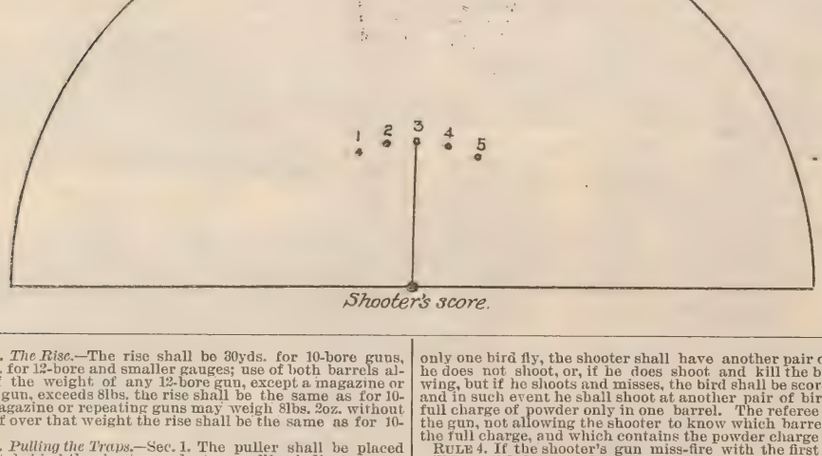
Sec. 2. Any contestant making an appeal shall notify the referee of his intention immediately, and shall hand such appeal to the referee in writing within twenty-four hours and shall send a copy of the same to the Association's office in New York city within ten days. The referee shall forward his copy also with a statement of the time of its receipt, together with any explanation he may care to make within ten days.

RULE 3. *Special Duties of Referee.*—The referee shall see that the traps are properly set at the beginning of a match and are kept in order to the finish and that they are kept properly filled. He shall at any time select one cartridge from a shooter's at the score, when challenged by a contestant, and publicly test the same for proper loading; if found improperly loaded the shooter shall suffer penalty as provided for in Rule 14.

RULE 4. *Balk.*—If any contestant is balked or interfered with, or there is other similar reason why it should be done, the referee may allow another bird.

RULE 5. *Shooter at the Score.*—In all contests the shooter must be at the score within three minutes after his name is called to shoot, or he forfeits his rights in the match.

RULE 6. *Scorer.*—A scorer shall be appointed by the management, whose score shall be the official one. All scoring shall be done with ink or indelible pencil. The scoring of a lost bird shall be indicated by an "0," and of a dead bird by a "1."



RULE 7. *Announcing the Score.*—At the close of each shooter's score the result shall be announced; if claimed to be wrong, the error, if any, shall be corrected before another shooter goes to the score.

RULE 8. *Distances.*—All distances mentioned in these rules must be accurate measurement.

RULE 9.—*Arrangement of Traps.*—All matches shall be shot from 5 ground traps, placed 5yds. apart, in the segment of a circle; the radius of the circle shall be 30yds. from the shooter's score. The traps shall be numbered from No. 1 on the left to No. 5 on the right, consecutively.

Note.—A ground trap is one that lies flat with the surface of the ground when open, and gives the bird its natural flight in starting.

RULE 10. *Boundary.*—The boundary shall be a semi-circle, the radius of which is 80yds. from the shooters score; the ends of the semi-circle shall terminate at the dead line, the rear boundary, which shall run at right angles to a line drawn from the shooter's score to trap No. 3. (See cut.)

Shooter's score.

RULE 11. *The Rise.*—The rise shall be 30yds. for 10-bore guns, and 28yds. for 12-bore and smaller gauges; use of both barrels allowed. If the weight of any 12-bore gun, except a magazine or repeating gun, exceeds 8lbs. the rise shall be the same as for 10-bores. Magazine or repeating guns may weigh 8lbs. 2oz. without penalty; if over that weight the rise shall be the same as for 10-bores.

RULE 12. *Pulling the Traps.*—Sec. 1. The puller shall be placed at least 6ft. behind the shooter, and a trap-pulling indicator must be used to designate which trap shall be pulled. The traps shall be pulled evenly and fairly for each contestant, and instantly after the shooter calls "pull." All traps must be full before the shooter calls "pull."

Sec. 2. Should the puller not pull in accordance with the indicator he shall be removed and another puller substituted.

Sec. 3. If more than one bird is liberated the shooter may call "no bird," but if he shoots the result must be scored.

RULE 13. *Caliber of Gun.*—No gun of larger caliber than 10-bore shall be used.

RULE 14. *Loads.*—Charge of powder unlimited. Charge of shot 1⅛oz. American Shooting Association shot measure, struck off. Any shooter using a larger quantity of shot shall forfeit his entrance money and rights in the match.

Note.—If in the opinion of the management, with the unanimous consent of the contestants, the shooter has not willfully violated this rule, his entrance money shall be returned to him.

RULE 15. *Loading Guns.*—No gun shall be loaded except at the score. Cartridges must be removed from the gun before leaving the score.

RULE 16. *Position of Gun.*—The shooter may hold his gun in any position, except against the shoulder, until he calls "pull." If the position of the gun is challenged, and sustained, the result of the shot, if a dead bird, shall be declared "no bird;" if a miss, "lost bird."

RULE 17. *Failing to Load.*—If the shooter fail to load his gun, another bird shall be allowed from an unknown trap.

RULE 18. *Gun not Cocked.*—If a gun is not cocked, or the safety not properly adjusted, and the bird escapes, it shall be scored a "lost bird."

RULE 19. *Miss-fire with the First Barrel.*—If the shooter's gun miss-fire with the first barrel, and he uses the second barrel and misses, the bird must be scored "lost bird;" but if killed with the second barrel, on the wing, it shall be scored "dead bird."

RULE 20. *Miss-fire With the Second Barrel.*—If a miss-fire occur with the second barrel, the shooter shall have another bird, using a full charge of powder only, in the first barrel. He must, however, put the gun to his shoulder and discharge the blank cartridge in the direction of the bird, and the bird must be on the wing when the first barrel is discharged.

RULE 21. *Birds Killed on the Ground.*—Sec. 1. A bird killed on the ground with the first barrel is "no bird," but it may be killed on the ground with the second barrel, if the first is fired while it is on the wing.

Sec. 2. If a bird is shot at on the ground with the first barrel, and the shooter fails to kill with the second barrel, it is a "lost bird;" if killed, "no bird."

RULE 22. *Birds Refusing to Fly.*—When a bird refuses to fly, such artificial means as have been provided by the management, may be used to start it, by direction of the referee. A bird hit with a missile shall be declared "no bird." The shooter may declare a bird refusing to fly, when the trap is pulled, "no bird."

RULE 23. *Leaving the Score.*—A shooter having fired his first barrel and left the score, cannot return to fire his second barrel.

RULE 24. *Gathering Birds.*—Sec. 1. If challenged, a bird to be scored must be gathered in bounds, by a dog or shooter, or, the shooter may appoint a person for that purpose. Three minutes time will be allowed to gather, but no extraneous means shall be used, and no other person shall be allowed to assist in gathering.

Sec 2. If any gatherer cannot locate the bird, he may appeal to the referee to locate it for him.

Sec. 3. All birds challenged must show shot marks to be scored "dead bird."

RULE 25. *Out of Bounds.*—A bird once out of bounds must be scored a "lost bird."

RULE 26. *Birds Shot at by Another Person.*—If a bird be shot at by any other person than the shooter at the score, the referee shall decide whether it shall be scored or another bird allowed.

RULE 27. *Endangering Person or Property.*—If any bird shall fly so that to shoot at it would endanger any person or property, it shall not be shot at, and the referee shall allow another bird.

RULE 28. *Ties.*—Sec. 1. All ties shall be shot off at the original distance, and as soon after the match as practicable, at the following number of birds: In matches of 10 birds or less, 3 birds. In matches of 11 to 25 birds inclusive, at 5 birds. In matches of 26 to 50 birds inclusive, at 10 birds. In matches of 51 to 100 birds inclusive, at 25 birds. The shooting shall continue until each tie is decided, provided that the shooting shall cease at sunset, unless the contestants otherwise agree.

Sec. 2. Ties if not shot off at the close of any day will be continued the next morning at a specified hour. Any contestant not present when called to the score after the hour named, or within three minutes thereafter, shall forfeit his rights in the match.

RULE 29. *Challenges.*—Sec. 1. No one but a contestant or his representative can challenge, and the challenge must be made before the next shooter goes to the score.

Sec. 2. In tie shooting no one shall be considered a contestant except those in their respective ties.

RULE 30. *Forbidden Shooting.*—No shooting will be permitted within the inclosure other than at the score, and in case there is no inclosure no shooting within 200yds. of the score, except by those at the score.

RULE 31. *Mutilating Birds.*—If it is proved to the referee that any contestant has wilfully mutilated a bird or is a party thereto, the referee shall declare all his rights in the match forfeited.

RULE 32. *Class Shooting.*—All shooting shall be class shooting, unless otherwise stated.

RULE 33. *Conduct.*—No person, whose conduct is ungentlemanly upon the grounds, or who shall persistently violate any rule after his attention has been called to the fact, shall be permitted to participate in a contest; and the referee shall so decide. The management giving a tournament under the rules of the American Shooting Association may suspend the offender and report the suspension to the Association for final action; and the Association shall have the power to suspend the offender for such period of time as the gravity of the offense may warrant, and during the period of such suspension the individual suspended shall not be allowed to participate in any contest held under the rules of this Association.

Rules for Double Bird Shooting.

RULE 1. Rules for single bird shooting shall govern double bird contests when not conflicting with the following:

RULE 2. *Double Birds.*—The double rises shall be from two traps of any kind, 10yds. apart, pulled simultaneously; 26yds. shall be the rise for 10-bore guns, and 24yds. for 12-bore and smaller gauges. If the weight of any 12-bore gun, except a magazine or repeating gun, shall exceed 8lbs., the rise shall be the same as for 10-bores. Magazine or repeating guns may weigh 8lbs. and 2oz. without penalty; if over that weight the rise shall be the same as for 10-bores.

RULE 3. Both birds should be on the wing when shot at. Should only one bird fly, the shooter shall have another pair of birds if he does not shoot, or, if he does shoot and kill the bird on the wing, but if he shoots and misses, the bird shall be scored as lost, and in such event he shall shoot at another pair of birds, with a full charge of powder only in one barrel. The referee shall load the gun, not allowing the shooter to know which barrel contains the full charge, and which contains the powder charge only.

RULE 4. If the shooter's gun miss-fire with the first barrel, he will be entitled to another pair of birds if he does not shoot his second barrel; but if he fires the second barrel the result must be scored, and the shooter shall shoot at another pair of birds, with a full charge of powder only in one barrel, as provided for in Rule 3.

RULE 5. If the shooter's gun miss-fire with the second barrel, the result of the first barrel must be scored, and the shooter shall shoot at another pair of birds, with a full charge of powder only in one barrel, as provided in Rule 3.

RULE 6. If a shooter fires both barrels at one bird, it shall be scored a "lost bird."

RULE 7. If both birds are killed with one barrel, it shall be declared "no birds," and the shooter shall shoot at another pair of birds.

RULE 8. *Ties.*—All ties must be decided in shooting off, as follows: In matches of 5 pairs or less, at 2 pairs. In matches of 6 to 10 pairs inclusive, at 3 pairs. In matches of 11 to 20 pairs inclusive, at 6 pairs. In matches of 21 to 50 pairs inclusive, at 10 pairs.

FOR INANIMATE TARGET SHOOTING.

RULE 1. *Judges and Referee.*—Sec. 1. Two judges and a referee or a referee alone, shall be selected to judge.

Sec. 2. If the judges cannot agree, the referee shall decide; and his decision shall be final in all tournament and sweepstake shooting.

Sec. 3. In individual matches a referee, scorer and puller may be agreed upon and named by the contestants.

RULE 2. *Appeals.*—Sec. 1. In all matches other than tournament or sweepstake, appeals from the referee's decision will be decided by the Association's Court of Appeals.

Sec. 2. Any contestant making an appeal shall notify the referee of his intention immediately, and shall hand such appeal to the referee in writing within twenty-four hours, and shall send a copy of the same to the Association's office in New York city within ten days. The referee shall forward his copy also, with a statement of the time of its receipt, together with any explanation he may care to make, within ten days.

RULE 3. *Special Duties of Referee.*—The referee shall see that the traps are properly set at the beginning of a match, and are kept in order to the finish. He shall endeavor to make the targets conform to the flight and direction indicated in Rule 13. He shall test any trap upon application of a shooter at any time, by throwing a trial bird therefrom. He shall select one cartridge from a shooter's at the score, when challenged by a contestant, and shall publicly test the same for proper loading; if found improperly loaded the shooter shall suffer penalty as provided for in Rule 17.

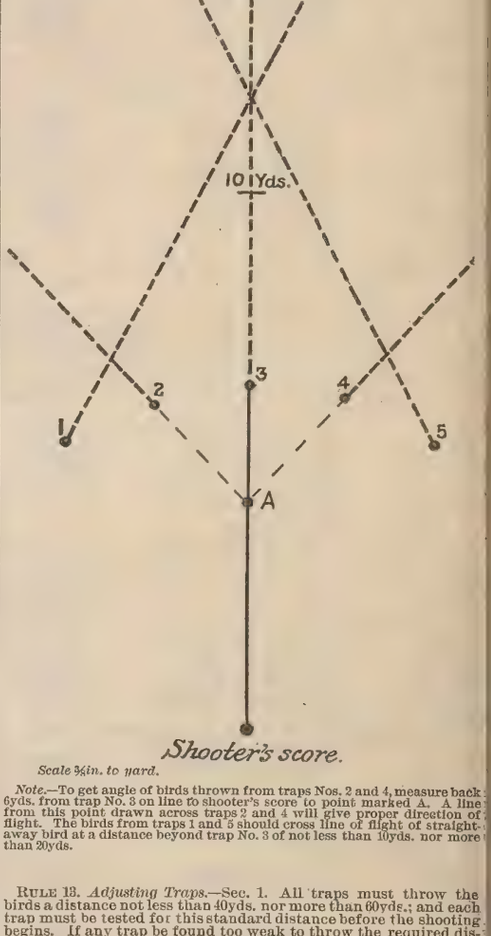
RULE 4. *Balk.*—If any contestant is balked or interfered with, or there is other similar reason why it should be done, the referee may allow another bird.

RULE 5. *Shooter at the Score.*—In all contests the shooter must be at the score within three minutes after his name is called to shoot, or he forfeits his rights to the match.

RULE 6. *Scorer.*—A scorer shall be appointed by the management, whose score shall be the official one. All scoring shall be done with ink or indelible pencil. The scoring of a lost bird shall be indicated by an "0," and of a dead bird by a "1."

RULE 7. *Keeping the Score.*—Sec. 1. The call for a broken bird shall be "dead bird," and the call for a missed bird shall be "lost bird."

Sec. 2. When two judges and a referee are serving, one of the judges shall announce the result of each shot distinctly, and it shall be called back by the scorer. If the second judge disagree with the decision of the judge calling, he shall announce it at once, before another bird is thrown, and the referee shall decide it. In the event of another bird being thrown before the referee's decision, the bird so thrown shall be "no bird."



RULE 8. *Broken Birds.*—A bird to be scored "dead bird" must have a perceptible piece broken from it while in the air; a "dusted" bird is not a broken bird. No bird shall be retrieved for shot marks. If a bird be broken by the trap the shooter may claim another bird; but if he shoots the result must be scored.

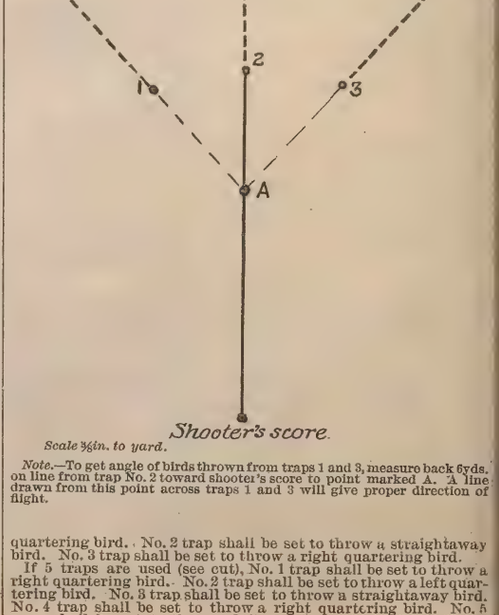
RULE 9. *Announcing the Score.*—At the close of each shooter's score the result shall be announced; if claimed to be wrong, the error, if any, shall be corrected before another shooter goes to the score.

RULE 10. *Screens.*—Either pits or screens, or both, may be used, but the screens must not be higher than is actually necessary to fully protect the trapper.

RULE 11. *Distances.*—All distances mentioned in these rules must be accurate measurement.

RULE 12. *Arrangement of Traps.*—All matches shall be shot from three or five traps, set level, 5yds. apart, in the segment of a circle or in a straight line. When in a segment of a circle the radius of the circle shall be 18yds. In all cases the shooter's score shall not be less from each trap than the rises provided for in Rule 15. The traps shall be numbered from number 1 on the left, to number 3 or 5 on the right, consecutively, according to the number used, as shown in cut.

Shooter's score.



Scale ⅜in. to yard.

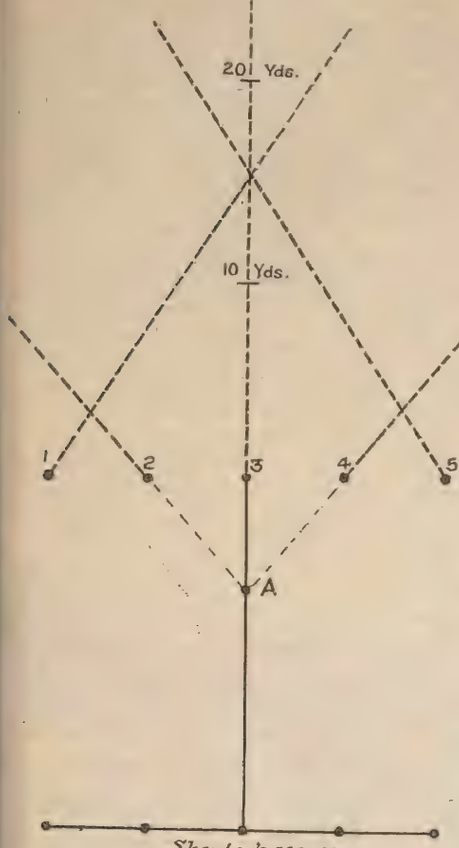
Note.—To get angle of birds thrown from traps Nos. 2 and 4, measure back 6yds. from trap No. 3 on line to shooter's score to point marked A. A line from this point drawn across traps 2 and 4 will give proper direction of flight. The birds from traps 1 and 5 should cross line of flight of straightaway bird at a distance beyond trap No. 3 of not less than 10yds. nor more than 20yds.

RULE 13. *Adjusting Traps.*—Sec. 1. All traps must throw the birds a distance not less than 40yds. nor more than 60yds.; and each trap must be tested for this standard distance before the shooting begins. If any trap be found too weak to throw the required distance, a new trap or spring, that will, must be substituted.

Sec. 2. The lever or projecting arm of the trap shall be so adjusted that the elevation of the bird in its flight, at a distance of 10yds. from the trap, shall not be more than 12ft. nor less than 6ft., and the angles of flight shall be as follows:

If 3 traps are used (see cut), No. 1 trap shall be set to throw a left

Shooter's score.



Scale ⅜in. to yard.

Note.—To get angle of birds thrown from traps 1 and 3, measure back 6yds. on line from trap No. 2 toward shooter's score to point marked A. A line drawn from this point across traps 1 and 3 will give proper direction of flight.

quartering bird. No. 2 trap shall be set to throw a straightaway bird. No. 3 trap shall be set to throw a right quartering bird.

If 5 traps are used (see cut), No. 1 trap shall be set to throw a right quartering bird. No. 2 trap shall be set to throw a left quartering bird. No. 3 trap shall be set to throw a straightaway bird. No. 4 trap shall be set to throw a right quartering bird. No. 5 rap shall be set to throw a left quartering bird. Traps Nos. 1

and 5 shall be set to throw their birds so that their line of flight shall cross that of the straightaway bird at a point not less than 10yds. nor more than 20yds. from trap No. 3.

Shooter's scores.

Scale 3/4in. to yard.

Note.—To get angle of birds thrown from traps Nos. 2 and 4, measure back 6yds. from trap No. 3 on line to shooter's score to point marked A. A line from this point drawn across traps 2 and 4 will give proper direction of flight. The birds from traps 1 and 5 should cross line of flight of straightaway bird at a distance beyond trap No. 3 of not less than 10yds. nor more than 20yds.

Sec. 3. After the traps are set for these angles, if the bird for any reason shall take a different course it shall be considered a fair bird, provided the trap has not been changed.

RULE 14. *Pulling the Traps.*—Sec. 1. The puller shall be placed at least 6ft. behind the shooter, and when the shooter calls "pull," the trap or traps shall be instantly sprung. In the single-bird shooting he shall pull the traps as decided by the trap-pulling indicator.

Sec. 2. If the trap is sprung before or at any noticeable interval after the shooter calls "pull," he can accept or refuse the bird; but if he shoots the result shall be scored.

Sec. 3. Should any puller not pull in accordance with the indicator, he shall be removed and another puller substituted.

RULE 15. *The Rise.*—In single-bird shooting the rise shall be 18yds. for 10-bore guns, and 16yds. for 12-bore and smaller gauges. In double-bird shooting the rise shall be 16yds. for 10-bore guns and 14yds. for 12-bore and smaller gauges. If the weight of any 12-bore gun, except a magazine or repeating gun, exceeds 8lbs., the rise shall be the same as for 10-bores. Magazine or repeating guns may weigh 8lbs. 2oz. without penalty; if over that weight the rise shall be the same as for 10-bores.

RULE 16. *Caliber of Gun.*—No gun of larger caliber than a 10-bore shall be used.

RULE 17. *Loads.*—Charge of powder unlimited. Charge of shot 1¼oz. American Shooting Association shot measure struck off. Any shooter using a larger quantity of shot shall forfeit his entrance money and rights in the match.

Note.—If in the opinion of the management, with the unanimous consent of the contestants, a shooter has not wilfully violated this rule, his entrance money shall be returned to him.

RULE 18. *Loading Guns.*—In single-bird shooting, only one barrel shall be loaded at a time, and the cartridge shall not be placed in the barrel until after the shooter has taken his position at the score. In double-bird shooting both barrels shall be loaded at the score. Cartridges must be removed from the gun before leaving the score.

RULE 19. *Position of Gun.*—The shooter may hold his gun in any position, except against the shoulder, until he calls "pull." If the position of the gun is challenged, and sustained, the result of the shot, if a dead bird, shall be declared "no bird," if a miss, "lost bird."

RULE 20. *Allowing Another Bird.*—The shooter shall be allowed another bird for either of the following reasons: For any defect in the gun or the load, causing a miss-fire. For unintentional neglect to load his gun. For unintentional neglect to cock a hammer gun. For unintentional neglect to properly adjust the safety slide on a hammerless gun. Provided, that in single-bird shooting, if the shooting is at traps set in the segment of a circle, the bird shall be thrown from an unknown trap to be decided by the indicator; if from traps set in a straight line, the bird shall be thrown from the same trap, at a different angle, and unknown to the shooter.

Note.—The object of this rule is that a shooter shall not incur a chance for defeat by the unfortunate circumstance of losing his shot.

RULE 21. *Single Bird Shooting.*—Each contestant shall shoot at three or more birds before leaving the score. If two birds are sprung at the same time it shall be declared "no bird."

RULE 22. *Double Bird Shooting.*—Both traps must be pulled simultaneously, and each contestant shall shoot at three pairs consecutively, thrown as follows: If three traps are used the first pair shall be thrown from Nos. 1 and 2 traps, the second from 2 and 3 and the third pair from 1 and 3. If five traps are used the first pair shall be thrown from Nos. 2 and 3 traps, the second pair from 3 and 4 and the third pair from 2 and 4. If only one bird is thrown it shall be declared "no birds." If a bird is lost for reasons stated in Rule 20, it shall be declared "no birds." If one be a fair and the other an imperfect bird it shall be declared "no birds." If both are broken by one barrel it shall be declared "no birds." If a shooter fire both barrels at one bird it shall be scored "lost birds."

RULE 23. *Tie Shooting.*—Sec. 1. All ties shall be shot off at the original distance, and as soon after the match as practicable, at the following number of birds:

Ties on single birds: In single bird matches of 25 birds or less, from 3 traps 3 birds, 5 traps 5 birds. In matches of 26 birds to 50 inclusive, on 3 traps 6 birds, 5 traps 10 birds. In matches of over 50, on 3 traps 15 birds, 5 traps 25 birds.

Ties on double birds: In double bird matches 10 pairs or less on traps, 3 pairs, in matches of more than 10 pairs, 5 pairs, thrown from traps Nos. 1 and 2. If 5 traps are used, the same number shall be thrown, in each case, from traps 2 and 3.

Sec. 2. Ties if not shot off at the close of any day will be continued the next morning, at a specified hour. Any contestant not present when called to the score, after the hour named, or, within three minutes thereafter, shall forfeit his rights in the match.

RULE 24. *Challenges.*—Sec. 1. No challenge shall be considered unless the party challenging is a contestant, and the challenge must be made before the next shooter goes to the score.

Sec. 2. In tie shooting, no one shall be considered a contestant except those in their respective ties.

RULE 25. *Forbidden Shooting.*—No shooting will be permitted within the inclosure other than at the score, and in case there is no inclosure, no shooting within 200yds. of the score, except by those at the score.

RULE 26. *Class Shooting.*—All shooting shall be class shooting, unless otherwise stated.

RULE 27. *Conduct.*—No person whose conduct is ungentlemanly upon the grounds, or who shall persistently violate any rule, after his attention has been called to the fact, shall be permitted to participate in a contest; and the referee shall so decide. The management giving a tournament under the rules of the American Shooting Association, may suspend the offender and report the suspension to the Association for final action; and the Association shall have the power to suspend the offender for such a period of time as the gravity of the offense may warrant, and during the period of such suspension the individual suspended shall not be allowed to participate in any contest held under the rules of this Association.

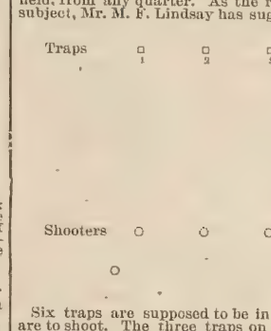
Classification.—Sec. 1. Any shooter to become eligible to the tournaments given under the rules and management of the American Shooting Association must qualify by sending to the headquarters of the Association a certificate from the president or secretary of a regularly organized gun club, of which he is a member, giving, to the best of his knowledge and belief, what he considers the shooter's average on inanimate targets. These certificates will be used in making up a proper classification of the contestants. Blank forms will be sent to any one on application. If the scores made by any shooter give sufficient grounds for changing a shooter's classification, the Association reserves the right to make the change.

Sec. 2. The classification of shooters will be as follows:

Class A—To consist of all those whose average is 86 and over.

Class B—To consist of all those whose average is from 70 to 85 inclusive.

Class C—To consist of all those whose average is under 70.



[Clubs adopting these rules are requested at once to notify the secretary of the Association to that effect. Address J. M. Taylor, Stewart Building, New York.]

THE SUBURBAN SYSTEM.

Editor Forest and Stream:

Shooting at inanimate targets from the trap having attained the large proportions it now has, it is a serious question what plan can be adopted which, while securing rapid shooting, also gives the best practice in connection with live bird or field shooting.

The Keystone plan, while very rapid, is certainly open to criticism as a practice for live bird shooting, because it is known positively just where the bird will start from and what direction it will take. Good shooters have observed that it spoils one for live bird shooting to practice much at Keystone rules, as it causes the shooter to expect his bird to rise from one spot, whereas he should be on the lookout for a rise from any one of five traps, or if in the field, from any quarter. As the result of much thought on the subject, Mr. M. F. Lindsay has suggested a plan like this:

Six traps are supposed to be in use and a squad of seven men are to shoot. The three traps on the left are set the usual right and left quarters and straightaway; the three traps on the right may be set same way. The puller is provided with the new revolving indicator, and as the first man prepares to shoot he turns the indicator and one of the traps on the left is pulled as directed by figures on the indicator. The shooter does not know which one it will be, of course. The indicator is then whirled again and one of the same three traps is pulled for the second man. The operation is repeated for the third man. Then the same thing is worked with the three traps and shooters on the right; the shooters go in a circle the same as Keystone plan, and it is thought can shoot as rapidly as under that plan. Anyhow, the new plan, which has been named the "Claremont rules," is worthy of trial.

AD. VANCE.

CORRY, March 21.—Scores of the Corry Gun Club. H. Arnold won gold medal, Lewis the silver, Starbird the leather:

BUFFALO, N. Y., March 20.—A few members of the Independent Gun Club, of this city, met at Jas. Murphy's place, West Seneca, N. Y., March 19, for practice at Peoria birds. The day was all that could be desired, with just enough wind to make the birds difficult to get at, but the boys managed to keep somewhere by their average. The club's membership amounts to 25, their grounds at Mr. Murphy's are about one mile from the city, with five trains passing there daily. We intend to have a Peoria and live bird tournament here in June and from the present outlook it will undoubtedly prove a success. First event, at 9 birds, entrance $1; div. 50, 30 and 20 per cent:

W McCarthy	011001111—6	J Murphy	100101111—6
E J Wilhelm	101111111—8	J Zimmers	100001011—4
W Elliot	111011101—7	F Kinney	111111111—9

Kinney first, Wilhelm second, third div.

Second event, same as first:

McCarthy	101111101—7	M Wasson	111100111—7
O Sampson	011111101—7	Wilhelm	001110111—6
Elliott	000111011—5	Kinney	111111111—9

Kinney first, second div., Wilhelm third.

Third event, same as second:

McCarthy	111011101—7	Zimmers	011001100—4
Wilhelm	111110110—7	Wasson	111010100—5
Elliott	100110101—6	Duggan	100111111—7
Murphy	001110111—6	Kinney	111111110—8

Kinney first, second and third div. The fourth and last event was a team shoot, with Mr. Murphy captain for one side and Mr. Duggan for the other, the losing side to pay for the excellent supper served by Mr. Murphy's genial spouse:

Capt. Duggan's Team.		Capt. Murphy's Team.	
Duggan	001101111—7	Murphy	111111111—10
McCarthy	011111111—9	Zimmers	101001111— 7
Kinney	111111110—9	Wasson	101111111— 9
Parker	001111110—7	Wilhelm	011111110— 8
Samson	110101111—8—40	Hubbars	100111111— 8—42

A. B. C.

ELM CITY GUN CLUB.—New Haven, Conn., March 24.—We have organized the Elm City Gun Club with the following officers: President, J. H. Pomeroy; Vice-President, W. H. Porter; Secretary, J. W. White; Treasurer, N. B. Eddy; Directors, Chas. A. Tyler, W. H. Lane and Thos. N. Gierding.—C. A. TYLER.

HUTCHINSON GUN CLUB.—Hutchinson, Kas., March 1.—Yesterday several members of the Hutchinson Gun Club met at their grounds and contested for the gold medal. The day was dark, cloudy and disagreeable, with a stiff breeze blowing from the north, which made the clay-birds dance about in a gleeful manner, and the way they bobbed around made the boys think of jack snipe shooting. The scores, however, were very creditable. Chas. Smith, of Wichita, present champion of Kansas, was present and took part in the shoot. He used a strange gun and did not strike his usual hot gait, but he enjoyed the shoot nevertheless. He won the State championship in 1879, and holds to-day a fine medal emblematic of his victory. Following are the scores made:

First match, 6 singles and 2 pair bluerocks:

Young	111111	11 11—10	Chamberlain	101011	01 10— 6
George	111111	10 11— 9	French	000100	01 10— 3
Burslem	111111	10 11— 9			

Second match, medal shoot, 15 singles and 5 pair:

George	111111111011111	11 10 01 10 11—21	
Young	101101101010101	11 10 11 11 10—17	
Burslem	001101011101110	11 10 11 10 10—16	
Chamberlain	101101110111010	00 10 10 10 10—15	
French	101100010101011	10 10 00 00 10—11	
Allen	011010000100000	10 11 10 00 10—10	

Mr. George won the medal.

Third match, 12 single bluerocks:

Chamberlain	111111111010—10	George	110100111100— 8
Allen	110111110011—10	French	101100010111— 7
Young	100110101011— 8	Burslem	001111110000— 7

Fourth match, 12 single bluerocks:

Allen	011111111111—11	George	010111011111— 9
Young	110111111111—11	French	011110111110— 9
Chamberlain	101001111111— 9	Burslem	110000001011— 5
*Smythe	001110111111— 9		

Fifth match, 12 single bluerocks:

Chamberlain	111101111011—10	*Smythe	111010101011— 8
Young	111011101111—10	French	101101000101— 6
Allen	111011001111— 9	Burslem	010001011010— 5

*Not a member.

It nearly always takes 21 or better to win our medal.—SHADY.

WILMINGTON, Del., March 19.—To-day was a great day for shooting at the grounds of the Wawaset Gun Club. The match for $25 a side between P. Ambold of the Wawaset Club and P. Carney resulted in a victory for the former:

Ambold	0010101111111011110011111—17
Carney	0111110101110111000111000—15

After the match there was some good sweepstake shooting indulged in by members of the club and others. There were three rounds of shooting and below are the detailed scores:

	First.	Second.	Third.
W H Hartlove	10111—4	10001—2	01111—4
P Ambold	11111—5		
R Miller	11111—5	01101—3	01111—4
G Neuber	10111—4		
T Weldin	11010—3	11100—3	*
W McKendrick	11110—4	11111—5	11111—5
L Fox	11011—4	11111—5	01111—4
W Philips	11111—5		
C Buckmaster	11011—4	000w	11111—5
E Melchoir	00100—1		
H Buckmaster	11100—3	01111—4	11111—5
J Edwards	10001—2	00011—2	
D Wilson	01111—4	10101—3	
H Calwell		00011—2	
T D Buckmaster		11000—3	
J Edwards, Sr		00011—2	
J Q Adams			11111—5

In the shoot-off of the ties in the first match, Miller won first money, Wilson second, H. Buckmaster and Weldin divided third money. In the shoot-off of the ties in the second match, McKendrick and Fox divided first money, H. Buckmaster second and D. Wilson third. The third match, as can be seen by the scores, was well shot. The shoot-off for first place in this match was won by H. Buckmaster with 3 straight, Fox got second with 3 straight.

BOSTON, March 20.—The announcement of the challenge match between Messrs. Dickey and Wheeler attracted an unusually large number of lovers of the shotgun to Walnut Hill to-day. In addition to this event there was a long programme of sweepstakes and a shoot for the individual badge of the State Association. The weather conditions were far from favorable, a strong and cold wind making it unpleasant to face the target. The event of the day was the Dickey-Wheeler contest. No closer match has ever been fought in New England, and when Dickey broke his last bird—on which the result of the match depended—he was heartily cheered. Another hotly contested race was the match for the State Association badge, which was won by Wheeler, who made a clean score and had only a bird to spare at the finish. Following is the result of a challenge match for purse of $100: O. R. Dickey vs. G. H. Wheeler, 100 clay birds and 100 standard targets:

Dickey.

Standards	1100111111111011010101111011011110111000111111101111111011111111111

OTTAWA, March 18.—It's a big day outdoors—scarcely a breath of air and a bright, warm sun. The bare patches are many at the range and the crowd large. This is the third shoot for March and April of the Montreal Gun Club. The fine day had its cheerful influence and attracted a goodly gathering of guns and spectators. For a starter a sweep at 10 birds, 18yds., was called:

Dr A Martin	1111111111—10	A H Throop	0110001111— 6
J Deslaurier	1110111001— 7	P Trudeau	0111111101— 8
W J Johnson	1110011111— 8	E King	1110100010— 5
R G Dalton	0110011101— 7	S White	1000001110— 4

The forces having increased in numbers, the third shoot for club prizes was called on at 20 birds each, 18yds. rise:

John Deslaurier	11111110111111101111 —18
R G Dalton	11001111111111111110 —17
A H Throop	10111111111010101111 —16
Ed White	11110110110101111011 +1—16
Dr H Equus	11101010010111110111 +1—15
W J Johnson	11011110101111011000 —13
P Trudeau	10011001011111110110 —13
Geo White	10011011101110010110 —12
Dr A Martin	10100111110010010111 —12
W DeCourcy	00011011100001000000+1—6
S White	00010101000100011011+2—10
Ed King	10110001110000000000+3—10

A sweep of 5 doubles, 2 and 4, 18yds. rise, brought out eleven to the score:

Ed White	11 00 00 11 11— 7	Geo White	00 10 00 00 10— 3
J Deslaurier	10 11 11 10 10— 7	Dr A Martin	10 10 00 00 10— 3
R G Dalton	10 10 11 10 11— 7	A H Throop	10 00 01 00 10— 3
W DeCourcy	10 11 10 00 01— 5	D H McPhee	00 00 10 10 00— 2
Ed King	00 11 01 10 10— 5	Dr H Equus	00 10 00 00 01— 2
P Trudeau	10 00 10 10 10— 4		

EMERALD GUN CLUB.—Regular club shoot at Burbank's Sea View Park, New Dorp, Staten Island, N. Y., March 6. Ten live birds, 6 ground trap, 21, 25, 30yds. rise, 30yds. boundary. Shot under Emerald Gun Club rules; three prizes:

P Butz (30)	1111100111—8	M W Murphy (25)	1110111006—6
John Bade (25)	0101011111—7	J Fisher (25)	0011101101—6
N Measel (30)	1100110010—5	L C Gehering (30)	1111111101—9
T J Crystal (25)	0110111111—8	G Remsen (30)	1010110101—6
R Regan (25)	0000001110—3	P J Keenan (25)	1010110101—6
H Rubino (25)	0000011100—3	L Schermerhorn (30)	0001111010—5
I H Voss (32)	0111111100—7	F Schrader (30)	1101011100—6
J Measel, Jr (30)	1111100011—7	T Codey (30)	0111010101—6
T P Mackenna (25)	1101011000—5	J Howard (21)	0010111110—6
G V Hudson (30)	0101011111—7	A McHale (21)	1100000000w

L. C. Gehering wins first prize for first time, a gold badge. T. J. Crystal wins second prize for first time, a gold badge. John Howard wins third prize, second time, a gold locket.

THE EMERALD GUN CLUB.—New York, March 20.—At the annual meeting of this club, March 7, President McMunn in the chair, the following members were elected to office for the ensuing year: John J. Ryan, President; Counsellor T. Cody, First Vice-President; Col. John H. Voss, Second Vice-President; John Measel, Jr., Treasurer; P. J. Keenan, Financial Secretary; T. P. Mackenna, Recording Secretary. After election the chairman appointed the following gentlemen as an executive board to act for the club in conjunction with its officers: G. V. Hudson, M.D., and John Howard. The club passed a resolution thanking the retiring president, M. McMunn, and the first vice-president, H. Rubino, for their strict attention to club business and uniform kindness to the members while in their respective positions, Mr. McMunn has been president of this club for the past two terms and most positively refused re-election on this occasion.—T. P. MACKENNA, Rec. Sec'y.

CENTRAL GUN CLUB.—Clinton Park, Maspeth, L. I.—First monthly shoot at 20 bluerocks, 16yds., for gold medal:

P Epping	10311000010100100110— 8	J Klein	1001010111010100001— 9
Landman	11111101011111110111—16	G Setzer	0111110010010101011—12
Cunigham	31111110011010100110—13	Leiten'al	0010000000000001000— 3
F Frank	0011001111000000003— 7		

NORWICH, Conn., March 22.—The Norwich Shooting Club will hold a two days' tournament on its grounds April 17 and 18.—E. W. YERRINGTON, Pres.

SARATOGA, March 20.—At a challenge contest to-day between four members of the Saratoga Gun Club—Messrs. Ramsdill and Gibbs challenging Messrs. Crawford and Livingston—some splendid scores were made, the challenged party winning by four birds, the score standing 81 to 77, each man having 50 shots. After the match Livingston continued his shooting for record, hitting 99 birds out of a possible 100. A gun club tournament will be held here early in April. Clubs will be present from Troy, Albany, Hoosick Falls, Cambridge, Auburn, Syracuse and a number of other places.

OTTAWA, March 20.—The old Ottawas to-day came out of winter quarters and held their first shoot for the season. The usual six reliables, who have held this club together, met and shot the regulation score of 15 birds each—Ligowskys:

W Stewart	011111111111110—13	W H Baldwin	1011000010101— 8
A Stewart	1110011100111—11	M H Tracy	1111100000101— 8
J Manuel	1101010010111011— 9	Dr A McPhee	0000110010000— 3

A sweep at 10 birds each, Ligowskys, followed and a brace of the Saints went in:

W Johnson	1111111101—9	A Stewart	1001110010—5
J Stewart	1110101011—7	J Mannel	0010111001—5
W H Baldwin	1110101011—7	W H Tracy	0000010001—2
Ed White	0011111110—7		

Every Wednesday throughout the season this club meets for practice.

TORONTO, March 19.—The final shoot of the West Toronto Junction Gun Club for the two gold medals took place at D. Blea's grounds to-day. W. Davidge won the handsome diamond medal presented by the president, D. Blea. D. C. Walton won the second. The following is the score out of a possible 90:

W Davidge	14 14 18 14 14—74	C Hinton	15 12 13 9 12—61
D C Walton	16 11 14 12 15—68	P Wakefield	15 9 13 12 11—60
W A Clarke	14 10 15 11 15—65	H Jackson	15 8 11 10 15—59
W Blea	17 11 14 12 10—64	E Dollery	9 3 11 6 15—44
N Good	10 12 14 11 15—62		

WELLINGTON, Mass., March 23.—The weather conditions today were all that could be desired by the large number of gunners who faced the traps at the grounds of the Wellington Gun Club, and as a consequence several fine scores were made. In the silver cup match at 8 clay-pigeons and 7 bluerocks, Perry won with a clean score of 15. In this match the following scores were made: Leon 11, Lee 12, Perry 15, Lang 9, Bradstreet 9, Chase 9, Stanton 13, Bond 12, Bradbury 12, Snow 14, Short 7, Chapin 14, Best 12, North 10, Schaefer 6, Field 14, Bennett 12, White 12, Wooster 12. The scores made in the merchandise match were: Leon 9, Schaefer 11, Snow 10, Lang 12, Bennett 13, Short 8, Chapin 10, Bradbury 12, Best 13, Stanton 12, Bradstreet 8, Chase 9, White 12, Perry 10, Lee 15, Field 13, North 8, Bond 8. Lee was first in the merchandise match with a clean score of 15. The sweepstake winners in the several matches were as follows: Six bluerocks, Leon, White, Chapin and Schaefer; 6 bluerocks, Chapin; 6 clay-pigeons, Leon and Chase; 6 clay-pigeons, Stanton, Leon, Bennett and Chapin; 6 bluerocks, Stanton, Snow and Chase; 6 bluerocks, Chapin, White and Bert; 9 pairs clay-pigeons, Lang, Lee and Field; 9 bluerocks, Lee; 6 bluerocks, Stanton, Chapin, North and Snow; 7 bluerocks, Perry, Snow and Chapin; 8 clay-pigeons, Perry, Bradbury and Field; 6 bluerocks, Stanton and Perry; 6 bluerocks, Chapin, Stanton, Snow and Lee; 6 macombers, Leon and Webster; 6 clay-pigeons, Stanton, Bond, Bennett and Lee; 6 bluerocks, Lee, Chapin and Field; 6 bluerocks, Hurlingham match, Stanton and Bert. The Wellington Gun Club will hold a tournament on their grounds Wednesday, March 27, at which the Jamaica Plain Gun Club, the Wellington Gun Club and other clubs will contest for the challenge amateur team badge of the Massachusetts State Shooting Association. E. Shumway and others will also strive to take the individual badge away from the present holder, E. J. Wardwell. In addition to these matches there will be some 30 or more sweepstake matches. The Wellington Gun Club has arranged for an all-day shoot Thursday, April 4.

NEW YORK, March 23.—On the Bronx Gun Club grounds, a match for $200 a side was shot this afternoon, between Jim Pilkington and Miss Annie Oakley, against Messrs. Ditmar and Jakes; the conditions were 25 birds each, Hurlingham rules; Pilkington and Miss Oakley won by a score of 39 to 35; Miss Oakley made the top score, 20. The birds were a picked lot of strong flyers.

Frank Class, of Pine Brook, has issued a challenge to shoot a match at 50 birds against any man in New Jersey for $100 a side, and has placed a forfeit of $25 in Oswald von Lengerke's hands. The match is to be shot at Ferb's under strict Hurlingham rules.

DAYTON, Ohio, March 26.—One thousand live pigeons are in the coops for the two-days' tournament that is to be held here Wednesday and Thursday of this week.

LOADING FOR TARGETS.—I would like to hear from the trap shots through your columns as to their manner of loading for bluerocks, kingbirds and keystones, size of shot most of them use and kind and quantity of powder.—WING.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

CHANGES IN THE A. C. A. RULES.

Editor Forest and Stream:

In answer to Mr. Edwards's request for opinions upon proposed amendments of racing rules in the A. C. A., I beg to submit one or two views as follows:

The hiking seat has never seemed to me quite a fair thing. Yet there is a certain reluctance in all progressive minds, to bar out inventions which may lead to improvements. And there are some members of the A. C. A., whose skill we are accustomed to concede, and whose opinions we respect, who perhaps could not sail without the hiking seat. Further, the risk of capsize attending its use makes an extremely doubtful advantage to any sailor. Therefore, while I do not personally like it, yet I would recommend that legislation upon this subject should be postponed (rather than abandoned) until a more urgent protest is made against it.

In the centerboard question, I am decidedly of the opinion that the top of board when housed should not rise more than 3in. above the adjacent gunwales. This expression of the rule would allow open canoes the same advantage as decked ones of equal depth.

The standing rig question is an old acquaintance of mine. Ever since that exciting and doubtful first race for the Trophy I have objected, not to the standing rig, but to a wardrobe of standing rigs. I believe the standing rig may be and often is a legitimate and proper contrivance, which should not be forever barred. It is clean and neat and when easily set and stowed is not so unsafe. The celebrated Thousand Island skiffs use a standing rig. But its form permits of reduction in area by dropping the sprit, and the size of the boat permits of ready furling and unstepping. Let us therefore allow any rig which can be reefed (or otherwise reduced) and stowed and furled without danger afloat.

All this is best done without special legislation by making these capabilities of the rig necessary and desirable in the races. And as I pointed out long ago, before general opinion was ripe for it, perhaps, a one-rig rule does it all, and leaves inventive genius untrammeled. But my own rig idea was not properly explained in your previous notice of it. I would allow a canoe all the sails she would undertake to carry (either set or stowed) permanently, *i. e.*, in every case. Besides her mainsail and mizen, which she will make a reef, because she cannot carry two sets, she might carry a storm mizen to use with the regular one set as a mainsail, and a spinaker if desired for very light winds. A well appointed canoe, as I know by experience, can stow these in habitual trim just as easily as a yacht does. And this rig enables her to prepare for any weather without going outside of her own stowage resources. But any other rig which constitutes a fair set of sails and is always carried complete would do. Such a rule as this, putting all upon a fair "one man, one canoe, one rig" basis, with races sailed in all weathers at the time posted, is all that is wanted.

R. W. GIBSON.

NEW YORK, March 21.

Editor Forest and Stream:

The agitation for the reform of the rules and practices of the A. C. A. which control the development of the canoe, has passed through all the preliminary stages, leading up to the practical realization of the object sought for. The dangerous tendencies of the three special racing appliances now almost universally used, the standing rig, the hiking seat, and the buzz-saw board, placed fairly in the center of the canoe, have been proved conclusively, not only in argument, but by the fifteen canoes that sailed in last year's trophy race, and the natural, the invariable result of the development of a racing machine pure and simple, the decay and death of racing has been brought to the serious attention of all canoeists. When the agitation began, it took the form of a demand that the cruisers should receive some encouragement and attention from the Association, then it became a demand for the protection of the canoe from destruction by the machine, and now the agitation begun for the benefit of the cruiser, is being carried on for the preservation of the racer. Although it cannot be said that the hostility evinced when the first proposals of reform were made, and the agitation was begun, has been turned into a burning sense of the necessity for action, the silence of the anti-progressionists, and the action of the executive committee, may be taken to prove that opposition has decayed into inertness, and lukewarmness developed into conviction. That in short the necessity for reform is acknowledged, and as a natural consequence the question now to be decided is what form the reforming action should take. The racing men have created the problem, their future existence as canoeists depends upon its solution, and they should solve it, and as a non-racing man I am as ready that they should do this as Artemus Ward was to sacrifice all his wife's relations upon the altar of his country. There are certain general principles concerned in the matter upon which the opinion even of a non-racing man may be of some interest, and with this hope I write.

The canoe is of the feminine gender, and is therefore well nigh unclassifiable, and is possessed of so many good qualities that they cannot be described by either one word or one phrase, but her crowning virtue is her universality, and it is this virtue that is now endangered. The battle is between the canoe that can be used under a score of different conditions and for as many different purposes and the specialized sailing craft that can only be used in racing. The three special characteristics of the machine are the standing rig, the hiking seat and the buzz-saw board; but although these specializing appliances can be classed together very effectively for the sake of argument, they have practically little connection with each other, and each of these lions in the path of progress roars in a different key.

The standing rig is an evil in itself, and it constitutes an evil tendency, in so far as it discourages the development of lowering rigs. It has also a tendency to discourage canoeists from becoming riggers as well as sailors, and thus to lower the standard of seamanship, which the craft should possess. Such a splendid sample of the canoe as the Guenn, can carry a standing rig in a race and be none the worse adapted for all-round work thereby. The use of a full racing rig does not of itself constitute a canoe a racing machine, and it makes little difference to any person but the man who uses it, whether this racing rig is a standing or a lowering one. The only valid objection to the use of the standing rig in a meet race is that it is a special appliance, that it checks the development of the lowering rig by giving effectiveness without safety or convenience that it is the duty of the Association to promote canoeing, and that therefore it should not encourage any appliance which discourages true progress.

The hiking seat on the other hand is not an evil in itself, so far as it has been made practical use of up to the present time, but there can be no question that its tendencies are wholly for evil. It is simply an addition to the beam of the canoe, and if carried to its logical conclusion would convert the racing machine into the most frightful abortion of a sailing craft that floats.

The buzz-saw board is the last of the three great lions, and, leaving aside the fact that it does not make a canoe dangerous, it is, in my opinion, the biggest, the ugliest, and the most generally ferocious of them all. A canoe may be raced with a standing rig, and a hiking deck seat, and still be, as far as her hull goes, a canoe in the widest sense of the word, but the craft with her cockpit filled up with a centerboard trunk can only be called a canoe by courtesy, for she is necessarily deprived of about two-thirds of the good qualities of the canoe. It is impossible to stow such a craft, to paddle her for any length of time with comfort, to sleep in her, to carry two in her—and the craft that has not room for two on a moonlight night is a poor apology for a canoe—or even to sail her, except when on her deck. Of course, when the centerboard trunk is movable these defects to a certain extent disappear, but a canoe without a centerboard is a poor cruising affair, and at the best such an appliance is but a poor compromise between serviceableness and the racing mania. If it is necessary that some restrictions should be put upon the stripping of racing yachts and rules, meaning "neat, ship-shape and compact things below," in order to prevent racing machines pure and simple from being built, surely it is even more necessary by restrictions and rules to prevent the cutting up of the interior of a canoe, when this cutting up destroys many of the canoe's valuable qualities. It is no defense of the misplaced board to plead that some men do not sleep in their canoes, or make use of them in any way which the board interferes with. Some men, the majority of sailing men, never paddle when they can help it. A goodly number of them never carry a paddle at all, but because this is so no one would argue that the Association should not, as it does, discriminate against the canoe that cannot be paddled. Nor can it be argued, with justice, that if the position of the centerboard were fixed by an arbitrary rule, the development of the canoe would be checked, and the problem with which the canoe designer has to deal would be artificially complicated. The limitation of length and beam, which all argue to be necessary, do artificially increase the problem of the canoe designer, and that in a most arbitrary manner, because there are natural reasons why a canoe 16ft. long should be no wider than 30in. The limits of length and width had to be fixed somewhere, and now that they are so fixed no one wishes a change, for the type created under these limits has been found to be a good one. The position of the centerboard is, on the other hand, a problem created by the very nature of the canoe, and until the racing mania—which was produced artificially by organizations—set in, it was fairly grappled with by canoe designers and as fairly solved.

That it is a much more difficult matter to deal with the centerboard than with either the standing rig or the hiking seat, is a self-evident fact; but that it is impossible I am not disposed to admit. The simpler and the more purely natural a rule is, the better it is; and in the matter of the centerboard, the reasons for action provide also the method to be adopted. A canoe to be generally serviceable should be so fitted as to enable her crew to lie down at full length within her, and it is because the centerboard is so placed in the modern racer that this cannot be done that the centerboard becomes a specializing fitting. If, therefore, the Regatta Committee have to add to the existing regulations as to centerboard a proviso that all canoes built after a certain date were to be so fitted internally as to permit their crew or owner to lie down in them at full length, to the satisfaction of the measurer, the natural problem caused by the character of the duties required of a canoe would become the problem caused by the legislation of the Association. It is also, as the chairman of the Regatta Committee suggests, as desirable to prevent the board from projecting above the deck as to limit its drop to about 18in.; but to take action against the length of the board and do nothing toward fixing its position would be very like fanning away the smoke and leaving the fire to burn the house down. Such a rule as I have suggested would also put an end to the cheese box cockpit, which may or may not become as serious an evil as the central position of the board.

It may be possible that the evil caused by fitting up the cockpit with a centerboard, like that of match wood construction, or a V-shaped midship section, is sufficiently harmful to cure itself, but even if this could be proved, and it cannot, it would not alter the main issue. The question before the Association is whether or no it is its duty to encourage the development of the canoe or of a specialized racing machine, or clumsy cruising concern, and the position of the centerboard is as much a point of this question as the standing rig.

The question of opportunism is, of course, as important an element in this matter of the reform of the A. C. A. rules as in any other reform or movement, and it is the question of opportunism that Mr. Edwards has brought before canoeists in his letter to the FOREST AND STREAM. Not being a racing man, my opinion as to whether action should be taken at once or not is of little value, but it seems to me that there is involved in this question of opportuneness another question of some importance, to wit: How far behind the Western Canoe Association and the Royal Canoe Club can the A. C. A. afford to lag in this matter of reform?

RETAW.

Editor Forest and Stream:

In response to the invitation of Mr. Edwards, I have great pleasure in expressing the strong opinion I have for some time held, namely:

That standing sails and hiking outside seats should be ruled out.

That this should be done now.

I would prefer the "one rig" rule as the best way to deal with standing sails.

ROBT. TYSON, No. 66, A. C. A.

BRITISH CANOE ASSOCIATION.—We have received the first year book of the B. C. A.; a neat little volume bound in vellum and illustrated by four excellent plates of the meet of 1888 at Loch Lomond, Scotland. The meet this year will open on July 31 at Lake Windermere.

A. C. A. MEMBERSHIP.—Eastern Division: H. W. Richards Winchester, Mass. Northern Division: Miles C. Williams, Montreal, Can.; Francis H. Gisborne, Arthur O. Wheeler, Ottawa. Atlantic Division: George E. Comyus, New Jersey.

NEW YORK C. C.—The club house has been fitted up with a kitchen and heating stoves, and the members have held several very pleasant meetings on Saturday nights.

THE CRUISE OF THE ORINDA.

BY W. H. WINSLOW, M.D.

[*Continued from Page 184.*]

THE next morning the yacht was made as clean as a new pin, inside and out, every rope was hauled taut and flemished down, the sails smoothed under their gaskets and the flags hoisted with the gun of the flagship. I made Olie flag lieutenant, to look after the colors and signals; Noir, ordnance officer, to attend to the signals and fireworks; Jerry, purser, to supply beverages and food, and look after expenses generally, and Meringue, able seaman, chief cook and steward, assuming myself the duties of sailing master and captain. It is a good plan to have every one assigned to special duty, then nothing is neglected; but in the evolutions with sails the three high-titled officers served as crew, and Meringue took charge of the forecastle and acted the part of second officer in carrying out the orders of his commander.

The purser had an order for a New England breakfast, and soon had a pot of baked beans on board; and we enjoyed them. The club houses, shores and vessels around us were visited in our tender, and a delightful day added much to the pleasure of the visit. The wind was favorable; we were anxious to get to the eastward, and we got under way about 4 o'clock and made a fine run before the wind to Gloucester, having superb views of the beautiful north shore and its rapidly multiplying cottages, villas and villages. Norman's Woe was passed very close at hand, Noir quoted something of Longfellow's poem and the good ship Hesperus, and we saw a poem in nature in the picturesque villa and strikingly lovely shore, the property of Longfellow's son. Gloucester was reached in two hours, the gentlest zephyr just lasting to fan us into the inner anchorage, and the night was restful.

A visit ashore in the morning and we were off again at 2 P. M. to the westward, with a good S.W. wind blowing. While relating a mistake I made in Pilgrim in attempting to run inside Milk Island instead of Thatcher's, I suddenly discovered we were in the same error again, and had to haul-to for some time to clear that deceitful milky way. We arrived at Rockport without incident and anchored in the deepest part of the harbor. The inner harbor is only used by vessels that can lie in the mud when the tide is out, and cutters are not that kind. The outer harbor is not safe in an easterly gale, and my ideas of it were materially changed by this visit.

I had been more and more disgusted with yacht officers' uniforms for several years. Jerry had fixed himself out in blue with S. B. Y. C. buttons, and wore the suit ashore during most of the cruise. He was mistaken upon occasions for a Pullman conductor, a policeman, a band master, a steamboat officer and a militiaman; in fact, for everything but what he was—an amateur yachtsman—and we agreed thereafter we would not deceive the people any longer. I learned in Boston that only hired sailors wore the brass buttons, and, as owner, I must have my buttons enameled in black. Well, I didn't, but concluded to devote my suit to wiping up deck, painting ship, tarring down and other cleanly purposes. A little dingny had passed us going ashore and back to a white yacht, the M., pulled by an admiral, to judge by his uniform. The man was insignificant in size and appearance, and wore a navy blue uniform absolutely dazzling from its brass buttons, several gold bands upon the sleeves of the coat and a band and anchor upon the cap, and I wondered that one so richly dressed, so bedizzened, so caparisoned, could bemean his lofty station by pulling his own boat and doing his own marketing. What was our astonishment to learn further along that this doughty sea dog was the sole captain, seaman, cook and boy aboard his craft, and made a living for his precious self by winning prizes, carrying passengers, and letting his yacht to excursion parties. He condescended to visit us at night, and what he did not know of the demerits of cutters and of the merits of centerboard yachts was never thought of by man. He was so much at home in our cabin, where he could stand erect, that we did not bring out the bottle for fear he would stay till morning. This uniform quite made me obstinate in my opinion to spoil mine as soon as possible, and Jerry put on corduroy trousers and shooting jacket next morning, though there was no hunting anywhere. And this leads me to an expression about yacht clothes. I think a cruise a fine opportunity to wear out oldish shore clothes, and that a good business suit of stripe, check or mixture, with a figured flannel shirt and flowing necktie, are just the things for harbor and shore wear. If one wishes full dress for a dinner party or a hop, he'd better stay off a small yacht, or else have his trunk and hat box sent along by railroad.

At 4 A. M. we thumped on a rock. How quickly a sailor awakens when his craft takes the bottom. In ten seconds Meringue and I were on deck to see what was the matter. She touched again and the reason was apparent. The log line showed 7ft. Then we pulled off shore and shortened cable, as the stern had swung in shore. I was informed that it usually comes out of the mud a severe gale there, because of the shallowness of the water and full sweep of the sea inward. It made me nervous, for the wind was hauling to the southeast and the sky looked threatening, so we had breakfast and started for Isles of Shoals, where we picked up a mooring and rolled about, while all had a ramble over Star Island. This is the best island of the group, but is little more than ledges covered with lichens and having a little poor pasture in the depressions. The Smith family have been there. Commodore Smith, H. B. M. Navy, discovered the islands and fortified them, and posterity has rewarded him by a pedestal and shaft, making a plain granite monument, with suitable inscription, placed upon the western side of the island. History records that these islands have been the scene of several battles between England and France, then two States quarreled about them, and lately rival owners have had a legal contest for possession. Important as a military station and as a commercial center, they have been; important they are now for summer resorters who are easily pleased, but they are likely to kill other people with ennui and dreary sameness.

The night promised a storm; we ran across and into the Piscataqua, and anchored behind an island to the eastward of Pepperell's Cove before the straggling village of Kittery. It soon began to rain and blow from the northeast, and kept it up all night. We were obliged to put on sou'westers, oilskins and boots, and tumble around the forecastle with a lantern to stock the large anchor and get it over the bow. The crew hauled the yacht up to the small anchor, I gave her a good scope on starboard, let go the heavy anchor and paid out both cables to about fifteen fathoms. This made us feel safe, for the water was only about twenty feet deep, and the bottom was muddy and grassy. My officers slept, but what captain or owner can sleep in a howling gale, with a barometer down to 29.7. Every little while I was out to try the lead and strain of the cables, and to see the position of some vessel, whose rattling chain spoke of another arrival; for vessels fleeing from the gale were coming in all night, guided to safety by the roar of Whaleback's fog horn and the harbor lights.

At daylight we were surrounded by quite a fleet. It cleared after breakfast, the wind came out from the northwest, and blew in heavy puffs. The subordinate officers walked to Kittery Foreside, crossed the ferry to Portsmouth and spent the day pleasantly, returning very hungry in the evening. Meringue and I dried the clothes, bedding and sails and put on some cleaning gear. While lying head to shore in the afternoon a hard squall struck us suddenly on the port beam. The main sheet was belayed, the jib and staysail sheets were off, and the cutter heeled to her rail and nearly dumped our deck things and the crew into the turbulent water. She came up almost immediately and sheered rapidly into the wind, as I pushed the tiller down and struggled with bed quilts. The wind shrieked and slatted the sails roughly and we let them run down and furled them. A few thousand pounds less ballast down below there and some one might have recorded another yacht capsized. Verily, I'd rather have pig lead in the bilge than golden eagles in my pocket under such circumstances, and such must be met frequently in cruising anywhere upon the coast of New England. After this we got out lines and caught a fine mess of cunners, the largest I ever saw, ranging from 8 to 10in. and plump and fat as Florida mullet. Meringue soon had them in the pan and their delicious odor filled the air just as the flag officer hailed from the wharf. I pulled the dingy ashore and brought the crew aboard, and the way they gloated over and mangled those brown crusted beauties! They got their lines out after supper and caught fish till dark, and resolved that salt water fishing was as delightful as catching anything except black bass.

Next morning we filled up water tanks and examined the small quantity of gasoline with anxiety. Our cook, *ex-officio*, was cleanly and neat, and she boarded water and washed up things when he had nothing else to do. Therefore the great consumption of aqua and purified naphtha. It was just a little annoying to fill up so often, but we did not interfere, for we were running three and four course dinners, and everything was lovely. The wind was strong from N.W., it had driven out the water greatly, our keel was on the mud and we could not get away till 10 o'clock, when we put in a single reef, rushed by a sloop-of-war that had just anchored to wait for flood tide, exchanged salutes with the colors, and put boldly out to sea. It was real cutter weather, and we bowled up the coast rapidly, and were off Cape Porpoise at 2 P. M. The tide was running out, the wind hauled right out of the narrow channel and I hailed a fisherman just coming out to set his trawls and engaged him for pilot. He took the tiller and Orinda took a plunge and a roll, and he let go the boat's painter that he had not quite fastened and dove to windward, while he shouted, "Let go the main sheet!"

"Not fast!" I said, as she came up. "Don't be afraid, sir; she'll not go over. You are evidently not used to cutters, and had better let me steer." I took the helm, which he was apparently glad to relinquish, and beat in by his directions. Orinda moved so gracefully and handled so easily that the pilot gained confidence in her, and then began to compare her cost and outfit with the fishing vessels of the port. He acknowledged that when their vessels lay over as far as Orinda, they had to stand by the sheets and were in danger, but, because they all understood this, a capsize was very rare. I wondered how he would have felt on the Pilgrim in Fiddler's Reach, on the Kennebec, when she threw her dishes across into an opposite locker. She had little bilge and less freeboard, while Orinda has considerable of both, and does not heel more than many wider craft. It is not heeling that scares, but the narrowness. Those accustomed to wide decks feel a sense of insecurity on a cutter, because the heel brings one so near the water, and it looks as if one must slide overboard. We did not slide, and I am glad the pilot did not, for I'm sure his ponderous cowhide boots would have sunk him, feet down and head up, like a tide-walker. We let go both anchors in midchannel because it was blowing hard and the tide was running in fiercely, and the fishing boat towed in our frisky tender. Then the crew went ashore and I took a nap. They brought off bread, milk, papers and letters, and had arranged to go to Kennebunkport the next day.

Cape Porpoise has changed greatly in two years. The snipe, ducks and herons have been killed or driven away by the fusillade of murderous visitors. The hotels now occupy the shores, and pleasure boats and excursion parties were seen everywhere. This wild, rough spot, that I had hoped might remain wild and rough for my delectation, had become civilized, demoralized and overrun by city folk, who were fast destroying the very things that had first attracted them thither. I shouldered my gun and sought the whilom haunts of multitudes of snipe, only to find three or four frightened things that kept me out of gunshot and flew away from me sixty miles an hour. I did not shoot. Poor bereaved orphans of the mighty flock, I thought, I will not harass you or take one gladsome day from the time that is so soon to end in eternity. Escape, if you can, a little while the cruel pursuit of the exterminators. Circumvent with your tiny brains man with his massive lobes and many convolutions, and flee from the blaze of Pieper, Parker, Smith and Scott, that another brood or two may be born to keep the species in existence.

The crew were off early next morning for Kennebunkport. Noir (otherwise Black), the proprietor of the *Bulletin*, of Pittsburgh, a high class literary journal of rare excellence and phenomenal success, led the party with the enthusiasm of a boy let loose from school, through sylvan glades, over ledges crowned by black spruces and wildly swaying pines, along the ragged rocks, where the sea throws in its chuckling, hissing, roaring breakers, in and out, now in the dense forest, now upon a commanding eminence, and again by the restless waters, inhaling the champagny air and opening lung cells that had long been stuffed with coal dust, feeling the richly ozonized blood rushing to the extremities, and swinging legs and arms in the glorious sunshine, refreshed, rejuvenated, intoxicated by the sense of perfect well-being in harmony with nature. They had two objects—to explore this lovely region of Maine, and to pay their respects to one of the *Bulletin*'s most honored contributors, a lady whose poetic nature finds in the wild scenes of Kennebunkport a subtle charm which the gifted most appreciate—Margaret Delande, the inspired writer, the great authoress. I know that the party had a delightful interview with the lady, dined at the hotel upon the bluff, inserted their names as yachtsmen of the Orinda, S.B.Y.C., upon the register, bought all the luxuries they saw for mess and returned aboard about four bells, first watch, thoroughly tired and supremely happy. They did not need the smoky sou'wester that Jerry passed around to lull them to sleep, but resolved it was just what they needed in that prohibition State to fill their cups of happiness.

Meringue and I had filled up the tank from a fine spring upon Merrit's Island, and caught a dozen young pollock and sea perch with a few sculpins in the afternoon, and we had a late fish breakfast next morning, as everybody was very sleepy; then we stowed things closely and were ready for sea. Lawyer Curry, with his wife and sons, called upon us in his sailboat, and expressed great interest in the first cutter he had ever looked over. He had suffered from insomnia and nervous exhaustion, and came to the Cape to rough it, and keep house in the primitive fashion adopted by many Maine sea shore dwellers in summer. He had learned to manage his well ballasted little sailboat with skill, and the family spent as much time afloat as ashore, visiting the islands and inlets, climbing over the rocks and fishing and picknicking as they fancied. His health was fully restored, though he received a daily mail and the *Boston Journal*, which ought to be missing a week at a time when one desires the best results from a sanitary outing.

The wind had been light from the southeast all morning, but it shifted around south at six bells, morning watch, and Pilot Fletcher and Mr. Curry came on board, the latter asking permission to go out with us and see the yacht work, which request I was glad to grant. It was half flood and the moderate wind was dead ahead, so we had sharp work beating out. We tacked several times within 25ft. of the rough, rocky shores, and the more the pilot saw of the yacht's quickness and certainty in stays, the closer he ventured in, as it was necessary to save every inch possible to get out at all. In half an hour we were out clear of the cape and kept off for Portland, heaving to off Stage Harbor, where the pilot and passenger hauled up their boat and went in, wishing us *bon voyage*.

I would advise visiting yachtsmen not to attempt to beat into or out of Cape Porpoise. It is an extremely narrow and dangerous channel, and upon the south shore there are immense boulders lying far out and barely covered with water. It would be much safer to run into Stage Harbor just to the north. The passage is clear and there is a good safe anchorage in this desolate-looking haven in most weathers, but it has the swell of the ocean, and it is sometimes necessary to shift from one side to the other for shelter when the wind changes to the eastward.

The wind soon came out southeast and blew steadily till we had passed Cape Elizabeth. We ran pretty close in and had excellent views of Wood Island, Biddeford Pool, Scarborough, Ferry and Old Orchard beaches, Richmond Island and the Cape. We passed and saluted a beautiful yacht flying to the southward, but could not make out her signals. She had two boats at davits, all sail except spinaker set, and a merry party in the cockpit, and made a most beautiful picture, which we greatly admired. I have since learned that it was the Lillie, belonging to my friend, Mr. S. E. Tobey, of the S. B. Y. C.

We passed a buoy off Cape Elizabeth marked T. R., which we supposed was Trundy's Reef, and were dismayed to find another buoy to windward lettered the same. The former was Taylor's Rock, and then we were sailing right across Trundy's Reef, which makes a long way off from shore. There was enough water for us, to be sure, but I don't like deviations from customary and safe channels, and so hauled-to a little and left the Trundy Buoy to port. The wind shifted to W.N.W. and became very light soon after, and we had a slow run into Portland; but we passed several large schooners on the way, and were pleased at the evidence of speed.

We anchored off the P. Y. C. house and fired a gun, which was soon answered by the club. Then things were snugged up, the crew went ashore and registered at the club house and took a stroll about town. There was quite a fleet of yachts around, and I noticed Commodore Gray's new sloop Viva among them. The Commodore takes his family and friends aboard every Saturday afternoon, runs down to Peak's Island, anchors for the night, takes a good rest and sail next day and gets back to town Sunday night—a most rational proceeding for an overworked city doctor. Our crew made a visit to Old Orchard by train on Sunday.

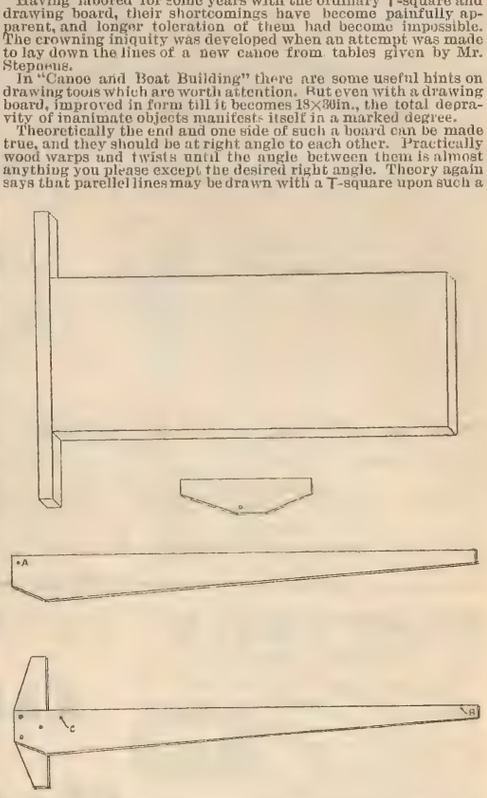
[TO BE CONTINUED.]

METEOR.—The steam yacht Meteor, injured by collision with the steamer Wyanoke, has been repaired at Norfolk. The result of the official investigation has been to exonerate her sailing master, Onslow Ludlow, from all blame, the following letter being sent to him by Messrs. William H. Ward and James R. Guy, United States local inspectors of steam vessels at Norfolk, Va.: "Sir—After investigation of the circumstances of the collision between the steamer Wyanoke and yacht Meteor in Hampton Roads on the afternoon of February 14, we find that you were not in fault, and you are, therefore, acquitted of all blame."

UNITED STATES NAVAL INSTITUTE.—The quarterly volume of the Proceedings of the United States Naval Institute, just issued, contains a valuable paper on "Naval Reserves and the Recruiting and Training of Men," by Lieut. Sidney A. Staunton, U. S. N., of the Bureau of Naval Intelligence.

SEAWANHAKA C. Y. C.—On Nov. 23 Mr. Gilbert C. Wilson delivered a very interesting lecture on sails before the club, followed by a general discussion.

THISTLE, sloop, has been sold by Wm. Ziegler to Malcolm Graham.



SOME HINTS FOR AMATEUR DRAFTSMAN.

Editor Forest and Stream:

Having labored for some years with the ordinary T-square and drawing board, their shortcomings have become painfully apparent, and longer toleration of them had become impossible. The crowning iniquity was developed when an attempt was made to lay down the lines of a new canoe from tables given by Mr. Stephens.

In "Canoe and Boat Building" there are some useful hints on drawing tools which are worth attention. But even with a drawing board, improved in form till it becomes 18×30in., the total depravity of inanimate objects manifests itself in a marked degree.

Theoretically the end and one side of such a board can be made true, and they should be at right angle to each other. Practically wood warps and twists until the angle between them is almost anything you please except the desired right angle. Theory again says that parellel lines may be drawn with a T-square upon such a

board, and by changing the square to the adjacent side other lines can be drawn at right angles to the first. The failures which practice develops shakes faith in theory, at least in this particular case.

The amount of fairing which waterlines call for is another proof that something is wrong. To one who makes drawings to the hundredth of an inch the results are unbearable. When a thing cannot be longer endured, the old proverb asserts that it must be cured. The following scheme, after careful trial, has to say the least given great relief, though not perfect. The board is a piece of pine 12in. wide and 30 or 36in. long. It was sawed off and planed on both sides. No effort was made to get the ends and sides square. The only requisite was that the surface should be smooth.

On the left hand end a strip 2in. wide was nailed. The outer side of this was made true with a jointer. This completes the board. Time needed for making it say ten minutes. In practice have as many as may be wanted. How the thing looks finished is shown in the upper figure.

The T-square is made to fit the board. Take a block like that at the left of the lower figure, pine will answer. Put a screw hole in it as shown. For the blade use scroll saw stuff 1-16in. thick. It should be 36in. long, 6in. wide, and tapered to 2in. at the outer end. Put a screw through the hole *A* into the stock, or head, of the T. Screw up tight enough to hold the parts fast and then put the square upon the board. Swing the blade till blade and upper edge are fairly parallel. Then put in the other two screws. A hand vise or a clamp is convenient to prevent the blade from slipping while boring the holes and setting the screws. This is not really necessary because it is not a question of truth. That is to be purchased ready made. The lower figure shows the square complete. *B* and *C* are two wire nails for which holes are made. The object of them is to nail the square fast to the board in the lowest position. All vertical lines can then be drawn with a 12-inch triangle and they will be truly at right angles to the base. In making the square the only point to be carefully noted is to joint the upper edge so that it will be straight. Use straight-grained wood if it is expected that the blade will remain true. Neglect of this rule is the cause for much complaint in regard to the squares of mathematical instrument makers. There are two ways of using the apparatus. First, it can be employed as an ordinary square and nailed only in the lowest position. Second, measure off from a central line the distance of all horizontal lines wanted and then nail the T-square fast in each position before drawing the line. It can be secured by a slight blow of a tack hammer on the two nails. The nails can at any time be reset in the holes and the blade will be held firmly in its original position.

When nailed fast the triangles can be used with perfect confidence, because the base line is absolutely secure. As the nails are 2in. long, and are only driven far enough to hold, they can be drawn with the fingers.

The narrow board is a great advantage, as is the square tacked in place and always in the place where it is wanted, while both hands are at liberty. The whole thing is so light and quickly finished that a half a dozen of them may be made, if so many drawings are in progress. Warping does not disturb the lines, nor prevent the square from returning exactly to the original position. For very accurate work the paper may be mounted with starch on muslin, and then fastened with starch to the board over the whole surface. There are then no thumb tacks to annoy the draftsman. The paper when thus secured will not expand nor contract so as to annoy the draftsman. In fact, one will have to have very fine gauges to find any alteration whatever.

Lastly, let every one who wishes to do accurate and satisfactory drawing buy a steel scale, graduated on one side, at least, to hundredths of an inch. They are usually made with a variety of divisions on the four edges, and can be had in all lengths from 8in. up. These scales, with their fine divisions, enable calculations to be carried out with a degree of exactness entirely unknown with the ordinary rules and scales.

W. E. P.

NEW YACHTS.

THE 40-footer designed by Mr. A. Cary Smith is for Mr. Royal Phelps Carroll, former owner of Nokomis, schr. The first intention was to make her a keel boat, but it has been decided to make an improved Banshee, deeper and of racing model and build, and with a centerboard. She will be built by Poillon, and will be of wood. The Weymore 40 at Bay Ridge is in frame, and Kathleen is well along toward completion. Chispa is ready to launch at any time. At Salem Frisbie has painted the 40 Helen, and her cabin is nearly completed. The 30 is nearly planked. At Lawley's Merlin is planed off and ready for paint as soon as the color is decided on. Verena, Nanon and Nepenthe are about completed, the Belmont 40, Mariquita, is planked and planed off, and work on her deck is under way. Lotowana, Mr. Foster's 40, is laid down. Mr. Owens's 45 will be laid down this week, but the Hasbrouck 40 has not been sent to the builder yet. At City Point Pryor is working under cover on the Mosher launch, everything being kept secret. She will be about 60ft. long with double skin, the outer one of mahogany. At Newburyport P. J. Lowell is building a sloop, Vexer, 23ft. 4in. over all, 19ft. 10in. l.w.l., 9ft. 6in. beam. Another yacht of the same size is also building by Fred Ellis. Rumors are afloat about New York of three large steam yachts to be commenced soon.

DREAM, sloop, Mr. Lee Johnson, of New York, capsized and sank on March 25, off Jekyl Island, Georgia, her crew being saved. She is a centerboard sloop, built at Pamrapo by McGiehan, 38ft. l.w.l., 15ft. beam and 4ft. draft.

BISCAYNE BAY NOTES.

THE Biscayne Bay Y. C. has elected the following Government officials to honorary membership: Superintendent U. S. Coast Survey, Superintendent U. S. Fish Commission, Superintendent of U. S. Life-Saving Service for the Seventh District, and Inspector U. S. Lighthouse Department Seventh and Eighth Districts.

One of the most closely-contested races ever seen in Southern waters was sailed on March 9 between the schooner yachts Allapatta, Kirk Munroe owner, and Nicketti, Jean de Hedouville owner, for the possession of the championship Class C pennant of the Biscayne Bay Y. C. The course was triangular, starting from a stakeboat anchored off the club house at Cocoanut Grove, across Biscayne Bay to the inner channel buoy off Cape Florida, thence to and around a buoy in mid-channel off Bear Cub, and thence to point of departure, 14 miles in all. The first leg of this course was a run dead before the wind, during which the two yachts kept side by side, neither gaining a foot on the other, the entire distance of six miles. They turned the first mark together with Nicketti inside, and started on a beat for the second. At the end of the first tack Allapatta held the lead; at the end of the second and third Nicketti held the lead; at the end of the fourth Allapatta had regained her position and turned the second mark a few seconds in advance of her rival. The run home was made on a single stretch, with both yachts close hauled and jammed into the eye of a breeze that came in spiteful gusts off shore. During it Allapatta steadily increased her lead and came in winner, beating Nicketti 5m. 45s., or with time allowance deducted, 5m. 38s. Several challenges are already awaiting the winner, and some more lively match races are in prospect.

The steam yacht Narod, from New York for a West Indies cruise, anchored in Biscayne Bay during the night of March 7.

SOUTHWARK Y. C.—The annual meeting of the Southwark Y. C. was held on March 18, the following officers being elected: Com., Wm. Batzell; Vice-Com., Jas. Irwin; Rear-Com., Samuel Duckett; Sec'y, Francis George; Treas., Isaac Sharp; Trustees, I. Sharp, V. V. Dorp, Geo. Lance; Measurers, Wm. Dougherty and Geo. Creasey, ex-Com. H. D. Basler, I. Sharp, Jos. Stephens, V. V. Dorp, Frank Maxwell, Geo. Lance and Julius Hoffman. The club has been at the foot of Mifflin street for the last twenty-five years, but the Globe Oil Co. having purchased the grounds they have been compelled to vacate. The committee appointed have secured a site for their new club house further down the river below the Pennsylvania Salt Mfg. Co.'s wharves. The club is in a prosperous condition financially.

THE NEW BURGESS FISHERMAN.—Mr. J. Malcolm Forbes, owner of Puritan and part owner of the new Burgess fisherman Fredonia, now about completed, is arranging for a trip from Boston to Fayal and perhaps Madeira in the latter vessel, starting May 20 and returning about July 20, in season to fit out Puritan for the New York Y. C. cruise. The object would be mainly to test the new vessel at sea, as she will sail in the ordinary working trim of a fisherman. Capt. Chas. Herty, of Gloucester, will be in command, with mate Ryan, of Puritan, and the latter's crew, making two mates, two quartermasters, six seamen, a cook, steward and a cabin boy. Capt. Francis Stone, of New Bedford, will be the navigating officer. The Fredonia is building by Adams, of Essex, Mass., and will be 109ft. over all, 95ft. l.w.l., 23ft. 9in. beam and 12ft. draft. She will be fitted with housing topmasts, quarterlifts, and a stationary jibstay, though the jibs will be set flying. The bobstay will be of chain and wire rope set up with a turnbuckle, while the jibstay, instead of leading through the bowsprit to the stem, will be shackled into the cranse iron on bowsprit end. The vessel will be temporarily fitted below as follows: The main companion will be well aft, just forward of the binnacle. The companion will be placed on the port side so as not to interfere with the binnacle. On the starboard side of the companion will be a water closet and wash room, and on the port side a small room in which charts will be kept and oilers hung up, etc. The companion stairs lead to the gentlemen's quarters, a large cabin the width of the boat, with two lengths of transom berths and lockers on either side. Forward of this is the main saloon, 12ft. long, and the width of the boat, with ample sofas on each side. Forward of the main saloon are four large guests' staterooms, two to starboard and two to port. This ends the guests' quarters, as the galley is just forward of the guest staterooms. On the starboard side of the galley is a stateroom which will be occupied by the sailing master, and on the port side a stateroom for the two mates. The crew's quarters are entered from the deck by a fore hatch. There are two spaces partly partitioned off from the main forecastle. The starboard one will be occupied by the cook and steward, and the port by the two quartermasters. Forward of these is the forecastle proper, with bunks for the crew.

WHIM, schr., Mr. C. W. Chapin, reached New York on Nov. 26, after a passage of eleven days from Key West. She encountered very heavy weather off the coast, but came through it in safety, carrying three large boats on deck besides a naphtha launch.

DORCHESTER Y. C.—On Nov. 22 a "small talk" was held at the club house, Capt. Jas. H. Mead, of the America, speaking on the subject of "Pilots' Experiences."

DETROIT Y. C.—The officers for 1889 are: Com., Geo. Newbury; Vice-Com., G. W. Larkins; Rear-Com., Walter Hinkel; Meas., C. Desner; Harbor Master, E. Godfrey; Sec'y, Thomas H. Lynch; Treas., H. Reeves. A full programme of races for the season has been arranged, beginning May 30 and ending Sept. 29, including a series of pennant races, cruises and weekly sails. On July 4 a cruise will be made across Lake St. Clair and up the St. Clair River. The pennant races are open to club boats only, but an open regatta is set for Sept. 19. The fleet numbers forty-three new yachts, of which twenty-one are already entered for the first race. The 35ft. class, in which are the sloops Turk, Kras, Lulu B. and Alert, promises to give some especially lively racing.

HYPATIA.—The sloop yacht lately built for James Wier, owner of the Hypatia, by John Mumm, was launched on March 26 at Bay Ridge, and christened with the name of the old yacht. The new yacht is a compromise sloop, with small outside lead keel and large board. She is 42ft. over all, 34ft. 9in. l.w.l., 13ft. 6in. beam and 5ft. draft, with a short overhang forward and fairly long stern.

BUFFALO Y. C.—The Buffalo Y. C. has issued a programme of races for the season, as in our list of fixtures, including a series of matches for championship pennants.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

STATE OF CALIFORNIA,
Adjutant General's Office,
Sacramento, Nov. 27, 1888.

The United States Cartridge Co., Lowell, Mass.:

GENTLEMEN—It affords me pleasure to inform you that the fifty thousand rounds of ball cartridges recently purchased from you through Messrs. Chas. Sonntag & Co., of San Francisco, were used in the annual target practice of the National Guard of this State. They gave perfect satisfaction, the powder was good, the balls of uniform weight, and the shells strong and suitable for reloading. The percentage made was higher than that made in the preceding year. Our most experienced officers have informed me that they were the best cartridges ever used here. Very respectfully, your obedient servant,

—*Adv.* (Signed) R. H. ORTON, Adjutant General.

HUNTER'S PATENT
Safe & Rapid Loader.

Pat. April 17, 1888. Pat. April 17, 1888. Pat. May 29, 1888.

The Collins Gun Company, of Omaha, Nebraska (the oldest and largest gun house in the West), writes: "We will be only too pleased to allow you to use our name as reference, and would say that we have tried every loader that has been placed on the market, and without any hesitation pronounce your machine the only machine yet that we have ever seen that is worth anything for our use, to wit, loading wood, Schultze or black powder for trap or game shooting."

Mr Curtis Wright, a well-known club man of Connersville, Ind, says: "The loader is at hand, and more than meets my expectations. It is a beautiful piece of mechanism, and perfect in every way; it is made for both strength and convenience, and cannot fail to take the lead in the market, as no one could ask anything better. The shooting fraternity owe you a vote of thanks for getting out so complete an article."

A number of other references on application.

The CRIMPER is also sold separate. Will crimp at least three shells to any other crimping one. Also clips shells any length—caps and decaps. Prices and full description address,

GURDON TRUMBULL'S

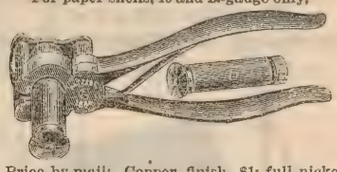
Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*



The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more valuo to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

FOR SALE BY

Forest and Stream Publishing Co.,

318 BROADWAY, NEW YORK.

CANVAS CANOES;

AND

HOW TO BUILD THEM

By PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in.× 27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper 48 pages; price 50 cents.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

Yachts and Canoes For Sale.

Cruising Yacht For Sale or Charter.

The owner of a well-known yacht, 47ft. long, 14ft. beam, 6ft. draft, perfectly fitted out for the comfort and accommodation of four to six persons in the cabin, and three men in forecastle, patent w. c. and all modern improvements, will sell or charter her at a reasonable price on account of important business engagements preventing his leaving the port during the summer months. The yacht is built upon a beautiful model, has two rigs, can be sailed as a sloop, when she is very fast, or as a yawl for cruising. She was built during the winter of 1886, of best of material, under the personal supervision of the owner, and is a staunch and excellent sea boat, well suited for cruising in the gulf of St. Lawrence, and has been so employed, where capital sea trout and other fishing can be enjoyed, and salmon may be included, seal and white porpoise hunting, duck and shore bird shooting. This is an opportunity seldom offered. Address P. O. Box 1091, Quebec City, Can. Satisfactory references in New York or elsewhere given and required.

For Sale---Cedar Canoe,

16×30, very fast, new last August; complete with cruising and racing sails.

C. W. LEE, 80 Board of Trade, Chicago.

BYLES CANOE, 14×30, MAHOGANY DECK, deck tiller, foot gear, two sails, paddle, etc. All in good condition. Price $60. F. B. C., P. O. Box 950, New York.

RUSHTON'S MOHICAN No. 3, WITH COMplete outfit, in first-class condition. Very cheap. Address A. L., 420 Commerce st., Phila.

Shooting and Fishing in Canada.

The subscriber, who has had many years' personal acquaintance as a surveyor with the forests and streams of the Maritime Provinces of Canada, as well as with those of part of Quebec, is prepared to act as resident Canadian agent for any association of sportsmen in the United States, for the purpose of pointing out and directing parties to localities for fishing as well as for hunting moose, caribou, bear and other game; also for procuring canoes, guides and hunters, and the securing of all supplies required for a camping outfit—the guides engaged would be such as are personally known to him. Proper reference given on application. EDWARD JACK, Fredericton, N. B., Canada.
